

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + Refrain from automated querying Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + Keep it legal Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at http://books.google.com/

PREFACE.

GEORGE MARTIN LANE died on the thirtieth of June, 1897. His Latin Grammar, in the preparation of which he had been engaged, during the intervals of teaching in Harvard University, for nearly thirty years, was at that time approaching completion. The first two hundred and ninety-one pages had been stereotyped; the pages immediately following, on the Relative Sentence and the Conjunctive Particle Sentence through quod and quia (pages 292-302), together with the chapter on the Infinitive (pages 374-386), were ready for stereotyping; of the remainder of the book, pages 303-373 and 387-436 were in the form of a first draught; finally, he had received a few weeks before his death, but had never examined, the manuscript of the chapter on Versification (pages 442-485), written at his invitation by his former pupil, Dr. Herman W. Hayley, now of Wesleyan University.

It was found that my dear and honoured master had left a written request that his work should be completed by me, in consultation with his colleagues, Professors Frederic De Forest Allen and Clement Lawrence Smith. A month had scarcely passed when scholars everywhere had another heavy loss to mourn in the sudden death of Professor Allen. Almost immediately afterwards, Professor Smith left this country, to take charge for a year of the American School of Classical Studies in Rome, but not before we had agreed that circumstances required the early publication of the book, notwithstanding his absence. I was thus deprived of two eminent counsellors, whose knowledge and experience would have been of inestimable assistance.

About one hundred and twenty pages (303-373 and 387-436), exclusive of *Versification*, were yet to receive their final form. Professor Lane had determined the order in which the topics contained in these pages should be treated, and no change has been made in that order. Most of the main principles of syntax,

too, have been left exactly as they were expressed in his draught. This draught was written some years ago, and, although he had corrected and annotated it from time to time, there is no doubt that in writing it out afresh he would have made many alterations and improvements which are not indicated in his notes. quently, he is not to be held responsible for errors and omissions in the pages which had not received his final approval. Yet I conceived it my duty to preserve, so far as possible, the very language of his corrected draught; and this, in the statement of almost all the main principles, I have been able to do. Some modifications and some radical alterations were inevitable; in particular, the treatment of quamvis, quando, quin, the Supine, and Numerals seemed to call for much amplification and rearrangement. I have also deemed it necessary to add some seventy sections1 under various heads, and Dr. Hayley has been good enough to write sections 2458-2510, which precede his chapter on Versification. But, in general, my principal function has been: first, to provide additional Latin examples of the principles which Professor Lane had formulated; secondly, to enter, under the various principles, historical statements regarding the usage in the Latin writers, drawn from the best authorities at my disposal.

Professor Lane's own method was far from that of a compiler. He took nothing for granted without thorough investigation, however well established it might seem, and he followed the dictum of no man, however widely accepted as an authority. For example, his many pupils and correspondents will remember how untiring he was in his efforts to arrive at accuracy in even the minutest points of inflection. Thus, for the List of Verbs (§§ 922-1022), he made entirely new collections, and admitted no form among the 'principal parts' unless actually found represented in the authors. In the details of syntax, he was equally indefatigable; the sections on the Locative Proper (1331-1341), for instance, contain the result of an immense amount of painful

¹ The sections which I have added are as follows: 1866, 1873, 1878, 1879, 1880, 1887, 1890, 1901, 1902, 1903, 1907, 1909, 1913, 1922, 1927, 1935, 1964, 1975, 1978, 1979, 1980, 1981, 1982, 1983, 1984, 1989, 1990, 2011, 2012, 2013, 2014, 2015, 2068, 2086, 2088, 2097, 2111, 2122, 2152, 2155, 2255, 2264, 2267, 2271, 2273, 2275, 2276, 2277, 2281, 2289, 2292, 2345, 2357, 2400, 2406, 2407, 2408, 2409, 2410, 2411, 2412, 2413, 2414, 2740-2745.

research. He devoted much anxious thought to the definitions and the titles of the various constructions: thus, the distinction between the Present of Vivid Narration (1590) and the Annalistic Present (1591) seems obvious now that it is stated; but to reach it many pages of examples were collected and compared. He held that examples printed in the grammar to illustrate syntactical principles should never be manufactured; they should be accurately quoted from the authors, without other alteration than the omission of words by which the construction under illustration was not affected. He was careful, also, not to use an example in which there was any serious doubt as to the text in that part which covered the principle illustrated by the example. To 'Hidden Quantity' he had given much attention, and many of the results of his studies in this subject were published, in 1889, in the School Dictionary by his friend Dr. Lewis. Since that time he had found reason to change his views with regard to some words, and these changes are embodied in the present book, in which he marked every vowel which he believed to be long in quantity.

The order in which the divisions and subdivisions of grammar are here presented will not seem strange to those who are acquainted with the recent grammars published by Germans. It is the scientific order of presentation, whatever order a teacher may think fit to follow in his actual practice. The table of contents has been made so full as to serve as a systematic exposition of the scheme, and to make needless any further words upon it here. In the Appendix Professor Lane would have inserted, out of deference to custom, a chapter on the Arrangement of Words; but the draught of it which he left was too fragmentary for publication. Since the proper preparation of the chapter would have greatly delayed the publication of the book, it was thought best to omit it altogether, at least for the present. This topic, in fact, like some others in the Appendix, belongs rather to a treatise on

Latin Composition than to a Latin Grammar.

For the indexes, and for much valuable help in proof reading, I heartily thank Dr. J. W. Walden, another of Professor Lane's

pupils.

In the course of his work, Professor Lane frequently consulted his colleagues and other distinguished scholars both in this country and in Europe. He gratefully welcomed their advice, and care-

Preface.

fully considered and often adopted their suggestions. Had he lived to write a preface, he would doubtless have thanked by name those to whom he considered himself as under particular obligation, whether from direct correspondence or through the use of their published works; but it is obvious that the information in my possession will not allow me to attempt this pleasant duty. Of Professor Lane's pupils, also, not a few, while in residence as advanced students at the University, were from time to time engaged in the collection of material which he used in the grammar. They, like his other helpers, must now be content with the thought of the courteous acknowledgment which they would have received from him.

MORRIS H. MORGAN.

HARVARD UNIVERSITY, CAMBRIDGE, May, 1898.

TABLE OF CONTENTS.

THE REFERENCES ARE TO SECTIONS.

Parts of Latin Grammar, 1.

PART FIRST: WORDS, 2-1022.

Parts of Speech, 2-15.

(A.) SOUND, 16-179.

Alphabet, 16-25.

Vowels, 26-38. Long and Short, 26-31. Pronunciation, 32-36. Classification, 37-38.

Diphthongs, 39-43.
Nature and Kinds, 39-41. Pronunciation, 42-43.

Consonants, 44-54.
Pronunciation, 44-49. Classification, 50-54.

Change of Sound, 55-154.

Vowel Change: Lengthening, 55-56. Shortening, 57-62. Long Vowels in Old Latin, 63-68. Weakening, 69-79. Diphthong Decay, 80-88. Development, 89-90. Disappearance, 91-96. Hiatus, 97. Contraction, 98-101. Elision, 102. Assimilation, 103-104. Dissimilation, 105.

Vowels and Consonants Combined: Assimilation, 106-111. Dissimilation, 112. Interchange of Vowels and Consonants, 113.

Consonant Change: Substitution, 114-119. Development, 120-121. Disappearance, 122-143. Assimilation, 144-151. Dissimilation, 152-154.

Syllables, 155.

Length of Vowels, 156-167. Short Vowels, 157-164. Long Vowels, 165-167.

Length of Syllables, 168-169.

Accent, 170-179.
Of Disyllables, 170. Of Polysyllables, 171-173. Kinds of Accent, 174-177. Proclitics, 178. Enclitics, 179.

(B.) FORMATION, 180-396.

Definitions, 180-108.

Roots, 183-189. Present Stems as Roots, 190-194. Stems, 195-197. Primitives and Denominatives, 198.

Formation of the Noun, 199-364.

Without a Formative Suffix, 199. Formative Suffixes, 200-203. Formation of the Substantive: Primitives, 204-245. Denominatives, 246-279. Formation of the Adjective: Primitives, 280-297. Denominatives, 298-341. Comparison, 342-364.

Formation of Denominative Verbs, 365-375.

Composition, 376-396.

Of Nouns, 379-390. Of Verbs, 391-396.

(C.) INFLECTION, 397-1022.

Definition, 397.

(A.) INFLECTION OF THE NOUN, 398-712.

General Principles, 398-431.

Case Endings, 398. The Stem, 399-401. Gender, 402-413. Number, 414-418. Case, 419-431.

The Substantive, 432-607.

Stems in -a- (The First Declension), 432-445. Stems in -o- (The Second Declension), 446-466. Consonant Stems (The Third Declension), 467-512. Stems in -i- (The Third Declension), 513-569. Gender of Consonant Stems and -i- Stems, 570-584. Stems in -u- (The Fourth Declension), 585-595. Stems in -\mathbb{E}- (The Fifth Declension), 596-607.

The Adjective, 608-643.

Stems in -o- and -a-, 613-620. Consonant Stems, 621-626. Stems in -i-, 627-636. Numeral Adjectives, 637-643.

The Pronoun, 644-695.

Personal and Reflexive, 644-651. Personal and Reflexive Possessive, 652-655. Other Pronouns, 656-659. Demonstrative, 660-670. Determinative, 671-675. Pronoun of Identity, 676-678. Intensive, 679-680. Relative, Interrogative, and Indefinite, 681-694. Correlative Pronouns, 695.

The Adverb, Conjunction, and Preposition, 696-712.

Nouns as Adverbs, 696-698. Accusative, 699-702. Ablative, 703-707. Locative, 708-709. Other Endings, 710. Correlative Adverbs, 711. Sentences as Adverbs, 712.

(B.) INFLECTION OF THE VERB, 713-1022.

General Principles, 713-742.

The Stem, 714-720. The Person Ending, 721-731. Nouns of the Verb, 732. Principal Parts, 733-735. Designation of the Verb, 736-737. Theme, 738-740. Classes of Verbs, 741-742.

Primitive Verbs, 743-791.

Root Verbs, 743-744. Inflection of sum, 745-750. possum, 751-753. do, 754-757. bibo, sero, sisto, 758. inquam, 759-761. eo, 762-767. queo

Table of Contents.

and nequeō, 768. edō, 769-771. volō, nōlō, mālō, 772-779. ferō, 780-781. Verbs in -ere (*The Third Conjugation*), regō, 782-783. Verbs in -iō, -ere, 784-791. capiō, 784-785. āiō, 786-787. fiō, 788-790. Others in -iō, -ere, 791.

Denominative Verbs, 792-797.

Verbs in -are (The First Conjugation), laudo, 792-793. Verbs in -are (The Second Conjugation), moneo, 794-795. Verbs in -are (The Fourth Conjugation), audio, 796-797.

Deponent Verbs, 798-801.

Periphrastic Forms, 802-804.

Defective Verbs, 805-817.

Redundant Verbs, 818-823.

Formation of Stems, 824-919.

Variable Vowel, 824–827. The Present System: Present Indicative Stem, 828–840. Present Subjunctive, 841–843. Imperative, 844–846. Imperfect Indicative, 847–848. Imperfect Subjunctive, 849–850. Future, 851–853. The Perfect System: Perfect Indicative Stem, 854–875. Perfect Subjunctive, 876–878. Perfect Imperative, 879. Pluperfect Indicative, 880. Pluperfect Subjunctive, 881. Future Perfect, 882–884. Short or Old forms of the Perfect System, 885–893. Nouns of the Verb: The Infinitive, 894–898. Gerundive and Gerund, 899. Supine, 900. Present Participle, 901–903. Future Participle, 904–905. Perfect Participle, 906–919.

List of Verbs arranged according to the Principal Parts, 920-1022.

PART SECOND: SENTENCES, 1023-2299.

Definitions, 1023-1061.

The Simple Sentence, 1023-1025. The Subject, 1026-1034. The Predicate, 1035-1036. Enlargements of the Subject, 1038-1047. Enlargements of the Predicate, 1048-1054. Combination of Sentences, 1055. The Compound Sentence, 1056-1057. The Complex Sentence, 1058-1061.

Agreement, 1062-1098.

Of the Verb, 1062-1076. Of the Substantive, 1077-1081. Of the Adjective, 1082-1098.

THE SIMPLE SENTENCE, 1099-1635.

(A.) USE OF THE NOUN, 1099-1468.

Number and Gender, 1099-1110.

Case, 1111-1437.

NOMINATIVE, 1113-1123. Nominative of Title, 1114-1116. Of Exclamation, 1117. Vocative Nominative and Vocative Proper, 1118-1123.

ACCUSATIVE, 1124-1174. Of the Object, 1132-1139. Emphasizing or Defining, 1140-1146. Of the Part Concerned, 1147. Of the Thing Put

On, 1148. Of Exclamation, 1149-1150. Of Space and Time, 1151-1156. Of the Aim of Motion, 1157-1166. Two Accusatives Combined, 1167-1174.

DATIVE, 1175-1225. I. The Complementary Dative: (1.) The Essential Complement: With Verbs, 1180-1199. With Adjectives, 1200-1204. (2.) The Optional Complement: Of the person or thing interested, 1205-1210. The Emotional Dative, 1211. The Dative of the Possessor, 1212-1216. Of Relation, 1217-1218. II. The Predicative Dative: Of Tendency or Result, 1219-1222. Of Purpose or Intention, 1223-1225.

GENITIVE, 1226-1295. I. With Substantives: In General, 1227-1231. Of the Subject, Cause, Origin, or Owner, 1232-1238. Of Quality, 1239-1240. Partitive, 1241-1254. Of Definition, 1255-1259. Objective, 1260-1262. II. With Adjectives, 1263-1270. III. With Verbs: Of Valuing, 1271-1275. With refert and interest, 1276-1279. With Judicial Verbs, 1280-1282. With Impersonals of Mental Distress, 1283-1286. WithVerbs of Memory, 1287-1291. Of Participation and Mastery, 1292. Of Fulness and Want, 1293-1294. IV. The Genitive of Exclamation, 1295.

ABLATIVE, 1296-1400. I. The Ablative Proper: Of Separation and Want, and of Departure, 1302-1311. Of Source, Stuff, or Material, 1312-1315. Of Cause, Influence, or Motive, 1316-1319. Of Comparison, 1320-1330. II. The Locative Ablative: The Locative Proper, 1331-1341. The Ablative used as Locative: Of Place in, on, or at which, 1342-1349. Of Time at which or within which, 1350-1355. III. The Instrumental Ablative: (1.) The Ablative of Attendance: Of Accompaniment, 1356-1357. Of Manner, 1358-1361. Ablative Absolute, 1362-1374. Ablative of Quality, 1375. Of the Route Taken, 1376. (2.) The Instrumental Proper: Of Instrument or Means, 1377-1384. Of Specification, 1385. Of Fulness, 1386-1387. Of Measure, Exchange, and Price, 1388-1392. Of the Amount of Difference, 1393-1399. Two or more Ablatives Combined, 1400.

Use of Cases with Prepositions, 1401-1437.

In General, 1401-1400. With the Accusative, 1410-1416. With the Ablative, 1417-1421. With the Accusative or the Ablative, 1422-1425. Combination of Substantives by a Preposition, 1426-1428. Repetition or Omission of a Preposition, 1429-1430. Two Prepositions with one Substantive, 1431-1432. Position of Prepositions, 1433-1437.

Use of Adverbs, 1438-1453.

Use of Degrees of Comparison, 1454-1468.

(B) USE OF THE VERB, 1469-1635.

Voice, 1469-1492. Active, 1469-1471. Passive, 1472-1485. Deponents, 1486-1492.

Mood, 1493-1586.

THE INDICATIVE, 1493-1533. In Declarations, 1493-1498. In Questions, 1499-1533. Yes or No Questions, 1502-1510. Positive and Negative Answers, 1511-1514. Alternative Questions, 1515-1525. Pronoun Questions, 1526-1530. Some Applications of Questions, 1531-1533.

THE INFINITIVE OF INTIMATION, 1534-1539.

Table of Contents.

THE SUBJUNCTIVE, 1540-1570. The Subjunctive in Declarations: 1. Of Desire: Of Wish, 1540-1546. Of Exhortation, Direction, Statement of Propriety, 1547-1552. Of Willingness, Assumption, Concession, 1553. II. Of Action Conceivable, 1554-1562. The Subjunctive in Questions, 1563-1570.

THE IMPERATIVE, 1571-1586. Of Command, 1571-1580. Of Prohibition, 1581-1586.

Tense, 1587-1635.

OF THE INDICATIVE, 1587-1633. Present, 1587-1593. Imperfect, 1594-1601. Perfect, 1602-1613. Pluperfect, 1614-1618. Future, 1619-1625. Future Perfect, 1626-1632. The Future Active Participle with sum, 1633. OF THE SUBJUNCTIVE, 1634-1635.

THE COMPOUND SENTENCE, OR COORDINATION, 1636-1713.

Without a Connective, 1637-1642.

With a Connective, 1643-1692.

Conjunctions, 1643. Copulative, 1644-1666. Disjunctive, 1667-1675. Adversative, 1676-1686. Other Words as Connectives, 1687-1692.

The Intermediate Coordinate Sentence, 1693-1713. The Subordinate Idea unindicated by the Mood, 1695-1704. The Subordinate Idea indicated by the Subjunctive, 1705-1713.

THE COMPLEX SENTENCE, OR SUBORDINATION, 1714-2299.

Definitions and Classifications, 1714-1716. Primary and Secondary Tenses, 1717. Virtual Futures, 1718.

Mood of the Subordinate Sentence, 1720-1731.

The Indicative, 1721. The Subjunctive: In Indirect Discourse, and in cases of Attraction, 1722-1729. Of Repeated Action, 1730. As in the Simple Sentence, 1731.

Tense of the Subordinate Sentence, 1732-1772.

Of the Indicative, 1732-1739. Of the Subjunctive, 1740-1772. Sequence of Tenses, 1745-1772. Tense subordinate to an Indicative, 1746-1761. Tense subordinate to a Subjunctive, 1762-1765. Tense subordinate to a Noun of the Verb, 1766-1769. Subjunctive due to another Subjunctive or to an Infinitive, 1770-1772.

The Indirect Question, 1773-1791. In General, 1773-1774. Yes or No Questions, 1775-1777. Alternative Questions, 1778-1784. Pronoun Questions, 1785. Original Subjunctives, 1786. Indicative Questions apparently Indirect, 1787-1791.

The Relative Sentence, 1792-1837.

Agreement of the Relative, 1801-1811. Moods in the Relative Sentence, 1812-1830. Relative Sentences of Purpose, 1817. Of Characteristic or Result, 1818-1823. Of Cause or Concession, 1824-1830. Correlative Sentences, 1831. Relative Sentences Combined, 1832-1834. The Relative introducing a main Sentence, 1835-1837.

The Conjunctive Particle Sentence, 1838-2122.

Introduced by quod, 1838-1855. quia, 1856-1858. quom or cum, 1859-1881. quoniam, 1882-1884. quotiens, quotienscumque, 1885-1887, quam, 1888-1898. quamquam, 1899-1902. quamvis, 1903-1907. tamquam, 1908-1910. antequam, priusquam, 1911-1922. postquam, ubi, ut, cum primum, simul atque, 1923-1934. ut, 1935-1970. ubl., 1971. quō, 1972-1976. quōminus, 1977-1979. quin, 1980-1990. dum, dōnec, quoad, quamdiü, 1991-2009. quandō, 2010-2014. sl., 2015-2115. etsi, tametsi, etiamsi, 2116. quasi, tamquam si, ut or velut si, 2117-2122.

Connection of Separate Sentences or Periods, 2123-2159. Without a Connective, 2124-2127. With a Connective, 2128-2158. Affirmative Coordination, 2159.

Nouns of the Verb, 2160-2299.

THE INFINITIVE, 2160-2236. Definitions, 2160-2163. The Infinitive of Purpose, 2164-2165. With Adjectives, 2166. The Infinitive as Object: The Complementary Infinitive, 2168-2171. The Accusative with the In-The Infinitive as Subject, 2207-2215. The Infinitive finitive, 2172-2206. of Exclamation, 2216. Tenses of the Infinitive, 2218. Present, 2219-2222. Perfect, 2223-2231. Future, 2232-2236.

THE GERUNDIVE AND GERUND, 2237-2268. Definitions, 2237-2242. Nominative, 2243-2249. Accusative, 2250-2253. Dative, 2254-2257. Genitive, 2258-2264. Ablative, 2265-2268.

THE SUPINE, 2269-2277. Definitions, 2269. Supine in .um, 2270-2273. Supine in -U, 2274-2277.

THE PARTICIPLE, 2278-2299. Definition, 2278. Time of the Participle, 2279-2281. The Attributive Participle, 2282-2286. The Substantive Participle, 2287-2292. The Appositive Participle, 2293-2296. The Predicative Participle, 2297-2299.

APPENDIX, 2300-2745.

Some Occasional Peculiarities of Verbs, 2300-2307.

The Conative Use, 2301-2303. The Causative Use, 2304. The Potential Use, 2305. The Obligatory Use, 2306. The Permissive Use, 2307.

Indirect Discourse, 2308-2334.

Definitions, 2308-2311. Mood, 2312-2320. Tense, 2321-2324. Pronoun, 2325. Conditional Periods in Indirect Discourse, 2326-2334.

Use of Pronouns, 2335-2403.

Index of Latin Words.

LATIN GRAMMAR

I. Latin Grammar has two parts. I. The first part treats of words: (A.) their sound; (B.) their formation; (C.) their inflection. II. The second part shows how words are joined together in sentences.

PART FIRST & WORDS

PARTS OF SPEECH.

- 2. The principal kinds of words or PARTS OF SPEECH are Nouns, Verbs, and Conjunctions.
 - 3. I. Nouns are Substantive or Adjective.
- 4. (A.) NOUNS SUBSTANTIVE, otherwise called Substantives, are divided, as to meaning, into Concrete and Abstract.
- 5. (1.) CONCRETE SUBSTANTIVES denote persons or things. Concrete Substantives are subdivided into *Proper Names*, which denote individual persons or things: as, Cicerō, Cicero: Rōma, Rome; and Common Names, otherwise called Appellatives, which denote one or more of a class: as, homo, man; taurus, bull.
- 6. Appellatives which denote a collection of single things are called Collectives: as, turba, crowd; exercitus, army. Appellatives which denote stuff, quantity, material, things not counted, but having measure or weight, are called Material Substantives: as, vinum, wine; ferrum, iron; faba, horsebeans.
- 7. (2.) ABSTRACT SUBSTANTIVES denote qualities, states, conditions: as, rubor, redness; aequitas, fairness; solitudo, loneliness.
- 8. (B.) Nouns Adjective, otherwise called Adjectives, attached to substantives, describe persons or things: as, ruber, red; aequus, fair; sõlus, alone.
- g. Pronouns are words of universal application which serve as substitutes for nouns.
- Thus, taurus, bull, names, and ruber, red, describes, particular things; but ego, I, is universally applicable to any speaker, and meus, mine, to anything belonging to any speaker.

- 10. ADVERBS are mostly cases of nouns used to denote manner, place, time or degree: as, subitō, suddenly; forās, out of doors; diū, long; valdē, mightily, very.
- II. PREPOSITIONS are adverbs which are used to modify as prefixes the meaning of verbs, or to define more nicely the meaning of cases: as, vocō, I call, evocō, I call out; ex urbe, from town.
- 12. II. VERBS are words which denote action, including existence or condition: as, regit, he guides; est, he is; latet, he is hid.
- 13. III. Conjunctions connect sentences, nouns, or verbs: as, et, and; sed, but.
- 14. Interjections are cries which express feeling, and are not usually a part of the sentence: as, **ā**, ah; heu, alas.
- 15. There is no ARTICLE in Latin: thus, mensa may denote table, a table, or the table.

A. SOUND.

ALPHABET.

16. The sounds of the Latin language are denoted by twenty-one letters.

Character	Name	pronounced	Character	Name	pronounced
A	а	ah	M	em	em
В	be	bay	N	en	en
C	. ce	kay	0	0	0
D	đe	day	P	pe	pay
E	e	ch	Q.	qu	koo
F	cf	ef	R	er	air
G	ge	gay	S	es	ess
H	ha	hah	T	te	tay
1	i	ee	V	u	00
K	ka	kah	X	ix	eex
L	el	el			

The sound indicated by -ay above, as 'bay,' is only approximate; the true sound is that of the French & in file; see 36.

17. The Latin alphabet, which originally consisted of capitals only, was, with the exception of G, borrowed from the Greeks of Cumae, but the letters were called by a new set of names. The letter C (first written $\langle \cdot \rangle$) and K had originally the sound of the Greek Γ and K. Afterwards K dropped out of general use, and the sign C stood for both sounds. But as this proved inconvenient, a new character, G, was formed by adding a stroke to the C. This was used for the old $\langle \cdot \rangle$, while C kept the k sound only. Occasionally q is written for c: as, pequina for pecunia, swoney; qum for cum, with.

- 18. K and the old-fashioned character for G, namely C, were kept in abbreviations: as, K., for kalendae, calends; C., for Gāius; O., for Gāia; Cn. for Gnaeus.
- 19. In Cicero's time two other letters were already in use in Greek words; these were always called by their Greek names, and were placed at the end of the alphabet; they are Y, named \ddot{u} (35), and Z, named zëta.
- 20. Before the introduction of these letters, u was used for the Greek Y: as Burrus, later Pyrrhus; and s, or, as a medial, ss, for Z: as, sona, belt, later zona; malacisso, I soften.
- 21. The characters I and V represent not only the two vowels i and u, but also their cognate consonants, named consonant i and consonant u, and equivalent to the English y and w respectively.
- 22. The consonant i was sometimes represented by a taller letter, especially in the imperial age: as, MAIOR, greater; or a double i was written: as, EIIVS, of him; Gräiugenārum, of Greek-born men (Lucx.); āiiō, I say; Māiia (Cic.). Sometimes the two designations were confounded, a double i being written, and one or the other letter made taller: as, EIIVS or EIIVS.
- 23. In schoolbooks and most texts of the authors, the vowel u is printed U, u, and the consonant V, v. A character, J, j, was introduced in the 17th century, to indicate the consonant i. But this character is no longer usual in editions of the authors, and will probably soon disappear from schoolbooks.
- 24. The distinction between u and v is not always made very consistently: q has regularly, and g and s have sometimes, an aftersound of w, best represented by v; but the usual practice is to write u, as in the following disyllables: quōrum, of whom; anguis, snate; suāvis, sneet.
- 25. The alphabet represents a series of sounds, ranging from the fullest vowel sound a, to a mere explosion, as, c, t, or p. These sounds are roughly divided into vowels and consonants.

VOWELS.

- 26. The vowels, a, e, i, o, u (y), are either *long* or *short*. The sound of a long vowel is considered to be twice the length of that of a short.
- 27. The same characters are ordinarily used to denote both long and short vowels. But at different periods long vowels were often indicated in inscriptions thus:
- 28. (1.) From 134 B.C. to 74 B.C., long a, e, or u was sometimes doubled: as, AARA, altar; PAASTORES, shepherds; LEEGE, by law; IVVS, right.
- 29. (2.) Long i was often denoted (a.) From 134 B.C. on, by the spelling ei: as, DAREI, be gruen; REDIEIT, has come back; INTERIEISTI, hast died. (b.) From 88 B.C. on, by a taller letter ('i longa'): as, HIC, this; FIXA, fastened. But 'i longa' is often used for initial consonant i, or for decorative purposes.
- 30. (3.) From 63 B.C. on, a mark called an apex (JJJ) was often put over a long vowel: as, FĒCIT, made; HORTĒNSIVS; DVĪMVIRATVS, duumvirate. The apex was written ' in the imperial age, and was turned by the grammarians into the horizontal mark -, still in use.

31. In schoolbooks, a long vowel is indicated by a horizontal line over it: as, ara, altar; mēnsis, month; ordo, series. A short vowel is sometimes indicated by a curved mark: as, per, through; dux, leader; but this mark is unnecessary if long vowels are systematically marked. A long vowel which is sometimes shortened in pronunciation is called common, and is marked : as, mini, to me.

PRONUNCIATION OF VOWELS.

- 32. The sound of a vowel is the same as its name.
- 33. The long vowels are pronounced thus: **ā** as in *father*; **ē** as ℓ in the French *fēte*; **ī** as in *machine*; **ō** nearly as in *tone*; **ū** as in *rule*.
- **34.** The short vowels have the same sounds, shortened: **a** as in the first syllable of *papa*; **e** nearly as in *step*; **i** as in *pit*, but with a little more of an *ee* sound; **o** as in *obey*; **u** as in *pull*.
- 35. The sound of y (short or long) is intermediate between u and i, like the French u or German ii. Short u also before b, p, m, or f, passed into this sound, and then into i: as, lacruma, lacrima, tear; optumus, optimus, best.
- 36. The names of the English letters a and o are a pretty close approximation to the Latin sounds e and o. But the English a and o are both diphthongs, a having a vanishing sound of ee (not heard in the \hat{e} of f2te), and o of oo, while the Latin e or o has one sustained sound.

CLASSIFICATION OF VOWELS.

- 37. Vowels are divided into open, otherwise called strong, and close, otherwise called weak. The most open vowel is a, \bar{a} ; less open are o, \bar{o} , and e, \bar{e} . The close vowels are u, \bar{u} (y, \bar{y}), and i, \bar{i} .
- 38. a is uttered from the expanded throat; u is labial, made by narrowing and rounding the lips, and i is palatal. o stands between a and u; e between a and i; and y between u and i.

DIPHTHONGS.

- 39. The combined sound of an open vowel and a closer one is called a *Diphthong*. All diphthongs are long.
- **40.** In their origin diphthongs are of two kinds: (a.) root diphthongs: as in **foedus**, *treaty*; **aurum**, *gold*; or (b.) the result of vowels meeting in formation, composition, or inflection: see 99.

41. The common diphthongs are au, ae, and oe. Uncommon diphthongs are ui, formed by the union of two close vowels, and eu; also the following, which are chiefly confined to old inscriptions: ai, ei, ou, oi.

PRONUNCIATION OF DIPHTHONGS.

- 42. The common diphthongs are pronounced thus: au like ou in house; ae like ay or ai in ay, aisle; oe like oi in spoil.
- 43. The uncommon diphthongs are pronounced thus: ui like oo-ee, eu like eh-oo, and ai like ah-ee, all rapidly uttered; ei as in eight; ou like oh-oo, and oi like oh-ee, both rapidly uttered.

CONSONANTS.

PRONUNCIATION OF CONSONANTS.

- 44. Most of the consonants are pronounced as in English. The following points must be noticed:
- 45. b before s or t has the sound of p: as, abs, pronounced aps; obtero, pronounced optero. c is always like k. g as in garden, gate, give; never as in gentle. j has the sound of the English consonant y.
- 46. m at the end of a word is hardly sounded, and in verse when it comes before a vowel usually disappears with the preceding vowel. n before c, g, q, or x, called 'n adulter inum' or 's purious n,' has a guttural sound, thus: nc as in uncle; ng as in angle, ngu as in sanguine; nqu as nkw in inknoiper; nx as in lynx. qu is like the English qu (24).
- 47. s as in sin, not with the sound of z, as in ease. Care should also be taken not to sound final s as z. In old Latin final s has a weak sound, and often drops off. su, when it makes one syllable with the following vowel, is like sw in sweet (24). t sounds always as in time, never as in nation. v is like the English w. x is a double consonant, standing for cs, and so sounded; never as gs or gz.
- 48. When consonants are doubled, each consonant is distinctly sounded: thus, terra, earth, sounded terra, not 'terra;' an-nus, year, not 'an-us.' But II does not differ very materially from 1. Consonants were not doubled in writing till after 200 B.C., and for more than a century after the usage is variable; but it must not be inferred that they were pronounced as single consonants.
- 49. About 100 B.C. the combinations ch, ph, and th were introduced in Greek words to represent χ , ϕ , and θ ; as Philippus, for the older Pilipos. Somewhat later these combinations were in general use in some Latin words: as, pulcher, triumphus, Cethēgus. ch is thought to have been pronounced like kh in blockhead, ph as in uphill, and th as in hothouse. But in practice ch is usually sounded as in the German machen or ich, ph as in graphic, and th as in pathos.

CLASSIFICATION OF CONSONANTS.

50. Consonants may be classed in three ways, thus:

- 51. (1.) In respect of continuity of sound: consonants which admit prolongation are called *Continuous sounds*: as, 1, m, s; those which do not are called *Momentary sounds*, *Mutes*, or *Explosives*: as, t, p.
- 52. (2.) In respect of intonation: consonants which have resonance are called *Sonants*: as, m, b; consonants which are mere puffs without resonance are called *Surds*: as, c, t, p.
- 53. (3.) In respect of the organs of voice chiefly employed: consonants are divided into *Guttural*, or throat sounds, as, g, c; *Lingual*, or tongue sounds, as, 1, d; and *Labial*, or lip sounds, as, m, b. 1 is *Palatal* and f *Labiodental*.

54. The threefold classification is shown in the following table:

	Cont	inuous Sou	Momentary, or		
Name from Vocal Organs.	· Son	ant.	Surd.	Mutes.	
v com o.g	Semivowel.	Nasal.	Spirant.	Sonant.	Surd.
Guttural.		n adul- terinum	h	g	c, q, k
Palatal.	i				
Lingual.	1, r	n	S	đ	t
Labiodental.			f		
Labial.	v	m		b	p

CHANGE OF SOUND.

VOWEL CHANGE.

LENGTHENING.

55. When a consonant disappears, its time is sometimes absorbed by a preceding short vowel, which thereby becomes long. This is called *Compensation*: as,

Sextius, Sēstius; *sexcentī, sēscentī, six hundred; sexdecim, sēdecim, sixteen (134); ex, ē, out of (142); *magior, māior, greater (135); *abiets, abiēs, fir (137). Very often however the vowel is not affected.

56. In noun stems in -o- the stem vowel is lengthened in the genitive plural -ōrum: as, servōrum, of slaves.

SHORTENING.

57. A vowel originally long is regularly shortened before another vowel, and often also in the last syllable of a word of more than one syllable: as,

fui, I have been, fieri, become, Lūcius; N. aquila, eagle; for the older fūi, fieri, Lūcius; N. aquilā.

- 58. Exceptional examples are found in old Latin of a vowel preserved long before a vowel: as, fidēi; āis; clūeat (Plaut.); adnūit (Enn.); FVVBIT (inscr., 28); fūit, fūimus (Plaut.). For such vowels regularly long, see 159.
- 59. In certain specific endings, a vowel which was originally long is regularly short in the classical period: as in,
- (a.) Noun endings: -a in the nominative of -ā- stems, and in the nominative and accusative plural neuter; -e in the ablative of consonant stems, and in the ending of the present infinitive active; nominatives in -or, neuter comparatives in -us, and the dative and ablative plural suffix -bus.
- (b.) Verb endings: the singular in -m and -t, before -nt or -nd, and -or and -ar in the passive.
- **60.** In a few pyrrhic words (--) in -1, which were originally iambic (--), the poets in all periods retained final -1 at pleasure: these are.
- mihī, tibī, sibī; ibī, ubī; also alicubī. The i of bi is always short in nēcubi and sīcubi, and usually in ubinam, ubivīs and ubicumque; ibidem is used by the dramatists, ibīdem in hexameter. ubīque has always I.
- 61. In old dramatic verse iambic words (...) often shorten the long vowel. The poets after Plautus and Terence preserve the long vowel.
- (a.) Nouns: G. eri, boni, preti. D. cani, ero, malo. L. domi, heri; uti. Ab. levi, manu, domo, bona, fide. Plural: N. fores, viri. D., Ab. bonis. Ac. foris, viros, bonas. (b.) Verbs: eo, volo, ago; ero, dabo; vides; loces; voles; dedi, dedin; roga, veni; later poets sometimes retain cave, vale, and vide. The vowel may also be shortened when n (1503) is added and s is dropped before n: rogan, abin; viden is also retained by later poets.
- 62. A vowel not of the last syllable is shortened in some words before a consonant: as, glomus (Luc.), glomus (Ho.); coturnix (Plaut., Lucr.), coturnix (Ov.); dēfrūtum (Plaut.), dēfrutum (Verg.). calēfacio, calefacio (394); stetērunt, steterunt (857); ēgerīmus, ēgerimus (876).

Preservation of Long Vowels in Old Latin.

63. Examples of the preservation of a long vowel in certain specific endings occur in old Latin. In classical Latin also the long vowels are sometimes preserved, but usually only before the caesura or other strong pause in the verse.

- **64.** (1.) In the final syllable of nouns a long vowel is sometimes preserved as follows:
- 65. Final -ā is sometimes preserved long in: (a.) The nominative singular of -ā-stems: as, familiā (Plaut.), aquilā (Enn.). (b.) The nominative and accusative plural neuter: as, oppidā, cēterā, omniā (Plaut.). Final -ō is sometimes preserved long in the adverbs citō and modō, which have usually -ō (2442). Final -ē is sometimes preserved long in: (a.) The ablative of consonant stems as, ōrdinē, dōtē (Plaut.), parietē (Enn.), temporē (Ter.). (b.) The present infinitive active: as, darē, promerē; in fierī the ending always remained -ī.
- 66. Final -ōr is sometimes preserved long in the nominative singular: as, clāmōr (Enn.); sorōr, uxōr; exercitōr, gubernātōr; stultiōr, longiōr (Plaut.).
- 67. Final -ūs in the neuter of comparatives is rare: as, longiūs (Plaut.); also in the dative and ablative plural suffix -būs: as, capitibūs (Naev.), aedibūs (Plaut.).
- **68.** (2.) A long vowel is sometimes preserved before -t in the third person singular active, or before -r in the first person singular passive of the verb: as,
- (a.) Before -t: -īt: indicative present of verbs in -īre: as, eit or īt, scīt (Plaut.); tinnīt (Enn.); rarely in that of verbs in -ere: as, percipīt, aīt (Plaut.), ponīt, nīctīt (Enn.); contemnīt (Lucil.); future: erīt, vēnībīt (Plaut.); perect: vēndidīt (Plaut.); perveit. Subjunctive present: sīt, possīt, velīt, (Plaut.); perfect: addūxerīt (Plaut.). -āt: indicative present: as, amāt, arāt, addīctāt (Plaut.); mānāt (Enn.), DECORAAT (inscr., 28), gemināt (Lucil.); imperfect: ponēbāt (Enn.). Subjunctive present: fuāt, praetereāt, sciāt (Plaut.), augeāt (Ter.). -ēt: indicative present: facēt (Plaut.). Subjunctive present: dēt, negēt (Plaut.); imperfect and pluperfect: essēt, fuissēt (Enn.).
- (b.) Before -r: morðr; loquār, opprimār (Plaut.); rarely -or in the future: as, fatëbor (Plaut.).

WEAKENING.

69. A stronger vowel sound often sinks to a weaker one.

- 70. The weakening is sometimes a gradual process: thus, in old Latin an o often occurs where in later Latin an u is found: as, flovios, pōcolom, later flurius, river, pōculum, cup; but it often occurs in formation, composition, or inflection, particularly when a syllable is prefixed or when the accent is shifted from its original place. Any vowel may sink to i, the weakest vowel. The particular sound at which the weakening is arrested is usually determined by the affinity of the vowel for the following consonant: see 106.
- 71. At the end of a word e is a favourite sound, taking the place not only of o, but of the weaker i: as, V. *servo, serve, thou slave; magis, mage, more; N. and Ac., *mari, mare, sea; *turpi, turpe, base.
- 72. (1.) WEAKENING OF a. a to u: salsus, salted, insulsus, unsalted; taberna, hut, contubernium, living together.
- 73. a to e: parō, I get ready, imperō, I command; *peparī, peperī, I brought forth; *fefallī, fefellī, I deceived; carpō, I pluck, discerpō, I tear apart; ars, art, iners, unskilful; factus, made, perfectus, finished. ā to ē rarely: hālō, I breathe, anhēlō, I gasp up, pant.

- 74. a to i: tangō, I touch, contingō, I take hold of; *tetagī, tetigī, I touched; canō, I sing, concinō, I sing with; *cecanī, cecinī, I sang; faciō, I make, perficiō, I finish; pater, Jather, Iuppiter, Heavenly Father, Jove the Father; *pepagī, pepigī, I agreed. ā to i: herbā, grass, herbidus, grassy; tubā-, trumpet, tubicen, trumpeter.
- 75. (2.) WEAKENING OF O. o to u: toll, tuli, I carried; *pepoli, pepuli, I pushed; TABOLA, tabula, board; *hortolus, hortulus, little garden; opos, opus, work; melios, melius, batter; COSENTIONT, COSSENTIONT, to onsentium, they agree. O was long retained in many words after u, v, or qu, but sank to u about Augustus's time, or later: servos, servom, servus, servum, state: volt, vult, he wishes; vivont, vivunt, they live; sequontur, secuntr, they follow (112). O to u: quor, cur, why; hoc, huc, hither; illoc, illuc, thither.
- 76. o to e: bonus, good, bellus, pretty; *piotas, pietas, dutifulness (105); *istos, iste, that; *servo, serve, thou slave (71).
- 77. 0 to i: *cardonis, cardinis, of a hinge; *cārotās, cāritās, dearness; *tūnocus, tīnicus, only: *aēnopēs, aēnipēs, bronzefoot.
- 78. (3.) WEAKENING OF u. u to i: optumus, optimus, best; lubet, libet, it pleases; artubus, artibus, with joints; quaesumus, quaerimus, we ask; egcludus, gelidus, cold.
- 79. (4.) WEAKENING OF e. e to i: teneo, I hold, contineo, I hold together; ille, that, illic, that there. E to i: *sēmicaput, sīnciput, jole.

DIPHTHONG DECAY.

- 80. Of the six original diphthongs au, ou, eu, and ai, oi, ei, the only one which preserved its original sound in the classical period is au. ou, ai, oi and ei passed away about 130 to 90 B.C.
- 81. CHANGE OF au. Though au is usually preserved, in some words a and u converged to 5: as, caudex, block, codex, book; fauces, throat, focale, neck-doth; particularly in the pronunciation of the vulgar: as, caupo, copo, inn-keeper; plaustrum, plostrum (barge), cart; Claudius, Clodius. In a few words au passed into u: as, claudo, cludo, I shut.
- 82. Change of ou. ou, found in inscriptions down to about 90 B.C., usually passed into \$\tilde{u}\$: as, povelicom, nountiata, iovservnt, later publicum, \$\theta \text{ublic}, \text{mintiata}, notified, i\tilde{u}\sets\text{erunt}, they ordered; sometimes into \$\tilde{o}\$: as, nounae, nones; *moutus, motus, moved.
- 83. CHANGE OF eu. eu occurs in Leucësius, later Lūcëtius. Otherwise eu has disappeared in root syllables, and is found only in a few compounds (40): neuter, neither, neu, nor, seu, whether, and ceu, as; in the interjections heu, eheu, or ëheu, alas; and in Greek words.
- 84. CHANGE OF ai, ac. ai is common in inscriptions; about 130 to 100 B.C. it was displaced by ac in public documents and literature; but the old-fashioned ai was often retained in private inscriptions.
- 85. The diphthong ae sank very slowly indeed to the sound of simple E. In provincial Latin E is found as early as 200 B.C.: as, CESVLA for CAESVLLA (inscr.); in Rome itself before 100 B.C. the pronunciation 'Cēcilius' for Caecilius, and 'prētor' for praetor is derided as boorish; but by 71 A.D. ae was verging toward E even in the court language: the coins of Vespasian have IVDEA as well as IVDAEA. In the 3d and 4th century A.D. E became the prevalent sound.

ı *

- 86. ai, ae is weakened in composition and inflection to ei, then to I: as, caedō, / cut, inceidō, incidō, / cut in, cecidī, / have cut; aequos, fair, iniquos, unfair; *viais, viels, viis, by ways. In the present subjunctive and future indicative, al becomes ē: as *daimus, dēmus, lat us give (839, 840); *regaimus, regēmus, we shall guide (852).
- 87. CHANGE OF 01, 0e. 01 passed about 130 B.C. into 0e, sometimes into 0, as FOIDERATEI, OINO, later foederātī, in treaty, ūnum, one. Similarly in compounds: providēns, prūdēns, foresseing. 01, 0e sometimes passed into ei, which in its turn became 1: as, LOEBERTAS, LEIBERTAS, libertās, freedom. Also in inflection: as, *locois, Loceis, locis, in places. In non, not, for noenum, it became 5. 01 passed into ui in huic, to this, and cui, to whom (cuique, cuiquam, &c.), for the older hoic and quoi (quoique, &c.).
- 88. Change of ei. ei as a genuine diphthong is common in old inscriptions, especially in inflection; it was afterwards weakened to I: as, Delxerynt, yelksit, later dixetrunt, they said, vixit, he lived; viels, viis, by ways (86); virel, viri, men; donis, by gifts (87). For ei as an indication of I, see 29.

DEVELOPMENT.

- 89. A short vowel sometimes grows up before a continuous sound, r, or m. This is sometimes called *Insertion*.
- *imbr, imber, shower; *ācr, ācer, sharp; *celebr, celeber, thronged; *agr, ager, field; agro-, *agerulus, agellus, little field. *smus, sumus, we are.
- 90. When Greek words are used in old Latin, a short vowel grows up between c and l, c and m, and c or m and n: as, Patricoles for Patroclus (107); Aesculäpius (108); Tecumēssa, Alcumēna, drachuma, drachuma (108); techina, trick; mina, mina, guminasium, gymnasium (111).

DISAPPEARANCE.

- gI. A short vowel sometimes disappears, particularly when its sound is absorbed in that of a continuous consonant.
- 92. (1.) INITIAL DISAPPEARANCE. Initial short e is lost before s in sum for esum. Initial loss is sometimes called Aphaeresis.
- 93. (2.) MEDIAL DISAPPEARANCE. Medial short e sometimes disappears before r, and medial short u before l. Medial absorption is sometimes called Syncope.
- inferā, infrā, below; dextera, dextra, right; asperīs, asprīs, rough; discipulīna, disciplīna, training.
- 94. Medial short i sometimes disappears between 1, r, or s, and a following d or t: as,
- validē, valdē, mightily; solidum, soldum, sum total; pueritia, puertia, boyhood; *liberitās, libertās, freedom. Occasionally between other consonants: as, audāciter, audācter, boldly.
- 95. Medial short e, u, or i disappears in many compounds, even in the root syllable: as,

*repepuli, reppuli, I pushed back (858); *manuceps, manceps, contractor: *primiceps, princeps, first; pūrigō, pūrgō, I clean; positus, postus, placed: surrigō, surgō, I rise.

96. (3.) FINAL DISAPPEARANCE. A final vowel disappears in some classes of words. The loss of a final vowel is sometimes called *Apocope*.

*pueros, puer, boy (142); puere, puer, thou boy; animale, animal, breathing thing; poste, post, after. Also e in the imperatives dic, say, duc, lead, and fac, do; in the enclitics -ce, -ne, not, and -ne interrogative: *sei-ce, so; hice, hic, this; *quine, quin, why not; habesne, haben, hast thou.

HIATUS. CONTRACTION. ELISION.

- 97. A succession of two vowel sounds not making a diphthong is called *Hiatus*. Hiatus in a word is often due to the loss of a consonant. It is common when the first vowel is **u**, **i**, or **e**; but in general it is avoided: (A.) by contraction; or (B.) by elision.
- 98. (A.) CONTRACTION. Two successive vowels in a word often combine and form a diphthong or a long vowel. This is called *Contraction*.
- 99. (1.) When the first vowel is open and the second close, they often unite in a diphthong: as,

*Gnā-īvos, Gnaivos, Gnaeus; *co-epiō, coepiō, I begin, co-ēpī (Lucr.), coepī, I began; rē-ice, reice, drive back; pro-inde, proinde, so; ne uter, neuter, neither; V. S. and N. Pl. Pompēī, Pompei; G. S. and N. Pl. familiā-ī, familiai, familiae, of a household, households; D. S. ēī, ei, to him; ais, ain, ait, aibam, thou sayest, &c.

100. (2.) Two like successive vowels unite in one long vowel: as, Phraātēs, Phrates; *proolēs, prolēs, of spring; non volo, nolo, / won't; *nehemo, nemo, nobody; consilii, consili, of counsel; perit, perit, he passed away; *tībiicen, tībicen, piper; but generally if two i's are short, one is dropped (102).

101. (3.) Two unlike successive vowels, unless they form a diphthong (99), usually unite in the long sound of the first: as,

māvolō, mālō, / wish rather; locāvērunt, locāverimt; locāverim, locārim; locāvisti, locāsti; locāvisse, locāsse, they placed, &c.; coalēscō,
cōlēscō, / grow together; nōvērunt, nōrunt; nōverim, nōrim; nōvisse,
nōsse, they know, &c.; metui, metū, for fear; dēlēvistī, dēlēstī, hast destroyed; dehibeō, dēbeō, / owe; siveris, sīrīs, thou mayst let. Similarly
when the first sound is a diphthong: praehibeō, praebeō, / furnish. Two
unlike successive vowels rarely unite in the long sound of the second: as, *locaō,
locō, / place.

102. (B.) ELISION. Of two successive vowels in a word the first is sometimes dropped. This is called *Elision*.

*ne-ullus, nullus, no: seorsum, sorsum, apart; *minior, *minius, minor, minus, less; *capiis, capis, thou takest. A stem vowel usually disappears before a suffix beginning with a vowel: as, formā, shape, formōsus for *formōsus, shapely (74); optā, choose, optiō, choice. In verse the vowel is sometimes retained in writing and dropped in pronunciation only: ne utiquam, pronounced 'nutiquam;' oriundus, 'orundus' (Lucr.).

ASSIMILATION.

103. Of two vowels separated by a consonant, the first sometimes becomes the same as the second.

Assimilation occurs oftenest when an 1 comes between (o) u and i: as, *famolia, Famelia (inscr.), commonly familia, family: *consulium, consilium, counsel; *Caeculius, Caecilius; *Siculia, Sicilia. Rarely in other combinations: as, *nehil, nihil, naught; *secors, senseless.

104. Of two vowels in immediate succession, the first is sometimes partially assimilated to the second: as, *ia, ea, she; or the second to the first: as, luxuria, luxuries, extravagance.

DISSIMILATION.

105. The repetition of a vowel without an intervening consonant is usually avoided.

Thus, while adsiduo- becomes adsidui- in adsiduitās, constancy, pio-becomes pie- in pietās, dutifulness; rogitāre, keep asking, but hietāre, keep yawning; from dīvo-, dīvīnus, divine, but from alio-, aliēnus, dienus, drients, 'FILIEI, consili, rather than filli, sons, consili, of counsel; vacuos, to Augustus's time, or later, rather than vacuus, emply: ruont, they rush, fluctuom, of waves (Plaut.). Similarly while o becomes u in hortulus, little garden (horto-), it is retained in filiolus, little son (filio-).

VOWELS AND CONSONANTS COMBINED.

ASSIMILATION.

- 106. Certain vowels, particularly short vowels, are apt to come before certain consonants.
- 107. (1.) AFFINITIES OF 0. 0 is apt to come before v; and, particularly in old Latin, before 1, sometimes before m.
- (a.) FLOVO, later fluo, I flow; *sevos, sovos, suus, his. Sometimes also atter v: as, verto, vorto, I turn; old vocivos, voto, later vacuos, empty, veto, I forbid. (b.) CONSOL, TABOLA, POCOLOM, later consul, consul, tabula, board, poculum, cup.
- 108. (2.) AFFINITIES OF u. u is apt to come before 1 and a vowel, or 1 with another consonant not 1; also before b, p, m, and, in old Latin, f.
- (a.) consulo, I deliberate; tabula, board (107). (b.) facilitas, facultas, ability; cultus, tilled; pulsus, driven. (c.) alumnus, foster-child; tegumen, covering; māxumus, later māximus, greatest; volumus, we wish; quaesumus, we ask. (d.) carnufex, later carnifex, executioner; sacrufico, sacrifico, I sacrifice; manufestus, palpable.
- 109. O, or u for O, sometimes comes before consonants with which it has no affinity: as, eboris, of ivory, ebur, ivory; fore, to be going to be; particularly before the plural person ending -nt of the verb: as, COSENTIONT, they agree, PROBA-VERONT, they approved; regunt, they guide.

- 110. (3.) AFFINITIES OF e. e is apt to come before r and a vowel, and before 11; often also before two consonants (except ng), or before a single consonant, especially a nasal, ending a word.
- (a.) operis, of work; regeris; regerem; rexerim, rexeram, rexero; rexerunt, art guided, &c. (b.) pello, I drive; velle, to wish; asellus, donkey. (c.) biceps, two-headed (caput): agmen, train; caespes, sod.
- III. (4.) Affinities of i i is apt to come before n and a vowel, before n adulterinum, and before d and t
- (a.) pagina, page; agminis, of a train; homonis, hominis, of a man; contingo, I touch; quinque, five. (b.) vividus, lively; regitis, you guide; fremitus, a roar.

DISSIMILATION.

112. quu, vu, and consonant i followed by vowel i are avoided.

Thus quom, servos, servom, rather than cum, when, servos, servom, slave, to Augustus's time, or later (cf. 105); sequontur, secuntur, rather than 'sequentur,' they follow: Graiugena, not 'Graiugena;' Gaï, plēbēi, elebeian, Pompēis, Baïs, not Gaï, plēbēi, Pompēis, Baïs, iaciō, I throw, in compounds becomes first-ieciō, then-iciō. But consonant i, though not written, was long pronounced in -icio.

INTERCHANGE OF VOWELS AND CONSONANTS.

- 113. The vowels i and u sometimes turn into their cognate consonants i and v respectively; consonants i and v less frequently become vowel i and u.
- (a.) *magior, māior, greater; *agiō, āiō, I say; *hoios, hūius, of this. lārua, lārva, goblin; mīluos, mīlvos, kite; *lauō, lavō, I bathe; *locāuī, locāvī, I placed. (b.) *etiam, etiam, even; *quomiam, quoniam, seeing that; *nunciam, nunciam, now. *avispex, auspex, diviner; volvo, I wrap, invölücrum, wrapper.

CHANGE. CONSONANT

SUBSTITUTION.

- 114. In some instances one consonant takes the place of another.
- 115. I in some words arises from d: odor, a smell, oleo, I smell; dingua. lingua, tongue. In others from r: stratus, stlatus, latus, broad.
- 116. The lingual sonant r often arises from the lingual surd s, especially between two vowels: as,
- Papisius, Papirius; lasēs, larēs, larēs; *genesis, generis, of a race; quaesō, quaerō, / ask; *esam, eram, / was; *esō, erō, / shall be; *gesō, gerō, / bear; *haeseō, haereō, / stick. Rarely before a consonant: dius-, diurnus, of the day. Medial s, however, between two vowels is always preserved when it begins the second part of a compound: as, dēsinō, / leave off. Final reportations arises from sizes arbos earbos who well melios better sometimes arises from s: as, arbos, arbor, tree; old melios, common melior, better.

- 117. h in most words is a weakened sound of an older sonant aspirate: as, trahō, I drag, vehō, I carry, for *traghō, *veghō.
- 118. Initial b sometimes comes from v, before which a d has disappeared (125): as, dvonos, bonus, good; dvellum, bellum, war; Dvellona, Bellona; and in many compounds of duo: as, biennium, two years. Medial b sometimes comes from f: as, rüfus, ruber, red. b final in ab, ob, sub, comes from p.
- 119. g in many words arises from an older c: as, *necōtium, negōtium, business; clueō, l am named, glōria, renown; and d from t: as, aput, apud, with.

DEVELOPMENT.

- 120. p grows up in a few words between m and s, and m and t: as, compsi, I decked, comptus, decked; sumpsi, I took, sumptus, taken; emptus, bought; contempsi, I scorned, contemptus, scorned; hiem-, hiemps, winter.
- 121. As n often vanishes before s (131), so conversely an n sometimes grows up in old Latin between a long vowel and s: as, thēnsaurus, later thēsaurus, hoard; Onēnsimus for Onēsimus. The nominative singular, cōniūnx, spouse, has an n after the u (following the analogy of the second n in cōniungō, I join), which is not found in the other cases.

DISAPPEARANCE.

122. A consonant sometimes disappears, especially in a combination of sounds which is hard to utter.

Disappearance of an initial consonant is sometimes called *Aphaeresis*, of a medial, *Syncope*, of a final, *Apocope*. In many instances a whole syllable disappears.

- 123. (t.) INITIAL DISAPPEARANCE. Initial s is sometimes dropped in formation, as in the second of these pairs of kindred words: spolium, plunder, populor, I strip; sterno, I spread, torus, couch. In lis, latus and locus for stlis, strife, stlatus, wide, and stlocus, place, st is lost.
- 124. Initial g is lost before n in a few words: gnātus, later nātus, son; gnōscō, later nōscō, I find out; gnāvus, nāvus, active. Initial c of clāmō, I howl, is lost in the kindred lāmenta, weeping and walling. Initial qu or c is lost in some derivatives from the stem quo-(681); "quobl, "cubl, ubl, where; "quotī, utī, or ut, how, as; "quonde, unde, whence: "quoter, uter, which of the two; but in compounds c is preserved: as, sī-cubi, if anywhere, sī-cunde, if from any place, nē-cubi, lest anywhere, nē-cunde, lest from anywhere.
- 125. Initial d is sometimes lost, as in Diovis, Iovis, of Jupiter; see also 118. Initial t has vanished in *tlatus, latus, borne (917).
- 126. (2) MEDIAL DISAPPEARANCE. In many cases a medial consonant is dropped together with the following vowel, to avoid a stuttering sound. This occurs oftenest in formation or composition: as,

*calami-tā-tōsus, calamitōsus, full of disaster; *cōnsuē-ti-tūdō, cōnsuētūdō, custom; *patrō-ni-cinium, patrōcinium, advocacy. *sti-pi-pendium, stīpendium, pay; *venē-ni-ficus, venēficus, poisoner.

127. Medial consonants of various kinds are further dropped as follows:

- 128. Medial consonant i is dropped in the old PLOVS, common plūs, for ploius, more; cūnctus for coiunctus, all, entire; bigae for biiugae, chariot and pair.
- 129. Medial v is often dropped: as, Gnaivos, Gnaeus; Gāvius, Gāius; dīvos, dius, god, godly, deus, god (104); audit, audiērunt, &c., he heard, &c. (893). Contraction often ensues: as, divitior, dītior, richer; acetias, aetās, age; particularly in tenses formed from perfect stems in -vI-: see 890 and 893.
- 130. Medial r often vanishes: 25, *provorsa, prosa, prose; *torstus, tostus, parched; *porsco, posco, I demand; *mulierbris, muliebris, of a woman; *periero, peiero, I forswear myself.
- 131. Medial m or n is sometimes lost: as, *septemnī, septēnī, seven every time; so co- for com-: cohortor, I exhort, conecto, I tie together, cognosco, I learn; and i- for in- before gn: ignosco, I pardon. n is especially apt to vanish before s: cosol, consul, Cesor, censor (inser.); *sanguins, sanguis, blood.
- 132. Medial h sometimes vanishes: as, ahēneus, aēneus, of bronze, *ahes, aes, bronze; mihī, mī, for me; also in compounds: nihil, nīl, naught; praehiebē, praebeō, I furnish; *praehidium, praedium, holding, estate; *praehida, praeda, booty; *mehemō, nēmō, nobody.
- 133. Medial s is very often dropped before n of the interrogative -ne (or -n): as, satisne, satin, enough? vidēsne, viden, seest thou? (urthermore in *ahesneus, ahēneus, of bronze: *posinō, *posnō, pōnō, I put. Before other consonants also: as, *iūsdex, iūdex, juror; tredecim, thirteen: spopondī, I promised; stetī, I stood, stitī, I set (859). Often before another s: missī, mīsī, I sent; dīvīssiō, dīvīsiō, division. Sometimes after x: exspectō, expectō, I await.
- 134. Medial x sometimes loses its c: as, *sexcentī, sēscentī, six hundred; Sextius, Sēstius; similarly discō, I learn, misceō, I mix (834); sometimes its sin ex-: as, ecferō, I carry out. Sometimes x disappears entirely: sexdecim, sēdecim, sixten; *texla, tēla, web.
- 135. Medial g, c, or q is dropped before many consonants, especially in formation: as, *magior, maior, greater; *agiō, āiō, / say; *nigvis, nivis, of snow; *bregvis, brevis, short; *lücmen, lümen, light; *lügmor, limor, moisture; *lücna, lüna, moon; Quinctus, Quintus; *figbula, fibula, ouch.
- 136. Medial c is regularly dropped between 1 and s, 1 and t, r and s, and r and t: as,
- mulsī, I stroked, milked; sparsus, scattered; artus, confined; sarsī, I patched; sartus, patched; see 868, 909, 911. C is rarely retained: as, mulctra, milkpail.
- 137. Medial d and t, unless assimilated (145), are regularly dropped before s: as, *virtūts, virtūs, manhood; *sentsī, sēnsī, I perceived; *vertsus, versus, turned. Sometimes assimilation and loss occur in the same word: as, ēssus, ēsus, eaten; dīvīssīo, dīvīsio, dīvision. In the nominative of noun stems in i, the i of the stem usually vanishes with a preceding d or t: as, *frondis, frons, leaf; *frontis, frons, forelead.
- 138. Medial d vanishes occasionally before other consonants: as, *cordculum, corculum, heart of hearts; *caedmentum, caementum, rubble-stone; *fidnis, finis, boundary; *suādvis, suāvis, sueet; *hodce, hōc, this here. Medial t vanishes in *salūtber, salūber, healthful.
- 139. (3.) FINAL DISAPPEARANCE. A word never ends in a doubled consonant.

Hence, nominative far for *farr, spelt; fel for *fell, gall; mel for *mell, honey; as for *ass, unit, an as; old second person singular Es, common es, for *ess, thou art.

- 140. Final m of a noun is often dropped in old private inscriptions down to about 100 B.C., and occasionally down to the imperial period: as, TAVRASIA for Taurāsiam; VIRO for virom, man; DVONORO for bonorum, of the good. In official inscriptions m is usually kept: as, ROMANOM; but not always: as, ROMANO for Romānom, the Romans. -m (or -um) is lost in noenu or non (87) for noenum, not, in donique (71) or donec for donicum, till, and in nihil for nihilum, naught.
- 141. Final n is lost in the nominative of noun stems in -on-, or -in- for -on-: see 497.
- 142. Final s is lost in iste, ille, and ipse, for *istos, &c., with weakening of o to e; in some other words after an i, with change of i to e: magis, mage, more; potis, pote, able; *nēvīs, *sīvīs, nēve, and that not, sīve, or if. In the nominative singular of most -ro- stems -os disappears (454): as, *puerōs, puer, boy; also twice in famul, thrall (Enn., Lucr.). abs and ex become ab, \(\frac{\pi}{a}, \) and \(\frac{\pi}{c}. \) In general, final s has a weak sound in old Latin, and often drops off (47).
- 143. Final d is dropped in the nominative and accusative cor for *cord, heart, and in the ablative singular: 426. Sometimes in hau for haud or haut, not.

ASSIMILATION.

144. A consonant is sometimes assimilated, either entirely or partially, to another consonant.

Assimilation is very common in prepositions prefixed to a verb; see 7001.

- 145. (1.) Entire Assimilation. (a.) The first of two consonants often becomes the same as the second: thus,
- d or t before s, unless dropped (137), regularly becomes s: as, *edse, Esse, to cat (895); *cedsī, cessī, I yielded; *concutsī, concussī, I shock up. But d of ad- in composition sometimes remains: as, adsentior, I agree. Other examples of entire assimilation are: rursus, russus, again; *liberulus, libellus, little book; *premsī, pressī, I pressē, I formōsus, formōsus, commonly formōsus, shapely; *corōnula, corōlla, chaplet; *flagma, flamma, flamc: *sedla, sella, scat; *lapidlus, lapillus, pebble; *mercēdnārius, mercēnnārius, hireling; quidpiam, quippiam, something; *supmus, summus, hichest.
- 146. (b.) The second of two consonants sometimes becomes the same as the first: as,
- *disiiciō, sometimes dissiciō, I throw asunder; *tolpō, tollō, I lift (833); *velse, *velsem, &c., velle (895), vellem, &c. (850) to wish; *torseō, torreō, I parch; gnārigō, nārrō, I tell; tenditur, tennitur, is stretched; t of the superlative suffix -timo- sometimes becomes r: as, pauperrimus, poorest (350); sometimes 1: as, humillimus, lowest (350); usually s: as, altissimus, highest (349).
- 147. (2.) PARTIAL ASSIMILATION. m usually changes to n before any consonant except m, b, or p: thus, com-becomes con-: conligo, I gather, conrigo, I put straight, later colligo, corrigo (145). Other changes are: *primceps, princeps, first; *homce, hunc, this; *tamdem, tandem, at length; *tamtus, tantus, so great.
- 148. n becomes m before b, p, or m: as in accumbo, / lie by; rumpo, / break; inpono, impono, / put in; inmineo, immineo, / threaten.

140. The sonants g and b regularly change to their surds, o and p, before s or t; gu and qu also become o: as,

*řěgs, *řěcs, rěx, king: *řěgsi, rěxi, I guided (47); *řěgtus, rěctus, guided; *scribsi, scripsi, I wrote; *scribtus, scriptus, written; *trāgsi, trāxi, I dragged; *trāgtus, trāctus, dragged; strugu-, strūxi, rereted (47); *strüctus, ereted; coqu-, cōxi, I cooked; coctus, cooked. In some words be si written, and ps pronounced (45): as, urbs, city, plěbs, commons, abs, from.

150. b and p in a few words turn to m before n: as, *Sabnium, Samnium;

*scapnum, scamnum, bench; *sopnus, somnus, sleep.

151. In some words the surds, c, t, and p, before l, r, m, or n, turn to their sonants g, d, or b: as, *neclego, neglego, I negled; *secmentum, segmentum, a cut; *quatrāgintā, quadrāgintā, forty; poplicus, pūblicus, of the state.

DISSIMILATION.

152. When a lingual mute, d or t, comes before t, the first mute in some instances changes to s: as,

*edt, Est, eais, *edtis, Estis, you eai; *palüdter, palüster, marshy; *equetter, equester, of cavalry.

153. When a root ending in d or t comes before certain suffixes beginning with t, both consonants change to s.

In this case both assimilation and dissimilation take place; such suffixes are: -to-, -tā-, -tu-, -tōr-, -tūrō-, -tūrā-, -tili-, -tiōn-, -tim: as, *fodtus, fossus, dug; *fodtor, fossor, ditcher; *quattus, quassus, shaken: *sedtum, sessum, to sit; very often one s drops (133): as, *dīvīdtīð, dīvīssið, dīvīsið, dīvīsiða. The above suffixes have also an s for t when attached to some roots ending in l, m, I, and to a few others: see 912.

154. Dissimilation sometimes occurs when the consonants are separated by a vowel sound: as, *caeluleus, caeruleus, sky-blue; *molālis, molāris, of a mill (313).

SYLLABLES.

155. A word has as many syllables as it has separate vowels or diphthongs. The last syllable but one is called the *Penult*; the last syllable but two is called the Antepenult.

LENGTH OF VOWELS.

156. The length of vowels must in general be learned by observation; but some convenient helps for the memory may be found in 2429; and the length of many vowels may be ascertained by the following general principles.

(A.) SHORT VOWELS.

157. A vowel before another vowel or h is short: as,

eos; eveho; fuit, fuimus, adnuit (57); compare primus and prior; sēcūrus and seorsum; dēlābor and deambulō; docēs, docēmus, docētis and doceo; vestīs, vestīmus, vestītis, and vestio, vestiunt; īs, imus, itis, and eo, eunt; minutus and minuo.

- 158. In simple words a diphthong occurs before a vowel only in one or two proper names, as Gnaeus, Annaeus, in which it remains long, and in Greek words. In compounds, ae of prae is shortened before a vowel: as, praeacutus; praeeunte; praeeun
- 159. In some instances a vowel before another vowel is preserved long: thus,
- 160. (1.) Old genitives in -aI have a: as, aulai. diei, genitive or dative, when three syllables, and sometimes rei and fidei have e; so also ei, dative of is, when two syllables; less frequently ei.
- rēi is said to occur in verse 6 times (Plaut. G. 2, Lucr. G. 2, D. 2); rei 9 times (Plaut. G. 2, Ter. G. 4, D. 1, Juv. G. 1, Sulp. Apoll. G. 1); rei 27 times (Plaut. G. 2, D. 3, Enn. D. 1, Ter. G. 9, D. 8, Lucil. G. 1, D. 1, Lucr. G. 2). fidēi G. 3 times (Plaut., Enn., Lucr.); fidei 11 times (Enn. D. 1, Man. G. 2, D. 1, Sil. G. 4, D. 1, Juv. G. 2); fidēi 5 times (Ter. G. 1, D. 3, Hor. 1). Ei 35 times (Plaut. 18, Ter. 8, Lucr. 9); ei some 17 times (Plaut. 12, Ter. 2, German. 1, Ter. Maur. 2); ei 23 times (Plaut. 11, Ter. 8, Lucil. 3, Cat. 1).
- 161. (2.) The penult is long in the endings -āī, -āīs, ōī, -ōīs, and -ēī, -ēīs, from stems in -iō- or -iā- (437, 458): as, Gāī, Bōī, Pōmpēī, Vēī, plēbēī; Gāīs, Bōīs, Pompēīs, Vēīs, plēbēīs, Bāīs.
- 162. (3.) Genitives in -īus have ī: as, alterīus; but these sometimes shorten ī in verse, except neutrīus, which is not found with short i; utriusque has always short i.
- 163. (4.) A long vowel is retained in the first syllable of file throughout, except usually before -er- (789), as fierem, fieri; in Gāïus when three syllables (usually Gāius); and in dius, godly (129), diu, open sky (used only in the expression sub diū, i.e. sub divõ), and Diāna; but Diāna has I as often as I. ōhō has ō; ēheu has ē in comedy, otherwise ē.
- 164. (5.) In many Greek words a long vowel comes before another vowel: as, Zer, Aeneas, Mēdēa.

(B.) LONG VOWELS.

165. All vowels are long which are:

- 166. (1.) Weakened from a diphthong, or which are the result of contraction: as,
- (a.) caedo, concido; aestimo, existimo (86); old povellos, common públicus (82). (b.) *tibiicen, tibicen; *aliius, alius. But sometimes the long vowel is found only in old Latin and is regularly short in the classical period: as, old locat, common locat (59).
 - 167. (2.) Before nf, ns, or consonant i; often before gn: as,
- īnfāns; Māia; āiō, āiunt, āiēbam; ēius; Sēius; Pompēius; plēbēius (but not in compounds of iugum: 2s, biiugus); benignus.

LENGTH OF SYLLABLES.

168. A syllable is long if its vowel is long, or if its vowel is followed by two consonants or by x or z: as,

ducēbās; volvunt. In ducēbās both the vowels and the syllables are long; in volvunt the vowels are short, but the syllables are long; in cases like the last the syllables (not the vowels) are said to be long by position. holes not count as a consonant, and qu (or qv, 24) has the value of a single consonant only: thus, in adhuc and aqua the first syllable is short.

169. In prose or old dramatic verse a syllable with a short vowel before a mute or f followed by 1 or r is not long: as, tenebrae. In other verse, however, such syllables are sometimes regarded as long. In compounds such syllables are long in any verse: as, obruit.

ACCENT.

170. Words of two syllables have the accent on the penult: as,

ho'mo; ā'cer.

171. Words of more than two syllables have the accent on the penult when that syllable is long; otherwise on the antepenult: as,

palūs'ter, onus'tus (168); muli'ebris, gen'etrīx (169); ar'borēs, ar'butus, gladi'olus.

- 172. A short penult retains the accent in the genitive and vocative with a single I from stems in -io- (456, 459): as, genitive, consi'li; impe'ri; genitive or vocative, Vergi'li; Vale'ri; Mercu'ri. For calefacis, &c., see 394.
- 173. In a few words which have lost a syllable the accent is retained on the last syllable; such are compounds of the imperatives dic and duc: as, ēduc'; and nominatives of proper names in -ās and -is for -ātis and -ītis: as, Arpīnās', for Arpīnātis; Laenās'; Maecēnās'; Quirīs'; Samnīs'; also nostrās', vostrās', quōiās'. For the effect of enclitics, see 179.
- 174. The Latin grammarians distinguish two kinds of accent: the acute, indicated by the mark ': as, dúx; and the circumflex, by the mark ': as, dôs. Syllables not having these accents are said to have the grave, `. The accent is not written, being evident from the length of the syllables.
- 175. Vowels with the acute accent are thought to have been uttered on a higher key; those with the circumflex to have begun on a higher key, and sunk to a lower key. But in modern practice this refinement is not usually attempted.

- 176. Monosyllables have the acute if the vowel is short: as, dux; if long, the circumfiex: as, lux. Disyllables have the circumfiex if the vowel of the penult is long and the last syllable is short: mêta; fâstus; otherwise the acute: as, (a.) mêtā; fâstō; prófert; (b.) bónus; népōs; arma; arcus.
- 177. Words of more than two syllables with the accent on the penult have the circumlex when the vowel of the penult is long and the last syllable is short: as, amīcus; otherwise the acute: as, (a.) amīcō; cōdex; rēxérunt. (b.) Mārcéllus. Words of more than two syllables with the accent on the antepenult have the acute: as, Rōscius; Sérgius.

PROCLITICS AND ENCLITICS.

- 178. PROCLITICS are unaccented words which are pronounced as a part of the following word; they are: (1.) The relative and indefinite pronouns and their derivatives; (2.) Prepositions.
- (a.) Thus, quō diē, pronounced quōdiē; quī vîxit, quīvîxit; genus unde Latînum, genus unde Latînum. Similarly quamdiū, as long as, aliquamdiū, for some time; also iamdiū, this long time. (b.) circum lītora, pronounced circumlītora; ab ōrīs, pronounced abōrīs; in inscriptions and manuscripts prepositions are often united in writing with the following word. When a preposition stands after its case it has an accent: as, lītora circum; except ad, cum, per, and tenus, which never have the accent.
- 179. ENCLITICS are words which have no accent of their own, but are pronounced as a part of the word preceding. The word before the enclitic has the accent on the last syllable.

The commonest enclitics are -que, -ne, (-n), -ve, -ce, (-c): as, Latiúmque; Latióque; līmináque; armáque; stimulóve; Hyrcānisve Arabísve; istice or istic (pronoun); istice or istic (adverb); adhūc; satisne or satin; hīcine. Other enclitics are: -met (650): as, egómet; dum: as, agédum; inde in déinde and próinde (which are disyllabic in verse), éxinde, périnde, and súbinde; and quandō in néquandō and síquandō.

B. FORMATION.

- 180. FORMATION is the process by which stems are formed from roots or from other stems.
- 181. A word containing a single stem is called a Simple word: as, māgnus, great, stem māgno-; animus, soul, stem animo-. A word containing two or more stems is called a Compound word: as, māgnanimus, great-souled, stem māgnanimo-.
- 182. Most inflected words consist of two parts: a stem, which is usually a modified 100t (195), and an inflection ending: thus, in ductori, for a leader, the root is d u c-, lead, the stem is ductor-, leader, and -i is the inflection ending, meaning for.

ROOTS.

183. A Root is a monosyllable which gives the fundamental meaning to a word or group of words.

Digitized by Google

- 184. A root is not a real word; it is neither a noun, naming something, nor a verb, denoting action. Thus i u g-, yoke, does not mean a yoke nor I yoke; it merely suggests something about yoking. The root becomes a real word only when an inflection ending is added, or, more commonly, both a formative suffix and an inflection ending: as, iug-u-m, a yoke.
- 185. Roots are common to Latin and its cognate languages, such as the Sanskrit and the Greek. When a root is named in this book, the specific Latin form of the root is meant. This often differs somewhat from the form of the root which is assumed as applicable to all the cognate languages.
- 186. Almost all roots are noun and verb roots; that is, roots with a meaning which may be embodied either in a noun or in a verb, or in both. Besides these there is a small class, less than a dozen in number, of pronoun roots. There are many words which cannot be traced back to their roots.
- 187. A root sometimes has two or more forms: as, f i d- (for f e i d-), f o e d-, f i d-, trust; g e n-, g n-, sire; t o l, t l, bear; r e g-, g uide.

Thus, fid- is found in fid-us, trusty, fid-ūcia, confidence, fid-ūciō, I pledge, fid-ūciārius, in trust, fid-ere, put trust in, fid-ēns, courageous, fid-entia, courage; foed- in foed-us, pledge of faith, foed-erātus, bound by a pledge of faith; fid- in fid-ēs, faith, fid-ēlits, faithful, fid-ēliter, faithfully, fid-ēlitās, faithfulness, per-fid-us, faithless, per-fid-iōsus, full of faithlessness, per-fid-iōsē, faithlessly. gen- in gen-itor, sire, gn- in gi-gn-ere, begeh-gn-ā-in gnā-tus, son.

- 188. A root ending in a vowel is called a *Vowel Root*: as, da-, give; a root ending in a consonant is called a *Consonant Root*: as, rup-, break. Roots are conveniently indicated by the sign $\sqrt{\cdot}$: as, $\sqrt{\cdot}$ teg-, to be read 'root teg-.'
- 189. A root or a part of a root is sometimes doubled in forming a word; this is called *Reduplication*: as, mur-mur, murmur; tur-tur, turtle-dove; po-pul-us, people; ul-ul-āre, yell.

PRESENT STEMS AS ROOTS.

190. Many nouns are formed from the present stems of verbs, which take the place of roots. Stems thus used are mostly those of verbs in -are and -ire.

Thus, from ōrā-, stem of ōrāre, speak, are formed ōrā-tor, speaker, and ōrā-tiō, speech; from audī-, stem of audīre, hear, are formed audī-tor, hearer, and audī-tiō, hearing.

191. Verbs in -ere, and those in -are and -ire in which the a or i is confined to the present system (868, 874) usually have parallel nouns formed directly from a root: as,

doc-tor, teacher, doc-umentum, lesson, doc-ilis, teachable ($\sqrt{doc-doce}$); sec-tor, cutter ($\sqrt{sec-doce}$); dom-itor, tamer, dom-inus, master, dom-itus, tamed ($\sqrt{dom-dome}$); sarc-ina, package ($\sqrt{sarc-dome}$), sarc-ina, package ($\sqrt{sarc-dome}$).

192. But a noun is sometimes exceptionally formed from the present stem of a verb in -ere: as, mone-ta, mint (monere); ace-tum, vinegar (acere); viretum, a green (virere); suade-la, persuasion (suadere); habe-na, rein (habere); ege-nus, needy (egere); vere-cundus, shamefast (vereri); vale-tudo, health (valere).

Digitized by Google

193. Verbs in -ere, and particularly such as have a present in -nō, -scō, -tō or -iō (832), usually have their parallel nouns formed directly from a root: as,

vīc-tor, conqueror (\sqrt{v} Ic-, vincere); incrē-mentum, growth (\sqrt{c} rē-, crēscere); pul-sus, \dot{a} push (\sqrt{p} 01-, pellere).

194. Sometimes, however, nouns are formed from such verb stems, and not from roots: as, lecti-stern-ium, a couch-spreading (sternere, \ster-, str\vec{\pi}-); vinc-ibilis, conquerable (vincere, \ster-); p\vec{\pi}-0); p\vec{\pi}-0; p\vec{\pi

STEMS.

195. A STEM is that part of a word which contains its meaning, and is either a root alone or more commonly a root with an addition called a *Formative Suffix*.

Thus, in the word ducis, leader's, the stem, which is identical with the root duc-, means leader; a root thus serving as a stem is called a Root Stem; in ductoris, leader's, the stem is formed by the formative suffix -tor-, denoting the agent, attached to the \sqrt{duc} .

196. New stems are formed by adding a suffix to a stem. Thus, from orator-, speaker, is formed by the addition of the suffix -io-, a new stem orator-io-, N. oratorius, speaker's.

197. The noun has usually only one form of the stem. The verb has different stems to indicate mood and tense; these stems are all based on two principal tense stems, the present and the perfect active.

PRIMITIVES AND DENOMINATIVES.

- 198. I. A stem or word formed directly from a root or a verb stem is called a *Primitive*. II. A stem or word formed from a noun stem is called a *Denominative*.
- (a.) Primitives: from √rēg., re g., guide: rēx, stem rēg., king; rēgnum, stem rēg.no., kingdom; rēctus, stem rēc.to., guided; regere, stem reg.e., guide. From ōrā., stem of ōrāre, speak: ōrātor, stem ōrā.tōr., speaker; ōrātiō, stem ōrā.tiōn., speech.
- (b.) Denominatives: from noun stem rēg-, king: rēgīna, stem rēg-īnā-, queen; rēgīus, stem rēg-io-, rēgālis, stem rēg-āli-, royal. From ōrātiōn-, speech: ōrātiūncula, stem ōrātiūn-culā-, little speech. From rēg-no-, kingdom: rēgnāre, stem rēgnā-, to rule. From ōr-, mouth: ōrāre, stem ōrā-, to speak.

(A.) FORMATION OF THE NOUN.

WITHOUT A FORMATIVE SUFFIX.

199. Some roots are used as noun stems: as, duc., N. dux, leader (\duc., lead); reg., N. rex, king (\forall reg., guide); particularly at the end of a compound: as, con-iug., N. coniunx, yoke-fellow, spouse (com-, \forall ug., yoke); tubi-cin., N. tubicen, trumpeter (tuba-, \forall can., play).

WITH A FORMATIVE SUFFIX.

200. SIMPLE formative suffixes are vowels: as, -a-, -o-, -i-, -u-; also -io-, -uo-, (-vo-); or such little syllables as -mo-, -min-; -ro-, -lo-; -on-; -no-, -ni-, -nu-; -to-, -ti-, -tu-; -ter-, -tor-; -unt- (-nt-); -es-(-er-), -or-; these syllables sometimes have slight modifications of form. Compound suffixes consist of one or more simple suffixes attached to a simple suffix: as, -tor-io-, -ti-mo-, &c., &c.

201. The following are examples of noun stems formed from roots or verb stems by simple suffixes added:

STEM.	Nominative.	From.	STEM.	NOMINATIVE.	From.
fug-ā-	fuga, flight	fug-, fly		somnus, sleep	sop-, sleep
fid-o-	fidus, trusty	fīd-, trust		plēnus, full	ple-, fill
ac-u- od-io-	acus, <i>pin</i> odium, <i>hate</i>	ac-, point od-, hate	reg-no-	rēgnum, <i>realm</i> datus, <i>given</i>	teg-, guide da-, give
pluv-iā-	pluvia, rain	plov-, wet		lectus, bed	leg-, lie
ar-vo-	arvom, tilth	ar-, till	gen-ti-	gēns, race	gen-, beget
al-vo-	alvos, belly	al-, nurture	sta-tu-	status, stand	Bta-, stand
sal-vo-	salvos, safe	Bal-, safe		rector, ruler	reg-, guide
fā-mā	fāma, <i>tale</i>	fā-, tell	e-unt-,	iēns, <i>going</i>	i-, go
	tegmen, cover	teg-, cover	rege-nt-	regens, guiding	
sti-lo-	stilus, <i>style</i>	stig-, stick		genus, race	gen-, beget
err-ön-	errð, stroller	errā-, stroll	fur-ōr-	furor, madness	fur-, rave

202. Formative suffixes are often preceded by a vowel, which in many instances is a stem vowel, real or presumed; in others, the vowel has come to be regarded as a part of the suffix itself.

Thus, -lo-: filio-lo-, N. filio-lu-s, little son (filio-); hortu-lu-s, little garden (horto-, 75); but -ulo-: reg-ulu-s, petty king (reg-); ger-ulu-s, porter (vg e s-, beur). -ci-: pūgnā-ci-, N. pūgnā-x, full of fight (pūgnā-re); but -aci-: fer-ax, productive (vf e r-, bear). -to-: lauda-to-, N. lauda-tu-s, praised (lauda-re); but -ato-: dent-atus, toothed (denti-). -tu-: equita-tu-, N. equita-tu-s, cavalry (equita-re); but -atu-: sen-atu-s, senate (sen-). -la-: suādē-la-, N. suādē-la, persuasion (suādē-re, 192); but -ēlā-: loqu-ēla, talk (vloqu-, speak). -tāt-: cīvi-tāt-, N. cīvi-tā-s, citizenship (cīvi-); but -itāt-: auctor-itā-s, authority (auctor-). -cio-: aedīli-cio-, N. aedili-ciu-s, of an aedile (aedili-); but -icio-: patr-iciu-s, patrician (patr-). -timo-: fīni-timo-, N. fīni-timu-s, bordering (fīni-); but -itimo-: leg-itimu-s, of the law (leg-).

203. There are many formative suffixes of nouns. The commonest only can be named, and these may be conveniently grouped as below, by their meanings. Compound suffixes are arranged with reference to the last element of the suffix: thus, under the adjective suffix -io- (304) will be found -c-io-, -īc-io-, -tor-io-, and -ar-io-. In many instances it is difficult to distinguish between simple and compound suffixes.

Digitized by Google

I. THE SUBSTANTIVE.

(A.) PRIMITIVES.

I. THE AGENT.

204. The suffixes -tor-, -o-, -a-, -lo-, and -on-, are used to denote the Agent: as,

STEM.	Nominative.	From.
lēc-tōr-	lector, reader	√1ē g-, read
scrib-ā-	scrība, writer	√scrīb-, write
fig-ulo-	figulus, potter	√fig-, mould
err-on-	errö, stroller	errā-ге, stroll

(1.) -tor- (N. -tor).

205. -tōr-, N. -tor, or -sōr-, N. -sor (153, 202), is the commonest suffix of the agent; the feminine is -trī-ci-, N. -trī-x. -tōr- is sometimes used in a present sense, of action repeated or occurring at any time, and sometimes in a past sense.

206. (a.) -tor- (-sor-), in the present sense, often denotes one who makes a regular business of the action of the root or verb.

orā-tor., N. orā-tor, spokesman, speaker (orā-re); lēc-tor, reader (vlē g-, read). Workmen and tradesmen: arā-tor, ploughman, pās-tor, shepherd, pīc-tor, painter, sū-tor, shoemaker. Semi-professional: captā-tor, legacy-hunter, dēlā-tor, professional informer. Government officials: cēn-sor, appraiser, censor, imperā-tor, commander, prae-tor, (leader), praetor, dictā-tor, līc-tor. Of the law: āc-tor, manager, accūsā-tor, accuser, spōn-sor, bondsman, tū-tor, guardian. From presumed verb stems (202): sen-ātor, senator (sen-); viā-tor, wayfarer (viā-); fundi-tor, slinger (fundā-). -tro-, N. -ter, has the meaning of -tōr-: as, aus-tro-, N. aus-ter (scorcher), southwester (vaus-, burn).

207. In the present sense -tor- (-sor-) is also used to indicate permanent character, quality, capability, tendency, likelihood: as, bellator, a man of war, warlike; deliberator, a man of caution: cessator, a loiterer: deri-sor, a monterironical; consumptor, apt to destroy, destructive; aedificator, building-mad.

208. (b.) -tōr- (-sōr-), in a perfect sense, is used particularly in old Latin, or to denote an agent who has acquired a permanent name by a single conspicuous action. In this sense it usually has a genitive of the object, or a possessive pronoun: thus,

castigā-tor meus, my mentor, or the man who has upbraided me; olivae inven-tor, the deviser of the olive (Aristaeus); reper-tor vitis, the author of the vine (Bacchus); patriae liberā-torēs, the emancipators of the nation.

(2.) -o- (N. -u-s), -ā- (N. -a); -lo- (N. -lu-s); -ōn- (N. -ō).

209. -o- and -ā- stems may denote vocation or class; many are compounds. -o-, N. -u-s: coqu-o-, N. coqu-o-s or coc-u-s, cook (\(\sigma\) could (\(\sigma\) could (\(\sigma\) could (\(\sigma\) could (\(\sigma\) could (\(\sigma\) could (\(\sigma\) collaboration, \(\sigma\) collaboration, \(\sigma\) collaboration (\(\sigma\) collaboration (\sigma\) collaboration (\(\sigma\) collaboration (\sigma\) collaboration (\(\sigma\) collaboration (\sigma\) collaboration (\(\sigma\) collaboration (\sigma\) collaboration (\sigma\) collaboration (\(

210. -u-lo-, N. -u-lu-s (202): ger-ulo-, N. ger-ulu-s, bearer (\sqrt{g} e s-, bear); fig-ulu-s, potter (\sqrt{f} i g-, shape, mould).

211. -ōn-, N. -ō-: err-ōn-, N. err-ō, stroller (errā-re); especially in compounds: praed-ō, robber (praedā-ri); praec-ō for *praevocō, herald (praevocā-re); combib-ō, fellow-drinksr (com-, \bib-, drink).

II. THE ACTION.

212. The suffixes -ā-, -io-, -iā-; -min-; -i-ōn-, -ti-ōn-; -lā-; -mā-, -nā-; -tā-, -tu-; -er-, -or-, -ōr-, are used to denote the *Action*: as,

STEM.	Nominative.	From.
od-io-	odium, hate	√od-, hate
āc-tiōn-	āctiō, action	√āg-, do
ques-tu-	questus, complaint	√qu e s-, complain
fur-ōr-	furor, rage	√fur-, rave

213. Words denoting action (1470) in a substantive form have a wide range of meaning; they may denote, according to the connection, action intransitive, transitive, or passive, complete or incomplete; if the verb denotes condition or state, the word of action often comes very near to denominatives of quality; furthermore the idea of action is often lost, and passes over to result, concrete effect, means or instrument, or place.

(1.) -ā- (N. -a); -io- (N. -iu-m); -iā- (N. -ia), -iē- (N. -iē-s).

214. -\(\bar{a}\)-, N. -a, is rare in words of action: fug-\(\bar{a}\)-, N. fug-a, flight (\forall fug-\), fly); most words are concrete: mol-a, mill (\forall mol-, grind); tog-a, covering (\forall teg-, cover).

215. - ur-a-, N. - ur-a, is rare: fig-ura-, N. fig-ura, shape (fig-, shape).

- 216. -tūr-ā-, N. -tūr-a, or -sūr-ā-, N. -sūr-a (153, 202), akin to the agent in -tōr- (-sōr-): armā-tūrā, N. armā-tūra, equipment (armā-re); pic-tūra, painting, i.e., act of painting or picture (\prig., paint). Words parallel with official personal names (206) denote office: cēn-sūra, taxing, censor's office (cf. cēnsōr-); prae-tūra, practorship (cf. praetōr-).
- 217. -io-, N. -iu-m, sometimes denotes the effect or the object. The line cannot always be drawn very sharply between these stems in -io- (many of which may be formed through a presumed noun stem), and denominatives in -io- (249).
- 218. (a.) -io- is rarely suffixed to simple roots or verb stems: od-io-, N. od-iu-m, hate, hateful thing, hateful conduct ($\sqrt{0}$ d-, hate); some words become concrete: lab-iu-m, lip ($\sqrt{1}$ a b-, lick).
- 219. (b.) Most primitives in -io- are compounds: as, adag-iu-m, proverb (ad, \sqrt{ag} , speak); ingen-iu-m, disposition (in, \sqrt{g} en, beget); discid-iu-m, separation, exscid-iu-m, destruction (di-, ex, \sqrt{s} c i d-, cleave); incend-iu-m, conflagration (in, \sqrt{c} an d-, light); obsequ-iu-m, compliance (ob-, \sqrt{s} e qu-, follow); conloqu-iu-m, parley (com-, $\sqrt{1}$ o qu-, talk); obsid-iu-m, siege (ob, \sqrt{s} e d-, sit).

- 220. -t-io-, N. -t-iu-m: spa-tio-, N. spa-tiu-m, stretch (\sqrt{s} pa-, span, stretch); solsti-tiu-m, sun-stand, solstice (sol-, \sqrt{s} ta-, stand); ini-tiu-m, a beginning (in, \sqrt{i} -, go).
- 221. -iā-, N. -ia: fur-iā-, N. fur-iae, plural, ravings, madness (\fur-rave); via, for *veh-ia, way (\forver veh-, carry). Most stems in -iā- are compounds, used in the plural only, often with concrete or passive meaning: delic-iae, allurements, pet (dē, \lac-, allure); excub-iae, patrol (ex, \forciv cub-, lie).
- 222. -iē-, N. -iē-s, a variation of -iā-, usually denotes result (604): ser-iē-, N. ser-iē-s, row (\sqrt{s} er-, string); spec-iē-s, sight, looks (\sqrt{s} pec-, spy, see); pernic-iē-s, destruction (per, \sqrt{n} ec-, murder).
- 223. -t-iē-, N. -t-iē-s: permi-tiē-, N. permi-tiē-s, wasting away (per, \sqrt{m} i-, less).

(2.) -min- (N. -men); -din-, -gin- (N. -dō, -gō).

224. -min-, N. -men (202), usually active, occasionally passive, is very common; it sometimes denotes the means, instrument, or effect.

certā-min-, N. certā-men, contest (certā-re); crī-men, charge (\sqrt{c} e r-, c rī-, sift); spec-imen, what is inspected, sample (\sqrt{s} p e c-, spy, see); lū-men, light (\sqrt{l} ū c-, light); flū-men, flood, stream (\sqrt{f} lu gu-, flow); ag-men, what is led, train (\sqrt{a} g-, lead). Words in -min- often mean nearly the same as those in -mento- (239): as, levā-men, levā-mentu-m, lightening; tegumen, teg-umentu-m, covering.

225. \(\bar{e}\)-din-, -\(\bar{i}\)-din- (202): -\(\bar{e}\)-din-, N. -\(\bar{e}\)-d\(\dagge\): -\(\bar{e}\)-din-, N. -\(\dagge\)-d\(\dagge\): -\(\dagge\)-din-, N. -\(\dagge\)-d\(\dagge\): -\(\dagge\)-d\(\dagge\): -\(\dagge\)-d\(\dagge\): -\(\dagge\)-d\(\

226. -ā-gin-, -I-gin- (202): -ā-gin-, N. -ā-gō: vorā-gin-, N. vorā-gō, gulf (vorā-re); imā-gō, representation (*imā-, cf. imitārī). -I-gin-, N. -I-gō: orī-gin-, N. orī-gō, source (orī-rī); cāl-īgō, darkness (\sqrt{c} al-, hide). A iew denominatives have -ū-gin-, N. -ū-gō: aer-ūgin-, N. aer-ūgō, copper rust (aer-).

(3.) -i-ōn- (N. -i-ō); -ti-ōn- or -si-ōn- (N. -ti-ō or -si-ō).

227. -i-ōn-, N. -i-ō: opin-iōn-, N. opin-iō, notion (opinā-rī); condic-iō, agreement (com-, \dic, say); contāg-iō, touch (com-, \dig e_-, touch). Some words are concrete: leg-iō, pick, legion (\die g-, pick). A few are denominatives: commūn-iō, mutual participation (commūni-).

228. -ti-ōn., N. -ti-ō, or -si-ōn., N. -si-ō (153, 202), is very common, and may denote action either intransitive, transitive, or passive, or the manner or possibility of action.

cōgitā-tiōn-, N. cōgitā-tiō, a thinking, a thought (cōgitā-re); exīstimā-tiō, judging, reputation (exīstimā-re); coven-tiō, commonly cōn-tiō, meeting, speech (com-, \(\nu \) ve n-, come); dēpul-siō, warding off (dē-, \(\nu \) pol-, push); oppūgnā-tiō, besieging, method of besieging (oppūgnā-re); occultā-tiō, hiding, chance to hide, possibility of hiding (occultā-re). Some words denote the place where: sta-tiō, a stand (\(\nu \) st a-, stand); some become collectives or concretes: salūtā-tiō, greeting, levee, guests at a levee (salūtā-re); mūnī-tiō, fortification, i.e., act of fortifying or works (mūnī-re).

(4.) -ē-lā- (N. -ē-la), -tē-lā- (N. -tē-la).

229. -E-Iā-, N. -E-la (202): suādē-Iā-, N. suādē-Ia, persuasion (suādē-re): loqu-ēla, taik (vlo qu-, taik); quer-ēla or quer-ēlla, complaint (vqu e s-, complain). Some words are concrete: candē-Ia, candle (candē-re).

230. -tē-lā-, N. -tē-la-: conrup-tēlā-, N. conrup-tēla, a seduction (com-, /rup-, spoil, ruin); tū-tēla, protection (/tū-, watch, protect).

(5.) -mā- (N. -ma), -nā- (N. -na); -trī-nā- (N. -trī-na).

231. -mā- and -nā- are rare, and denote result or something concrete. -mā-, N. -ma: fā-mā-, N. fā-ma, tale (√fā-, tell); flam-ma, blass (√flag-, blase). -nā-, N. -na: lū-na, moon (√lūc-, light); pen-na, feather (√pet-, fly).

232. -inā-, N. -ina: ang-inā-, N. ang-ina, choking (Vang-, choke); pāg-ina, page (Vpāg-, fasten); sarc-ina, package (Vsarc-, patch). -inā-, N. -ina (202): ru-īnā-, N. ru-īna, downfall (Vru-, tumble); -inā- is very common in denominatives: pisc-īna, fish-pond (pisci-).

233. -tri-nā-, N. -tri-na, akin to the agent in -tor-: doc-trina-, N. doc-trina, teaching, either the act of teaching or what is taught (\doc-, teach); sū-trina, shoemaking, shoemaker's trade, shoemaker's shop (\subseteq subseteq \cdot\, sew).

(6.) -tā- or -sā- (N. -ta or -sa); -tu- or -su- (N. -tu-s or -su-s).

234. -tā-, N. -ta, or -sā-, N. -sa (153), is rare, and sometimes denotes result, or something concrete: as, no-tā-, N. no-ta, mark (\sqrt{g} no-, kmv); por-ta (passage), gate (\sqrt{g} or-, fare); for-sa, ditch (\sqrt{f} od-, dig); repulsa, repulsa (re-, \sqrt{g} ol-, push); offen-sa, dfence (ob, \sqrt{f} end-, strike).

235. -tu-, N. -tu-s, or -su-, N. -su-s (153, 202), denotes the action and its results: ques-tu-, N. ques-tu-s, complaint (\(\)que \(\text{s-}, \) complain); gern-itus, groan (\(\)\ g \(\text{em} \), groan). Stems in -\(\text{s-}\)-tu-s, sometimes denote office or officials: consul-\(\text{atu-s}, \) sometimes denote office or officials: consul-\(\text{atu-s}, \) sometimes denote office or officials: consul-\(\text{atu-s}, \) sen-\(\text{atu-s}, \) s

(7.) -er- for -es- (N. -us); -ōr- (N. -or).

236. Neuter stems in -er- (for -es-), or in -or- (for -os-), N. -us, denote result, or have a concrete meaning: gen-er-, N. gen-us, birth, race (\lambda g en-beget); op-er-, N. op-us, work (\lambda op-, work); frig-or-, N. frig-us, cold (\lambda frig-, cold). -\text{-\text{E}} with lengthened \text{\text{E}} is sometimes used in the nominative of gender words: as, n\text{ub-\text{\text{E}}}s, cloud (\lambda n\text{u} \text{u} \text{u} \text{u} \text{v} = \text{\text{E}}\text{.} \text{j} = \text{\text{E}}\text{.} \text{bard.} -n-\text{er-}, -n-\text{or-}, \text{N. on-us: vol-ner-, N. vol-nus, wound (\lambda v \text{ol-}, tear); fac-inor-, N. fac-inus, deed (\lambda fac-, do, 202).

237. -ōr- (for an older form -ōs-, 116), N. -ōs, commonly -or, masculine, denotes a state. Many substantives in -ōr- have a parallel verb, usually in -ōre (368), and an adjective in -ido- (287).

od-or-, N. od-os or od-or smell (vo d-, smell, cf. ole-re); pall-or, paleness (cf. palle-re); cal-or, warmth (cf. cale-re); um-or, moisture (cf. ume-re); am-or, love (cf. ame-re); ang-or, choking, anguish (vang-, choke).

III. THE INSTRUMENT OR MEANS.

238. The suffixes -men-to-, -tro-, -cro- or -culo-, -lo-, -bro- or -bulo-, are used to denote the *Instrument* or *Means*: as,

STEM.	Nominative.	From.
ōrnā-mento-	örnämentum, embellishment	örnā-re, <i>embellish</i>
arā-tro-	arätrum, plough	arā-re, <i>plough</i>
pō-culo-	põculum, drinking-cup	√p ō-, <i>drink</i>
pā-bulo-	päbulum, fodder	√p ā-, <i>feed</i>

239. -men-to-, N. -men-tu-m (202), is one of the commonest suffixes; it sometimes denotes result of action, rarely action itself.

240. -tre-, N. -tru-m (202): arā-tro-, N. arā-tru-m, plough (arā-re); fer-etru-m, bier (\forall f e r-, bear); rōs-tru-m, beak (\forall rōd-, peck). Sometimes -stro-: mōn-stru-m, warning (\forall m o n-, mind); lu-stra, plural, fen, jungle (\forall u o, wash); lū-stru-m, purification (\forall o u-, wash). -trā-, N. -tra, F.: mulc-trā-, N. mulc-tra (also mulc-tru-m, Ne.), milking-pail (\forall m u g-, milk). -es-trā-: fen-estra, window.

241. -cro-, N. -cru-m, used when an l precedes: ful-cro-, N. ful-cru-m, couch-leg (\(\forall \) ful-c-, \(\rho \) prop). -cro- sometimes denotes the place where: ambulacru-m, \(\rho \) promenade (ambula-re); sometimes the effect: simula-cru-m, \(likeness \) (simula-re).

242. -culo-, N. -culu-m (202): pō-culo-, N. pō-culu-m, cup (√pō-drink); fer-culu-m, tray (√fer-, bear). -culo- sometimes denotes the place where: cub-iculu-m, sleeping-room (√cub-, lie); cēnā-culu-m, originally dining-room, usually garret (cēnā-re).

243. -u-lo-, N. -u-lu-m- (202): chiefly after c or g: vinc-ulo-, N. vinc-ulu-m, bond ($\sqrt{\text{vinc}}$, bind); cing-ulu-m, girdle ($\sqrt{\text{cing}}$ -, gird). -u-lā-, N. -u-la, F., rēg-ula, rule ($\sqrt{\text{rēg}}$ -, guide).

244. -bro-, N. -bru-m (202): crī-bro-, N. crī-bru-m, sieve ($\sqrt{\text{c e r}}$, c r ī-, sift); lā-bru-m, wash-basin ($\sqrt{\text{l a v}}$, wash). -brā-, N. -bra, F.: dolā-bra, chisel, mattock (dolā-re); lat-ebra, hiding-place ($\sqrt{\text{l a t}}$, hide).

245. -bulo-, N. -bulu-m (202): pā-bulo-, N. pā-bulu-m, fodder (\sqrt{p} ā-, keep); vēnā-bulu-m, husting-spear (vēnā-rī); pat-ibulu-m, pillory (\sqrt{p} a t-, steech). -bulo- sometimes denotes the place where: sta-bulu-m, standing-place, stall (\sqrt{s} ta -, stand). -bulā-, N. -bula, F., rare: fī-bula, ouch (\sqrt{f} ig-, fasten); ta-bula, board (\sqrt{t} a-, stretch); fā-bula, talk (\sqrt{f} ā-, talk).

(B.) DENOMINATIVES.

I. THE QUALITY.

246. The suffixes -io-, -ia-; -ta-, -tat-, -tut-, -tu-din-, are used to denote the Quality: as,

STEM.

NOMINATIVE.

FROM.

conleg-ioaudāc-iācīvi-tāt-

audācia, boldness

conlegium, colleagueship conlega, N. conlega, colleague audāci-, N. audāx, bold

cīvitās, citizenship māgni-tūdin- māgnitūdō, greatness

cīvi-, N. cīvis, citizen magno-, N. magnus, great

247. These abstracts are feminine, and come chiefly from adjectives or participles, except those in -io-, which are neuters, and come mostly from substantives. Sometimes the same stem takes two or more of these suffixes: as, clāri-tāt- or clāri-tūdin-, brightness (clāro-); iuven-tūt-, in poetry iuventat- or iuven-ta-, youth (iuven-).

(1.) -io- (N. -iu-m), -iā- (N. -ia).

- 248. -iā- is sometimes weakened to -iē- (604); -io- or -iā- is sometimes attached to other suffixes: thus, -t-io-, -t-ia- (-t-io-); -mon-io-, -mon-ia- : -cin-io-.
- 249. -io-, N. -iu-m, chiefly used in compounds, denotes belonging to, with a very wide range of meaning; many of these words are clearly neuter adjectives in -10- (305). Suffixed to personal names -iooften denotes the condition, action, or employment, which gives rise to the name; this meaning sometimes passes over to that of result, relation of persons, collection of persons, or place.
- 250. (a.) From simple noun stems: sen-io-, N. sen-iu-m, feeble old age (sen-); somn-iu-m, dream (somno-); sav-iu-m, love-kiss (suavi-); silentiu-m, silence (silenti-); crepund-ia, plural, rattle (*crepundo-); mendaciu-m, lie (mendāci-); solāc-iu-m, comfort (*solāci-, comforting).
- 251. (b.) Direct compounds (377): aequinoct-iu-m, equinox (aequo-, nocti-); contubern-iu-m, companionship (com-, taberna-); privileg-iu-m. special enactment (privo-, leg-).
- 252. (c.) Indirect compounds (377), chiefly from personal names: consiliu-m, deliberating together, faculty of deliberation, conclusion, advice, deliberative body (consul-); auspic-iu-m, taking auspices, auspices taken (auspic-); remig-iu-m, rowing, oars, oarsmen (remig-); conleg-iu-m, colleagueship, corporation (conlega-); aedific-iu-m, building (*aedific-, builder); perfugiu-m, asylum (perfugā-).
- 253. -t-io- N. -t-iu-m, rare: servi-tio-, N. servi-tiu-m, slavery, slaves (servo-); calvi-tiu-m, baldness (calvo-).
- 254. -mon-io-, N. -mon-iu-m (202): testi-monio-, N. testi-moniu-m, evidence (testi-); matr-imoniu-m, marriage (matr-); patr-imoniu-m, patrimony (patr-).

255. -cin-io-, N. -cin-iu-m, rare: latrō-cinio-, N. latrō-ciniu-m, rob-bery (latrōn-, 131); patrō-ciniu-m, protection (patrōno-, 126).

256. -iā-, N. -ia, is very common indeed, forming abstracts from

nouns, mostly adjectives or present participles.

audāc-iā-, N. audāc-ia, boldness (audāci-); miser-ia, wretchedness (misero-); abundant-ia, plenty (abundanti-); scient-ia, knowledge (scienti-); milit-ia, warfare (milit-); victor-ia, victory (victor-); mäter-ia, timber (mäter-); custod-ia, guard (custod-).

257. -iē-, N. -iē-s (104): pauper-iē-, N. pauper-iē-s, moderate means (pauper-). Most stems in -iē- are primitive (222).

258. -t-iā-, N. -t-ia, is suffixed to a few adjective stems, chiefly in -o-: iūsti-tiā-, N. iūsti-tia, justice (iūsto-); mali-tia, wickedness (malo-); pudicitia, shamefastness (pudico-); tristi-tia, sadness (tristi-).

259. -t-ië-, N. -t-ië-s, particularly as a collateral form of -t-ië- in the N., Ac., and Ab. singular (604): molli-tië-, N. molli-tië-s, softness (molli-).

260. -mon-ia-, N. -mon-ia (202): acri-monia-, N. acri-monia, sharpness (acri-); parsi-monia, economy (parso-). Analogously from roots, quer-imonia, complaint (/qu e s-, complain); al-imonia, nurture (/a l-, nurture).

261. -tā-, N. -ta: chiefly poetic: iuven-tā-, N. iuven-ta, youth (iuven-); senec-ta, age (sen-ec-).

262. -tāt-, N. -tā-s (202), is one of the very commonest suffixes.

pie-tat-, N. pie-ta-s, dutifulness (pio-, 105); felici-ta-s, happiness (felici-); civi-ta-s, citizenship, the community (civi-); facili-ta-s, easiness, facul-ta-s, ability (facili-); cāri-tā-s, dearness (cāro-); auctor-itā-s, authority (auctor-); līber-tā-s, freedom (lībero-, 94); mājes-tā-s, grandeur (mājōs-); volun-tā-s, wish (*volunti-, 126); venus-tā-s, grace (venusto-, 126); ae-tā-s, age (aevo-, 129); tempes-ta-s, kind of time, weather (tempes-).

263. -tūt-, N. -tū-s, only in iuven-tūt-, N. iuven-tū-s, youth (iuven-), senec-tū-s, age (senec-), servi-tū-s, slavery (servo-), and vir-tū-s, manhood (Viro-, 94).

264. -tū-din-, N. -tū-dō, suffixed to adjective stems: māgni-tūdin-, N. māgni tūdō, greatness (māgno-); forti-tūdō, courage (forti-); and to a few participles: consue-tudo, custom (consueto-, 126); sollici-tudo, anxiety (sollicito-); analogously vale-tudo, health (*valeto-, valere).

II. THE PERSON CONCERNED.

265. The suffixes -ario-, -on-, -ion-, -li-, -no-, and some others, are used to denote the Person concerned or occupied with a thing: as,

STEM.	Nominative.	From.
sic-ārio-	sīcārius, <i>assassin</i>	sicā-, N. sica, dagger
āle-ōn-	āleō, gambler	āleā-, N. ālea, die
lūd-iðn-	lūdið, <i>player</i>	lūdo-, N. lūdus, play
aedi-li-	aedīlis, aedile	aedi-, N. aedis, house
tribū-no-	tribūnus, <i>tribune</i>	tribu-, N. tribus, tribe

III. THE PLACE.

266. Neuters with the suffixes -torio-, -ario-, -ili-, -to-, or -eto-, are often used to denote the Place: as,

STEM.	Nominative.	From.
audī-tōrio- aer-ārio-	audī-tōrium, <i>lecture-room</i> aerārium, <i>treasury</i>	audītor-, N. audītor, hearer aer-, N. aes, money
ov-īli-	ovile, sheepfold	ovi-, N. ovis, sheep
murt-ēto-	murteta, myrtlegroves	murto-, N. murtus, myrtle

IV. DIMINUTIVES.

267. The suffixes -lo-, -la-, or -cu-lo-, -cu-la-, are used to form substantives with a *Diminutive* meaning. Diminutives may denote:

268. (1.) Actual smallness: as, securicula, a little hatchet; ventulus, a bit of wind; spēcula, a ray of hope.

269. (2.) Imputed smallness: implying, (a.) admiration, affection, or compassion; (b.) contempt or irony. This diminutive, which usually serves to add point to sentences themselves of a playful, patronizing, or slurring character, is very hard to translate; little and small are often inadequate; old or poor will sometimes do; but usually recourse must be had to free translations adapted to the particular context: as,

oratiuncula, a gem of a speech, an attempt at a speech; matercula, an anxious mother, poor mamma, dear mamma: lectulus, one's own little bed; anellus aureolus, a gay gold ring; Graeculi, our Greek coasins, the good people in Greece; Graeculus, a regular Greek, your gentleman from Greece; muliercula, a pretty girl, a lady gay, one of the gentler sex, a mere woman, an unprotected female, a maiden all forlorn; lacrimula, a wee tear, a crocodile tear; volpēcula, Master Reynard, dan Russel; tonstricula, a common barber girl; popellus, rabble; nummuli, filthy lucre; mercedula, an apology for pay; ratiuncula, a first rate reason; cauponula, a low tavern.

270. Some diminutives have entirely lost the diminutive meaning: as, puella, girl, not necessarily little girl; others have changed their original meaning: as, avunculus, uncle, originally grandpapa; anguilla, eel, originally little snake. Some words are only found in the diminutive form: as, stella, star (*sterā-). Diminutives usually have the gender of their primitives; exceptions are rare: as, rāna, frog, F., rānūnculus, tadpole, M.

(1.) -lo- (N., M. -lu-s, Ne. -lu-m), -lā- (N. -la).

271. Stems in -o-, -ā-, or a mute (-g-, -c-, -d-, or -t-), take -lo- or -la-, which is usually preceded by -u- (202).

hortu-lo-, N. hortu-lu-s, little garden (horto-); oppidu-lu-m, hamlet (oppido-); serru-lā-, N. serru-la, little saw (serrā-); rēg-ulu-s, chieftain (rēg-); vōc-ula, a bit of a voice (vōc-); calc-ulu-s, pebble (calci-); nepōtulu-s, a grandson dear (nepot-); aetat-ula, tender age (aetat-).

272. Stems in -eo-, -io-, or -vo-, retain -o- before -lo-; stems in -eā-, -iā-, or -vā-, also have -o- before -lā-.

alveo-lo-, N. alveo-lu-s, little tray (alveo-); gladio-lu-s, little sword (gladio-); servo-lu-s, little slave (servo-); nauseo-lā-, N. nauseo-la, a slight squeamishness (nauseā-); bēstio-la, little animal (bēstiā-); fīlio-la, little daughter (filiā-).

273. Stems in -lo-, -ro-, -no-, and -lā-, -rā-, -nā-, commonly drop the stem vowel and assimilate -r- or -n- to -l-: thus: -el-lo-, -el-lā- (110).

catel-lo-, for *catululo-, N. catel-lu-s, puppy (catulo-); agel-lu-s, little field (agro-); asel-lu-s, donkey (asino-); fabel-la-, N. fabel-la, short story (fabula-); umbel-la, sunshade (umbra-); pagel-la, short page (pagina-). A few words are not thus changed: pueru-lo-, N. pueru-lu-s, poor boy (puero-), as well as puel-lu-s.

274. In some words the vowel before -ll- is not changed to -e-: Hispāl-lu-s (Hispāno-), Messāl-la (Messānā-), proper names; corōl-la, chaptet (corōnā-); ll-lu-s, the least one, any at all (uno-); Sūl-la (Sūrā-), proper name; lapil-lu-s, for *lapid-lu-s, pebble (lapid-). Also homul-lu-s, son of the dust (homon-).

(2.) -cu-lo- (N., M. -cu-lu-s, Ne. -cu-lu-m), -cu-lā- (N. -cu-la).

275. Stems in a continuous sound (-1-, -n-, -r-, or -s-), or in -i-, -u-, or -e-, usually take -cu-lo- or -cu-la-.

sermūn-culo-, N. sermūn-culu-s, small-talk (sermōn-); virgun-culā-, N. virgun-cula, little maid (virgon-); homun-culu-s, son of earth (homon-); arbus-cula, liny tree (arbos-); cor-culu-m, heart of hearts (cord-, cor-, 138); Igni-culu-s, spark (Igni-); ani-cula, grandam (anu-); diē-cula, brief day (diē-); analogously, volpē-cula (vixen), little fox (*volpē-). Rarely with I: cani-cula, little dog (can-).

276. -ūn-culo-, N. -ūn-culu-s : av-ūnculo-, N. av-ūnculu-s, uncle (avo-); rān-ūnculu-s, tadpols (rānā-). -ūn-culā-, N. -ūn-cula: dom-ūnculā-, N. dom-ūncula, little house (domo-).

277. Diminutives are sometimes formed from other diminutives: cistel-lu-la, casket (cistel-la, cistu-la, cistā-).

278. A few other suffixes have a diminutive meaning: as, -ciōn-, -leo-, -astro-,-ttā: homun-ciō, manikin, child of dust (homon-); acu-leu-s, sting (acu-); Antōni-aster, regular little Antony; pin-aster, bastard pine; Iūli-tta, Juliat (Iūliā-); Polli-tta, little Polla (Pollā-).

V. PATRONYMICS.

279. Patronymics, or proper names which denote descent from a father or ancestor, have stems in -d\(\bar{a}\)- (N. -d\(\bar{e}\)-s), F. -d- (N. -s). These are chiefly Greek names used in poetry.

Priami-dā-, N. Priami-dē-s, scion of Priam's house; Tantali-d-, N. Tantali-s, daughter of Tantalus. Pēli-dē-s (Pēleu-s); Aenea-dē-s (Aenēā-); Thestia-dē-s (Thestio-); Lāertia-dē-s (Lāertā-); Scīpia-dā-s (Scīpiōn-). F. sometimes -īnē or -ōnē: Neptūnīnē (Neptūno-); Acrisionē (Acrisio-).

II. THE ADJECTIVE.

(A.) PRIMITIVES.

280. Primitive adjectives may usually be divided into active and passive; but the same suffix often has either an active or a passive meaning. Under primitive adjectives belong the participles; but these will be mentioned in connection with the verb.

I. WITH AN ACTIVE MEANING.

281. The suffixes -o-, -uo-, -ci-, -lo-, and -do-, are used to form adjectives with an Active meaning: as,

STEM.	Nominative.	From.	
vag-o-	vagus, wandering	√vag-, wander	
contig-uo-	contiguus, touching	com-, √t a g-, touck	
minā-ci-	minax, threatening	minä-ri, threaten	
cal-ido-	calidus, warm	√cal-, <i>warm</i>	

(I.) -0- (N. -u-s); -uo- (N. -uu-s).

282. -o- (N. -u-s): such have the meaning of a participle: vag-o-, N. vag-u-s, roaming (√v a g-, roam); viv-u-s, living (√v i v-, live); many are compounds: as, male-dic-u-s, abusive (male, √d i c-, say); pro-fug-u-s, flying on (pro-, √f u g-, fly). Passive: fid-u-s, trustworthy (√f i d-, trust).

283. -uo-, N. -uu-s: adsid-uo-, N. adsid-uu-s, unremitting (ad. \sed-, sit); contig-uu-s, touching (com-, \stag-, touch); perpet-uu-s, uninterrupted (per, \sqrt{pet-, go}). Some words are passive: as, sal-vu-s, safe (\sal-, save); vac-uu-s, empty (\sqrt{vac-, empty}); rélic-uu-s, left behind (rê-, \sqrt{liqu-, leave}), later réliquus (112).

(2.) -ci- (N. -x); -lo- (N. -lu-s); -do- (N. -du-s).

284. -ā-ci-, N. -ā-x (202), denotes capacity, habit, or inclination, often implying censure: pūgnā-ci-, N. pūgnā-x, full of fight (pūgnā-re); minā-x, threatening (minā-rī); fer-āx, productive (√fer-, bear); dic-āx, full of motherwit, quick at a joke (√dic-, say); rap-āx, apt to snatch (√rap-, snatch).

285. -u-lo-, N. -u-lu-8 (202), denotes simple action: as, pat-ulo-, N. pat-ulu-8, spreading (\sqrt{pat} -, spread); or inclination: as, bib-ulu-8, apt to drink (\sqrt{bib} -, drink).

286. -do- is often suffixed to -un- (-en-), -bun-, or -cun-; thus: -un-do- (-en-do-), -bun-do-, -cun-do-.

287. -i-do-, N. -i-du-s (202), denotes a state, and usually has a parallel verb in -ēre (368): cal-ido-, N. cal-idu-s, warm (cf. calē-re); call-idu-s, knowing (cf. calē-re); nit-idu-s, shining (cf. nitē-re); rarely in -ere: cupidu-s, desirous (cf. cupe-re); flu-idu-s, liquid (cf. flue-re); rap-idu-s, hurried (cf. rape-re). -i-do- becomes -i-di- in vir-idi-s, green (cf. virē-re). -do- sometimes occurs in denominatives: herbi-du-s, grassy (herbā-).

Digitized by Google

288. -un-do- (-en-do-), N. -un-du-s (-en-du-s) is the suffix of the gerundive, which was originally neither active nor passive (2238). In a few words from reflexives, which have become adjectives, it has a reflexive or active meaning: lab-undo-, N. lab-undu-s, gliding, slipping (labi); oriundu-s, arising (orini); sec-undu-s, following (sequi); volv-endu-s, rolling (volvi).

289. -bun-do-, N. -bun-du-s (202), has the meaning of an exaggerated present participle: frem-ebundo-, N. frem-ebundu-s, muttering away ($\sqrt{\text{frem-}}$, rear); trem-ebundu-s, all in a flutter ($\sqrt{\text{trem-}}$, quiver); furibundu-s, hot with rage ($\sqrt{\text{fur-}}$, rave); contionā-bundu-s, speaking a speech (contionā-rī); minitā-bundu-s, breathing out threatenings (minitā-rī); vitā-bundu-s, forever dodging (vītā-re).

290. -cun-do-, N. -cun-du-s, denotes permanent quality: fā-cundo-, N. fā-cundu-s, cloquent (\fā-, speak); îrā-cundu-s, choleric (îrā-scī); iū-cundu-s, pleasant, interesting (\fi i u v-, help).

II. WITH A PASSIVE MEANING.

291. The suffixes -li-, -ti-li-, -bili-, -tīvo-, -no-, and -mino-, are used to form adjectives with a Passive meaning: as,

STEM.	Nominative.	· From.
fac-ili-	facilis, easy to do	∮fac- , <i>do</i>
duc-tili-	ductilis, ductile	√duc-, <i>draw</i>
amā-bili-	amābilis, <i>lovable</i>	amā-re, <i>love</i>
mag-no-	m āgnus , <i>great</i>	√m a g-, increase

(I.) -li- (N. -li-s); -ti-li-, -bili- (N. -ti-li-s, -bili-s).

292. -i-li-, N. -i-li-s (202), denotes passive capability: fac-ili-, N. fac-ili-s, easy to do (\sqrt{f} a c-, do); frag-ili-s, breakable, frail (\sqrt{f} r a g-, break); habili-s, manageable, handy (\sqrt{h} a b-, hold); nüb-ili-s, marriageable (\sqrt{n} ü b-, veil).

293. -ti-li-, N. -ti-li-s, or -si-li-, N. -si-li-s (153), denotes capability or quality: as, duc-tili, N. duc-tili-s, capable of being drawn out, ductile (\d u c-, draw); fis-sili-s, cleavable (\d f i d-, split); r\vec{a}-sili-s, scraped (\d r \vec{a} d-, scrape). Rarely active: as, fer-tili-s, productive (\d f e r-, bear)

294. -bili-, N. -bili-s (202), denotes passive capability like -i-li-, but is far more common: horr-ibili-s, exciting a shudder (cf. horre-re); amā-bili-s, lovable (amā-re); flē-bili-s, lamentable ($\sqrt{f1}$ e-, weep). Rarely active: as, sta-bili-s, that can stand (\sqrt{s} t a-, stand); penetrā-bili-s, picrcing (penetrā-re). -ti-bili- (153), passive, rare: flexibili-s, flexible ($\sqrt{f1}$ e c-, bend).

295. -tīvo-, N. -tīvu-s, denotes the way a thing originated: as, captīvu-s, captīve (\sqrt{cap} , take); sta-tīvu-s, set (\sqrt{sta} , set).

(2.) -no- (N. -nu-s); -mino- (N. -minu-s).

296. -no-, N. -nu-s, an old passive participle suffix, denotes result: māg-nu-s (enlarged), great (√m a g-, great); vā-nu-s, vain (√v a c-, empty). Neuter as substantive: dō-nu-m, gift (√dō-, give). Sometimes active: egē-nu-s, needy (egē-re, 192).

297. -mino-, an old passive participle suffix, is found in the second person plural of the passive verb: regi-mini (sc. estis), being ruled (are ye); subjunctive, regi-mini (regere). The nominative singular with -s lost, -mino, is rarely found in the second and third person singular imperative of deponents: as, progredi-mino, step forward thou (progredi). -mino- or -mno-is further found in a few substantives: as, alu-mnu-s, nurseling (val-, nurse).

(B.) DENOMINATIVES.

298. Denominative adjectives may be divided into such as denote: I. Material or Resemblance. II. Appurtenance: implying sometimes possession, often fitness, conformity, character, or origin. III. Supply. IV. Diminutives. V. Comparatives and Superlatives; a few of these are primitive.

I. MATERIAL OR RESEMBLANCE.

200. The suffixes -eo- and -n-eo- are used to form adjectives denoting Material or Resemblance: as,

STEM.

NOMINATIVE.

FROM.

aur-coahē-neo-

aureus, golden ahēneus, bronze auro-, N. aurum, gold *ahes-, N. aes, bronse

300. -eo-, N. -eu-s: aur-eo-, N. aur-eu-s, golden, all gold, as good as gold (auro-); ferr-eu-s, iron (ferro-); pulver-eu-s, all dust (pulver-); virgin-eu-s, girlish (virgin-).

301. -n-eo-, N. -n-eu-s: ahē-neu-s, bronze (*ahes-, aes-); quer-neu-s, oaken (quercu-). -no- is usually poetical: as, ebur-nu-s, ivory (ebur-); quer-nu-s, oaken (quercu-). -a-neo-, N. -a-neu-s: miscellaneu-s, mixed (miscello-).

II. APPURTENANCE.

302. The suffixes -o-, -io-, -vo-; -timo-, -li-, -no-; -bri-, -cri-, -tri-; -co-, -ti-, -si-, are used to form adjectives denoting Belonging to: as,

STEM. NOMINATIVE. FROM. reg-iorēgius, kingly reg-, N. rex, king mari-timomaritimus, of the sea mari-, N. mare, sea rēg-ālirēgālis, of a king reg-, N. rex, king can-inocaninus, of a dog can-, N. canis, dog mulie-brimuliebris, womanly mulier-, N. mulier, woman civi-cocivicus, citizen's cīvi-, N. cīvis, citizen

(1.) -0- (N. -u-s), -io- (N. -iu-s), -vo- (N. -vu-s).

303. -o-, N. -u-s: decor-o-, N. decor-u-s, becoming (decor-); canor-u-s, melodious (canor-); pervius, passable (via-).

304. -io- is one of the commonest suffixes, and is often added to other suffixes; thus: -o-io-, -īo-io-; -tōr-io- (-sōr-io-); -ār-io-.

- 305. -io-, N. -iu-s: rēg-io-, N. rēg-iu-s, of or like a king (rēg-); patriu-s, of a father (patr-). Here belong many gentile names: as, Sēst-iu-s (Sexto-). These are used with substantives as adjectives: as, lēx Cornēl-ia, lēx Iūl-ia. Furthermore patrial adjectives: as, Corinth-iu-s, Corinthia, (Corintho-). In some, consonant -io- is used: plēbē-iu-s, of the commons (plēbē-). -io- is rare in primitives: exim-iu-s, select (ex, v e m-, take).
- 306. -c-io-, N. -c-iu-s (202): aedili-cio, N. aedili-ciu-s, of an aedile (aedili-); patr-iciu-s, of the fathers (patr-); later-iciu-s, of brick (later-).
- 307. -ic-io-, N. -ic-iu-s: nov-icio-, N. nov-iciu-s, new, new-comer (novo-); nātāl-iciu-s, birthday's (nātāli-); caement-iciu-s, rubble (caemento-). Usually suffixed to perfect participles to denote the quality derived from the past act: conduct-iciu-s, hired (conducto-); trālāt-iciu-s, transferred (trālāto-).
- 308. -tōr-io-, N. -tōr-iu-s, or -sōr-io-, N. -sōr-iu-s, from the agent (205) in -tōr- (-sōr-), is the commonest ending with -io-: imperā-tōrio-, N. imperā-tōriu-s, of a commander (imperātōr-). The neuter, as substantive, denotes the place where (266): audī-tōriu-m, lecture-room (audītōr-); dēvor-sōriu-m, inn (dēvorsōr-).
- 309. -ār-io-, N. -ār-iu-s, very common, is chiefly added to substantives: as, agr-ārio-, N. agr-āriu-s, of land (agro-). Often as substantive: not-āriu-s (265), stenographer (notā-); aer-āriu-m (266), treasury (aer-); sēmin-āriu-m, nursery (sēmin-); bell-āria, plural, goodies, bonbons (bello-).
- 310. -ī-vo-, N. -ī-vu-s (202): tempest-īvu-s, seasonable (tempestāt-, 126); aest-īvu-s, summer's (aestāt-).
 - (2.) -timo- (N. -timu-s); -li- (N. -li-s); -no- (N. -nu-s).
- 311. -timo-, N. -timu-s (202), for an older -tumo- (78): mari-timo-, N. mari-timu-s, of the sea (mari-); fini-timu-s, of the border (fini-); leg-itimu-s, lawful (leg-).
- 312. -li- N. -li-s: humi-li-, N. humi-li-s, lowly (humo-); but almost always in denominatives -li- is preceded by a long vowel (202), usually -ā- or -ī-, thus: -ā-li- (-ā-ri-), -ī-li; -ē-li-, -ū-li-.
- 313. -ā-li-, N. -ā-li-s: rēg-āli-, N. rēg-āli-s, kingly (rēg-); decemvirāli-s, of a decemvir (decemviro-); fāt-āli-s, fated (fāto-); t-āli-s, such (stem to-, that); qu-āli-s, as (quo-). -ā-ri-, N. -ā-ri-s, is used for -āli- if an l precedes (154): as, mol-āri-, N. mol-āri-s, of a mill (molā-); milit-āri-s, of a soldier (milit-). Neuters in -āli- and -āri- often become substantives (600): fōc-āle, neckcloth (fauci-); anim-al, breathing thing (animā-); calc-ar, spur (calci-).
- 314. -ī-li-, N. -ī-li-s: cīv-īli-, N. cīv-īli-s, of a citizen (cīvi-); puerili-s, boyish (puero-). The neuter, as substantive, sometimes denotes the place where (266): ov-īle, sheepfold (ovi-).
- 315. -ē-li, N. -ē-li-s: fidē-li-, N. fidē-li-s, faithful (fidē-); crūd-ēli-s, cruel (crūdo-); patru-ēli-s, cousin (patruo-). -ū-li-, N. -ū-li-s: tribū-li-, N. tribū-li-s, tri

316. The old participle suffix -no- (296) is sometimes added at once to noun stems, sometimes to other suffixes: thus, -a-no-, -i-no-; -ti-no-, -tī-no-; -er-no-, -ur-no-.

317. -no-, N. -nu-s, is added to stems formed with the comparative suffix -ero- or -tero- (347), denoting place: super-no-, N. super-nu-s, above; inter-nu-s, internal (inter); exter-nu-s, outside; so, also, alternu-s, every other (altero-); and to a very few substantives: as, pater-nu-s, fatherly (patr-); frater-nu-s, brotherly (fratr-); ver-nu-s, of spring (ver-). Also to cardinals, making distributives: as, bi-ni, two by two (for *duini. duo-, 118).

318. -ā-no-, N. -ā-nu-s (202): arc-āno-, N. arc-ānu-s, secret (arcā-); Rōm-ānu-s, of Rome (Rōmā-); mōnt-ānu-s, of a mountain (mōnti-); oppid-ānu-s, of a town (oppido-). -i-āno-: Cicerōn-iāno-, N. Cicerōn-iānu-s, Cicero's. Rarely -ā-neo-: mediterr-āneu-s, midland (medio-, terrā-).

319. -i-no-, N. -i-nu-s (202): mar-ino-, N. mar-inu-s, of the sea; repent-inu-s, sudden (repenti-); oftenest added to names of living beings: as, can-inu-s, of a dog (can-); div-inu-s, of a god (divo-); ali-enu-s, others' (alio-, 105). Also to proper names: as, Plaut-ino-, N. Plautinu-s, of Plautus (Plauto-); Alp-inu-s, Alpine (Alpi-).

320. -ti-no-, N. -ti-nu-s, is used in some adjectives of time: cras-tinu-s, to-morrow's (cras-); diu-tinu-s, lasting (diu); pris-tinu-s, of aforetime (pri-,

321. -ti-no-, N. -ti-nu-s, is used in a few words of place and time: intes-tino-, N. intes-tinu-s, inward (intus); vesper-tinu-s, at eventide (vespero-, 94).

322. -s- before -no- becomes -r- (116): hodier-no-, N. hodier-nu-s, of to-day (hodië, *hodiës-); diur-no-, N. diur-nu-s, of the day (dius-); and -urno-, regarded as a compound suffix, is found in diut-urno-, N. diut-urnu-s, lasting (*diuto-); noct-urnu-s, of the night (nocti-). -t-erno-, N. -t-ernu-s, is rare: hes-ternu-s, yester (*heso-); sempi-ternu-s, everlasting (semper).

(3.) -bri-, -cri-, -tri- (N. -ber or -bri-s, &c.).

323. -bri-, N. -ber or -bri-s: salū-bri-, N. salū-ber, healthy (salūt-); mulie-bri-s, womanly (mulier-).

324. -cri-, N. -cer or -cri-s (202): volu-cri-, N. volu-cer, winged (*volo-, flying); medio-cri-s, middling (medio-).

325. -tri-, N. -ter or -tri-s: eques-tri-, N. eques-ter, of horsemen (equit-, 152); semes-tri-s, of six months (sex, mens-). -es-tri- is used in a few words: camp-ester, of fields (campo-); silv-estri-s, of woods (silva-).

(4.) -co- (N. -cu-s); -ti-, -si- (N. -s, -si-s).

326. -co- is often suffixed to -ti-, sometimes to -es-ti-; thus: -ti-co-, -es-ti-co-.

327. -co-, N. -cu-s: civi-co-, N. civi-cu-s, of a eitisen (civi-); bellicu-s, of war (bello-); vīli-cu-s, bailiff (vīllā-). -ā-co-, -ī-co-, -ū-co-(202): merā-cu-s, amī-cu-s, anti-cu-s, apri-cu-s, postī-cu-s, pudī-cu-s, cadu-cu-s. -ti-co-, N. -ti-cu-s: rus-tico-, N. rus-ticu-s, of the country (rūs-). -es-ti-co-, N. -es-ti-cu-s: dom-esticu-s, of a house (domo-, domu-).

328. -ti- or -si- denotes belonging to a place; usually -ā-ti-, -i-ti-, -es-ti-, -en-ti-; -ēn-si-, or -i-ēn-si-.

329. -ti-, N. -s: Tībur-ti-, N. Tībur-s, Tilurtine (Tībur-). -ā-ti-; quōi-āti-, N. quōi-ā-s, what countryman? (quōio-); Anti-ā-s, of Antium (Antio-); optim-ātēs, good men and true (optimo-). -ī-ti-: Samn-īti-, N. Samn-ī-s, Samnian (Samnio-). -en-ti-: Vēi-enti-, N. Vēi-ēn-s, of Vei (Vēio-). -es-ti-, N. -es-ti-s: agr-esti-, N. agr-esti-s, of the fields (agro-); cael-esti-s, heavenly (caelo-).

330. -ēn-si-, N. -ēn-si-s (202), from appellatives of place or proper names of place: castr-ēnsi-, N. castr-ēnsi-s, of a camp (castro-); circ-ēnsi-s, of the circus (circo-); Hispāni-ēnsi-s (temporarily) of Spain.
-i-ēnsi-: Karthāgin-iēnsi-s, of Carthage (Karthāgin-).

III. SUPPLY.

331. The suffixes -to- or -ōso- are used to form adjectives denoting Supplied or Furnished with: as,

STEM. NOMINATIVE. FROM.
barbā-to- barbātus, bearded barbā-, N. barba, beard anno-5so- annosus, full of years anno-, N. annus, year

(I.) -to- (N. -tu-s); -len-to- (N. -len-tu-s).

332. -to-, the perfect participle suffix, is sometimes added at once to a noun stem, sometimes to other suffixes, thus: -āto-, -īto-, -ēto-, -uto-, -lento-.

333. -to-, N. -tu-s: onus-to-, N. onus-tu-s, loaded (onus-); vetus-tu-s, full of years (*vetus-, year); iüs-tu-s, just (iüs-); hones-tu-s, honourable (*hones-); fünes-tu-s, deadly (fünes-). -ā-to-: barbā-tu-s, bearded (barbā-); dent-ātu-s, toothed (denti-); -i-to-: aurī-tu-s, long-eared (auri-); -ū-to-: cornū-tu-s, horned (cornu-). -en-to-, N. -en-tu-s: cru-ento-, N. cru-entu-s, all gore (*cru-enti-, *cru-er). As substantive, arg-entu-m (white metal), silver (*arg-enti-, *arg-er, be white); flu-enta, plural, streams (fluenti-).

334. The neuter of stems in -to-, as a substantive, denotes the place where something, generally a plant, is found (266): arbus-tu-m, vineyard (arbos-); commonly preceded by -\varepsilon-, forming -\varepsilon-\varepsilon-(202), usually plural: d\varepsilon-\varepsilon tangent (d\varepsilon-); murt-\varepsilon tangent (murto-).

335. -len-to-, N. -len-tu-s (202): vino-lento-, N. vino-lentu-s, drunken (vino-): sanguin-olentu-s, all blood (sanguin-); lūcu-lentu-s, bright (lūci-, 108); pulver-ulentu-s, dusty (pulver-). A shorter form -lenti- is rare: vi-olenti-, N. vi-olēn-s, violent (vi-); op-ulēn-s, rich (op-)

(2.) -ōso- (N. -ōsu-s).

336. -ōso- (sometimes -ōnso-, -ōsso-), N. -ōsu-s, full of, is very common indeed. -ōso- is sometimes attached to other suffixes, thus: -o-ōso-, -ul-ōso-, -ūo-ul-ōso-.

337. -ōso-, N. -ōsu-s: ann-ōso-, N. ann-ōsu-s, full of years; formonsu-s, form-ossu-s or form-osu-s, shapely (forma-); pericul-osu-s, with danger fraught (periculo-); mor-osu-s, pringish, erros (mor-); calamit-osu-s, full of damage (calamitat-, 126); superstiti-osu-s, superstitious (superstition-, 126); früctu-osu-s, fruilful (früctu-, 97); mont-uosu-s, full of mountains (monti-, 202); cüri-osu-s, full of care (cürā-); laboriosu-s, toilsome (labor-, 202).

338. -c-ōso-, N. -c-ōsu-s: belli-cōso-, N. belli-cōsu-s, warlike (bello-, bellico-). -ul-ōso-, N. -ul-ōsu-s: formīd-ulōso-, N. formīd-ulōsu-s, terrible (formīdin-, 126). -ūc-ul-ōso-, N. -ūc-ul-ōsu-s: met-ūculoso-, N. met-ūculōsu-s, skittish (metu-).

IV. DIMINUTIVES.

339. Diminutives are formed from adjectives, as from substantives (267).

-lo-, N. -lu-s: aureo-lo-, N. aureo-lu-s, all gold, of precious gold, of red red gold, good as gold (aureo-); ebrio-lu-s, tipsy (ebrio-); parvo-lu-s, or parvu-lu-s, smallish (parvo-); frigidu-lu-s, chilly (frigido-); vet-ulus, little old (vet-); tenellu-lu-s, soft and sweet (tenello-, tenero-); pulchellus, sweet pretty (pulchro-); bel-lu-s, bonny (bono-); novel-lu-s, newborn (*novolo-, novo-). -culo-, N. -culu-s: pauper-culo-, N. pauper-culu-s, poorish (pauper-); levi-culu-s, somewhat vain (levi-).

340. A peculiar class of diminutives is formed by adding -culo- to the comparative stem -ius- (346): as, nitidius-culo-, N. nitidius-culu-s. a trifle sleeker (nitidius-); longius-culu-s, a bit longer (longius-).

341. Adverbs sometimes have a diminutive form: as, belle, charmingly; paullulum, a little bit; meliuscule, a bit better (340).

V. COMPARATIVES AND SUPERLATIVES.

342. Comparatives and superlatives are usually formed from the stem of the positive: as, dignior, worthier, dignissimus, worthiest, from digno-, stem of dignus (102). A few are formed directly from roots: thus, maior, greater, and maximus, greatest, are formed from the \sqrt{mag} , and not from magno-, stem of magnus.

(I.) COMPARATIVE -ior, SUPERLATIVE -issimus.

343. The nominative of comparative adjectives ends usually in -ior, and that of superlatives in -issimus: thus.

COMPARATIVE.			:	UPERLATIV	E.
Masc. -ior	Fem. -ior	Neut. -ius	Masc. -issimus	Fem. -issima	Neut. -issimum
Positive.		Compara	TIVE.	SUPERLAT	TIVE.
altus, hig trīstis, sa		altior, high tristior, sa	•	ssimus, tissimus	highest. 5, saddest.

(2.) SUPERLATIVE -rimus.

344. Adjectives with the nominative in -er have the nominative of the superlative like the nominative of the positive with -rimus added (350): as,

Positive.

COMPARATIVE.

SUPERLATIVE.

pauper, poor, acer, sharp,

pauperior, poorer, acrior, sharper, pauperrimus, poorest. Acerrimus, sharpest.

mātūrrimus occurs once (Tac.), for mātūrissimus, positive mātūrus, ripe.

(3.) SUPERLATIVE -limus.

345.

humilis, difficilis, and facilis, similis, dissimilis, and gracilis,

have the nominative of the superlative in -limus, following 1 of the stem (350): as,

Positive.

COMPARATIVE.

SUPERLATIVE.

humilis, lowly,

humilior, lowlier,

humillimus, lowliest.

THE COMPARATIVE SUFFIX.

346. The comparative suffix is -15s-, which becomes in the singular, nominative masculine and feminine, -1or (116; 59), neuter nominative and accusative, -1us (59); in all other cases -15r- (116).

347. Other comparative suffixes are -ro- or -ero-, and -tro- or -tero-, used in a few words, principally designating place: as, sup-eri, the upper ones; inferi, the nether ones; ex-teri, outsiders, posteri, after-generations; alter, the ather: uter, whether? which of the two? (for *quo-ter, quo-); dexter, right.

348. Some words designating place have a doubled comparative suffix, -er-iōr-, or -ter-iōr-: as, sup-er-ior, upper, Inferior, lower. Ci-ter-ior, hither, deterior (lower), worse, exterior, outer, interior, inner, posterior, hinder, after, filterior, further, dexterior, more to the right. -is-tro- is used in two words which have become substantives: min-is-ter (inferior), servant, and magister (superior), master.

THE SUPERLATIVE SUFFIX.

349. The common superlative suffix is -issimo-, nominative -issimus, for an older -issumo-, nominative -issumus (78).

350. In some words, -timo- is added to the last consonant of the positive stem, and the t is assimilated to preceding r or 1 (344, 345): as, acer-rimo-, N. acerrimus; humil-limo-, N. humillimus.

351. The suffix -timo- is further used in a few root superlatives: ci-timus, dextimus, extimus, intimus, optimus, postumus, and ültimus; and -simo- in māximus, pessimus, and proximus.

352. The suffix -mo- or -imo- is used in sum-mo-, N. summus, highest (sup); min-imo-, N. minimus, least; primus, first, septimus, seventh, decimus, tenth. -mo- or -imo- is attached to -ios- in plurimus for *plo-ios-imus (fullest), most; and to -re- or -tre-, a modified -ro- or -tro-, in supremus, extremus, and postremus.

PECULIARITIES OF COMPARISON.

353. Some positives have a comparative or superlative, or both, from a different form of the stem: such are.

frügālior. frügi, thrifty, frügālissimus. nequam, naughty, nequior, nēquissimus. iuvenis, young, iunior, (nātū minimus). senex, old, senior, (nātū māximus). māximus (351). magnus, great, māior, beneficus, kindly, beneficentior. beneficentissimus. honorificus, complimentary, honorificentior. honorificentissimus. mägnificus, grand, magnificentior, magnificentissimus.

354. iuvenior, younger, is late (Sen., Plin., Tac.). benevolēns, kindly, benevolentior, benevolentissimus, and maledicēns, abusīre, maledicentior (once each, Plaut.), maledicentissimus, have usually as positive benevolus and maledicus respectively.

355. Some positives have a comparative or superlative, or both, from a wholly different stem: such are,

bonus, good, melior, optimus (351). malus, bad, pēior. pessimus (351). multus, much, plūs (sing. Ne. only), plūrimus (352). minimus (352). parvus, little.

parvus has rarely parvissimus.

356. Four comparatives in -erior or -terior, denoting place (348), have two forms of the superlative; the nominative masculine singular of the positive is not in common use:

exterior, extimus (351), or extremus (352), outermost.

inferior. infimus, or imus, lowest.

postumus (351), lastborn, or postrēmus (352), last. posterior.

summus (352), cr suprēmus (352), highest. superior.

357. Six, denoting place, have the positive only as an adverb or preposition:

Cis. this side. citimus (351), hitherest. citerior (348), dē, down, deterior (348), dēterrimus, lowest, worst. in, in, intimus, inmost. interior (348), prae, before, prior, primus (352), first. prope, near, propior, proximus (351), nearest. uls, beyond, ülterior (348), ültimus (351), furthest.

ocior, swifter, ocissimus, has no positive.

358. These have a superlative, but no comparative: bellus, pretty, falsus, false, inclutus, famed, invictus, unconquered, invitus, unwilling, meritus, descriing, novus, new: vetus, veterrimus, old, sacer, sacerrimus, sacred, vafer, vaferrimus, sly; malevolus, malevolentissimus (twice, Cic.), spiteful; maleficus, maleficentissimus (once, Suet.), wicked, münificus, münificentissimus (inscrt.; Cic. once), generous. mīrificus, mīrificissimus (twice, Acc., Ter.), strange. Plautus has ipsissumus, his very self.

- 359. Most primitives in -ilis and -bilis (292, 294), have a comparative, but no superlative; but these have a superlative: facilis and difficilis (345), easy and hard, ūtilis, useful; also fertilis, productive, amābilis, lovable, mobilis, movable, nobilis, well known.
- 360. Many adjectives have no suffixes of comparison, and supply the place of these by magis, more, and māximē, most: as, mīrus, strange, magis mīrus, māximē mīrus. Many adjectives, from their meaning, do not admit of comparison.

COMPARATIVE AND SUPERLATIVE ADVERBS.

361. Adverbs derived from adjectives have as their comparative the accusative singular neuter of the comparative adjective; the superlative is formed like that of the adjective, but ends in -5: as,

altē, on high,	altius,	altissimē.
acriter, sharply,	ācrius,	ācerrimē.
facile, easily,	facilius,	facillimē.

- 362. An older superlative ending, -Ed for -E, occurs in an inscription of 186 B.C.: FACILVMED, i.e. facillimē. A few adverbs have superlatives in -ō or -um: as, meritissimō, most deservedly; prīmō, at first, prīmum, first; postrēmō, at last, postrēmum, for the last time.
- 363. If the comparison of the adjective has peculiarities, they are retained in the adverb likewise: as, bene, well, melius, optimē; male, ill, pēius, pessimē; multum, much, plūs, plūrimum; mātūrē, betimes, mātūrius, mātūrissimē (Cic., Plin.), or mātūrimē (Cic., Caes., Sall., Tac.). ōcius, swifter, no positive, ōcissimē. minus, less, and magis, more, are for *minius and *magius. In poetry magis sometimes becomes mage (71).
- 364. A few adverbs not derived from adjectives are compared: as, diū, long, diūtius, diūtissimē; saepe, often, saepius, saepissimē; nūper, lately, no comparative, nūperrimē; secus, otherwise, sētius, the less; temperi, betimes, temperius, earlier, no superlative.

(B.) FORMATION OF DENOMINATIVE VERBS.

365. Denominative verb stems have present infinitives in -āre, -ēre, or -īre (-ārī, -ērī, or -īrī), and are formed from noun stems of all endings: as,

Verb.	From Noun.	Verb.	From Noun.
fugā-re, rout	fugā-, N. fuga	flore-re, blossom	flör-, N. flös
locā-re, place	loco-, N. locus	sorde-re, be dirty	sordi-, N. sordēs
nomina-re, name	nomin-, N.nomen	pūnī-re, punish	poenā-, N. poena
levā-re, lighten	levi-, N. levis	condi-re, season	condo-, N. condus
sinuā-re, bend	sinu-, N. sinus	custodi-re, guard	custod-, N. custos
albē-re, be white	albo-, N. albus	vesti-re, dress	vesti-, N. vestis
miserē-rī, pity	misero-, N. miser	gesti-re, flutter	gestu-, N. gestus

- 366. These present verb stems are formed by adding a suffix consisting of a variable vowel, -o- or -u-, -e- or -i- (for an older -io- or -iu-, -ie- or -ii-), to the noun stem. The noun stem ending is often slightly modified, and almost always contracted with the variable vowel.
- 367. In a half a dozen denominatives from stems in -u- the u of the noun stem remains without modification, and is not contracted with the variable vowel (97): these are, acuere, sharpen (acu-), metuere, fear, statuere, set, tribuere, assign; arguere, make clear, batuere, beat.
- 368. Verbs in -are are by far the most numerous class of denominatives; they are usually transitive; but deponents often express condition, sometimes occupation: as, dominari, lord ii, play the lord; aquari, get oneself water. Most verbs in -Ire also are transitive; those in -Ere usually denote a state: as, calere, be warm; but some are causative: as, monere, remind.
- 369. Many denominative verbs in -are contain a noun suffix which is not actually found in the noun itself; such suffixes are: -oo-, -oin-, -lo-, -er-, -ro-, -to-, &c.: as,
- -co-: albi-căre, be white (*albi-co-); velli-căre, pluck (*velli-co-, plucker). -cin-: latrō-cinārī, be a robber (latrōn-); sermō-cinārī, discourse (sermōn-). -lo-: grātu-lārī, give one joy (*grātu-lo-); vi-olāre, harm (*vi-olo-); hēlu-lārī, cry 'hēla' (*nēlu-lo-). -er-: mod-erārī, check (*mod-es-, 236). -ro-: tole-rāre, endure (*tole-ro-); flag-rāre, blazz (*flag-ro-). -to-: dēbili-tāre, lame (*dēbili-to-); dubi-tāre, doubt (*dubi-to-).
- 370. Many denominatives in -are are indirect compounds (377), often from compound noun stems which are not actually found. So, particularly, when the first part is a preposition, or the second is from the root fac, make, ag, drive, do, or cap, take: as,
- opi-tul-ārī, bear help (opitulo-); suf-fōc-āre, suffocate (*suf-fōc-o-, fauci-); aedi-fīc-āre (housebuild), build (*aedifīc- or *aedifīco-, housebuilder); sīgni-fīc-āre, give token (*sīgnifīco-); fūm-ig-āre, make smoke (*tūmigo-, smoker, fūmo-, √ag-); nāv-ig-āre, sail, and rēm-ig-āre, row (nāvi-, ship, and rēmo-, oar); mīt-ig-āre, make mild (mīti-); iūr-ig-āre, commonly iūr-g-āre, quarrel (iūr-); pūr-ig-āre, commonly pūr-g-āre, clsan (pūro-); gnār-ig-āre, nārrāre, tell (gnāro-); anti-cip-āre, take beforshand (*anticipo-, ante, √cap-); oc-cup-āre, seize (*occupo-); re-cup-er-āre, get back (*recupero-).
- 371. Many verbs in -tare (-sare), or -tari (-sari), express frequent, intense, or sometimes attempted action. These are called *Frequentatives* or *Intensives*; they are formed from perfect participle stems; but stems in -a-to- become -i-to-: as,
- cant-āre, sing (canto-); cess-āre, loiter (cesso-); amplex-ārī, em-brace (amplexo-); habit-āre, live (habito-); pollicit-ārī, make overtures (pollicito-); dormīt-āre, be sleepy (dormīto-); negit-āre, keep denying (negāto-).
- 372. Some frequentatives in -tare are formed from the present stem of a verb in -ere; the formative vowel before -tare becomes i: as,
- agi-tăre, shake (age-re); flui-tăre, float (flue-re); nosci-tăre, recognise (nosce-re); quaeri-tăre, keep seeking (quaere-re); scisci-tări, enquire (scisce-re); vendi-tăre, try to sell (vende-re).

٠,٠

373. A few frequentatives add -ta- to the perfect participle stem: as,

acti-tare, act often (acto-); facti-tare, do repeatedly (facto-); lectitare, read again and again (lecto-); uncti-tare, anoint often (uncto-). From a frequentative another frequentative is sometimes derived: as, dict-are, dictate, dicti-tare, keep asserting (dicto-).

- 374. Some verbs are found only as frequentatives: as, gust-āre, taste (*gusto-, /gus-, taste); put-āre, think (puto-, /pu-, clean); aegrōt-āre, be ill (aegrōto-).
- 375. A few verbs in -uriō, -urīre, express desire; such are called *Desideratives*: as, ēss-urīre or ēs-urīre, want to cat (edere, ēsse). A few in -ssō, -ssere, express earnest action; such are called *Meditatives*: as, lacē-ssō, lacē-ssere, provoke.

COMPOSITION.

- 376. In compounds, the fundamental word is usually the second, which has its meaning qualified by the first.
- 377. A DIRECT COMPOUND is one formed directly from two parts: as, con-iug-, N. coniunx, yoke-fellow (com-, together, vi u g-, yoke); con-iungere, join together (com-, iungere); an INDIRECT COMPOUND is one formed by the addition of a suffix to a direct compound: as, iūdic-io-, N. iūdicium, trial (iūdic-): iūdica-re, judge (iūdic-).
- 378. A REAL COMPOUND is a word whose stem is formed from two stems, or an inseparable prefix and a stem, fused into one stem; an APPARENT COMPOUND is formed by the juxtaposition of an inflected word with another inflected word, a preposition, or an adverb.

I.' COMPOSITION OF NOUNS.

(A.) REAL COMPOUNDS.

FORM OF COMPOUNDS.

379. If the first part is a noun, its stem is taken: as, Ahēno-barbus, Redbeard, Barbarossa; usually with weakening of a stem vowel: as, Grāiugena, Greek-born (Grāio-, 112); aēni-pēs, bronzefoot (77); or sometimes with disappearance of a syllable (126): as, *venēni-ficus, venē-ficus, poisoner (venēno-); or of a vowel (95): as, man-ceps, contractor (manu-); particularly before a vowel (102): as, māgn-animus, great-souled (māgno-). Consonant stems are often extended by i before a consonant: as, mōri-gerus, complaisant (mōr-); or less frequently lose a consonant (133): as, *iūs-dex, jūror.

380. Stems in -s-, including those in -er-, -or- and -or- (236), are sometimes compounded as above (370): as, nemori-vagus, woodranger; honori-ficus, complimentary; but usually they drop the suffix and take i: as, opi-fex, workman (oper-); foedi-fragus, truce-breaker (foeder-); volni-ficus, wounding (volner-); mūni-ficus, generous (mūner-); terri-ficus, awe-inspiring (terror-); horri-fer, dreadful, horri-sonus, awful-sounding (horror-).

381. The second part, which often has weakening of the vowel (69), is sometimes a bare root used as a stem (199), oftener a root with a formative suffix; or a noun stem, sometimes with its stem ending modified: as, i\(\text{i\text{0}}\)-ic., N. i\(\text{i\text{0}}\)-ic., N. causidicus, pleader (209); in-gen-io-, N. ingenium, disposition (\(\frac{1}{2}\)\)en, begel, 219); con-t\(\text{i\text{g}}\)-i\(\text{i\text{o}}\)-i. N. cont\(\text{a\text{g}}\)-i\(\text{o\text{i}}\)-i. where \(\text{i\text{o}}\)-i.

MEANING OF COMPOUNDS.

- 382. DETERMINATIVES are compounds in which the second part keeps its original meaning, though determined or modified by the first part. The meaning of a determinative may often be best expressed by two words.
- 383. (1.) The first part of a determinative may be an adjective, an adverb, a preposition, or an inseparable prefix; the second part is a noun: as,

lāti-fundium, i.e. lātī fundī, broad acres; prīvi-lēgium, i.e. prīva lēx, special act; alti-sonāns, i.e. altē sonāns, high-sounding; con-discipulus, i.e. cum altero discipulus, fellow-pupil; per-māgnus, i.e. valdē māgnus, very great; in-dīgnus, i.e. non dīgnus, unworthy.

384. (2.) The first part of a determinative may represent the oblique case of a noun, generally a substantive; the second part is a noun or verb stem. These compounds are called *Objectives*: as,

Accusative of direct object (1132), armi-ger, i.e. qui arma gerit, armourbearer; dative of indirect object (1208), man-tēle, i.e. manibus tēla, handkerchief, napkin; genitive (1227), sõl-stitium, i.e. sõlis statiõ, solstice; ablative instrumental (1300), tubi-cen, i.e. qui tubā canit, trumpeter; locative (1331), Trõiu-gena, i.e. Trõiae nātus, Troy-born; ablative locative (1350), nocti-vagus, night-wandering; mõnti-vagus, mountain-ranging.

385. Possessives are adjective compounds in which the meaning of the second part is changed. The second part of a possessive is always formed from a substantive, qualified by the noun, adverb, or inseparable prefix of the first part, and the whole expresses an attribute which something has: as,

longi-manus, longarms, long-armed; miseri-cors, tender-hearted; bi-linguis, two-tongued; magn-animus, greatheart, great-hearted; im-berbis, beardless.

(B.) APPARENT COMPOUNDS.

386. Apparent Compounds are formed:

387. (t.) By two nouns combined, one with an unchanging case ending, the other with full inflections: as, aquae-ductus, aqueduct; senātūs-cōn-sultum, decree of the senate; pater-familiās, father of a family; vērī-similis, like the truth; in these words, aquae, senātūs, familiās, and vērī are genitives, and remain genitives, while the other part of the compound is declinable.

- 388. (2.) By a substantive with an adjective habitually agreeing with it, both parts being declined: as, res publica, the common-weal; res gestae, exploits; ius iurandum, oath; pecuniae repetundae, money claim.
- 389. (3.) By nouns, chiefly substantives, in the same case placed loosely side by side and making one idea. The two words may be used: (a.) Copulativel: as, Usus-früctus, use and enjoyment; pactum-conventum, bargain and covenant; duo-decim, two and ten, twelve: or (b.) Appositively: one word explaining the other (1045): as, Iuppiter, Jove the Father, for Iovis pater; Märspiter, Mars the Father, for Märs pater.
- 390. (4.) From an original combination of an oblique case with a preposition: as, proconsul, proconsul, from pro consule, for a consul; Egregius, select, from E grege, out of the herd; delirus, astray, mad, from de lire, out of the furrow.

II. COMPOSITION OF VERBS.

(A.) REAL COMPOUNDS.

391. Real Compounds are direct compounds of a verb with a preposition; the root vowel or diphthong of the verb is often weakened (69): as,

per-agere, put through, accomplish; ab-igere, drive away; ex-quirere, seek out. The prefix, which was originally a separate adverb modifying the verb, is in poetry sometimes separated from the verb by another word; the disyllabic prepositions in particular often remain as juxtaposed adverbs (396).

392. Some prepositions are inseparable, that is, used only in composition: ambi-, round, an-, up, dis-, in two, apart, por-, towards, red-, re-, back, sēd-, sē-, by oneself, away: as, amb-īre, go round to; an-hēlāre, breathe up; dis-pellere, drive apart; por-rigere, stretch forth; red-dere, give back; sē-iungere, separate.

(B.) APPARENT COMPOUNDS.

- 393. Apparent Compounds are formed by the juxtaposition of:
- 394. (1.) A verb with a verb: facio and fio are added to present stems, mostly of intransitive verbs in -ere; the -e- of the first verb is sometimes long, and sometimes short (62): as, cale-facere, make warm (calere); excande-facere, make blaze (candere); made-facere, make wet (madere). In these apparent compounds, the accent of facio remains the same as in the simple verb: as, calefácis.
- 395. (2.) A substantive with a verb: as, anim-advertere, pay heed to, anim-madvertere; vēnum-dare, or vēndere, sell, vēnum dare; vēn-īre, be sold, vēnum īre; lucrī-facere, make gain, lucrī facere; rē ferre or rē-ferre, concern.
- 396. (3.) An adverb with a verb: as, circum-dare, put round; satis-facere, satis-dare, give satisfaction; intro-ire, go inside; malle, prefer, for magis velle; nolle, be unwilling, for non velle; ne-scire, hau-scire, not know.

C. INFLECTION.

397. Inflection is the change which nouns, pronouns, and verbs undergo, to indicate their relation in a sentence.

The inflection of a noun or pronoun is often called *Declension*, and that of a verb, *Conjugation*.

(A.) INFLECTION OF THE NOUN.

398. The noun or pronoun is inflected by attaching case endings to the stem.

The endings, which are called case endings for brevity, indicate number as well as case, and serve also to distinguish gender words from neuters in the nominative and accusative singular of some stems, and of all plurals. These endings are nearly the same for stems of all kinds.

THE STEM.

399. The stem contains the meaning of the noun. Noun stems are arranged in the following order: (1.) stems in -\bar{a}-, in -o-, in a consonant, or in -i-; these are substantive, including proper names, or adjective; (2.) stems in -u- or -\bar{b}-; these are substantive only, and include no proper names.

400. In some instances, a final stem vowel is retained before a case ending which begins with a vowel: as, urbi-um, ācri-a, cornu-a, portu-i, portu-um (97); in others the stem vowel blends inseparably with the vowel of the case ending: as, mēnsīs (86), dominīs (87).

401. Some nouns have more than one form of the stem: as,

sēdēs (476); femur, iecur (489); vās, mēnsis (492); vīrus, volgus (493); iter, nix, senex, &c. (500); vīs (518); caedēs (523); famēs, plēbēs (524); domus (594); angiportus, &c. (595). Many nouns have a consonant stem in the singular, and an -i- stem in the plural: see 516; most substantives in -iē- or -tiē- have a collateral form in -iā- or -tiā- (604). Some adjectives have two different stems: as, hilarus, hilaru, hilarum, and hilaris, hilare; exanimus and exanimis.

GENDER.

402. There are two genders, Masculine and Feminine. Masculine and feminine nouns are called Gender nouns. Nouns without gender are called Neuter.

403. Gender is, properly speaking, the distinction of sex. In Latin, a great many things without life are conceived of as alive, and are masculine or feminine.

404. Some classes of substantives may be brought under general heads of signification, as below, like the names of rivers and winds (405), which are conceived of as male divinities, or of plants (407), which are conceived of as females. When the gender cannot be determined thus, it must be learned from the special rules for the several stems and their nominatives.

GENDER OF SOME CLASSES OF SUBSTANTIVES.

MASCULINES.

405. Names of male beings, rivers, winds, and mountains, are masculine: as,

Caesar, Găius, Sülla, men's names; pater, father; erus, master; scriba, scruener; Tiberis, the Tiber; Aquilo, a Norther; Lücretilis, Mt. Lucretilis.

406. The river names: Allia, Düria, Sagra, Lēthē, and Styx are feminine. Also the mountain names Alpēs, plural, the Alps, and some Greek names of mountains in -a or -ē: as, Aetna, Mt. Eina; Rhodopē, a Thracian range. A few are neuter, as Sōracte.

FEMININES.

407. Names of female beings, plants, flowers, shrubs, and trees, are feminine: as,

Gāia, Glycerium, women's names; mālus, apple-tree; quercus, eak; ilex, holm-oak; abies, fir.

408. Masculine are: bölötus, mushroom, carduus, thistle, dümī, plural, brambles, intibus, endive, iuncus, rush, oleaster, bastard olive, rubus, bramble, rumex, sorrel, scirpus, bulrush, and rarely ficus, fig. Also some of Greek origin: as, acanthus, amāracus, asparagus, and crocus. Neuter are: apium, parsley, balsamum, balsam-tree, röbur, heart of oak, and some names with stems in -er- (573).

MOBILE, COMMON, AND EPICENE NOUNS.

- 409. MOBILE NOUNS have different forms to distinguish sex: as, Iūlius, a man, Julius, Iūlia, a woman, Juliu; cervus, stag, cerva, hind; socer, father-in-law, socrus, mother-in-law; victor, conqueror, victrix, conqueress. Adjectives 'of three endings' (611), belong to this class.
- 410. Some nouns have one ending, but are applicable to either sex. Such are said to be of Common Gender: as, adulescens, young man or young woman; dux, leader; infans, baby, child; and many other consonant stems or stems in -i-, denoting persons. Adjectives 'of two endings' or 'of one ending' (611), belong to this class.
- 411. EPICENES have one ending and one grammatical gender, though applicable to animals of either sex. Thus, aquila, eagle, is feminine, though it may denote a ho-eagle as well as a sho-eagle: anatēs, ducks, feminine, includes drakes.

NEUTERS.

412. Infinitives, words and expressions quoted or explained, and letters of the alphabet, are neuter: as,

vivere ipsum, mere living; istūc 'taceō,' your 'I won't mention;' longum vale, a long goodbye; o Graecum, Greek O. But the letters have sometimes a feminine adjective, agreeing with littera understood.

VARIABLE GENDER.

413. Some substantives have different genders in the two numbers; the different gender is sometimes indicated by a difference of stem: as, epulum, neuter, epulae, feminine, feast. See balneum, frēnum, jocus, locus, margarita, ostrea, rāstrum, in the dictionary.

NUMBER.

- 414. There are two numbers, the Singular used of one, the Plural of more than one.
- 415. ambb, both, and duo, two, nominative and accusative masculine and neuter, are the only remnants of an old Dual number, denoting two.
 - 416. Some substantives, from their meaning, have no plural.
- Such are: proper names: as, Cicero, Cicero; Rōma, Rome; material and abstract substantives: as, oleum, oil, vinum, wine, iüstitia, justice; and gerunds: as, regendi, of guiding. For the occasional use of the plural, 1105-1110.
 - 417. Some substantives, from their meaning, have no singular.
- Such are: names of persons of a class: as, māiōrēs, ancestors; superī, the beings above; mānēs, ghosts; of feasts, sacrifices, days: as, Sāturnālia, festival of Saturn; kalendae, first of the month; of things made of parts or consisting of a series of acts: as, arma, arms; artūs, joints; quadrīgae, four-in-hand; exsequiae, funeral rites; of some places: as, Falerii; Vēi; Pompēi; Athēnae, Athens; Alpēs, the Alps.
- 418. Some substantives have different meanings in the two numbers: as, aedis, temple, aedēs, house; auxilium, aid, auxilia, auxiliaries; carcer, jail, carcerēs, race-barriers; Castrum, Castle, castra, camp; comitium, meeting-place, comitia, election; cōpia, abundance, cōpiae, troops; facultās, ability, facultātēs, wealth; finis, end, finēs, boundaries; grātia, favour, grātiae, thanks; impedimentum, hindrance, impedimenta, baggage; littera letter (of the alphabet), litterae, episte; rōstrum, beak, rōstra, speaker's stand. See also aqua, bonum, fōrtūna, lūdus, opera, pars, in the dictionary.

CASE.

419. Nouns have five cases, the Nominative, Genitive, Dative, Accusative, and Ablative.

The nominative represents a noun as subject, the accusative as object; the genitive denotes the relation of of, the dative of to or for, and the ablative of from, with, in, or by. But the meanings of the cases are best learnt from reading. All cases but the nominative and vocative are called Oblique Cases.

- 420. Town names and a few appellatives have also a case denoting the place where, called the *Locative*. Masculine stems in -o- and some Greek stems with other endings have still another form used in addressing a person or thing, called the *Vocative*.
- 421. The stem of a noun is best seen in the genitive; in the genitive plural it is preserved without change, except that o of -o-stems is lengthened (56). In dictionaries the stem ending is indicated by the genitive singular, thus: -ae, -ī, -is, -ūs (-ĕi), indicate respectively stems in -ā-, -o-, a consonant or -i-, -u-, and -ē-, as follows:

GENITIVE SINGULAR. GENITIVE PLURAL.

STEMS IN.

-ae, mēnsae, table -ārum, mēnsā-rum -ā-, mēnsā-, N. mēnsa -i, domini, master -ōrum, dominō-rum -o-, domino-, N. dominus -cons. um, reg-um -consonant, reg-, N. rex -is, rēgis, king -is, cīvis, citizen -ium, cīvi-um -i-, civi-, N. civis -ūs, portūs, port -u-, portu-, N. portus -uum, portu-um -ē, rē-, N. rēs (-ĉī, rĉī), thing (-ērum, rē-rum)

- 422. Gender nominatives usually add -s to the stem: as, servo-s or servu-s, slave, rex (149), civi-s, portu-s, re-s. But stems in -a- or in a continuous consonant (-l-, -n-, -r-, or -s-) take no -s: as, mensa, consul, consul, flamen, special priest, agger, mound, flos, flower.
- 423. Neuters have the nominative and accusative alike; in the singular the stem is used: as nomen, name; or a shortened stem: as, exemplar, pattern; but stems in -o- take -m: as, aevo-m or aevu-m, age. In the plural -a is always used: as, regna, kingdoms, nomina, cornua, horns. For -s in adjectives of one ending, see 612.
- 424. Gender accusatives singular add -m to the stem: as, mēnsa-m, servo-m or servu-m, nāvi-m, ship, portu-m, die-m. The consonant stems have the ending -em: as, rēg-em; most substantive stems in -i- and all adjectives also drop -i- and take -em: as, nāv-em, trīst-em, sad. In the plural, gender stems add -s to the accusative singular (131): as, mēnsā-s, servō-s, rēgē-s, nāvī-s or nāvē-s, portū-s, rē-s.
- 425. The ablative singular usually ends in the long vowel of the stem: as, mēnsā, dominō, nāvī, portū, rē. The ablative of consonant stems usually has -e for an older -ē: as, patre, father; and that of substantive -i- stems has -e more commonly than -i: as, nāve.
- 426. The ablative singular of -\(\bar{a}\)- and -O- stems ended anciently in -\(\bar{a}\)d and -\(\bar{o}\)d respectively: as, PRAIDAD, PREIVATOD; that of consonant stems in -\(\bar{i}\)d: as, AIRID, COVENTIONID. But -\(\bar{d}\) is almost entirely confined to inscriptions and disappeared early, first in consonant and -O- stems, and afterwards in -\(\bar{a}\)- stems (143).
- 427. The genitive plural adds -rum to -ā-, -o-, and -ē- stems: as, mēnsā-rum, dominō-rum, rē-rum; and -um to consonant stems, -i-stems, and -u- stems: as, rēg-um, cīvi-um, portu-um.
- 428. The dative and ablative plural are always alike: stems in -ā- and -o- take -is, which blends with the stem vowel (400): as, mēnsīs, dominīs; other stems have -bus, before which consonant stems are extended by i: as, rēgi-bus, nāvi-bus, portu-bus or porti-bus, rē-bus.

429. Some pronouns and a few adjectives have some peculiar case endings; see 618-694.

430. Many nouns are defective in case.

Thus, many monosyllables have no genitive plural: as, aes, copper, cor, heart, cos, whetstone, dos, dowry, os, face, pax, peace, pix, pitch, ros, dew, sal, salt, lūx, light; many words have no genitive, dative, or ablative plural: as, hiemps, winter; especially neuters: as, far, spelt, fel, gall, mel, honey, pūs, matter, rūs, country, tūs, frankincense. Many words in -tu- (-su-) have only the ablative (235). For -ē- stems, see 600. Other words more or less defective are exlēx, exspēs, fās and nefās, Infitiās, inquiēs, instar, luēs, nēmō, opis and vicis genitives, pondō and sponte ablatives, secus, vis. Many adjectives of one ending' want the nominative and accusative neuter plural and genitive plural.

431. Some adjectives are altogether indeclinable: as, frugī, thrifty, an old dative; nēquam, nanghty, an old accusative; quot, how many; tot, so many; and most numerals (637). These adjectives are attached to any case of a substantive without varying their own forms.

STEMS IN -a -.

The First Declension.

Genitive singular -ae, genitive plural -ā-rum.

432. Stems in -ā- include substantives and adjectives; both substantives and adjectives are feminine.

433. Names of males are masculine (405): as, scriba, writer; also Hadria, the Adriatic, and rarely damma, deer, and talpa, mole.

434. The nominative of stems in -a- ends in the shortened stem vowel -a.

435. Stems in -a- are declined as follows:

Example Stem	mēnsa, <i>table</i> , mēnsā-, F.		Stemand case endings
Singular Nom. Gen. Dat. Acc. Abl.	mēnsa mēnsae mēnsae mēnsam mēnsā	table, a (or the) table a table's, of a table to or for a table a table from, with, or by a table	Fa Fac Fac Fam -ä
Plural Nom. Gen. Dat. Acc. Abl.	mēnsae mēnsārum mēnsis mēnsās mēnsis	tables (or the) tables tables', of tables to or for tables tables from, with, or by tables	-ae -ārum -īs -ās -īs

SINGULAR CASES.

- 436. -ā- of the stem was shortened in the nominative and accusative singular at an early period (59). A few examples of the nominative in -ā are found in the oldest writers (65): as, familiā, family; liberā, free, adjective; epistulā, letter (Plaut.). A couple of old masculine nominatives in -ās are quoted (422): paricidās, murderer, and hosticapās, taker of enemies. In the accusative singular -ām occurs once: inimīcitiām (Enn.).
- 437. The genitive sometimes ends (1.) in -all in poetry: as, aulal, of the hall; pictal, embroidered; (2.) in -all as, molas, of a mill. This genitive is rare, but was always kept up in the word familias with pater or mater, sometimes with filius or filia: pater familias, the goodman, mater familias, the housewife. But pater familiae, or in the plural patres familiarum, is equally common.
- 438. Town names and a few appellatives have a locative case in -ae: as, Rōmae, at Rome, in Rome; militiae, in war, in the field, in the army.

PLURAL CASES.

439. Compounds ending with -cola, inhabiting, and -gena, born, and patronymics, sometimes have the genitive plural in -um in poetry: as, caelicolum, of occupants of heaven; Graiugenum, of Greek-born men; Aeneadum, of Aeneas's sons; also names of peoples: as, Lapithum, of the Lapithae. With these last -um occurs even in prose: as, Crotoniatum, of the Crotona people.

440. In the dative and ablative plural, -eis sometimes occurs (443): as, tueis ingrātieis, against your will (Plaut.). Nouns in -ia have rarely a single I: as, pecunis, by moneys (Cic.); taenis, with fillets (Verg.); nonis Iunis, on the fifth of June (Cic.).

441. In the dative and ablative plural, words in -aia, or plural -aiae, have -ais, and those in -eia have -eis (112): as, KAL. MAIS, on the calends of May (inscr.); Bais, at Bajae (Hor.); plebeis, plebeian.

442. The dative and ablative plural sometimes end in -abus, particularly in deabus, goddesses, and filiabus, daughters, to distinguish them from deis, gods, and filiabus, sons. ambae, both, and duae, two, regularly have ambabus and duabus.

443. Other case forms are found in inscriptions, as follows:

G. -ai, one syllable (84): PVLCHRAI; -āis, twice only: PROSEPNAIS, for Proserpinae; -aes, after 80 b.C., chiefly in proper names, mostly Greek: HERAES; rarely in appellatives: DOMINAES; -ēs: MINERVES; -ā, once: COIRA, i.e. Cūrae. D. -ai, in all periods (84): FILIAI; -ā: FORTVNA; -ē (85): FORTVNE. Ac. -a (140): TAYRASIA; MAGNA SAPIENTIA. Ab. -ād (426): PRAIDAD. Loc. -ai: ROMAI. Plural: N. -ai (84): TABELAI DATAI; -ā, rare: MATRONA; -ē, rare and provincial (85): MYSTE, i.e. mystae. D. and Ab. -cis, very often (86): SCRIBEIS; D. -ās, once: DEVAS CORNISCAS, i.e. dīvis Cornīscīs. Ab. -ēs once (85): NYGES, i.e. nūgīs.

GREEK NOUNS.

444. Greek appellatives always take a Latin form in the dative singular and in the plural, and usually throughout: thus, poëta, M., poet, and aula, F., court, are declined like mēnsa. Masculines have sometimes a nominative -ēs and accusative -ēn: as, anagnōstēs, reader, anagnōstēn; rarely an ablative -ē: as, sophists. Greek feminines in -ē sometimes have Greek forms in late writers: as, N. grammaticē, philology, G. grammaticēs, Ac. grammaticēn, Ab. grammaticē (Quintil.).

445. Greek proper names sometimes have the following forms. Nominative masculine -ās, -ēs: as, Prūsiās, Atrīdēs; feminine -ā: as, Gelā, Phaedrā; -ē: as, Circē. Genitive feminine -ēs: as, Circēs. Accusative masculine -ān, -dēn: as, Aenēān, Pēlīdēn; feminine -ēn: as, Circēn. Ablative feminine -ē: as, Tīsiphonē. Vocative -ā or -a: as, Atrīdā, Atrīda, Thyesta; -tē: as, Boōtē; -dē: as, Aeacidē.

STEMS IN -o-.

The Second Declension.

Genitive singular -I, genitive plural -o-rum.

- 446. Stems in -o- include substantives and adjectives, masculine or neuter.
- 447. Most names of plants in -us are feminine (407); also the following: alvos or alvus, belly, colus, distaff, domus, house, humus, ground, vannus, fan.
- 448. The nominative of masculines ends, including the stem vowel, in -o-s, or usually -u-s; some end in -r; neuters end in -o-m, or usually u-m.
- 449. (1.) Stems in -o- with the nominative in -us or -um are declined as follows:

Examples Stems	dominus, master, domino-, M.	rēgnum, kingdom, rēgno-, Ne.	Stem	case endings
Singular Nom. Gen. Dat. Acc. Abl. Voc.	dominus, a (or the) master domini, a master's dominō, to or for a master dominum, a master [master dominō, from, with, or by a domine, master	rēgnum rēgnī rēgnō rēgnum rēgnō	Mus -i -ō -um -ō	Neum -i -ō -um -ō
Plural Nom. Gen. Dat. Acc. Abl.	dominī, (the) masters dominōrum, of masters dominīs, to or for masters dominōs, masters [masters dominīs, from, with, or by	rēgna rēgnōrum rēgnīs rēgna rēgnīs	-i -ōrum -is -ōs -is	-a -ōrum -īs -a -Is

450. deus, god, is declined as follows: N. deus, G. dei, D. and Ab. deo, Ac. deum. Plural: N. dei, dii, commonly di, G. deorum or deum, D. and Ab. deis, diis, commonly dis, Ac. deos.

451. (2.) Stems in -o- with the nominative in -r or in -aius, -eius, or -oius are declined as follows:

Examples Stems	puer, <i>boy</i> , puero-, M.	ager, field, agro-, M.	Pompēius, <i>Pompey</i> , Pompēio-, M.
Singular Nom. Gen. Dat. Acc. Abl. Voc.	puer, a (or the) boy pueri, a boy's, of a boy puero, to or for a boy puerom, a boy puerom, a boy puero, from, with, or by a boy	ager agrī agrō agrum agrō	Pompēius Pompēi Pompēi Pompēi Pompēium Pompēi Pompēi, Pompēi
Plural Nom. Gen. Dat. Acc. Abl.	pueri, (the) boys puerorum, boys, of boys pueris, to or for boys pueros, boys pueris, from, with, or by boys	agrī agrōrum agrīs agrōs agrīs	Pompēi Pompēiārum Pompēis Pompēiās Pompēiās

SINGULAR CASES.

452. -us and -um were originally -os and -om. But -us was used in the earliest times, -um somewhat later, and both became prevalent between 218 and 55 B.C. (75). After u or v, however, the -os and -om were retained till toward 50 A.D. (105); also after qu; but -cus and -cum often displaced -quos and -quom (112): as, equos, equom, or ecus, ecum, horse; antiquos, antiquom, or anticus, anticum, ancient. In the vocative -e was always used, and is retained by Plautus in puere, thou boy.

453. Words in -rus with a long penult, as, sevērus, stern, and the following substantives with a short penult are declined like dominus (449):

erus, master iüniperus, juniper numerus, number umerus, shoulder uterus, womb

For adjective stems in -ro- with nominative -rus, see 615.

454. Masculine stems in -ro- preceded by a short vowel or a mute, except those above (453), drop -os in the nominative, and have no vocative: as, stem puero-, N. puer, boy (142). Most masculines in -ro- have a vowel before r only in the nominative -er (89): as, agro-, N. ager. But in compounds ending in -fer and -ger, carrying, having, and the following, the vowel before -r is a part of the stem, and is found in all the cases:

adulter, Liber, paramour, Liber puer, vir, boy, man gener, socer, son-in-law, father-in-law liber, vesper, children, evening For Mulciber, Hibër, and Celtibër, see the dictionary; for adjective stems in -ro- with nominative -r, see 616. Once socerus (Pl.).

- 455. nihilum, nothing, usually drops -um in the nominative and accusative, becoming nihil or nīl, and noenum, naught, becomes non, not (140). famul is used for famulus, slave, by Ennius and Lucretius, once each (142).
- 456. Substantives ending in -ius or -ium (but never adjectives), have commonly a single -i in the genitive singular (105): as,
- Vergilius, G. Vergili (172); filius, son, G. fili; cônūbium, marriage, G. cônūbi.
- 457. Vergil has once a genitive -ii, fluvii, river's. Propertius has -ii two or three times; with Ovid, Seneca, and later writers, -ii is common: as, gladii, of a sword; even in proper names, which were the last to take -ii: as, Tarquinii; but family names almost always retain a single -I. Locatives have -ii: as, Iconii (Cic.).
- 458. Proper names ending in -āius, -ēius, or -ōius have -āī, -ēī, or -ōī in the genitive and vocative singular and nominative plural, and -āīs, -ēīs, or -ōīs in the dative and ablative plural (112): as,
- Gāius, G., V., and N. Pl. Gāi, D. and Ab. Pl. Gāis; Pompēis; Bōi, Bōis. In verse ēi of the vocative is sometimes made one syllable (99): as, Pompēi; Voltei (Hor.).
- 459. Latin proper names in -ius have the vocative in -i only: as, Vergilius, V. Vergili; Mercurius, V. Mercuri (172). So, also, filius, fili, son; genius, geni, good angel; volturius, volturi, vulture; meus, mi, my, from the stem mio-.
- 460. Town names and a few appellatives have a locative case in -i: as, Ephesi, in Ephesus; humi, on the ground; belli, in war.

PLURAL CASES.

- 461. In the nominative plural masculine, -ei sometimes occurs (465): as, nātei geminei, twins born (Plaut.); -eis or -īs is rare (465): as, Sardeis, Sardians; Oculis, eyes; not infrequently hisce, these here (Plaut.); masculine stems in -io-have rarely a single -ī: as, fill, sons. For -āi, -ēi, or -ōi, see 458. The nominative and accusative plural of neuters ended anciently in -ā (65): as, oppidā, towns (Plaut.). But -ā was shortened at an early period (59).
- 462. In the common genitive plural -ōrum, the -o- of the stem is lengthened (56). A genitive plural in -ūm (or, after v, in -ōm) is common from dīvos, dīvus, and deus, god; from dēnārius, denar, modius, peck, nummus, money, sēstertius, sesterce, and talentum, talent, with numerals; and from cardinals and distributives (641): as, dīvom, dīvum, deum; mīlle sēstertiūm; ducentūm; bīnūm. The u was originally long (29; 30); but it was shortened before 100 A.D.
- 463. Other masculine substantives have occasionally this genitive: as, libertim, of children; particularly in set phrases and in verse: as, centuria fabrim, century of mechanics; Grāitm, of Greeks. With neuter substantives, as oppidim, for oppidorum, of towns, and with adjectives it is rare.
- 464. In the dative and ablative plural, -cis is rare (87): as, Epidamnieis (Plaut.). Stems in -io- have rarely a single ī: as, filis, for sons. For -āīs, -cīs, or -ōīs, see 458. ambō, both, and duo, two, have ambōbus and duōbus (640).

465. Other case forms are found in inscriptions, as follows:

N. -08, -0m, with 0 retained (70): FILIOS, TRIBUNOS; POCOLOM; in proper names -0 (47): CORNELIO; -u, rare: LECTY; -is, or -i, for -iu8: CAECILIS; CLAVDI; neuter -0 (140): POCOLO. G. oldest form -i: VRBANI; -ei, from 146 B.C. to Augustus: POPVLEI; CONLEGEI; -ii from stems in -io- not before Tiberius: COLLEGII. Ac. -om: VOLCANOM; -0 (140): OPTVMO VIRO; -u: GREMIV. Ab. -ōd, not after 186 B.C. (426): POPLICOD, PREIVATOD. Plural: N.-ei, always common (87): VIREI; FILEI; -ēs, -eis, -is (461): ATILIES; COQVES: LEIBEREIS; i.e. liberi; MAGISTRIS; MAGISTRIS; -ē, rare: PLOIRVME, i.e. plūrumi. G. -ōm or -ō (140) ROMANOM; ROMANO; -ōTO (140): DVONORO; -im once: AISERNIM. D. and Ab. -eis, the only form down to about 130 B.C. (87): ANTIQVEIS; PROXSYMEIS; -ēs, twice: CAVATVRINES.

GREEK NOUNS.

466. Greek stems in -o- are generally declined like Latin nouns, but in the singular sometimes have -os in the nominative, -on in the nominative or accusative neuter, rarely -ū in the genitive, or -ō in the feminine ablative. Plural, nominative sometimes -oe, masculine or feminine, and genitive, chiefly in book-titles, -ōn: as,

Nominative Ilios; Ilion or Ilium. Genitive Menandrū, of Menander. Ablative feminine adjective lectīcā octophoro, in a sedan with eight bearers. Plural: nominative Adelphoe, the Brothers; canephoroe, basket-bearers, feminine. Genitive Georgicon liber, book of Husbandry. For Androgeos, Athos and Panthūs, see the dictionary.

CONSONANT STEMS.

The Third Declension.

Genitive singular -is, genitive plural -um.

467. Consonant stems are mostly substantive, and include both gender words and neuters.

Comparatives and a few other words are adjective. For the gender of substantives, see 570.

- 468. The nominative of consonant stems ends in -s (or -x); or in -n (-5), -1, -r, or -s of the stem, rarely in -c or -t.
- 469. Most consonant stems have one syllable less in the nominative than in the genitive.

Such words are called *Imparisyllabic* words or *Imparisyllables*: as, nominative rēx, king, one syllable; genitive rēgis, of a king, two syllables.

470. Many consonant stems have a double form: one form used in the nominative singular (neuters have this form in the accusative also), another form in the other cases: as,

index, juror, stem of nominative indec- (110), of other cases indic-; flamen (110), special priest, flamin- (111); virgo, maid, virgin- (111); auceps (110), fowler, aucup- (72); ebur (75), wory, ebor-; genus, race, gener- (116, 110); tristius (346), sadder, tristior- (346); corpus (75), body, corpor- (116); pater (89), father, patr-. In such instances the stem of the oblique cases is taken for brevity to represent both forms of the stem.

MUTE STEMS.

471. (1.) Stems in a guttural mute, -g- or -c-, are declined as follows:

Examples Stems	rēx, king, rēg-, M.	dux, leader, duc-, M.	iūdex, juror, iūdic-, M.,F.	Case endings
Singular Nom. Gen. Dat. Acc. Abl.	rex, a (or the) king regis, a king's, of a king regi, to or for a king regem, a king regem, a king rege, from, with, or by a	dux ducis duci ducem duce	iūdex iūdicis iūdici iūdicem iūdice	-s (-x) -is -i -em -e
Plural Nom. Gen. Dat. Acc. Abl.	rēgēs, (the) kings rēgum, kings', of kings rēgibus, to or for kings rēgēs, kings [kings rēgibus, from, with, or by	ducēs ducum ducibus ducēs ducēs	iūdicēs iūdicum iūdicibus iūdicēs iūdicībus	-ës -um -ibus -ës -ibus

In the nominative and accusative, neuters have no case ending in the singular, and -a in the plural. In the other cases they have the same case endings as gender stems.

- 472. (a.) Examples of stems in -g-, with nominative -x, genitive -gis, are:
- -ex, -egis grex, M., (F.), herd; aquilex, M., spring-hunter, hydraulic engineer.
- -ēx, -ēgis rēx, M., king; interrēx, regent; lēx, F., law; and N. and Acexlēx, exlēgem, beyond the law, adjective.
- -ex, -igis rēmex, M., oarsman.
 - -ix, -igis strix, F., screech-owl.
 - -unx. -ugis coniunx (121) or coniux, M., F., spouse.
 - -ux, -ūgis frūx, F., fruit.

- 473. (b.) Examples of stems in -c-, with nominative -x, genitive -cis, are:
- -ax, -acis fax, F., torch, no G. Pl. in good writers (430).
- -ax, -acis pax, F., peace, Pl. only N. and Ac. paces; limax, F., snail.
- -ex, -ecis faenisex, M., haycutter; nex, F., murder; preci, D., F., prayer, no N., usually plural.
- -ex, -ecis vervex, M., wether; allex, F., fish-pickle, also allec, Ne.
- -ex, -icis Masculines mostly: apex, point; carex, F., rush; caudex or codex, block, book; cimex, bug; cortex, M., F., bark: culex, gnat; forfex, M., F., shears; frutex, shrub; llex, F., holm-aak; illex, M., F., seducer; imbrex, tile; latex, fluid; murex, purpleshell; obicc, Ab., M., F., bar, no N.; paelex, F., concubinc; pollex, thumb; pulex, flea; pumex, pumice-stone; ramex, blood-vessel; rumex, sorrel; silex, M., F., flint; sorex, shrewmouse; vortex or vertex, whirl; vitex, F., a shrub. Also some compounds: as, iudex, juror; artifex, artisan; auspex, bird-viewer.
- -ix, -icis Feminines mostly: appendix, addition; calix, M., cup; filix, fern; fulix, gull; fornix, M., arch; larix, larch; pix, pitch, no G. Pl. (430); salix, willow; vārix, swollen vein; vicis, G., change, no N., D., or G. Pl. (430).
- -īx, -īcis Feminines: cervīx, neck; cicātrīx, scar; cornīx, crow; coturnīx (62), quail; lodīx, blanket; rādīx, root; struīx, heap. Also coxendīx, hip, later coxendix, coxendicis.
- -ox, -ocis vox, F., voice.
- -ux, -ucis crux, F., cross; dux, M., F., leader; nux, F., nut-tree, nut; trādux, M., vinelayer.

474. (2.) Stems in a lingual mute, -d- or -t-, are declined as follows:

Examples Stems	custõs, keeper, custõd-, M.	aetās, age, aetāt-, F.	virtūs, virtue, virtūt-, F.	mīles, soldier, mīlit-, M.
Singular Nom. Gen. Dat. Acc. Abl.	custõs custõdis custõdī custõdem custõde	aetās aetātis aetātī aetātem aetāte	virtūs virtūtis virtūtī virtūtem virtūte	mīles mīlitis mīlitī mīlitem mīlite
Plural Nom. Gen. Dat. Acc. Abl.	custōdēs custōdum custōdibus custōdēs custōdibus	actātēs actātum actātibus actātēs actātībus	virtūtēs virtūtum virtūtibus virtūtēs virtūtibus	mīlitēs mīlitum militibus mīlitēs mīlitibus

- 475. (a.) Examples of stems in -d-, with nominative -s, genitive -dis, are:
- -as, -adis vas, M., F., personal surety, no G. Pl. (430).
- -aes, -aedis praes, M. bondsman.
- -es, -idis obses, M., F., hostage; praeses, M., F., overseer. *deses, slothful, adjective.
- -ēs, -edis pēs, M., foot.
- -es, -ēdis hērēs, M., F., heir; exhērēs, disinherited, adjective; mercēs, F., reward.
- -is, -idis Feminines: capis, cup; cassis, helmet; cuspis, spear-point; promulsis, appetizer; lapis, M., stone.
- -ōs, -ōdis custos, M., F., guard.
- -aus, -audis laus, F., praise.
- -us, -udis pecus, F., beast, head of cattle.
- -ūs, -ūdis Feminines: incūs, anvil; palūs, swamp, nominative once in Horace palus, as from an -o- stem; subscūs, dovetail.
- 476. sēdēs, F., seat, has an -s- stem, namely -ēs (236), in the nominative, and sēd- in the other cases (401); G. Pl. sēdum, once sēdium (Vell. Pat.). The only example of a neuter stem in -d-, with nominative -r, genitive -dis, is cor (143), heart, cordis, no G. Pl. (430).
- 477. (b.) Examples of stems in -t-, with nominative -s, genitive -tis, are:
- -as, -atis anas, F., duck; G. Pl. also anitum (Cic.), and Ac. Pl. anitēs (Plaut.).
- -ās, -ātis actās, F., age; also numerous other feminines in -tās (262).
- -es, -etis interpres, M., F., go-between; seges, F., crop; teges, F., mat.
- -es, -itis

 Masculines mostly: ames, net-pole; antistes, M., F., overseer; caespes, sod; comes, M., F., companion; eques, horseman; fomes, tinder; gurges, whirlpool; hospes, M., F., guest-friend; limes, path; merges, F., sheaf; miles, M., F., solder; palmes, vine-sprout; pedes, man afoot, infantry; poples, hough; stipes, trunk; termes, bough; trames, by-path. dives, rich; sospes, safe; superstes, surviving; caelite, Ab., occupant of heaven, no N., adjectives.
- -ēs, -etis abiēs, F., fir; ariēs, M., ram; pariēs, M., wall.
- -ēs, -ētis Feminines: quiēs and requiēs, rest, no D., Ac. often requiem, Ab. usually requiē (603); inquiēs, unrest, N. only.
- -os, -otis compos, master of, adjective.
- -ōs, -ōtis nepōs, M., grandson, profligate; sacerdōs, M., priest; cōṣ, F., whatstone, no G. Pl. (430); dōs, F., dowry, no G. Pl. in good writers (430); dōtum once (Val. Max.), and dōtium in the jurists.
- -ūs, -ūtis Feminines: iuventūs, youth; salūs, existence; senectūs, old age; servitūs, slavery, all singular only; and virtūs, virtue, with a plural.

- 478. vātēs, bard, has an -s- stem, namely -ēs (236), in the nominative, and vāt- in the other cases (401); G. Pl. vātum, but thrice vātium (Cic.). The only example of a neuter stem in -t-, with nominative -t, genitive -tis, is caput, head, capitis, and its compounds occiput, back of the head, and sīnciput, jole. lac, Ne., milk, lactis, has in old Latin nominative and accusative lacte, but usually drops the -te.
 - 479. (3.) Stems in a labial mute, -b- or -p-, are declined as follows: municeps, burgess, stem municip-, M., F.

Singular: N. mūniceps, G. mūnicipis, D. mūnicipi, Ac. mūnicipem, Ab. mūnicipe. Plural: N. mūnicipēs, G. mūnicipum, D. mūnicipibus, Ac. mūnicipēs, Ab. mūnicipibus.

- 480. Examples of stems in -b- or -p-, with nominative -s, genitive -bis or -pis, are:
- -ebs, -ibis caelebs, unmarried, adjective, the only stem in -b-.
- -, -apis dapis, G., F., feast, N. and D. S., and G. Pl. not used (430).
- -eps, -ipis adeps or adips, M., F., fat, no G. Pl.; forceps, M., F., pincers; municeps, burgher. particeps, sharing, and princeps, first, adjectives.
- -eps, -upis auceps, fowler; manceps, contractor, mancupis or mancipis.
- ---, -ipis stipis, G., F., small change, no N.
- -ops, -opis Ops, F., old Opis (Plaut.), goddess of power; opis, G., F., help, no N., D. once only, Pl. opēs, means (418).

II. STEMS IN A CONTINUOUS CONSONANT.

481. (1.) Stems in -1- and -n- are declined as follows:

Examples Stems	consul, consul, consul, M.	leō, <i>lion</i> , leōn-, M.	imāgō, likeness, imāgin-, F.	nomen, name, nomin-, Ne.
Singular				
Nom.	cōnsul	leō	imāgō	nōmen
Gen.	consulis	leōnis	imāginis	nōminis
Dat.	consuli	leōnī	imāginī	nōminī
Acc.	cōnsulem	leōnem	imāginem	nōmen
Abl.	cōnsule	leōne	imägine	nōmine
Plural				
Nom.	consules	leõnēs	imāginēs	nōmina
Gen.	consulum	leõnum	imāginum	nēminum
Dat.	consulibus	leõnibus	imāginibus	nōminibus
Acc.	consules	leõnēs	imāginēs	nōmina
Abl.	consulibus	leōnibus	imāginibus	nōminibus

482. Examples of stems in -1-, with nominative -1, genitive -1is, are:

-alis sal, M., salt, sometimes Ne. in the singular; no G. Pl. (430).

-el, -ellis fel (139), Ne., gall; mel, Ne., honey; plural only fella, mella.

-il, -ilis mügil, M., mullet; pügil, M., boxer; vigil, M., watchman.

-ōl. -ōlis sōl, M., sun, no G. Pl. (430).

-ul, -ulis consul; praesul, head dancer; exsul, exile.

483. (a.) Examples of stems in -n-, with nominative -en, genitive -inis, are:

flämen, M., priest; pecten, M., comb; tlbicen, M., piper; tubicen, M., trumpeter; sanguen, Ne., blood. Many neuters in -men (224): as, certämen, contest.

484. (b.) Examples of stems in -n-, with nominative -5, genitive -5nis, are:

Many masculine concretes: as, pugiō, dagger; words of the agent (211): as, praedō, robber; and family names: as, Cicerō. Feminine abstracts in -iō (227), and many in -tiō or -siō (228): as, opiniō, notion; cōgitātiō, thought.

485. (c.) Examples of stems in -n-, with nominative -5, genitive -inis, are:

Masculines: Apollo; cardo, hinge; ordo, rank; turbo, whirlwind. homo, M., F., human being; nomo, nobody; for G. and Ab., nullius and nullo are generally used; margo, M., F., brink. Feminines: grando, hail; harundo, reed; hirundo, swallow; hirudo, leech; testudo, tortoise; virgo, maiden. Many in -do, -dinis (225), -go, -ginis (226), and -tudo, -tudinis (264): as, cupido, also M., desire; imago, likeness; solitudo, loneliness.

486. sanguls, M., blood, stem sanguin-, takes -s in the nominative (131). canis, M., F., dog, stem can-, and iuvenis, M., F., young person, stem iuven-, have the nominative formed like that of -i- stems. For senex, old man, see 500.

487. (2.) Stems in -r- and -s- are declined as follows:

Examples	pater, father,	dolor, pain,	flös, <i>flower</i> ,	genus, race,
Stems	patr-, M.	dolor-, M.	flör-, M.	gener-, Ne.
Singular Nom. Gen. Dat. Acc. Abl.	pater	dolor	flös	genus
	patris	dolōris	flöris	generis
	patrī	dolōri	flöri	generi
	patrem	dolōrem	flörem	genus
	patre	dolōre	flöre	genere
Plural Nom. Gen. Dat. Acc. Abl.	patrēs patrum patribus patrēs patribus	dolōrēs dolōrum dolōribus dolōrēs dolōribus	flörēs flörum flöribus flörēs flöribus	genera generum generibus genera generibus

- 488. Many stems in -r- ended originally in -s-, which became -r- between two vowels, and in some words in the nominative also (116): as, flos, M., flower, G. *flosis, floris; honos, M., honour, G. honoris, N. honor.
- 489. (a.) Examples of stems in -r-, with nominative -r, genitive -ris, are:
- -ar, -aris baccar, Ne., a plant; ilibar, Ne., rarely M., bright sky, no Pl.
- -ār, -aris lār, M., household god; G. Pl. larum; two or three times larium.
- -ār, -arris fār (139), Ne., spelt; Pl. only N. and Ac. farra.
- -er, -eris Masculines: acipēnser, sturgeon; agger, mound; ānser, rarely F., goose; asser, pole; carcer, jail; later, brick; mulier, F., woman; passer, sparrow; vomer, ploughshare. Neuters: cadāver, corpse; tūber, swelling; über, breast; verberis, G., lash, no N., generally Pl.; acer, maple, and some other plant names: see 573. pauper, poor, adjective.
- -ter, -tris accipiter, M., hawk; frater, M., brother; mater, F., mother; pater, M., father.
- -ēr, -ēris vēr, Ne.; no Pl.
- -or, -oris aequor, Ne., sea; marmor, Ne., marble; arbor, F., tree.
- olor, M., swan; soror, F., sister; uxor, F., wife. Many masculines in -or for -5s (237): as, odor, smell; and in -tor, -tōris (205): as, amātor, lover. Also gender comparatives of adjectives: as, trīstior (346), M., F., sadder.
- -ur, -oris Neuters: ebur, ivery; Pl. only ebora; röbur, heart of oak; Pl. röbora common, röborum and röboribus twice each. Also femur thigh, femoris or feminis, and iecur, liver, iecoris, iecineris, or iocineris.
- -ur, -uris augur, M., F., augur; furfur, M., bran; turtur, M., F., turtle-dove; voltur or vultur, M., vulture. Neuters: fulgur, lightning; guttur, rarely M., throat; murmur, murmur; sulpur, sulphur. cicur, tame, adjective.
- -ūr, -ūris fūr, M., thief.
- 490. volucris, F., bird, stem volucr-, has its nominative formed like that of -1- stems.
- 491. (b.) Examples of stems in -s-, or -r- for -s-, with nominative -s, genitive -ris, are:
- -aes, -aeris aes, Ne., copper, bronze; in the Pl. only aera and aerum are usual.
- -ēs, -eris Cerēs. pūbēs, mangrown; impūbēs, immature, adjectives; for the last more commonly impūbis, like brevis (630).
- -is, -eris cinis, M., ashes; cucumis, M., cucumber, also with -i- stem; pulvis, M., dust; vomis, M., ploughshare.
- -os, -oris arbos, F., tree.
- -ōs, -ōris Masculines: flōs, flower; mōs, custom; rōs, dew, no G. Pl. (430); lepōs, grace; honōs or honor, honour, and some old Latin words for later -or: as, odōs or odor, smell (489). ōs, Ne., mouth, face, no G. Pl. (430).

-us, -eris Neuters: acus, husk; foedus, treaty; fūnus, funeral; genus, race; glomus (62), clew; holus, green stuff; latus, side; mūnus, gift; onus, burden; opus, work; pondus, weight; raudus or rūdus, piece of copper; scelus, crime; sidus, constellation; ulcus, sore; vellus, fleece; viscus, bowel, usually plural; volnus or vulnus, wound. Also Venus, F., and vetus, old, adjective.

-us, -oris Neuters: corpus, body; decus, grace; dēdecus, disgrace; facinus, deed; facinus, interest; frigus, cold; litus, shore; nemus, grove; pectus, breast; pecus, flock; penus, store; pignus, bledge; stercus, dung; tempus, time; tergus, back. Also lepus, M., kare.

-us, -ōris Neuter comparatives of adjectives: as, trīstius (346), sadder.
-ūs, -ūris Neuters: crūs, leg; iūs, right, Pl. iūra, G. Pl. twice only (Plaut.; Cato), no D. or Ab. Pl.; iūs, broth, pūs, pus, rūs, country, tūs, frankincense, Pl. only N. and Ac. iūra, &c. tellūs, F., earth.

492. vās, Ne., vessel, utensil, retains the s between two vowels: G. vāsis, D. vāsī, Ab. vāse, plural N. and Ac. vāsa; the G. vāsōrum, and D. and Ab. vāsis, are formed from an -o- stem, vāso- (401). mēnsis, M.. month, mēnsis, has its nominative formed like that of -i- stems; G. Pl. mēnsum, sometimes mēnsuum or mēnsium. os (139), Ne., bone, ossis, has no G. Pl. in good writers (430): ossium late.

493. The two neuters virus, gall, poison, and volgus or vulgus, the crowd, have -o- stems, except in the nominative and accusative (401), and no plural: thus, N. and Ac. volgus, G. volgī, D. and Ab. volgō. A masculine accusative volgum is sometimes found. The Greek neuter pelagus, the deep, has also G. pelagī, D. and Ab. pelagō, Pl. N. and Ac. pelagē (508).

III. STEMS IN -u- OR -V-.

494. Four substantives with stems in -u- or -v-, grūs, F., crane, gruis; sūs, M., F., sow, swine, suis; bōs, M., F., ox, cow, bovis; and nix (500), F., snow, nivis, follow the consonant declension; also the genitive Iovis, and the other oblique cases of Iuppiter (500). But sūs has in the plural dative and ablative suibus, sūbus, or subus; bōs has in the plural genitive boum or bovum, rarely bovom (112), and in the dative and ablative bōbus, or oftener būbus (75); nix has no genitive plural in good writers (430): nivium late, once nivum.

SINGULAR CASES.

495. (1.) The nominative singular of gender stems in a mute is formed by adding -s to the stem (422): as,

rēg-, king, N. rēx (149); duc-, leader, N. dux (47); custod-, guard, N. custos (137); aetāt-, age, N. aetās (137); caelib-, unmarried, N. caelebs (45); mūnicip-, burgher, N. mūniceps. hiem-, winter, the only stem in -m-, N. hiemps (120) or hiems, also takes -s.

496. (2.) Stems in a continuous consonant, -1-, -n-, -r-, or -s-, and neuters have no nominative suffix (422, 423): as,

consul-, consul, N. consul; flamin-, special priest, N. flamen; agger-, mound, N. agger; iur- for ius-, right, N. ius.

For cor, heart, see 476; lacte, lac, milk, 478; sanguis, blood, 486; -s in neuter adjectives, 612.

497. (a.) Stems in -5n- drop -n- in the nominative; stems in -in-for -on- drop -n-, and end in -5 (141): as,

leon-, lion, N. leo; imagin- for imagon-, likeness, N. imago.

- 498. (b.) Stems of one syllable in -r- for -s- usually retain -s in the nominative: as, flor- for flos-, M., flower, N. flos; iur- for ius-, Ne., right, N. ius. Some of more than one syllable also retain -s: see 491; but in others -s is changed to -r, and in masculines a preceding of is shortened: as, odos, smell, odor. lepos, grace, retains -os.
- 499. (c.) Four stems in -er- for -es- have the nominative singular in -is: cinis, ashes, cineris; cucumis, cucumber, cucumeris or cucumis; pulvis, dust, pulveris; and vomis, oftener vomer, ploughshare, vomeris.
- 500. The following have the nominative singular formed from a different stem from that of the other cases (401):

iter, journey, itineris, stems iter-, itiner-; luppiter (389), lovis; nix, snow, nivis, stems nigu-, niv- (494); senex, old man, man of forty or more, senis, stems senec-, sen-. For sēdēs, seat, see 476; vātēs, bard, 478. canis, dog, N. also canēs (Plaut., Enn., Lucil.), iuvenis, young or middle-aged person (486), volucris, bird (490), and mēnsis, month (492), have their nominatives formed like those of -i- stems.

501. An old dative in -ē is sometimes retained in set phrases (507): as, aerē, money; jūrē, right.

502. Substantives have rarely an ablative in -I or -ei like -i- stems: as, capiti (Catull.), head, for capite; dotei (Plaut.), dowry, for dote. Substantives used as adjectives have sometimes -I: as, artifici manü, with artist hand; but often -e: as, alite lapsü, with winged glide. For -e in old Latin, see 65.

503. Adjectives in the comparative degree have sometimes an ablative in -ī: as, meliōri, better, for meliōre. Adjectives 'cf one ending' with consonant stems (624) have always -e, except vetus, old, which has sometimes veterī.

504. Town names and a few appellatives have a locative case in -I: as, Karthägini, at Carthage; rūri, a-field, in the country.

PLURAL CASES.

505. The nominative and accusative plural masculine and feminine have rarely -īs, like stems in -i-: as, sacerdōtīs, priests; meliōrīs, better. For -ā in neuters in old Latin, see 65.

506. The genitive plural of stems in -tāt- (262) is sometimes -ium, like that of -i- stems: as, cīvitātium, communities; voluptātium, pleasures (Cic.); but chiefly in or after the Augustan age. mēnsis, month, has mēnsum, but often mēnsum, sometimes mēnsium. āles, bird, has sometimes ālituum in hexameter verse. For the dative and ablative -būs in old Latin, see 67.

507. Other case forms are found in inscriptions, as follows:

N. MVNICIPES; -ō for -ō8 (47): MAIO, i.e. māiōs or māior. G. -es, as early as 218 B.C.: SALVTES; -us, from 186 to 100 B.C.: NOMINVS; -u (47): CAESARV. D. -ei: VIRTVTEI, soon after 290 B.C.; HEREDEI, 45 B.C.; -ē, disappeared sooner than -ei except in set phrases (501), but is equally old: IVNONE; IOVRE. Ac. -e (140): APICE. Ab. -id (426): COVENTIONID, i.e. cōntiōne; -ei: VIRTVTEI; -i: HEREDI. Plural: N. -is: IOVDICIS. G. -om: POVMILIONOM; -ium: MVNICIPIVM. D. -ebus: TEMPESTATEBVS. Ac. -is: MVNICIPIS.

GREEK NOUNS.

508. Greek appellatives of the consonant declension occasionally retain Greek case endings: as, lampas, torch, G. lampados, Ac. lampada. Plural: N. lampades, Ac. lampadas. āēr, air, has usually the accusative āera, and aethēr, upper air, always has aethera. In the plural nominative and accusative, cētus, swimming monster, melos, strain of music, and pelagus (493), the deep, have -ē: as, cētē. Genitive -ōn, rare: as, epigrammatōn, epigrams. Dative and ablative -matīs from words in -ma, -matīs: as, poēmatīs, poems (401).

509. Greek proper names of the consonant declension are usually declined like Latin ones in old Latin and prose. From Vergil and Propertius on, Greek case endings grow more and more frequent, especially in poetry; they are best learned for every name from the dictionary; the commonest forms are:

Genitive -os: as, Pān, Pānos; -ūs, with nominative -ō: as, Mantō, Mantūs. Dative -i, rare: as, Mīnōidi. Accusative -a, common with names of persons in poetry, not in prose, more common with those of places, and even in prose: as, Acheronta; always Pāna; -ō, with feminines in -ō, -ūs: as, Dīdō. Vocative: Pallās, Pallā; in old Latin the nominative is commonly used instead of the vocative. Plural: Nominative -es: as, Arcades. Dative -sin, rare: as, Lēmniasin. Accusative -as, very common: as, Lelegas; in prose, Macedonas; also in words not Greek: as, Allobrogas (Caes.).

510. Names in -eus, like Orpheus, are usually declined like -o- stems (449). They have less frequently Greek forms: as, G. Orpheos, D. Orphei or Orphi, Ac. Orphea. Accusative rarely -ea: as, Ilionea.

511. Some names in -ēs have the genltive in -is or -I and the accusative in -em or -ēn (401): as, Sōcratēs, G. Sōcratīs or Sōcratī, Ac usually Sōcratem, also Sōcratēn. Achillēs and Ulixēs have in the genitive -eI, -fl, or -I. Names in -clēs have rarely the accusative -clea: as, Periclea.

512. Some names in -is have forms either from a stem in -id-, or from one in -i-: as, Paris, G. Paridis, D. Paridi, Ac. Paridem, Parim or Parin, V. Pari.

STEMS IN -i- AND MIXED STEMS.

The Third Declension.

Genitive singular -is, genitive plural -i-um.

513. Stems in -i- include both substantives and adjectives, gender words and neuters.

For the gender of substantives, see 570.

- 514. The nominative of gender stems in -1- ends usually in -s (or -x), sometimes in -1 or -r; that of neuter substantives has no suffix, and ends usually in -e, sometimes in -1 or -r.
- 515. Most stems in -i- have as many syllables in the nominative as in the genitive.

3

Such words are called *Parisyllabic* words, or *Parisyllables*: as, nominative oivis, citisen, two syllables; genitive oivis, of a citisen, also two syllables.

516. Stems in -i- are declined in the main like consonant stems, but have -im in the accusative of some substantives, and -I in the ablative of adjectives, of some gender substantives, and of neuters; in the plural they have -ium in the genitive, -Is often in the accusative of gender words, and -ia in the nominative and accusative neuter.

I. PARISYLLABLES.

517. (1.) Parisyllabic gender stems in -i- with the nominative in -is are declined as follows:

Examples Stems	tussis, cough, tussi-, F.	turris, tower, turri-, F.	amnis, river, amni-, M.	hostis, enemy, hosti-, M., F.	
Singular Nom. Gen. D.t. Acc. Abl.	tussis tussis tussi tussim tussi	turris turris turrī turrim, -em turrī, -e	amnis amnis amni amnem amne, -i	hostis hostis hosti hostem hoste	-is -is -ī -im, -em -ī, -e
Plural Nom. Gen. Dat. Acc. Abl.	tussēs tussīs, -ēs	turrēs turrium turribus turrīs, -ēs turribus	amnēs amnium amnibus amnīs, -ēs amnibus	hostës hostium hostibus hostīs, -ēs hostibus	-ēs -ium -ibus -īs, -ēs -ibus

518. (a.) Like the singular of tussis are declined parisyllabic names of rivers and places, like Tiberis, Hispalis. Also cucumis, M., cucumber (but see 491), and the defectives sitis, F., thirst, Ac. sitim, Ab. siti, no plural; and vis, F., power, Ac. vim, Ab. vi. Plural (401): N. vīrēs, G. vīrium, D. and Ab. vīrībus, Ac. vīrīs or vīrēs. (The D. vī is only found twice; a N. and Ac. Pl. vīs is very rare.)

519. (b.) The following feminines are declined like turris, with -im or -em in the accusative, and $-\bar{i}$ or -e in the ablative:

clāvis, key nāvis, vessel sēmentis, planting febris, fever puppis, stern strigilis, skin-scraper

So also in the oblique cases, Liger, the Liger. Arar, the Arar, has in the accusative -im, in the ablative -e or -ī.

520. secūris, axe, messis, crop, and restis, rope, also have -im or -em in the accusative, but only secūrī, messe, and reste in the ablative. canālis, conduit, has only -em in the accusative, and only -ī in the ablative.

The Noun: Stems in -i-. [521-527.

521. (c.) The following are declined like amnis, with -em in the accusative, and -I or -e in the ablative:

avis, *bird* bīlis, *bils* cīvis, citizen classis, fleet füstis, club Ignis, fire

522. (d.) Most parisyllabic stems in -i-, with the nominative in -is, are declined like hostis: as,

ensis, M., glaive; piscis, M., fish; aedis, F., temple, Pl. house (418); vitis, F., vine; and a great many others. Also gender forms of adjectives in -i- 'of two endings' (630), except the ablative singular, which ends in -I.

523. (2.) Parisyllables in -i- with the nominative in -es have their other cases like those of hostis: such are:

caedēs, bloodshed; cautēs, rock; clādēs, disaster; indolēs, native disposition, no Pl.; lābēs, fall; molēs, pile; nūbēs, cloud; prolēs, ofspring, no Pl.; pūbēs, young population, no Pl.; rūpēs, crag; saepēs, hedge; strāgēs, slaughter; subolēs, offspring; tābēs, wasting, no Pl., feminines; and some others. Masculine: verrēs, boar; volpēs or vulpēs, fox.

524. famēs, hunger, has G. twice famī (Cato, Lucil.), Ab. always famē (603), no Pl.; plēbēs, commons, N. also plēbs or plēps, has G. plēbeī (603), plēbī or plēbīs, no Pl.

525. (3.) A few stems in -bri-, -cri-, or -tri-, are declined as follows: imber, shower, stem imbri-, M.

Singular: N. imber, G. imbris, D. imbrī, Ac. imbrem, Ab. imbrī, oftener imbre. Plural: N. imbrēs, G. imbrium, D. imbribus, Ac. imbrīs or imbrēs, Ab. imbribus. So also lunter or linter, F. (M.), tub, boat, titer, M., leather bag, and venter, M., belly, but with only -e in the Ab.; and the masculine of adjectives in -bri-, -cri-, -tri-, N. -er (628); these last have in the Ab. always -ī.

526. (4.) Parisyllabic neuters in -i- with the nominative in -e are declined as follows:

Examples Stems	sedīle, <i>seat</i> , sedīli-, Ne.		mare mar	, <i>sea</i> , i-, Ne.	Stem	case endings
	Singular	Plural	Singular	Plural	s.	Pl.
Nom. Gen. Dat. Acc. Abl.	sedīle sedīlis sedīlī sedīle sedīlī	sedīlia sedīlium sedīlibus sedīlia sedīlibus	mare maris mari mare mari	maria maria	-e -is -ī -e -ī	-ia -ium -ibus -ia -ibus

527. mare has rarely the ablative mare in verse; in the plural only the nominative and accusative are usual; but a genitive marum is once quoted (Naev.), and the ablative maribus is once used by Caesar.

528. Examples of parisyllabic neuters in -i-, with the nominative in -e, genitive -is, are:

ancile, sacred shield; aplustre, ancient; conclave, suite of rooms; Insigne, ensign; praesaepe, stall; rete, net, Ab. rete. Also the neuter of adjectives in -i-'of two endings' (630), and some words in -ile, -ale, -are, originally adjectives (313, 314): as, bublle, ox-stall; focale, neckcloth; cocleare, spoon.

II. IMPARISYLLABLES.

529. Some stems in a mute followed by -i-, and a few in -ii- and -ri- or -si- drop the -i- in the nominative, and thus become imparisyllables. Gender stems of this class are like consonant stems in the singular, except the ablative of adjectives, which has usually -i.

530. Imparisyllabic stems in -i- are declined as follows:

Examples Stems	arx, citadel, arci-, F.	pars, part, parti-, F.	urbs, <i>city</i> , urbi-, F.	animal, animal, animāli-, Ne.
Singular Nom. Gen. Dat. Acc. Abl.	arx arcis arci arcem arce	pars partis parti partem parte	urbs urbis urbi urbem urbe	animal animālis animāli animal animāli
Plural Nom. Gen. Dat. Acc. Abl.	arcēs arcium arcibus arcīs, -ēs arcibus	partēs partium partibus partīs, -ēs partibus	urbēs urbium urbibus urbīs, -ēs urbibus	animālia animālium animālibus animālia animālibus

- 531. Examples of stems in -oi-, with nominative -x, genitive -ois, are:
- -ax, -acis fornax, F., furnace. Many adjectives (284): as, audax, daring. -aex. -aecis faex, F., dregs, no G. Pl. (430).
- -ex, -icis supplex, supplicant, Ab. -I, sometimes -e, G. Pl. supplicum. Adjectives: duplex, twofold; multiplex, manifold; quadruplex, fourfold; septemplex, sevenfold; simplex, simple; triplex, threefold. The foregoing have Ab. -I: as, duplicI; duplice once (Hor.), septemplice twice (Ov.; Stat.); G. Pl. -ium, Ne. Pl. N. and Ac. -ia.
- -īx, -īcis fēlīx, happy; pernīx, nimble, adjectives. Also many feminines of the agent in -trīx (205): as, vīctrīx, victorious; these sometimes have a Ne. Pl. N. and Ac.: as, vīctrīcia; in the G. Pl. they have -ium, or, as substantives, -um: as, nūtrīcum, nurses.

- -lx, -lcis calx, F. (M.), heel; calx, M., F., limestona, no G. Pl. (430); falx, F., sickle.
- -nx, -ncis lanx, F., platter, no G. Pl. (430); definx, M., eleven twelfths; quincunx, M., five twelfths.
- -ox, -ocis praecox, over-ripe, older stem praecoquis; rarely with -o- stem (401): as, praecoquam.
- -ōx, -ōcis celōx, F., clipper. atrōx, savage; ferōx, wild; vēlōx, swift, adjectives.
- -rx, -rcis arx, F., citadel, G. Pl. rare and late; merx, F., ware, N. in old Latin sometimes merces or mers.
- -ux, -ucis. Adjectives: trux, savage, Ab. -i or -e, G. Pl. -ium; redux, returning, Ab. -i or -e (558); no G. Pl. and no Ne. N. or Ac. (430).
- -aux, fauce, F., Ab., throat, N. faux once only and late, generally Pl.
- -ūx, -ūcis lūx, F. (581), light, Ab. sometimes -ī, no G. Pl. (430).
- 532. (a.) Examples of stems in -di-, with nominative -s, genitive -dis, are:
- -ēs, -edis Compounds of pēs, foot: compede, F., Ab., fetter, no N., G. Pl. compedium; adjectives: as, ālipēs, wing-footed, bipēs, two-legged, quadrupēs, four-footed, &c., Ab. -ī, Pl. G. -um only (563), Ne. N. and Ac. -ia, rare and late.
- -ns, -ndis Feminines: frons, foliage; glans, acorn; iuglans, walnut.
- -rs, -rdis concors, like-minded, adjective, and other compounds of cor, Ab.
 -I (559), Ne. Pl N. and Ac. -ia, G. Pl. not usual: discordium,
 at variance, and vecordium, frantic, once each.
- -aus,-audis fraus, F., deceit, G. Pl. fraudium, later fraudum.
- 533. (b.) Examples of stems in -ti-, with nominative -s (-x), genitive -tis, are:
- -ās, -ātis Arpīnās, of Arpinum, and adjectives from other town names; optimātēs, good men and true, G. Pl. -ium, less often -um; penātēs, gods of the household store.
- -es, -etis Adjectives: hebes, dull: teres, cylindrical, Ab. -I (559), no G. Pl., Ne. Pl. hebetia, teretia, late and rare; perpes, lasting through, Ab. perpeti, late only; praepes, swift-winged, Ab. -I or -e, G. Pl. -um, no Ne. Pl. N. or Ac.
- -ēs, -ētis locuplēs, *rich*, adjective, Ab. usually -e of a person, -I often of a thing, G. Pl. locuplētium, sometimes locuplētum, Ne. Pl. locuplētia once.
- -is, -ītis līs, contention; dīs, rich, adjective, Ab. alwavs -ī (559), Pl. G. -ium, once -um (Sen.), Ne. N. and Ac. -ia. Quirīs, Samnīs.
- -ls, -ltis puls, pottage, no G. Pl. (430).

- -ns, -ntis Masculines: dēns, tooth: fēns, fountain; pēns, bridge; mēns, mountain, N. once mēntis (Enn.); factors of twelve: sextāns, one sixth; quadrāns, triēns, dēdrāns, dēxtāns. Feminines: frons, forehead; gēns, clan; mēns, mind. Present participles: as, regēns, guiding. Many adjectives: as, ingēns, gigantic, Ab. -1 (559); Vēlēns, of Vei; compounds of mēns: as, āmēns, out of one's head; of dēns: as, tridēns, Ab. -ī, as substantive usually -e.
- -eps, -ipitis Adjective compounds of caput, head: anceps (543), two-headed, once older ancipes (Plaut.); biceps, two-headed; triceps, three-headed; praecipes, head-first, old praecipes (Plaut.; Enn.), Ab. -i (559), no G. Pl., Nc. Pl. N. and Ac. -ia.
- -rs, -rtis Feminines: ars, art; cohors, cohort; fors, chance; mors, death; pars, part; sors, lot, N. twice sortis (Plaut.; Ter.). Adjectives: consors, sharing, exsors, not sharing, no G. Pl.; expers, without part; iners, unskilled, sollers, all-skilled, Ne. Pl. N. and Ac. -ia.
- -x, -ctis nox, F., night; Ab. also noctū (401); an old adverb form is nox, nights.
- 534. (a.) Stems in -bi-, with nominative -bs (149), genitive -bis, are:
- trabs, F., beam, older N. trabës (Enn.); plēbs, F., commons, N. sometimes plēps, for the older plēbēs (603), no Pl.; urbs, F., city.
- 535. (b.) Stems in -pi-, with nominative -ps, genitive -pis, are: inops, poor, adjective, Ab. -I (559), G. Pl. -um, no Ne. Pl. N. or Ac. (430); stirps, F. (M.), trunk.
- 536. Examples of stems in -li-, with nominative -l, genitive -lis, are:
- -al, -ālis Neuters, originally adjective (546): animal, animal; bacchānal, shrine or feast of Bacchus; cervical, bolster; puteal, well-curb; toral, valance; tribūnal, tribunal; vectīgal, indirect tax. Only N. or Ac.: Cubital, elbow-cushion; minūtal, minced-fish; capital, capitālia, death, capital crime.
- -il, -ilis vigil, wide-awake, adjective, Ab. -I, as substantive -e (561), G. Pl. vigilum (563), no Ne. Pl. N. or Ac. (430).
- 537. (a.) Examples of stems in -ri-, with nominative -r, genitive -ris, are:
- -ar, -āris Neuters, originally adjective (546): calcar, spur; columbar, dovecote; exemplar, pattern; lacūnar, panel-ceiling; pulvinar,
 couch; subligar, tights; torcular, wine-press.
- -ār, -aris Adjectives: pār, equal; dispār, impār, unequal, for Ab., see 561; G. Pl. -ium, Ne. Pl. N. and Ac. -ia; compār, co-mate, as substantive has G. Pl. -um.
- -er, -eris Adjectives: degener, degenerate, Ab. -I (559), no Ne. Pl. N. or Ac. (430); über, fruitful, Ab., -I, late -e, Ne. Pl. übera once only (Acc.).

- -or, -oris Adjectives: memor, remembering; immemor, forgetful, Ab. -i (559), G. Pl. memorum (636) once only (Verg.), no Ne. Pl. N. or Ac. (430).
- -or, -ōris Adjective compounds of color: as, concolor, of like skade, discolor, of different shade, both with Ab. -I only; versicolor, pied, Ab. -I, rarely -e, Ne. Pl. N. and Ac. -ia; the G. Pl. of these words is not usual, but versicolorum once.
- 538. (b.) Stems in -ri-, with nominative -s of the stem, genitive -ris, are glis, F., dermouse, gliris; mas, M., male, maris; mus, F., mouse, muris.
- 539. The only imparisyllabic stem in -si- is \$\$ (139), M., unit, an as, G. assis, with its compounds bes, two thirds, G. bessis, and semis, half an as, half, G. semissis.

SINGULAR CASES.

540. (1.) The nominative singular of gender stems in -i- is usually formed by adding -s to the stem (422). But many gender substantives have the nominative in -\(\bar{\epsilon}\)s (236, 401): as,

amni-, river. N. amnis; aedi-, temple, N. aedis; brevi-, short, N. brevis. With N. -es: nübi-, cloud, N. nübes; for other examples, see 523.

- 541. Some substantives form the nominative in both these ways: as, valles and vallis, valley, equally common; aedis, temple, later aedes; for caedes, slaughter, clades, disaster, and moles, pile, caedis, &c., occur exceptionally.
- 542. A few stems in -bri-, -cri-, or -tri-, drop -i- in the nominative, without taking -s, -r of the ending becoming -er (89): as, imbri-, shower, N. imber (525).
- 543. Of gender imparisyllables, some have lost -i- of the stem before -s in the nominative; others have originally a consonant stem in the nominative (529-535).

Thus, monti-, mountain, and sorti-, lot, have N. mons and sors for an older montis and sortis; but dens, tooth, and regens, ruling, have as original stems dent- and regent-. Adjectives in -cipiti- have N. -ceps (533).

- 544. A few adjective stems in -li- or -ri- drop -i- in the nominative without taking -8 (536, 537): as, vigili-, wide-awake, N. vigil; pari-, equal, N. pār; so also Arar and Liger. Three substantives in -ri- for -si- likewise drop -i-, and end in the original -s (538): glīri- for glīsi-, dormouse, N. glīs; mās, male; mūs, mouse.
- 545. Carō, F., Aesh, Carnis (Ab. -I, usually -e, no G. Pl.) and supellex, F., furniture, supellectilis (Ab. -I or -e, no Pl.), have the nominative formed from a different stem from that of the other cases (401).
- 546. (2.) Neuter stems in -i- have no nominative suffix, and end in -e for -i- of the stem (71): as,

mari-, sea, N. mare; brevi-. short, N. breve. In some words, originally neuter adjectives in -ale and -are, the -e is dropped and the a shortened: as, animale, living thing, animal (536); exemplare (Lucr.), pattern, exemplar (537). Some neuter adjectives end in -l or -r (536, 537); and some of one ending end in -s (612).

- 547. The accusative singular of gender substantives usually has -em, like consonant stems (424); but a few substantives with the nominative in -is have -im only, and some have either -im or -em.
 - 548. (a.) Accusatives in -im

 Are sitim, tussim, vim,

 And būrim, cucumim.

 thirst, cough, strength
 ploughtail, cucumber
- 549. The accusative in -im is found in many adverbs (700): as, partim, in part; in some adverbial expressions: as, adamussim, examussim, to a T, adfatim, to satiety, ad ravim, to hoarseness; in some names of rivers and cities: as, Tiberim, Hispalim; and in some Greek words (565).
 - 550. (b.) Six have the accusative commonly in -im, sometimes in -em: febrim, -em, fever puppim, -em, stern securim, -em, axe pelvim, -em, basin restim, -em, rope turrim, -em, tower
 - 551. Six have the accusative commonly in -em, sometimes in -im: bipennem, -im, two-edged axe clavem, -im, key sementem, -im, planting strigilem, -im, skin-scraper
- 552. In the ablative, gender substantives have usually -e, and neuters and adjectives have -I: as,

hoste, enemy; mari, sea; ācri, sharp, brevi, short, audāci, daring.

- 553. (1.) Of gender substantives with the nominative in -is, a few have only -ī in the ablative, and many have either -ī or -e.
 - 554. (a.) These ablatives have only -1:

secūrī, sitī, tussī, vī, canālī, cucumī.

axe, thirst, cough, strength conduit, cucumber

Some names of rivers and cities have only -i: as, Tiberi, Hispall. The locative also ends in -i: as, Neāpoli, at Neapolis.

555. (b.) These ablatives of gender substantives with the nominative in -is have -ī or -e:

amne, -ī, river clāvī, -e, key puppī, -e, stern ave, -ī, bird febrī, -e, fever sēmentī, -e, planting bīle, -ī, bile fūstī, -e, club strigilī, -e, skin-scraper cīvī, -e, citizen ignī, -e, fire turrī, -e, tower clāsse, -ī, fleet nāvī, -e, ship

- 556. A few other words in -is have occasionally an ablative in -ī: as, anguis, snake, collis, hill, finis, end, postis, post, unguis, nail, &c. sors, lot, imber, shower, and lūx, light, have also -e or -ī; supellēx, furniture, has supellēctili or -e; Arar has -e or -ī; Liger, -ī or -e.
- 557. Neuter names of towns with the nominative in -e have -e in the ablative: as, Praeneste. rēte, net, has only rēte; mare, sea, has rarely mare (527).
- 558. (2.) Adjectives 'of two endings' with stems in -i- (630) often have -e in the ablative when they are used as substantives, and sometimes in verse, when a short vowel is needed: as,

adfini, -e, connection by marriage; aedile, -i, aedile; familiari, -e, friend. But some even as substantives, have -i: as, aequali, of the same age, consulari, ex-consul, gentili, tribesman. Adjectives of place in -ensis (330) usually have -i, but sometimes -e: as, Tarquiniense. Proper names have usually -e: as, Iuvenale.

559. Adjectives 'of one ending' with stems in -i- (632), have commonly -I in the ablative. The following ablatives have only -I:

amenti, frenzied, ancipiti, two-headed, praecipiti, head-first, concolori, of like hue, concordi, harmonious, discordi, at variance, socordi, imperceptue, degeneria, degenerate, diti, rich, tereti, rounded, ingenti, huge, inopi, without means, memori, remembering, immemori, forgetful.

- 560. Present participles, when used as adjectives, have -ī in the ablative, otherwise -e: as,
- a sapienti viro, by a wise man; adulescente, youth, substantive; Romulo regnante, in the reign of Romulus, ablative absolute (1362).
- 561. Other adjectives 'of one ending' occasionally have -e in the ablative when used as substantives or as epithets of persons, or in verse when a short syllable is needed: as,

consorti, sharing, pari, equal, vigili, wide-awake, felici, happy, as adjectives; but consorte, &c., as substantives; in prose, impari, dispari, unequal; in verse, impare, dispare. Proper names have -e: as, Felice.

PLURAL CASES.

- 562. In the plural, gender nominatives have -ēs, rarely -īs or -eis, and gender accusatives have -īs or -ēs indifferently, sometimes -eis; after about 50 A.D., -ēs was the prevalent ending for both cases. Neuters add -a to the stem, making -ia; for -iā in old Latin, see 65.
- 563. In the genitive plural, present participles, some substantive stems in -nt(i)-, and some adjectives 'of two endings' (631) have occasionally -um: as,

amantum, lovers; rudentum, rigging; agrestum, country folk; caelestum, heaven's tenantry. apis, bes, has commonly -um; caedes, slaughter, and fraus, deceit, have rarely -um. For -um in some adjectives 'of one ending,' see 636; for -būs in the dative and ablative in old Latin, see 67.

564. Other case forms are found in inscriptions, as follows:

N. without -is: vectigal, i.e. vectīgālis, adjective; -e for -is (47, 71): militare, i.e. mīlitāris, adjective; -ēs (540): AIDILES, i.e. aedīlis; CIVES, i.e. CĪVIS. G. -us, from 186 to 100 b.C.: Partvs, i.e. partis. D. -ei: vrbei. Ac. -i (140): Parti, i.e. partem; -e: AIDE, i.e. aedem. Ab. -ei: FONTEI; -e: SERVILE, i.e. servīlī. Plural: N. -ēs: FINES; -eis: FINES; -īs: FINES,

GREEK NOUNS.

565. Greek stems in -i- are usually declined like Latin ones, with the accusative in -im, and ablative in -i. But the accusative sometimes has -n: as, poësin, poetry, Charybdin; similarly Capyn; and a vocative occurs: as, Charybdi. The plural genitive Metamorphoseon, and as ablative Metamorphosesin, occur as titles of books.

CHARACTERISTICS OF STEMS IN -i -.

566. Parisyllables with nominatives in -is, -ēs, or -e, and a few in -er; and imparisyllables with nominatives in -al, and in -ar for -āre, have stems in -i-.

But canis, iuvenis (486), volucris (490), mēnsis (492), sēdēs (476), and wātēs (478), have consonant stems,

- 567. Under -1- stems may also conveniently be grouped the following classes, which have usually a consonant form in the singular, and an -1- form in the plural:
- 568. (a.) Imparisyllabic adjectives with the genitive in -is, except comparatives and the dozen with consonant stems (624), and imparisyllables with a nominative in -s or -x preceded by any consonant except p. But coniunx (472) and caelebs (480) have consonant stems.
- 569. (b.) The following monosyllables: as, unit, an as, faex, dregs, fraus, deceit, glis, dormouse, lis, strife, lüx, light, mas, male, müs, mouse, nox, night, stirps, trunk, vis, strength. Also fauce, throat, and compede, fatter, both Ab., no N., and fornax, furnace.

GENDER OF CONSONANT STEMS AND -i- STEMS.

570. The gender of many of these substantives is determined by their meaning (404-412); that of participles used as substantives follows the gender of the substantive understood; Greek substantives follow the Greek gender. The gender of other words may be conveniently arranged for the memory according to the nominative endings as follows.

MASCULINE.

571. Imparisyllables in -es or -ēs and substantives in -er, -ō, -or, and -ōs are masculine: as,

caespes, sod; pēs, foot; agger, mound; sermē, speech; pallor, paleness; flös, flower.

- 572. These imparisyllables in -es or -ës are feminine: merges, sheaf, seges, crop, teges, mat; requiës and quiës, rest; compedës, plural, fetters; mercës, reward. aes, copper, bronze, is neuter.
- 573. These substantives in -er are neuter: cadaver, corpse, iter, way, tüber, swelling, truffle, über, udder, verberis, lash, genitive, no nominative; also names of plants in -er: as, acer, maple, cicer, chickpea, papaver, poppy, piper, pepper, siler, osier, siser, skirret, süber, corktree. linter, tub. boat, is feminine, once masculine. ver, spring, is neuter.
- 574. Substantives in -ō, with genitive -inis (485), are feminine; as, imāgō, imāginis, likeness; also carō, carnis, flesh, and words of action in -iō and -tiō (227, 228). But cardō, hinge. ōrdō, rank, and turbō, whirlwind, are masculine. margō, brink, and cupīdō, desire, are sometimes masculine.

575. These substantives in -or are neuter: ador, spelt, aequor, sea, marmor, marble, cor, heart. arbor, tree, is feminine.

576. These substantives in -os are feminine: cos, whetstone, arbos, tree, dos, dowry. os, oris, mouth, face, is neuter, also os, ossis, bone.

FEMININE.

577. Parisyllables in -es, and substantives in -as -aus, -is, -s preceded by a consonant, and -x, are feminine: as.

nubes, cloud; aetas, age; laus, praise; navis, ship; urbs, city; pax, reace.

578. ās, assis, penny, is masculine. Vās, vessel, utensil, and the defectives fās, right, and nefās, wrong, are neuter.

579. Substantives in -nis are masculine; also twenty-nine others in -is, as follows:

axis, callis, caulis, anguis, fascis, fūstis, lapis, sanguīs, piscis, postis, pulvīs, ēnsis, torquis, torris, unguis, mēnsis, vēctis, vermis, vōmis, collis, glīs, canālis, also follis, cassēs, sentēs, veprēs, orbis, cucumis, and sometimes corbis.

azle, path, cabbage, snake bundle, club, stone, blood fish, post, dust, glaive twisted collar, frebrand, nall, month lever, worm, ploughshare, hill dormouse, conduit, ball nets, brambles, thorns, plurals, circle cucumber, basket

būrim, ploughtail, accusative only, is also masculine. A few of the above are sometimes feminine: as, amnis, anguis, callis, canālis, cinis, fīnis, fūnis, torquis, veprēs, &c.

580. Four in -s preceded by a consonant are masculine: dēns, tooth, fōns, fountain, pōns, bridge, mōns, mountain; also factors of twelve: sextāns, one sixth, quadrans, triëns, dōdrāns, dēxtāns; rudēns, rope, once. adeps, fat, and forceps, pincers, are masculine or feminine. stirps, stock, is sometimes masculine.

581. calix, cup, fornix, arch, and tradux, vinelayer, are masculine; also substantives in -unx and -ex; except nex, murder, and preci, prayer, dative, no nominative, which are feminine; also rarely grex, herd. cortex, bark, forfex, scissors, silex, fint, and obice, barrier, ablative, no nominative, are either masculine or feminine. calx, heel, and calx, lime, are sometimes masculine, also lux, light, in the ablative in old Latin.

NEUTER.

582. Substantives in -c, -e, -l, -n, -t, in -ar, -ur, -us, and -ūs, are neuter: as,

lac, milk; mare, sea; animal, animal; carmen, song; caput, head; calcar, spur; fulgur, lightning; corpus, body; ills, right.

583. sõl, sun, pecten, comb, lien, spleen, renes, kidneys, plural, and furfur, bran, are masculine. So usually sal, salt, but sometimes neuter in the singular. far, spelt, is neuter.

584. pecus, beast, is feminine; also tellūs, earth, and the substantives in -ūs which have -ūdis (475) or -ūtis (477) in the genitive: as, palūs, marsh; iuventūs, youth.

STEMS IN -u-.

The Fourth Declension.

Genitive singular -ūs, genitive plural -u-um.

- 585. Stems in -u- are substantive only, and mostly masculine.
- 586. There are only three neuters in common use, cornû, horn. genû, knee, and verû, a spit. But some cases of other neuters are used: as, ablative pecû, flock; plural nominative and accusative artua, limbs (Plaut.); OSSVA, bones (inscr.).
- 587. The nominative of stems in -u- ends, including the stem vowel, in -u-s in gender words, and in lengthened -u of the stem in neuters.
- 588. Most substantives in -u- are masculines in -tu- or -su-, often defective in case (235). The following words are feminine: acus, pin, needle, domus, house, manus, hand, porticus, colonnade; and the plurals iddis, ides, and quinquatrus, feast of Minerva; rarely penus, store, and specus, cave.
 - 589. Stems in -u- are declined as follows:

Examples Stems	flüctus, <i>wave</i> , flüctu-, M.	cornü, horn, cornu-, Ne.	Stem	case endings
Singular Nom. Gen. Dat. Acc. Abl.	flüctus, a (or the) wave flüctüs, a wave's, of a wave flüctui, -ü, to or for a wave flüctum, a wave flüctü, from, with, or by a wave	cornti cornti cornti cornti cornti	M. -us -ūs -uī, -ū -um -ū	Ne. -ū -ūs -ū -ū -ū
Plural Nom. Gen. Dat. Acc. Abl.	fluctus, (the) waves fluctuum, waves, of waves fluctibus, to or for waves fluctus, waves [waves fluctus, from, with, or by	cornua cornuum cornibus cornua cornibus	-ūs -uum -ibus -ūs -ibus	-ua -uum -ibus -ua -ibus

SINGULAR CASES.

590. In the genitive, the uncontracted form -uis sometimes occurs: as, anuis, old woman (Ter.). A genitive in -ti is rather common: as, adventi, arrival; ōrnātī, embellishment (Ter.); senātī, senate. In the dative, -uī is regularly contracted to -ū in neuters and often in gender words.

PLURAL CASES.

- 591. In the genitive plural, a form in -om occurs in old writers (105): as, flüctuom, waves (Plaut.). -ūm for -u-um is rare: as, passūm, steps (Plaut.); currūm, chariots (Verg.).
- 592. In the dative and ablative plural, the following retain -u-bus: acus, pin, needle, arcus, bow, partus, birth, tribus, tribe. The following have -u-bus or -i-bus (78): artūs, plural, joints, lacus, lake, portus, haven, specus, cave, genū, knee, verū, a spit. All other words have -i-bus only.
 - 593. Other case forms are found in inscriptions, as follows:
- G. -uos (105): Senatvos; -ū (142) Senatv; -uus, in the imperial age (28): Exercityvs. D. -uei (88): Senatvei. Ac. -u (140): Manv. Åb. -uu (28): Arbitratvv; -uō, once, by some thought to be for -ūd (426): Magistratvo. Plural: N. -uus (28): Magistratvs.
- 594. domus, house, F., has stems of two forms, domu- and domo- (401); it is declined as follows: N. domus, G. domüs, rarely domī, D. domuī or domō, Ac. domum, Ab. domō or domū, Locative domī, rarely domuī. Plural: N. domūs, G. domuum, later domōrum, D. and Ab. domibus, Ac. domōs, less commonly domūs.
- 595. Some other substantives have an -u- stem in some of their cases, and an -o- stem in others: see angiportus, arcus, caestus, colus, cornū, cornus, cupressus, ficus, fretus, gelus, laurus, murtus, penus, pinus, quercus, rictus, tonitrus, in the dictionary.

STEMS IN -E-

The Fifth Declension.

(Genitive singular -eI, genitive plural -e-rum.)

- 596. Stems in -e- are substantive only, and feminine.
- 597. dies, day, is always masculine in the plural, and commonly in the singular; but the feminine is common when dies denotes length of time or a set day. meridies, midday, is masculine and singular only.
- 598. The nominative of stems in -8- ends, including the stem vowel, in -8-s.
 - 599. Stems in -e- are of two classes:
- 600. (1.) Stems of the first class have one or two syllables; there are four of them: res, thing, spes, hope, dies, day, and fides, faith.
- Of this class, res and dies have a plural throughout; spes has only the nominative and accusative plural, and fides has no plural.

601. Stems in -**E**- of the first class are declined as follows:

Examples Stems	rēs, thing, rē-, F.	diēs, <i>day</i> , diē-, M.	Stem and case endings
Singular Nom. Gen. Dat. Acc. Abl.	res, a (or the) thing res, a thing's, of a thing res, ten, to or for a thing rem, a thing rem, a thing res, from, with, or by a thing	diës diël, dien diël, dien diem dië	-ēs -ēi, -ēi, -6l -ēi, -ēi, -6l -em -ē
Plural Nom. Gen. Dat. Acc. Abl.	rēs (the) things rērum, things', of things rēbus, to or for things rēs, things rēs, things rēbus, from, with, or by things	diēs diērum diēbus diēs diēbus	-ēs -ērum -ēbus -ēs -ēsus

602. fidēs is declined like rēs; it has once a genitive fidēs (Plaut.). For rēī, reī, or rē, and fidēī, fideī, or fidēn, see 160. diēs has rarely a genitive diēs (Enn.) or diī (Verg.). spēs has only the genitive and dative spēn in verse. A genitive or dative in -ē is sometimes found: as, rē, diē, fidē.

603. A few cases of other words sometimes follow this class (401): as, plēbēs (524), commons, G. plēbēl or plēbī; famēs (524), hunger, Ab. always famē; requiēs (477), rest, G. requiē (Sall.), Ac. requiem, Ab. requiē; tābēs (523), waste, Ab. tābē, *contāgēs, contact, Ab. contāgē (Lucr.), &c.

604. (2.) Stems of the second class are formed by the suffix -18-or -t18-, and have three or more syllables.

This class, which is a modification of stems in -a-, has usually no genitive, dative, or plural. Many stems, especially those in -tie-, have also a collateral form in -a-, and the genitive and dative, when used at all, are commonly from a stem in -a-.

605. Stems in -ē- of the second class are declined as follows:

lūxuries, extravagance, stem lūxurie-, F. Nom. lūxuries, Acc. lūxuriem, Abl. lūxurie.

606. A few examples of the genitive of these stems are found: as, pernicii, perniciës, or pernicië, ruin (Cic.); rabiës, fury (Lucr.); acië, edge of battle (Sall., Caes., auct. B. Afr.), facië, maks (Plaut., Lucil.), specië, looks (Caes.); aciëi (auct. B. Afr.). And a very few of the dative: as, aciëi twice (Caes.); perniciëi, pernicii (Nep.); pernicië (Liv.).

607. Eluviës, offscouring, wash, has the nominative of the plural, and glaciës, ice, has the accusative of the plural. Five words only have the nominative and accusative plural:

series, acies, row, edge, species, facies, look, make, offigies, likeness.

THE ADJECTIVE.

608. Adjectives are declined like substantives, and it has been shown already how their cases are formed. But they differ from substantives in having different forms in some of their cases to denote different genders; it is convenient therefore to put their complete declension together.

609. Adjective stems end in -o- and -a-, in a consonant, or in -i-.

610. An accusative plural of a stem in -u-, anguimanüs, with a serpent for a hand, is once used (Lucr.). There are no adjective stems in -e-.

611. Adjectives are often conveniently said to be 'of three end-

ings,' 'of two endings,' or 'of one ending.'

By the 'ending' is meant the ending of the nominative singular: thus, bonus, bona, bonum, good, and acer, acris, acre, sharp, are 'of three endings' (400); brevis, breve, short, is 'of two endings' (410); and audax, bold, is 'of one ending' (410).

612. Adjectives 'of one ending' which form a gender nominative in -s, retain the -s irrationally in the nominative and accusative neuter singular: as, N. M. and F. audāx, N. and Ac. Ne. also audāx.

STEMS IN -o- AND -a-.

613. Most adjectives with stems in -o- and -a- are declined as follows:

Example Stems	M. bonus, F. bona, Ne. bonum, good, bono-, bonā					
	Singular.			Plural.		
Nom. Gen. Dat. Acc.	Masc. bonus boni bono bonum	FRM. bona bonae bonae bonam	NEUT. bonum boni bono bonum	Masc. bonī bonōrum bonīs bonōs	Fem. bonae bonārum bonīs bonās	NEUT. bona bonōrum bonīs bona
Abl. Voc.	bono bone	bonā	bonō	bonis	bonis	bonis

614. Stems in -io- and -iā- have no consonant i in cases ending in -i or -īs (112): as, plēbēius, plebeian, G. S. M. and Ne., and N. Pl. M. plēbēi, D. and Ab. Pl. plēbēis.

615. Stems in -ro- preceded by a long vowel retain -us in the nominative singular masculine and are declined like bonus (453): as, sevērus, stern; also

ferus, merus, wild, unmixed mörigerus, complaisant praeposterus, reversed properus, hasty prosperus, lucky triquetrus, three-cornered 616. (1.) Some stems in -ro- preceded by a short vowel end in -r in the nominative singular masculine and have no vocative (454); they are declined as follows:

Example Stems	M. liber, F. libera, Ne. liberum, fra, libero-, liberā					
	Singular.			Plural.		
	MASC.	FEM.	NEUT.	MASC.	FEM.	NEUT.
Nom.	liber	libera	līberum	liberi	līberae	lībera
Gen.	līberī	līberae	liberi	līberōrum	līberārum	liberorum
Dat.	līberð	liberae	līberō	līberīs	liberis	līberīs
Acc.	līberum	liberam	liberum	liberõs	līberās	lībera
Abl.	līberō	līberā	līberō	liberis	liberis	liberis

Such are: compounds, chiefly poetical, ending in -fer and -ger, bearing, carrying, having: as, caelifer, heaven-upholding; corniger, horned; also the following:

(alter, 618), asper, other, rough lacer, liber, torn, free tener, Trēver, tender, Treveran gibber, miser, hump-backed, forlorn

dexter, right, has dextera, dexterum, or dextra, dextrum, G. dexteri, or dextri, &c. sinister, left, has usually sinistra, &c., rarely sinisteram (Plaut., Ter.). asper has a plural accusative aspros (Stat.), and ablative aspris (Verg.).

617. (2.) Other stems in -ro- have a vowel before r only in the nominative singular masculine -er (454); they are declined as follows:

Example Stems	M. aeger, F. aegra, Ne. aegrum, ill, aegro-, aegrā					
	Singular.			Plural.		
Nom. Gen. Dat. Acc. Abl.	_	Fem. aegra aegrae aegrae aegram aegrā	•	MASC. aegri aegrörum aegris aegrös aegris	Fem. aegrae aegrārum aegrīs aegrās aegrās	NEUT. aegra aegrōrum aegris aegra aegris

618. Nine adjectives or adjective pronouns have the pronoun form -īus in the genitive singular and -ī in the dative singular, for masculine, feminine, and neuter alike; they are the following:

alius, another ünus, one alter, the other
sõlus, alone üllus, any at all uter, which of the two
tõtus, whole nüllus, no neuter, neither

619. Of the above words, those with the nominative in -us are declined like linus (638). But alius has N. and Ac. Ne. aliud (659); for the G., alterius is mostly used, except in the combination alius modi, of another sort; the N. M. is rarely alis, Ne. alid, D. rarely ali. alter is declined like liber (616), except in the genitive singular alterius (alterius) and dative alteri. For uter and its derivatives, see 692.

620. The ordinary genitive and dative of -0- and -a- stems, from some of the above words, is sometimes found: G. and D. aliae, solae, alterae, D. alia, nüllo, &c.

CONSONANT STEMS.

OF TWO ENDINGS.

621. The only consonant stems of two endings are comparatives (346); they are declined as follows:

Example Stems	M. and F. trīstior, Ne. trīstius, sadder, trīstior-, trīstius					
	Singular	r.	Plural.			
Nom. Gen. Dat. Acc. Abl.	MASC. AND FEM. tristior tristioris tristiori tristiorem tristiore	NEUT. trīstius trīstiōris trīstiōrī trīstius trīstius	MASC. AND FEM. trīstiörēs trīstiörum trīstiöribus trīstiöres trīstiöribus	Neut. trīstiēra trīstiērum trīstiēribus trīstiēra trīstiēribus		

622. The ablative rarely has -I for -e: as, meliorI (503); the accusative plural masculine and feminine rarely have -Is: as, meliorIs (505).

623. plūs, more, has in the singular only Ne. N. and Ac. plūs, G. plūris, and Ab. plūre. Plural: N. M. and F. plūrēs, Ne. plūra, G. plūrium, D. and Ab. plūribus, Ac. M. and F. plūrēs or plūrīs, Ne. plūra. complūrēs, a good many, plural only, has N. M. and F. complūrēs, Ne. N. and Ac. complūria or complūra, G. complūrium, D. and Ab. complūribus, Ac. M. and F. complūrēs or complūris.

OF ONE ENDING.

624. A dozen adjectives 'of one ending,' mostly words applying to persons, with consonant stems throughout, have no nominative or accusative neuter plural; they are:

caelebs, compos, unmarried, master of *dēses, dīves, lazy, rich particeps, princeps, sharing, first

pübēs, impūbēs, mangrown, immature sõspes, superstes, safe, surviving pauper, cicur, poor, tame 625. When these adjectives have a neuter, it is the same as the gender forms, except in the accusative singular; they are declined as follows:

M. F. and Ne. dives, rich, stem divit-.

Singular: N. dives, G. divitis, D. diviti, Ac. M. and F. divitem, Ne. dives, Ab. divite. Plural: N. and Ac. M. and F. divites, G. divitum, D. and Ab. divitibus.

626. The plural caelites, heavenly, occupants of heaven, is also declined like the plural of dives; the singular Ab. caelite occurs a couple of times. vetus, old, G. veteris, is also declined like dives, but has a Ne. Pl. N. and Ac. vetera; the Ab. S. is regularly vetere, but veteri is sometimes used.

STEMS IN -i-.

OF THREE ENDINGS.

627. A dozen adjectives with stems in -bri-, -cri-, or -tri-, have a distinctive form in -er for the masculine nominative singular; they are:

celeber, thronged salüber, healthy ācer, keen alacer, lively	volucer, winged campester, of a plain equester, cavalry- palüster, of a swamp	pedester, foot- puter, rotten silvester, woody terrester, land-
alacel, mely	paruster, of a swamp	terrester, tana-

So also celer, swift. The names of months, September, October, November, December, are also adjectives with stems in -bri-, but are not used in the neuter. Other adjectives with stems in -bri-, -cri-, or -tri-, have no distinctive form for the masculine nominative singular: as, muliebris, mediocris, initiatris.

628. These adjectives are declined as follows:

Example Stem	M. ācer, F. ācris, Ne. ācre, <i>sharp</i> , ācri						
	Singular.			Plural.			
Nom. Gen. Dat. Acc. Abl.	Masc. ācer ācris ācrī ācrem ācrī	Fem. ācris ācris ācrī ācrem ācrī	NEUT. Acre Acris Acri Acre Acre	Masc. ācrēs ācrium ācribus ācrīs, -ēs ācribus	Fem. ācrēs ācrium ācribus ācrīs, -ēs ācribus	NEUT. ācria ācrium ācribus ācria ācribus	

629. In all cases but the masculine nominative singular these adjectives are just like those in -i- 'of two endings' (630). But the ablative always has -i, never -e, and the genitive plural always has -ium, never -um. In celer the second e belongs to the stem: M. celer, F. celeris, Ne. celere; the genitive plural, which is celerum, is found only as a substantive. Most of these adjectives have now and then a masculine in -is, like adjectives 'of two endings' (630), and in old Latin the nominative -er is rarely feminine.

OF TWO ENDINGS.

630. Adjectives 'of two endings' with stems in -i- are declined as follows:

Example Stem	M. and F. brevis, Ne. breve, short, brevi						
	Singula	r.	Plural.				
	MASC. AND FEM.	NEUT.	MASC. AND FEM.	NEUT.			
Nom.	brevis	breve	brevēs	brevia			
Gen.	brevis	brevis	brevium	brevium			
Dat.	brevi	brevī	brevibus	brevibus			
Acc.	brevem	breve	brevis, -ēs	brevia			
Abl.	brevi	brevi	brevibus	brevibus			

631. The ablative is sometimes -e when these adjectives are used substantively or in verse (558). The genitive plural is rarely -um for -ium (563).

OF ONE ENDING.

632. Most adjectives 'of one ending' have a consonant form of the stem in the singular, except usually in the ablative (633), and an -i- stem in the plural; they are declined as follows:

Examples Stems	M. F. and Ne.		M. F. and Ne. 1 regent	
Singular Nom. Gen. Dat. Acc. Abl.	Masc. & Fem. audāz audācis audāci audāci audācem audāci	Neur. audāx audācis audāci audāx audāx	MASC. & FEM. regens regentis regenti regentem regente, -i	Neut. regëns regentis regenti regëns regente, -i
Plural Nom. Gen. Dat. Acc. Abl.	MASC. & FEM. audācēs audācium audācibus audācīs, -ēs audācibus	NEUT. audācia audācium audācibus audācia audācibus	MASC. & FEM. regentēs regentium regentibus regentīs, -ēs regentibus	NEUT. regentia regentium regentibus regentia regentibus

633. Present participles have -ī in the ablative, when they are used as adjectives, otherwise -e (560). For -ī or -e in other words, see 559, 561. For -ium or -um in the genitive plural, 563.

- 634. Most adjectives 'of one ending' in -i- are declined as above (632); some of them have peculiarities in some of their cases, as follows:
- 635. (1.) trux (531), savage, has Ab. -I or -e, G. Pl. -ium, no Ne. Pl. N. or Ac. redux (531), returning, has Ab. -I or -e, no G. Pl. or Ne. Pl. N. or Ac. hebes, dull, teres, cylindrical (533), and compounds of caput, head, as anceps, (533), two-headed, have Ab. -I, no G. Pl.; a Ne. Pl. N. or Ac. -ia is rare. For locuples, rich, see 533.
- 636. (2.) The following have -I in the ablative, but -um of consonant stems in the genitive plural, and no nominative or accusative neuter plural: inops (535), without means, vigil (536), wide-awake, memor (537), remembering, degener, degenerate. Über (537), prolific, has Ab. -I, twice -e, Ne. Pl. once -a (Acc.). Compounds of pes, as, bipes (532), two-legged, have a late and rare Ne. Pl. N. and Ac. -ia.

THE NUMERAL ADJECTIVE.

637. Of the cardinals, tinus, duo, tres, and the hundreds except centum are declined. The other cardinals are not declined.

638. Uni	18, one,	is d	eclined	as	follows:
----------	----------	------	---------	----	----------

	Singular.			Plural.			
	MASC.	FBM.	NEUT.	MASC.	Fem.	NEUT.	
Nom.	ünus	ūna	unum	üni	ünae	ūna	
Gen.	ūnīus	ünius	ünīus	ünörum	ünärum	ünörum	
Dat.	üni	ūnī	ūni	û nīs	ប៊ូលខែ	ünīs	
Acc.	ünum	unam	unum	ūnōs	ūnās	ūna	
Abl.	ūnō	ünā	ūnō	ünis	ūnīs	ūnīs	
Voc.	üne						

In verse, the genitive singular is often unius.

639. duo, two, and tres, three, are declined as follows:

	MASC.	FEM.	NEUT.	Masc. & Fem.	NEUT.
Nom.	duo	duae	duo	trēs	tria
Gen.	du ōrum	duārum	duðrum	trium	trium
Dat.	duō bus	duābus	duõbus	tribus	tribus
Acc.	duo or duõs	duās	duo	trēs or trīs	tria
Abl.	duōbus	duābus	duõbus	tribus	tribus

640. In dramatic verse, $d\hat{\mathbf{u}}$ 0, &c., is common. In the genitive plural, duo sometimes has du $\hat{\mathbf{u}}$ m (462). amb $\hat{\mathbf{o}}$, bah, is declined like duo, but has $-\hat{\mathbf{o}}$ in the nominative and accusative, and only amb $\hat{\mathbf{o}}$ rum and amb $\hat{\mathbf{a}}$ rum in the genitive plural. For the forms duo, amb $\hat{\mathbf{o}}$, see 415; du $\hat{\mathbf{o}}$ bus, du $\hat{\mathbf{a}}$ bus, 464, 442.

641. Hundreds are declined like the plural of bonus (613): as, ducenti, ducentae, ducenta, two hundred, G. ducentorum or ducentum (462), &c.

642. The adjective mille, thousand, is not declined. The substantive has in the singular only N. Ac. Ab. mille, but a complete plural: N. and Ac. millia (milia), G. millium (milium), D. and Ab. millibus (milibus).

643. Ordinals, as primus, first, and distributives, as bini, two each, are declined like bonus (613). But distributives seldom have a singular, and often have the genitive plural -um (462): as, binum.

THE PRONOUN.

(A.) THE PERSONAL AND REFLEXIVE PRONOUN.

644. The pronoun of the first person, **ego**, *I*, of the second person, **tū**, *thou*, and the reflexive pronoun, **suī**, **sē**, *himself*, *herself*, *itself*, *themselves*, are declined as follows:

	eg	o, <i>I</i>	tū,	, thou	sui, self
	Sing.	Plur.	Sing.	Plur.	Sing. & Plur.
Nom. Gen. Dat. Acc. Abl.	ego meī mihī, mī mē mē	nās nostrūm, -trī nābīs nās nābīs	tū tuī tibî tē tē	võs vestrõm, -tri võbis võs võbis	suī Bibl Sē Sē

645. The nominatives ego and tū, and the accusatives mē, tē and sē, have no case ending.

The last vowel of ego is rarely long in Plautus, long or short in Lucilius.

The nominative ego has a different stem from that of its other cases, and the plurals of ego and tū have a different stem from that of the singular.

646. mei, tui, and sui, which are often monosyllables in old verse, were originally the genitive of the neuter possessives, used substantively. An old genitive mis is quoted, and tis occurs rarely in Plautus.

647. The datives tibl and sibl, also the plurals nobls and vobls, have the form of a locative case, seen in ibl, there, and ubl, where (709).

648. In old Latin, the ablative is med, ted, sed (426), which forms are also used irrationally for the accusative. But by Terence's time the -d was no longer used (143).

649. Older forms for vestrum and vestri are vostrum and vostri. The genitive plural was originally a genitive of the possessive: that in -i being the neuter singular, that in -um the masculine or feminine plural. In old Latin, nostrorum, nostrorum, vostrum, vostru

650. Emphasis is given (1.) by reduplication (189): N. tüte; with -ne interrogative, tütine; Ac. and Ab. mēmē, tētē, rare; sēsē, very common. (2.) by -met added to any case but the genitive plural: as, egomet; but tū has only tūtemet or tūtimet.

651. In inscriptions, the datives MIHEI, TIBEI, and SIBEI occur, so written in verse sometimes even when the last syllable is short; and MIHE, TIBE. Plural: D. and Ab. vobeis. Ac. enos in an old hymn; seese (28).

THE PERSONAL AND REFLEXIVE POSSESSIVE.

652. The possessives of ego, tū, and suī, are meus, mine, tuus, thine, and suus, his, her, its, their (own), declined like bonus (613), except that meus has mī in the vocative singular masculine (459); those of nos and vos are noster, our, and voster, later vester, your, declined like aeger (617).

653. Old forms are tuos, tuom, and suos, suom (452). In old verse meds, med, &c., tuos, tuo, suos, sud, &c., often occur. sos for suos, sas for suas, and sis for suis, are old and rare.

654. Other case forms are found in inscriptions, as follows:

MERIS, MIBIS, monosyllable; TOVAM; SVEI, SOVOM, SOVO, SVVO, SOVEIS, SVEIS, SVIEIS.

655. Emphasis is given (1.) by -met added to suō, suā, suōs, and to mea and sua, neuter plural: as, suōmet; (2.) by -pte, which is oftenest found with the ablative: as, suōpte.

(B.) OTHER PRONOUNS.

656. Some pronouns have a peculiar genitive singular in -Ius and dative singular in -I, for masculine, feminine, and neuter alike.

These are: iste, ille, ipse, uter, and their derivatives. Some other words of a pronoun character also have this form of the genitive and dative: see 618.

657. In verse, the -I- of the genitive is often shortened, and always in utriusque; but neutrius is not found with short i. In dramatic verse, the genitive singular of iste, ille, or ipse, is often two syllables.

658. hic, is, qui or quis, and their derivatives have the genitive singular in -ius, thus: hūius, €ius, and quōius or cūius; in dramatic verse, these genitives are often one syllable. Their datives are huic for hoice, €i or €1, and quoi or cui.

659. Six words have a peculiar neuter nominative and accusative singular in -d: id, illud, istud, quid, quod, aliud, and derivatives. In manuscripts, -t is sometimes found for -d: as, it, illut, istut, &c.; sometimes also in inscriptions of the empire. In hoc for *hod-ce and in istuc and illuc for *istud-ce, *illud-ce, the d has vanished (138).

THE DEMONSTRATIVE PRONOUN.

660. The demonstrative pronouns are hic, this, this near me; iste, istic, that, that near you; and ille, illic, yonder, that.

661. The demonstrative pronoun hio, this, this near me, is declined as follows:

	Singular.			Plural.		
Nom.	Masc.	FEM.	NEUT.	Masc. hi	Fem.	NEUT.
Gen.	hūius	hūius	hūius	hörum	hae hārum	hõrum
Dat.	huic	huic	huic	his	his	his
Acc.	hunc	hanc	hōc	hōs	hās	haec
Abl.	hōc	hāc	hōc	his	his	hīs

662. The stem of hic is ho-, hā-; to most of its cases a demonstrative -c for -ce is attached. The masculine and feminine nominative singular and nominative and accusative neuter plural take an -i-: hic for *ho-i-ce, *heice (87); haec for ha-i-ce (84). hunc, hanc, are for *hom-ce, *ham-ce.

663. Old forms with the full ending -ce are frequent in the dramatists: D. huice, Ac. hunce. Plural: Ne. N. and Ac. haece, G. F. harunce; also hōrunc, hārunc. After 100 B. C., the full form -ce is not found, except occasionally after -s: hūiusce, hōsce, hāsce, hīsce. Before -ne interrogative it is retained in the weakened form -ci-: as, hīcine. But hīcne, hōcne, huicne, &c., are found, though rarely.

664. The nominative hic or hicine and nominative and accusative hoc or hocine sometimes have the vowel before c short. A nominative plural feminine hace is found in writers of all ages. Other and rare forms are: Pl. N. M. hisce (461), D. or Ab. hibus.

665. Other case forms of hic are found in inscriptions, as follows:

N. M. HEC, HIC. G. HOIVS, HVIIVS (22), HVIVS, HOIVSCE, HOIVSQVE, HVIVSQVE, D. HOICE, HOIC, HOI, HVIC, HVI. Ac. M. HONC, HOC; F. HANCE; Ne. HOCE, HVC. Ab. M. and Ne. HOCE; F. HACE, oftener than HAC in republican inscriptions; HAACE (28). Loc. HEICE, HEIC. Plural: N. M. HEISCE, HEIS, Or HEI, HISCE OF HIS; HI, not before Augustus; Ne. N. and Ac. HAICE, HAECE. G. HORVNC. D. and Ab. HEISCE, HIBVS. AC. F. HASCE.

666. The demonstrative pronouns iste, that, that near you, and ille, yonder, are declined alike, as follows:

	Singular.			Plural.		
Nom. Gen. Dat. Acc. Abl.	Masc. ille illius illi illum	Fem. illa illius illi illam illa	NEUT. illud illius illi illud illod	Masc. illī illōrum illīs illōs illōs	FEM. illae illārum illis illās illās	Neut. illa illōrum illis illa illis

667. The first syllable of iste and ille is often short in the dramatists. Old forms of iste are: N. istus, G. isti, in istimodi, D. F. istae. The initial i of iste and of istic (669), is sometimes not written: as, sta res (Cic.), stüc periculum (Ter.). Old forms of ille are: N. Olus (48); ollus or olle, &c.: as, D. S. or N. Pl. olli, D. Pl. ollis. G. illi, in illimodi, D. F. illae. The dramatists have eccistam, eccilla, eccillum, eccillum, for ecce istam, &c., and ellum, ellam, for em illum, &c.

668. Other case forms of ille are found in inscriptions, as follows:

D. F. ILLAE. Plural: N. M. ILLEI. G. OLORVM (48). D. and Ab. OLLEIS, ILLEIS.

669. istic and illic, compounded of iste, ille, and -ce or -c, are declined alike, as follows:

1	Singular.			Plural.		
Nom. Acc. Abl.	Masc. illic illunc illoc	Fem. illaec illanc illāc	Neut. illūc illūc illōc	MASC. illic illosce illisce	Fem. illaec illasce illisce	NEUT. illaec illaec illisce

670. Rare forms are: N. and Ac. Ne. istôc, illôc, G. illiusce, D. illic, Ab. F. istâce, illâce. Plural: N. M. illîsce (461), illîc, Ac. illôsce, illâsce. Before -ne interrogative, -ce becomes -ci-: N. illicine, istûcine or istucine, Ac. illancine, Ab. istôcine, istâcine. Pl. Ac. istôscine.

THE DETERMINATIVE PRONOUN.

671. The determinative pronoun is, that, the aforesaid, the one, is declined as follows:

	Singular.				Plural.	Plural.		
Nom. Gen. Dat. Acc. Abl.	MASC. is ēius ēi eum	FEM. ea ēius ēi eam	Neur. id ēius ēī id eō	MASC. el, ii, or l eorum els, iis, or is eos els, iis, or is	Fem. eae eārum eīs, iīs, or īs eās	NEUT. ea eōrum eis, iis, or is ea eis, iis, or is		

672. is and id (659) are formed from a stem i-, and the other parts from a stem eo-, ea- (104). The genitive is sometimes written in Cicero and Plautus eiius (22). The dative singular is ēī thirty-five times in verse, eī some seventeen times, and ê1 twenty-three times (160).

673. In old verse, the genitive singular rarely has the first syllable short. Old and rare forms are: D. F. eae, Ac. M. im or em. Pl. D. and Ab. Ibus, F. eabus (442). In dramatic verse, eum, eam, e., eo, ea, and e., eorum, earum, eos, eas, els, are often found; also eccum, eccam, eccos, eccas, eccas, ecca, for ecce eum, &c.

674. Other case forms of is are found in inscriptions, as follows:

N. EIS, 124 B.C. G. EIVS, EIIVS, EIIVS or EIIVS (22). D. EIEI, 123 B.C.; EEI, 1EI; EI, 123 B.C., and common in all periods. Plural: N. EEIS, EIS, 1EIS, till about 50 B.C.; EEI, EI, 1EI. D. and Ab. EEIS, EIEIS, 1EIS, 1S; after the republic, 11S, 1IS.

675. A rare and old pronoun equivalent to is is sum, sam, accusative singular, sos, accusative plural, and sis, dative plural.

THE PRONOUN OF IDENTITY.

676. The pronoun of identity, idem, the same, is declined as follows:

	Singular.				Plural.		
	MASC.	FEM.	NEUT.	MASC.	Fem.	NEUT.	
Nom.	Idem	eadem	idem	eidem or idem	eaedem	eadem	
Gen.	čiusdem	ēiusdem	ē iusdem	eðrunder	n eārundem	eõrundem	
Dat.	eīdem	eidem	eidem	eisdem or isdem	eisdem) or isdem	eisdem or isdem	
Acc.	eundem	eandem	idem	eösdem eisdem	eäsdem	eadem	
Abl.	eödem	eādem	eōdem	or isdem			

677. In manuscripts and editions, the plural nominative masculine is often written ildem, and the dative and ablative ilsdem. The singular nominative masculine is rarely eisdem or isdem (Plaut., Enn.), eidem (Cic., Varr.), neuter idem (Plaut.). In verse, eundem, candem, odem, codem, cadem, and oldem, codem, corundem, cosdem, casdem, are often found.

678. Other case forms of idem are found in inscriptions, as follows:

N. M. EISDEM, 123 B.C., ISDEM, 59 B.C., both common till Caesar's time; EIDEM; Ne. EIDEM, 71 B.C. D. IDEM. Plural: N. M. EISDEM, ISDEM, EIDEM, till Caesar's time; IIDEM, once only. D. and Ab. ISDEM, very rarely IISDEM.

THE INTENSIVE PRONOUN.

679. The intensive pronoun ipse, himself, stems ipso-, ipsä-, is declined like ille (666), but has the nominative and accusative neuter singular ipsum.

680. In dramatic verse, ipse has rarely the first syllable short, and often has the older form ipsus (142). Plantus has these forms: N. F. eapse, Ac. eumpse, eampse, Ab. eopse, eapse, equivalent to ipsa, &c. So reapse for re ipsa.

THE RELATIVE, INTERROGATIVE, AND INDEFINITE PRONOUN.

(1.) qui AND quis.

681. The stem qui-, or quo-, quā-, is used in three ways: as a relative, who, which; as an interrogative, who? which? what? as an indefinite, any.

682. (a.) The relative qui, who, which, is declined as follows:

	Singular.				Plural.		
Nom. Gen. Dat. Acc. Abl.	MASC. qui cuius cui quem	Fem. quae cūius cui quam qua	NEUT. quod cūius cui quod quō	MASC. qui quōrum quibus quōs quōs	FEM. quae quārum quibus quās quibus	NEUT. quae quōrum quibus quae quibus	

683. (b.) The interrogative adjective qui, quae, quod, which? what? is declined like the relative qui (682).

684. The interrogative substantive has in the nominative singular quis, quid, who? what? the rest is like qui (682).

In old Latin, quis is both masculine and feminine, but a separate feminine form quae is used three or four times.

685. quis interrogative is sometimes used adjectively with appellatives: as, quis senātor? what senator? And qui is sometimes used substantively: a, qui primus Ameriam nuntiat? who is the first to bring the tidings to Ameria?

686. (c.) The indefinite quis or qui, one, any, has the following forms:

quis and quid masculine and neuter substantives, qui and quod adjectives; feminine singular nominative and neuter plural nominative and accusative commonly qua, also quae. The rest is like qui (682).

687. quis, quem, quid, and quibus come from the stem qui-; the other parts come from quo-, qua-. quae stands for an older quai (690). For quid and quod, see 650.

688. Old forms of the genitive singular are quoius, and of the dative quoiei, quoii, also in derivatives of qui or quis. A genitive plural quoium is old and rare. The dative and ablative plural is sometimes quis from quo-, qua-. A nominative plural interrogative and indefinite ques is rare (Pacuv.).

689. The ablative or locative is sometimes qui, from the stem qui-: as an interrogative, how? as a relative, wherewith, whereby, masculine, feminine, or neuter, in old Latin sometimes with a plural antecedent; especially referring to an indefinite person, and with cum attached, quicum; and as an indefinite, somehow.

690. Other case forms of qui or quis and their derivatives are found in inscriptions, as follows:

N. QVEI, prevalent in republican inscriptions; also QVI; once QVE. G. QVOIVS, regularly in republican inscriptions; CVIIVS, CVIIVS, CVIIVS (22), once QVIVS (17). D. QVOIEH, QVOI; once F. QVAI. Ab. QVEI. Plural: N. M. QVEI, but after 120 B. C., occasionally QVI; QVES, indefinite; F. and Ne. QVAI. G. QVOIVM.

DERIVATIVES OF qui AND quis.

691. The derivatives of qui and quis have commonly quis and quid as substantives, and qui and quod as adjectives. Forms requiring special mention are named below:

692. quisquis, whoever, whatever, everybody who, everything which, an indefinite relative, has only these forms in common use: N. M. quisquis, sometimes F. in old Latin, Ne. N. and Ac. quicquid or quidquid, Ab. M. and Ne. as adjective quoquo.

Rare forms are: N. M. quiqui, Ac. quemquem, once Ab. F. quaqua, as adverb quiqui, once D. quibusquibus. A short form of the genitive occurs in quoiquoimodi or cuicuimodi, of whatsoever sort.

aliquis or aliqui, aliqua, once aliquae (Lucr.), aliquid or aliquod, some one, some; Ab. M. sometimes, Ne. often aliqui (689). Pl. Ne. N. and Ac. only aliqua; D. and Ab. sometimes aliquis (688).

ecquis or ecqui, ecqua or ecquae, ecquid or ecquod, any? Besides the nominative only these forms are found: D. eccui, Ac. ecquem, ecquam, ecquid, Ab. M. and Ne. ecquo. Pl. N. ecqui, Ac. M. ecquos, F. ecquas.

quicumque, quaecumque, quodcumque, whoever, whichever, everybody who, everything which. The cumque is sometimes separated from qui by an intervening word. An older form is quiquomque, &c.

quidam, quaedam, quiddam or quoddam, a, a certain, some one, so and so; Ac. quendam, quandam. Pl. G. quorundam, quarundam.

quilibet, quaelibet, quidlibet or quodlibet, any you please.

quisnam, rarely quinam, quaenam, quidnam or quodnam, who ever? who in the world? Sometimes nam quis, &c.

quispiam, quaepiam, quippiam, quidpiam or quodpiam, any, any one; Ab. also quipiam (689), sometimes as adverb, in any way.

quisquam, quicquam or quidquam, anybody at all, anything at all, generally a substantive, less frequently an adjective, any at all. There is no distinctive feminine form, and quisquam and quemquam are rarely, and in old Latin, used as a feminine adjective. Ab. also quiquam (689), sometimes as adverb, in any way at all. No plural.

quisque, quaeque, quicque, quidque or quodque, each. Sometimes tinus is prefixed: tinusquisque; both parts are declined. quisque and quemque are sometimes feminine. Ab. S. quique (689) rare, Ab. Pl. quisque (688) once (Lucr.).

quivis, quaevis, quidvis or quodvis, which you will; Ab. also quivis (689).

(2.) uter.

693. utcr, utra, utrum, whether? which of the two? has the genitive singular utrīus, and the dative singular utrī.

The rest is like aeger (617). uter is sometimes relative, whichsoever, or indefinite, either of the two.

DERIVATIVES OF uter.

694. The derivatives of uter are declined like uter; they are:

neuter, neither of the two, genitive neutrius, always with i (657). When used as a grammatical term, neuter, the genitive is always neutri: as, generis neutri, of neither gender.

utercumque, utracumque, utrumcumque, whichever of the two, either of the two.

uterlibet, whichever you please.

uterque, which soever, both. G. always utriusque (657).

utervis, whichever you wish.

alteruter, F. altera utra, Nc. alterutrum or alterum utrum, one or the other, G. alterius utrius, once late alterutrius, D. alterutri, Ac. M. alterutrum or alterum utrum, F. alterutram once (Plin.) or alteram utram, Ab. alterutrō or alterō utrō, F. alterā utrā. No Pl., except D. alterutrīs once (Plin.).

CORRELATIVE PRONOUNS.

695. Pronouns often correspond with each other in meaning and form; some of the commonest correlatives are the following:

Kind.	Interrogative.	Indefinite.	Demonstrative, Determinative, &c.	Relative.
Simple	quis, quī, who?	quis, quī, aliquis	hīc, iste, ille is, quisque	qui
Alternative	uter, which of the two?	uter, alteruter	uterque	uter, qui
Number	quot, how many? (431)	aliquot	tot	quot
Quantity	quantus, how large? (613)	aliquantus, quantusvīs	tantus	quantus
Quality	quālis, of what sort? (630)	quālislibet	tālis	quālis

THE ADVERB,

THE CONJUNCTION, AND THE PREPOSITION.

I. NOUNS AS ADVERBS.

- 696. Adverbs, conjunctions, and prepositions are chiefly noun or pronoun cases which have become fixed in a specific form and with a specific meaning. Many of these words were still felt to be live cases, even in the developed period of the language; with others the consciousness of their noun character was lost.
- 697. Three cases are used adverbially: the accusative, the ablative, and the locative.
- 698. The rather indeterminate meaning of the accusative and the ablative is sometimes more exactly defined by a preposition. The preposition may either accompany its usual case: as, adamussim, admodum, ilicō; or it may be loosely prefixed, with more of the nature of an adverb than of a preposition, to a case with which it is not ordinarily used: as, examussim, interea. Sometimes it stands after the noun: as, nuper (*novomper) lately. Besides the three cases named above, other forms occur, some of which are undoubtedly old case endings, though they can no longer be recognized as such: see 710.

(I.) ACCUSATIVE.

(a.) ACCUSATIVE OF SUBSTANTIVES.

699. domum, homeward, home; rūs, afield; forās, out of doors (*forā-); vicem, instead; partim, in part; old noenum or noenu, common non, for ne-oenum, i.e. ūnum, not one, naught, not; admodum, to a degree, very; adamussim, examussim, to a T; adfatim, to satiety; invicem, in turn, each other.

700. Many adverbs in -tim and -sim denote manner (549): as, cautim, warily, statim, at once, sēnsim, perceptibly, gradually; ostiātim, door by door, viritim, man by man, fürtim, stealthily.

(b.) Accusative of Adjectives and Pronouns.

701. Neuters: all comparative adverbs in -ius (361): as, doctius, more learnedly; so minus, less, magis, more (363). primum, first, secundum, secondly, &c.; tum, then (to-, that): commodum, just in time; minimum, at least, potissimum, in preference, postrēmum, at last, summum, at most; versum, toward, rursum, russum, rūsum, back; facile, easily, impūne, scotfree, recēns, lately, semel, once (simili-), simul, logether (simili-). Plural: cētera, for the rest; quia, because (qui-); in old Latin frūstra, in vain (fraud-).

702. Feminines: bifāriam, twofold; coram, face to face (com- or co-, *orā-); tam, so (tā-, that); quam, as, how. Plural: aliās, on other occasions.

(2.) ABLATIVE.

(a.) ABLATIVE OF SUBSTANTIVES.

703. domō, from home, rūre, from the country; hodiē, to-day (ho-, diē-), vesperī, vesperē, by twilight, noctū, by night, nights, lūcī, lūce, by light, tempore, in time, betimes; sponte, voluntarily, fōrte, by chance; quotannīs, yearly; grātiis or grātis, for nothing, ingrātiis or ingrātis, against one's will; ilicō, on the spot (in locō), foris, out of doors (*forā-).

(b.) ABLATIVE OF ADJECTIVES AND PRONOUNS.

704. Many adverbs in -ō are formed from adjectives of time: as, perpetuō, to the end, crēbrō, frequently, rārō, seldom, repentinō, suddenly, sērō, l.te, prīmō, at first. Many denote manner: as, arcānō, privily, sēriō, in earnest. Some are formed from participles: as, auspicātō, with auspices taken; compositō, by agreement. A plural is rare: alternīs, alternately.

705. Instead of -\(\bar{0}\), neuter ablatives commonly have -\(\bar{e}\): as, long\(\bar{e}\), far, doct\(\bar{e}\), wisely. So also superlatives: facillim\(\bar{e}\), most easily, anciently FACILV-MED (362). A few ablatives have -\(\begin{e}\): as, repente, suddenly.

706. From pronouns some end in -i (689): as, qui, how? indefinite, qui, somehow; atqui, but somehow; qui-quam, in any way at all.

707. Feminines: many in -ā: ūnā, together; circā, around; contrā, against (com-, 347); extrā, outside (ex, 347); in classical Latin, frūstrā, in vain (fraud-). So, especially, adverbs denoting the 'route by which:' hāc, this way; rēctā, straightway.

(3.) LOCATIVE.

708. In -I, from names of towns and a few other words: Karthāginī, at Carthage; Romae, for Romāi, at Rome; domī, at home; illī, commonly illī-c, there (illo-), istī, commonly istī-c, where you are, hī-c, here (ho-); old sei, common sī, at that, in that case, so, if; sīc, so (sī, -ce).

709. In -bi, from some pronouns: ibi, there (i-); ubi (for *quobi, 124), where; alicubi, somewhere; si-cubi, if anywhere, ne-cubi, lest anywhere.

OTHER ENDINGS.

710. Besides the above, other endings are also found in words of this class: as,

-s in abs, from, ex, out of; similarly us-que, in every case, ever (quo-que), us-quam, anywhere at all (quo-quam, 124). -tus has the meaning of an ablative: as, intus, from within, within; antiquitus, from old times, anciently; funditus, from the bottom, entirely. -o denotes the 'place to which' in adverbs from pronoun stems: as, eo, thither; quo, whither; illo, or illuc, for *illoce, thither (75); hoc, commonly huc, for *hoce, hither. -im denotes the 'place from which:' as, istim, commonly istinc, from where you are; illim, commonly illinc, from yonder; hinc, hence; exim, thereupon; also -de: as, unde, whence (quo-, 124), sI-cunde, if from any place, ne-cunde, lest from anywhere. -ter: as comparative (347): praeter, further, beyond, inter, between; denoting manner: acriter, sharply; amanter, affectionately; rarely from -o- stems: as, firmiter, steadfastly.

CORRELATIVE ADVERBS.

711. Adverbs derived from pronoun stems often correspond with each other in meaning and form; some of the commonest correlatives are the following:

	Interrogative.	Indefinite.	Demonstrative, Determinative, &c.	Relative.
	ubl, where ?	alicubī usquam uspiam ubivīs	hīc, istīc, illīc ib l , ib l dem	ubi
Place	quō, whither?	aliquō quōlibet	hüc, istüc, illüc eō, eōdem	quō
	quorsum, whitherward?	qu ōvis aliquōvor- sum	horsum, istorsum	quorsum
	unde, whence?	alicunde undelibet	hinc, istinc, illinc inde, indidem	unde
Tr:	quando, when?	aliquandō umquam	nunc, tum, tunc	quom or cum
Time	quotiens, how	aliquotiens	totiëns	quotiēns
Way	quā, by what way?	aliquā quāvis	hāc, istāc, illāc eā, eādem	quā
Manner	uti or ut, how?	aliquā	ita, sīc	uti or ut
Degree	quam, how?	aliquam	tam	quam

II. SENTENCES AS ADVERBS.

712. Some adverbs are condensed sentences: as,

flicet, you may go, straightway (fre licet); scflicet, you may know, obviously, of course (scfre licet); videlicet, you can see, plainly (videre licet); nūdiustertius, now is the third day, day before yesterday (num dius, i.e. dies, tertius); forsitan, maybe (fors sit an); mīrum quantum, strange how much, astonishingly; nescio quo pacto, nescio quomodo, somehow or other, unfortunately.

(B.) INFLECTION OF THE VERB.

713. The verb is inflected by attaching person endings to the several stems.

THE STEM.

- 714. The stem contains the meaning of the verb, and also denotes the mode (mood) and the time (tense) of the action as viewed by the speaker.
- 715. There are three Moods, Indicative, Subjunctive, and Imperative.
- 716. There are six TENSES in the indicative, three of the present system, *Present*, *Imperfect*, and *Future*; and three of the perfect system, *Perfect*, *Pluperfect*, and *Future Perfect*. The subjunctive lacks the futures; the imperative has only the present.
- 717. The meanings of the moods and tenses are best learnt from reading. No satisfactory translation can be given in the paradigms, especially of the subjunctive, which requires a variety of translations for its various uses.
- 718. The verb has two principal stems: I. The Present stem, which is the base of the present system; II. The Perfect stem, which is the base of the perfect active system.
- 719. The perfect system has no passive; its place is supplied by the perfect participle with a form of sum, am, or less frequently of fui, am become.
- 720. Many verbs have only the present system: as, maereð, mourn; some have only the perfect system: as, memini, remember. Some verbs have a present and perfect system made up of two separate roots or stems: as, present indicative ferð, carry, perfect indicative tuli, and perfect participle lätus; present possum, can, perfect potui.

THE PERSON ENDING.

- 721. The person ending limits the meaning of the stem by pointing out the person of the subject. There are three PERSONS, the First, used of the speaker, the Second, of what is spoken to, and the Third, of what is spoken of. The person ending furthermore indicates number and voice.
- 722. There are two NUMBERS: the Singular, used of one, and the Plural, used of more than one.
- 723. There are two VOICES: the Active, indicating that the subject acts, and the Passive, indicating that the subject acts on himself, or more commonly is acted on by another.

The Verb: Person Endings. [724-731.

- 724. Only transitive verbs have all persons of the passive. Intransitive verbs have in the passive only the third person singular, used impersonally; the participle in this construction is neuter.
- 725. Some verbs have only the passive person endings, but with a reflexive or an active meaning; such are called *Deponents*: see 798.

726. The person endings are as follows:

Voice.	Active.				Pas	sive.		
Mood.	IND. & SUB.		Imperative.		IND.	& Sub.	IMPER	ATIVE.
Number.	Sing.	PLUR.	Sing.	PLUR.	Sing.	PLUR.	SING.	PLUR.
First person.	-m	-mus	not used	not used	-r	-mur	not used	not usea
Second person.	-8	-tis	none, -tō	-te, -tōte	-гів, -ге	[-minī]	-re, -tor	[-minī]
Third person.	-t	-nt	-tō	-ntō	-tur	-ntur	-tor	-ntor

- 727. In the perfect indicative active, the second person singular ends in -ti, and the third person plural in -runt for an older -ront, or in -re. -re is most used in poetry and history, and by Cato and Sallust; -runt by Cicero, and almost always by Caesar.
- 728. In the indicative, -m is not used in the present (except in sum, am, and inquam, quoth I), in the perfect or future perfect, or in the future in -bō. -s is not used in Es or es, thou art, and in Es, eatest (139).
- 729. In inscriptions,-d sometimes stands for-t in the third person singular, and sometimes-t is not used: as, FECID, made, for fēcit; DEDE, gave, for dedēt or dedit. And other forms of the third person plural of the indicative active are sometimes used: as, DEDROT, DEDRO, and DEDERI, gave, for dedērunt, EMERY, bought, for ēmērunt.
- 730. In the passive second person singular, -re is not very common in the present indicative, except in deponents; but in other tenses -re is preferred, especially in the future -bere, by Cicero, -ris by Livy and Tacitus. The second person plural passive is wanting; its place is supplied by a masculine participle form in -mini, which is used without reference to gender, for gender words and neuters alike (297).
- 731. Deponents have rarely -mino in the imperative singular: as, second person, progredimino, step forward thou (Plaut.); in laws, as third person: FRYMINO, let him enjoy; or -to and -nto for -tor and -ntor: as, titio, let him use; titunto, let them use. In a real passive, -nto is rare: as, CENSENTO, let them be rated.

NOUNS OF THE VERB.

732. The verb is accompanied by some nouns, which are conveniently, though not quite accurately, reckoned parts of the verb; they are:

'Three Infinitives, Present Active and Passive, and Perfect Active, sometimes called the Infinitive Mood. For the future active and passive and the perfect passive, compound forms are used.

The Gerund and the Gerundive.

Two Supines.

Three Participles, Present and Future Active, and Perfect Passive.

PRINCIPAL PARTS.

733. The several verb stems can readily be found, when once the principal parts are known; these are given in the dictionary.

734. The Principal Parts of a verb are the Present Indicative Active, Present Infinitive Active, Perfect Indicative Active, and Perfect Participle: as,

Pres. Indic.	PRES. INFIN.	PERF. INDIC.	PERF. PART.
regō, <i>rule</i>	regere	rēxi	rēctus
laud ō , <i>praise</i>	laudāre	laudāvi	laudātus
moneō, advise	monēre	monui	monitus
audiō, <i>hear</i>	audire	a udī vī	auditus

735. The Principal Parts of deponents are the Present Indicative, Present Infinitive, and Perfect Participle: as,

PRES. INDIC.	PRES. INFIN.	PERF. PART.
queror, complain	queri	questus
miror, wonder	mīrārī	mīrātus
vereor, fear	verērī	veritus
partior, share	partīrī	partītus

DESIGNATION OF THE VERB.

736. A verb is usually named by the present indicative active first person singular: as, regō; laudō, moneō, audiō; or by the present infinitive active: as, regere; laudāre, monēre, audīre. Deponents are named by the corresponding passive forms: as, queror; mīror, vereor, partior; or queri; mīrārī, verērī, partīrī.

737. For convenience, verbs with -ere in the present infinitive active are called *Verbs in* -ere; those with -āre, -ēre, or -īre, *Verbs in* -āre, -ēre, or -īre, respectively. In like manner deponents are designated as *Verbs in* -ī; or *Verbs in* -ārī, -ērī, or -īrī, respectively.

THEME OF THE VERB.

738. The several stems of the verb come from a form called the *Theme*. In primitives, the theme is a root; in denominatives, the theme is a noun stem.

Thus, reg- in reg-ō is a root; while vesti- in vesti-ō, dress, is a noun stem. The noun stem is sometimes modified in form. Oftentimes the noun stem is only presumed: as, audi- in audi-ō.

739. Some verbs have a denominative theme in the present system, and a primitive theme in the perfect system, others have the reverse.

740. Most verbs with an infinitive of more than two syllables in -are, -ere, or -ire, or, if deponent, in -ari, -eri, or -iri, are denominative; most other verbs are primitive.

Thus, laudāre, monēre, audire; mirāri, verēri, partīri, are denominative; while esse, dare, (dē)lēre, regere, queri, are primitive. A few verbs, however, which have the appearance of denominatives, are thought to be primitive in their origin.

ARRANGEMENT OF THE VERB.

741. Verbs are divided into two classes, according to the form of the present system: I. Root verbs, and verbs in -ere, mostly primitive; II. Verbs in -are, -ere, or -ire, mostly denominative.

742. Verbs are sometimes arranged without regard to difference of kind, in the alphabetical order of the vowel before -s of the second person singular of the present indicative active, \(\bar{a}, \bar{e}, \bar{i}, \bar{i}. \) it thus, laud\(\bar{a}s, \) mon\(\bar{e}s, \) regis, aud\(\bar{a}s, \) sometimes called the first, second, third, and fourth conjugation respectively.

I. PRIMITIVE VERBS.

743. A few of the oldest and commonest verbs of everyday life have a bare root as stem in the present indicative or in parts of it; and some of them have other peculiarities; such are called *Root Verbs*, or by some, *irregular* (744-781). Most primitives are verbs in -ere, like regō (782).

(A.) ROOT VERBS.

Irregular Verbs.

(a.) WITH A PREVALENT BARE ROOT.

744. Primitives with the bare root as present indicative stem in almost all their forms are sum, am, dō, give, put, and compounds; and with the root doubled, bibō, drink, serō, sow, and sistō, set.

(I.) sum, am (es-, s-).

745. sum, am, is used only in the present system (720). The perfect system is supplied by forms of ful (fu-).

INFINITIVE.

Fut. futurus esse, to be going to be

PARTICIPLE.

Pres. esse, to be

Perf. fuisse, to have been

Pres. See 749
Perf.

Fut. futurus, going to be

746. The first person sum is for an older esum (92); for the -m, and for es, see 728. In sum and sumus, an u is developed before the person endings (89). For sim, &c., and siem, &c., see 841. In the imperfect eram, &c., and the future erō, &c., s has become r (116).

- 747. The indicative and imperative es is for an older Es, which is regularly used by Plautus and Terence. The e of es and est is not pronounced after a vowel or -m, and is often omitted in writing: as, experrēcta Es, pronounced experrēctas; epistula est, pronounced epistulast; consilium est, pronounced consiliumst. In the dramatists, -s preceded by a vowel, which is usually short, unites with a following Es or est: thus, tu servos Es becomes tu servos; similis est, similist; virtus est, virtus; res est, rest.
- 748. Old forms are: SONT (inscr. about 120 B.C.); with suffix -scō (834), escit (for *esscit), gets to be, will be, escunt; present subjunctive, siem, stēs, siet, and sient (841), common inscriptions down to 100 B.C., and in old verse; also in compounds; imperative estōd rare.
- 749. The present participle is used only as an adjective. It has two forms: sontem (accusative, no nominative), which has entirely lost its original meaning of being, actual, the real man, and has only the secondary meaning of guilty, and insons, innocent; and -sēns in absēns, away, praesēns, at hand, and di consentēs, gods collective. sum has no gerund or gerundive.
- 750. A subjunctive present fuam, fuas, fuat, and fuant occurs in old Latin, and an imperfect forem, fores, foret, and forent, in all periods. The present infinitive fore, to get to be, become, has a future meaning. Old forms in the perfect system are FVVBIT (28), FVBT; füit, füimus, füerim, füerit, füerint, füsset (Plaut., Enn.). fui has no perfect participle or supine.

751.

possum, can.

	Principal parts: possum,	, posse; (potui, ——).				
	INDICATIVE MOOD.					
	Singular.	Plural.				
Pres. Imp. Fut.	possum, potes, potest poteram, poterās, poterat poterō, poteris, poterit	possumus, potestis, possunt poterāmus, poterātis, poterant poterimus, poteritis, poterunt				
	SUBJUNCTI	VE MOOD.				
Pres. Imp.	possim, possīs, possit possem, possēs, posset	possīmus, possītis, possint possēmus, possētis, possent				
Pres.	INFINITIVE.	PARTICIPLE.				

752. possum is formed from potis or pote, able, and sum, juxtaposed (396). The separate forms potis sum, &c., or pote sum, &c., are also used, and sometimes even potis or pote alone takes the place of a verb; in either case potis and pote are indeclinable, and are applied to gender words and neuters both.

753. t is retained before a vowel, except in possem, &c., for potessem, &c., and in posse; t before s changes to s (145). Old forms are: possiem, &c. (748), potessem, potisset, potesse. Rare forms are potestor (inscr. §8 B.C.), and passives, as potestur, &c., with a passive infinitive (1484). possum has no participles; the perfect system, potui, &c., is like fui, &c. (745).

(2.) do, give, put (d a-, d a-).

754. There are two verbs $d\bar{o}$, one meaning give, and one meaning put. The $d\bar{o}$ meaning put is oftenest used in compounds; the simple verb has been crowded out by $p\bar{o}n\bar{o}$. The present system of $d\bar{o}$ is as follows:

	Principal parts: do,	dare, dedi, datus.					
	ACTIVE VOICE.

	IMPERATIV						
	dare or dator, dator	daminī, dantor					
	INFINITIVE.	GERUNDIVE.					
Pres.	dari	dandus					

755. In the present system a is short throughout in the first syllable, except in das and da. For dedi, datus, and supines datum, datu, see 859 and 900.

756. Old forms: with suffix -nō (833): danunt for dant. From another form of the root come duis, duit; interduō, concrēduō, perfect concrēduī; subjunctive duim, duīs (duās), duit and duint (841), and compounds, used especially in law language, and in praying and cursing; crēduam, crēduās or crēduit.

757. Real compounds of do have a present system like rego (782); in the perfect and the perfect participle, e and a become i: as, abdo, put away, abdere, abdidī, abditus; crēdō, put trust in. perdō, fordo, destroy, and vēndō, put for sale, have gerundives perdendus, vēndundus, and perfect participles perditus, vēnditus; the rest of the passive is supplied by forms of pereo and vēneō. reddō, give back, has future reddibō 3 times (Plaut.). In the apparent compounds with circum, pessum, satis, and vēnum, do remains without change, as in 754.

(3.) bibō, serō, and sistō.

758. bibō, drink, serō, sow, and sistō, set, form their present stem by reduplication of the root (189). The vowel before the person endings is the root vowel, which becomes variable, like a formative vowel (824). These verbs have the present system like regō (782).

(b.) WITH THE BARE ROOT IN PARTS.

inquam, eo, and queo.

759. inquam, eo, and queo have the bare root as present stem, in almost all their parts; in a few parts only the root is extended by a formative vowel (829).

(1.) inquam, say I, quoth I.

760. inquam, say I, is chiefly used in quoting a person's direct words; and, from its meaning, is naturally very defective. The only parts in common use are the following:

	INDICATIVE MOOD.					
Pres. Fut.	Singular. inquam, inquis, inquit ——, inquiës, inquiet	Plural, inquiunt,				

761. Rare forms are: subjunctive inquiat (Cornif.), indicative imperfect inquiebat (Cic.), used twice each; indicative present inquimus (Hor.), perfect inqui (Catull.), inquisti (Cic.), once each; imperative inque, 4 times (Plaut. 2, Ter. 2), inquitò, 3 times (Plaut.). For inquam, see 728.

762.

(2.) eō, go (I- for ei-, i-).

	Principal part	s: eō, īre, iī, itum.

Fut.	itūrus esse	itūrus			
	GERUND.	SUPINE.			
Gen.	eundi				
Dat.	eundō				
Acc.	eundum				
Abl.	eundō	l 			

^{763.} The passive is only used impersonally, and has a neuter gerundive eundum and participle itum; but transitive compounds, as adeō, go up to, have a complete passive: as, adeor, adiris, &c. ambiō, go round, canvass, follows denominatives in -Ire (796), but has once or twice the imperfect ambibat, ambibant, ambibatur (Liv., Tac., Plin. Ep.), and once the future ambibunt (Plin.); future perfect ambissit, ambissint, once each (prol. Plaut.).

^{764.} The i is weakened from ei (88): as, eis, eit, eite, abeis, abei (Plaut.); EITVR, ABEI, ADEITVR (inscr. 130 B.C.), VENEIRE (49 B.C.), PRAETEREIS. Before 0, u, or a, the root becomes e. For u in euntis, see 902.

^{765.} Old forms are: iero (Plaut.), ii, ierat (Ter.), once each (58); in an inscription of 186 B.C., ADIESET, ADIESENT, ADIESE, and of 146 B.C., REDIEIT (105); INTERIEISTI. A future in -iet, as transiet (Sen.), is late and rare.

- 766. Compounds often have a double i in the second persons of the perfect indicative, in the pluperfect subjunctive throughout, and in the perfect infinitive: as, abiisti, abiistis; abiissem, &c.; abiisse; oftener still, however, a single long I (105): as, abisti, &c. In the first person of the perfect indicative a single long I is found rarely in late writers in the singular: as, adI (Val. Fl.).
- 767. A few examples are found of a perfect system with v, as ivi, &c. This form is confined almost exclusively to poetry and late prose.
- (a.) Examples of simple forms with v are: Iverō, īvisse (Plaut.), īvit (Cato), īvī (Ter., Varro), īverat (Catull.). (b.) Compound forms: obīvit (Verg.), subīvit (Ov., Stat.); trānsīvisse (Claud. ap. Tac.), inīvimus, trānsīvi, trānsīvimus (Curt.), trānsīvit, trānsīverant (Sen.), exīvit (Gell.). Apparent compounds (396): anteīvit (Ov.); intrō īvit (C. Gracch., Piso, Gell.).

(3.) queò, can.

768. queō, can, and nequeō, can't, have the perfect quivi, the rest like eō (762); but they have no imperative, gerundive, or future participle, and the present participle is rare. queō is commonly used with a negative, and some parts only so. Passive forms are rare, and only used with a passive infinitive (1484).

edo; volo (nolo, mālo) and fero.

(I.) edo, eat (ed-, Ed-).

769. edő, eat, has a present system with a formative vowel like regő throughout (782); but in some parts of the present, and of the imperfect subjunctive, parallel root forms occur, with d of the root changed to s (145, 152), and the vowel lengthened, as may be seen in the following:

	Principal parts: ed	lō, ēsse, ēdi, ēsus.

	INFINITIVE.	PARTICIPLE.			
Pres.	ësse	edēns			

770. For Es, see 728; for edim, &c., 841. In the passive, the indicative present Estur is used, and imperfect subjunctive EssEtur. The perfect participle Esus is for an older Essus (133). Supines Essum, Essü (Plaut.).

771. comedō, eat up, has also the following root forms: comēs, comēst, comēstis; comēstē; comēsse; comēssēs, comēsset. The present subjunctive has also comedim, comedin, comedint. The participle perfect is comēssus, comēsus, comēsus, future comēssūrus. exedō, eat out, has exēst and exēsse; subjunctive exedint.

772. volō (nōlō, mālō) and ferō have the bare root in some parts only of the present system; in other parts the root extended by a formative vowel, like regō (782). volō (nōlō, mālō) lack some forms, as will be seen below.

773. (2.) volō, will, wish, want, am willing (vol-, vel-).

	Principal parts: volo	, velle, volui, ——.
	INDICATIV	VE MOOD.

	INFINITIVE.	PARTICIPLE.
Pres.	velle	volēns
Perf.	voluisse	

774. volo for volo is rare (2443). volt and voltis became vult and vultis about the time of Augustus (75). For volumus, see 89; velim, &c., 841; vellem, &c., velle, 146. Sis, an thou wilt, is common for sī vis (Plaut., Ter., Cic., Liv.). sultis, an't please you, is used by Plautus for sī voltis.

775. nölö, won't, is formed from nön, not, and volö, juxtaposed, and mälö, like better, from magis or mage, more, and volö, juxtaposed (396).

776. nolo, won't, don't want, object, am not willing.

	INFINITIVE.	GERUNDIVE.	
Pres.	capi	capiendus	

The Verb: Verbs in -io, -erc. [785-791.

785. There are a dozen verbs in -iō, -ere, like capiō, and three deponents in -ior, -i, all formed from consonant roots with a short vowel: see 836. \$\bar{a}i\bar{o}\$, say, and \$\bar{f}i\bar{o}\$, grow, become, have certain peculiarities arising from the blending of the root with the suffix.

(1.) āiō, say, say ay, avouch (2g-).

786. āiō, say, is defective, and has only these parts in common use:

	Singular.	Plural.
Ind. Imp.	āiō, ais, ait āiēbam, āiēbās, āiēbat , āiās, āiat	,, āiunt āiēbāmus, āiēbātis, āiēbant ,

^{787.} For \$i\overline{0}\$, sometimes written \$\vec{a}i\overline{0}\$ (22), see 135. Old forms are: present \$\vec{a}i\overline{a}i\overlin

(2.) flo, become, am made.

788. fiō, become, and factus sum supplement each other: in the present system, the passive of faciō, make, except the gerundive, faciendus, is not used, fiō, &c., taking its place; in the perfect system, only factus sum, &c., is used.

Ind. Pres.	Singular. fið, fis, fit	Plural.
Ind. Imp. Ind. Fut. Subj. Pres. Subj. Imp. Imper.	fiebam, fiebās, fiebat fiam, fies, fiet	fiēbāmus, fiēbātis, fiēbant fiēmus, fiētis, fient fiāmus, fiātis, fiant fierēmus, fierētis, fierent fite
Infin. Pres.	fieri	Part. Pres

^{789.} In fiō, &c., I represents an older ei, seen in FRIENT (inscr. 45 B.C.). The infinitive fieri is not a passive form, but represents an older fiere i (65); twice fiere (Enn., Laev.). The vowel before -er- in fierem, &c., and fieri, is sometimes long in the dramatists where a cretic (_ _ _ _) is required, but otherwise always short.

790. -fiō is used in apparent compounds (394): as, patēfit. In real compounds commonly -ficior: as, cōnficior; but sometimes -fiō: as, cōnfit, cōnfitat, cōnfieret, cōnfierent, cōnfierei, dēfit, dēfitet, dēfieri, dēfieri; effit, effiant, ecfieri; infit; interfiat, interfieri; superfit, superfiat.

791. Some verbs in -iō, -ere (or -ior, -i), have occasionally the form of verbs in -ire (or -iri), in some parts of the present system, oftenest before an r, and particularly in the passive infinitive: as,

fodiri, 3 times (Cato, Col. 2), circumfodiri (Col.), ecfodiri (Plaut.); adgrediri (adgredirier). 4 times (Plaut.), progrediri (Plaut.); moriri 6 times (Plaut. 4. Pomp., Ov.), &moriri twice (Plaut., Ter.); oriri, always; parire, twice (Plaut., Enn.); usually potiri (potirier). Also cupiret (Lucr.); adgredire, adgredibor, adgredimur (Plaut.); morimur (Enn.); oriris (Varr., Sen.), adoritur (Lucil., Lucr.), orirëtur (Cic., Nep., Sall., Liv.), adorirëtur (Liv., Suet.); paribis (Pomp.), pariret (inscr.); potiris (Manil.), potitur (Lucil., Ov.), &c., &c.

The Verb: Periphrastic Forms. [799-803.

799. Three deponents in -ior, -ī, gradior, walk, morior, die, and patior, suffer, and their compounds, have a present system like the passive of capio (784). But adgredior and progredior and morior and Emorior have sometimes the forms of verbs in -īrī; for these, and for orior, arise, orīrī, ortus, and potior, become master of, potirī, potītus, see 791. By far the largest number of deponents are verbs in -ārī, like mīror, mīrārī (368).

800. Some verbs waver between active and passive person endings: as, adsentio, agree, adsentire, and adsentior, adsentiri; populo, ravage, populare, and populor, populari: see 1481.

801. A few verbs are deponent in the present system only: as, devortor, turn in, perfect devorti; revortor, turn back, perfect revorti, but with active perfect participle revorsus. Four are deponent in the perfect system only: fido, trust, fidere, fisus, and the compounds, confido, diffido; and audeo, dare, audere, ausus, gaudeo, feel glad, gaudere, gavisus, and soleo, am used, solere, solitus. Most impersonals in ere have both an active and a deponent form in the perfect system: see 815, 816.

PERIPHRASTIC FORMS.

802. (1.) The future active participle with a form of sum is used to denote an intended or future action: as,

recturus sum, I am going to rule, intend to rule.

	INDICATIVE MOOD.			
	Singular.	Plural.		
Pres.	rēctūrus sum, es, est	rēctūrī sumus, estis, sunt

	INFINITIVE.			
Pres.	rēctūrus esse	•		
Perf.	rēctūrus fuisse			

803. A future perfect is hardly ever used: as, fuerit victūrus (Sen.). In the imperfect subjunctive, forem, fores, foret, and forent are sometimes used (Nep., Sall., Liv., Vell.).

804. (2.) The gerundive with a form of sum is used to denote action which requires to be done: as,

regendus sum, I am to be ruled, must be ruled.

DEFECTIVE VERBS.

805. (1.) Some verbs have only a few forms: as,

inquam, quoth I (760); \$\tilde{a}i\tilde{o}, avouch (786). See also apage, avount, get thee behind me, cedo, give, tell, f\tilde{a}ri, to lift up one's voice, have or ave and salve, all hail, ovat, triumphs, and quaeso, prithee, in the dictionary.

- 806. (2.) Many verbs have only the present system; such are:
- 807. (a.) sum, am (745); fero, carry (780); fio, grow, become (788).
- 808. (b.) Some verbs in -ere: angō, throttle, bitō, go, clangō, sound, claudō or claudeō, hobble, fatīscō, gape, glīscō, wax, glūbō, peel, hīscō, gape, temnō, scorn, vādō, go, vergō, slope. Also many inceptives (834): as, dītēscō, get rich, dulcēscō, get sweet, &c., &c.

809. (c.) Some verbs in -ēre: albeō, am white, aveō, long, calveō, am bald, cāneō, am gray, clueō, am called, hight, flāveō, am yellow, hebeō, am blunt, immineō, threaten, lacteō, suck, liveō, look dark, maereō, mourn, polleō, am strong, renideō, am radiant, squāleō, am scaly, ūmeō, am wet.

810. (d.) Some verbs in -ire: balbūtiō, sputter, feriō, strike, ganniō, yelp, ineptiō, am a fool, superbiō, am stuck up, tussiō, cough. Also most desideratives (375).

The Verb: Defective Verbs. [811-815.

- 811. Many verbs are not attended by a perfect participle, and lack in consequence the perfect passive system, or, if deponent, the perfect active system.
- **812.** (3.) Some verbs have only the perfect system: so particularly **coepi**, have begun, began (99); and with a present meaning, **5di**, have come to hate, hate; and memini, have called to mind, remember. The following is a synopsis of these three verbs:

	-	INDICAT	IVE MOOD.	
Perf. Plup. F.P.	Active. coepī coeperam coeperō	Passive. coeptus sum coeptus eram coeptus erō	Active. õdi õderam õderõ	Active. meminī memineram meminerō
		SUBJUNC	TIVE MOOD.	
Perf. Plup.	coeperim coepissem	coeptus sim coeptus essem	ōderim ōdissem	meminerim meminissem
		IMPERAT	IVE MOOD.	
Perf.	-			mementō, me- mentōte
		INFI	NITIVE.	
Perf.	coepisse	coeptus esse	disse	meminisse
	}	PART	ICIPLES.	
Perf. Fut.	coeptūrus	coeptus	ōsūrus	

- 813. A few forms of the present system of coepi occur in old writers: as, coepiō (Plaut.), coepiam (Caec.. Cato), coepiat (Plaut.), coeperet (Ter.), and coepere (Plaut.); perfect once coëpit (Lucr.). ōsus sum or fui (Plaut., C. Gracch., Gell.), exōsus sum (Verg., Sen., Curt., Gell.), and perōsus sum (Suet., Col., Quint.), are sometimes used as deponents. meminī is the only verb which has a perfect imperative active. ōdī and meminī have no passive.
- 814. coeptūrus is rather rare and late (Liv. 2, Plin., Suet.), once as future infinitive (Quint.); and ōsūrus is very rare (Cic., Gell.). exōsus and perōsus, as active participles, haling bitterly, are not uncommon in writers of the empire; the simple ōsus is not used as a participle.
- 815. (4.) Impersonal verbs have usually only the third person singular, and the infinitive present and perfect: as,
- (a.) pluit, it rains, tonat, it thunders, and other verbs denoting the operations of nature. (b.) Also a few verbs in -Ere denoting feeling: as, miseret (or miseretur, miserescit), it distresses, miseritum est; paenitet, it repents, paenituit; piget, it grieves, piguit or pigitum est; pudet, it shames, puduit or puditum est; taedet, it is a bore, taesum est.

816. Some other verbs, less correctly called impersonal, with an infinitive or a sentence as subject, are likewise defective: as,

lubet or libet, it suits, lubitum or libitum est, lubuit or libuit; licet, it is allowed, licuit or licitum est; oportet, it is proper, oportuit; re fert or refert, it concerns, re ferre or referre, re tulit or retulit. For the impersonal use of the third person singular passive, as pugnatur, there is fighting, pugnandum est, there must be fighting, see 724.

817. Of the impersonals in -ere, some have other forms besides the third person singular and the infinitives: as,

paenitēns, repenting, paenitendus, to be regretted, late; pigendus, irksome; pudēns, modest, pudendus, shameful, puditūrum, going to shame; lubēns or libēns, with willing mind, gladly, very common indeed; imperative LICETO, be it allowed (inscr. 133-111 B.C.), licēns, unrestrained, licitus, allowable; gerunds pudendum, pudendō, pigendum.

REDUNDANT VERBS.

- 818. (1.) Some verbs have more than one form of the present stem: thus,
- 819. (a.) Verbs in -ere have rarely forms of verbs in -ēre in 'the present system: as, abnueō, nod no, abnuēbunt (Enn.), for abnuō, abnuent; congruēre, to agree (Ter.), for Congruere. For verbs in -iō, -ere (or -ior, -i), with forms of verbs in -ire (or -iri), see 791. Once pinsibat (Enn.).
- 820. (b.) Some verbs in -āre have occasionally a present stem like verbs in -ere: as, lavis, vashest, lavit, &c., for lavās, lavat, &c.; sonit, sounds, sonunt, for sonat, sonant. Others have occasionally a present stem like verbs in -ēre: as, dēnseō, thicken, dēnsērī, for dēnsē, dēnsērī.
- 821. (c.) Some verbs in -ēre have occasionally a present stem like verbs in -ere: as, fervit, boils, fervont, for fervet, fervent. See also fulgeo, oleo, scateo, strīdeo, tergeo, tueor in the dictionary. cieo, set a going, sometimes has a present stem in -īre, particularly in compounds: as, cīmus, ciunt, for ciēmus, cient.
- 822. (d.) Some verbs in -ire have occasionally a present stem like verbs in -ere: as, Evenunt, turn out, for Eveniunt; Evenat, Evenant, for Eveniat, Eveniant, and advenat, pervenat, for adveniat, perveniat (Plaut.).
- 823. (2.) Some verbs have more than one form of the perfect stem: as,
- eð, go, old II (765), common ii, rarely IvI (767); pluit, it rains, pluit, sometinies plüvit. See also pangð, parcð, clepð, vollð or vellð, intellegð, pðnð, nectð, and adnectð, salið and insilið, applicð, explicð and implicð, dimicð and necð in the dictionary. Some compound verbs have a form of the perfect which is different from that of the simple verb: as, canð, make music, cecini, concinui, occinui; pungð, punch, pupugi, compunxi, expunxi; legð, pick up, lēgi, dilēxi, intellēxi, neglēxi; emð, take, buy, ēmī (adēmī, exēmī), compsi, dēmpsi, prompsi, sümpsi.

FORMATION OF STEMS.

VARIABLE VOWEL.

824. The final vowel of a tense stem is said to be *variable* when it is -o- in some of the forms, and -u-, -e-, or -i- in others.

825. The sign for the variable vowel is -o|e-: thus, rego|e-, which may be read 'rego- or rege-,' represents rego- or regu-, rege- or regi-, as seen in rego-r or regu-nt, rege-re or regi-t.

826. The variable vowel occurs in the present of verbs in -ere, except in the subjunctive, in the future in -bō or -bor, and in the future perfect, as may be seen in the paradigms. It is usually short; but in the active, o is long: as, regō, laudābō, laudāverō; and poets rarely lengthen i in the second and third person singular of the present. For the future perfect, see 882.

827. In old Latin, the stem vowel of the third person plural of the present was o: as, COSENTIONT; o was long retained after v, u, or qu (112): as, VIVONT, ruont, sequentur; or, if o was not retained, qu became c: as, secuntur.

I. THE PRESENT SYSTEM.

PRESENT INDICATIVE STEM.

I. Primitives.

(A.) ROOT VERBS.

828. A root without addition is used as the present stem, in the present tense or parts of the present tense, in root verbs (744-781):

es-t, is; da-t, gives; inqui-t, quoth he; i-t, goes; nequi-t, can't; Es-t, eats; vol-t, will; fer-t, carries. With reduplicated root (189): bibi-t, drinks; seri-t, sows; sisti-t, sets.

(B.) VERBS IN -ere.

829. (1.) The present stem of many verbs in -ere is formed by adding a variable vowel -o|o, which appears in the first person singular active as -ō, to a root ending in a consonant or in two consonants: as.

Present Stem. Verb. From Theme.

regole- rego, guide regvertole- verto, turn vert-

133

Other examples are: tegō, cover, petō, make for; mergō, dip, serpō, creep; pendō, hang; dīcō, say, fīdō, trust, scrībō, write, with long ī for ei (88); dūcō, lead, with long ū for eu, ou (82); lūdō, play, with long ū for oi, oe (87); laedō, hit, claudō, shut; rādō, scrape, cēdō, move along, fīgō, fix, rōdō, gnaw, glūbō, peel. *furō, rave; agō, drive, alō, nurture. gīgnō, beget (gen-, gn-), has reduplication, and sīdō, settle, light (sed-, sd-), is also the result of an ancient reduplication (189).

830. In some present stems an original consonant has been modified: as, gerö, carry (ges-), ürö, burn (116); trahö, draw (tragh-), vehö, cart (117); or has disappeared: as, fluö, flow (flügu-).

831. Some roots in a mute have a nasal before the mute in the present stem: as, frangō, break (frag-). Other examples are: iungō, join, linquō, leave, pangō, fix, pingō, paint; findō, eleave, fundō, pour; -cumbō, lie, lambō, liek, rumpō, break (148). The nasal sometimes runs over into the perfect or perfect participle, or both.

832. (2.) The present stem of many verbs in -ere is formed by adding a suffix ending in a variable vowel -o|e., which appears in the first person singular active as -ō, to a root: thus, -nō, -scō, -tō, -iō: as,

PRESENT STEM.	VERB.	From Theme.
lino e-	lino, besmear	1 i-
crēsco e-	crēscō, grow	crē-
pecto e-	pectō, comb	p e c-
capio e-	capiò, take	cap-

833. (a.) -nō is added to roots in a vowel, or in a continuous sound, -m-, -r-, or -l-.

So regularly lino, besmear, sino, let; temno, scorn, cerno, sift, sperno, spurn, only. Occasionally such forms are found in old Latin from other roots, mostly in the third person plural: as, danunt (Naev., Plaut.), prodinunt, redinunt, for prodeunt, redeunt (Enn.). In a few verbs, -n is assimilated (146): as, tollo, lift. Sometimes the doubled I runs into the perfect (855): as, velli, fefelli. minuo, lessen, and sternuo, sneeze, have a longer suffix -nuole.

834. (b.) -soo, usually meaning 'begin to,' forms presents called Inceptives or Inchoatives.

-scō is attached: first, to roots: as, nāscor, am born, nōscō, learn, pāscō, feed, scīscō, resolve: consonant roots have ī, less commonly ē, before the suffix: as, tremīscō or tremēscō, fall a-trembling, nancīscor, get (831; but dīscō, learn (dīc-), and pōscō, demand (porc-), are shortened (134). Secondly, to a form of the present stem of denominative verbs, especially of those in -ēre: as, clārēscō, brighten; the stem is often assumed only, as in inveterāscō, growodd, mātūrēscō, get ripe. Manv inceptives are used only in composition: as, extimēscō, get scared, obdormīscō, drop asleep.

835. (c.) -tō occurs in the following presents from guttural roots: flectō, turn, nectō, string, pectō comb, plector, am struck, amplector, hug, complector, clasp. From a lingual root vid-, comes visō, go to see, call on (153). From vowel roots: bētō or bitō, go, and metō, mow.

836. (d.) -15 is usually added to consonant roots with a short vowel; the following have presents formed by this suffix:

capiō, take, cupiō, want, faciō, make, fodiō, dig, fugiō, run away, iaciō, throw, pariō, bring forth, quatiō, shake, rapiō, seize, sapiō, have sense, and their compounds; the compounds of *laciō, lure, and speciō or spiciō, spy, and the deponents gradior, step, morior, die, and patior, suffer, and their compounds. For occasional forms like those of verbs in -īre (or -īrī), see 791. For āiō, see 786; for fiō, 788.

837. A few present stems are formed by adding a variable vowel -o|e-, for an older -io|e-, to a vowel root: as,

ruō, tumble down, rui-s, rui-t, rui-mus, rui-tis, ruu-nt (97). Vowel roots in -ā-, -ē-, or -i- have a present stem like that of denominatives: as, stō, stand, stā-s, sta-t, stā-mus, stā-tis, sta-nt; fleō, weep. flē-s, fle-t, flē-mus, flē-tis, fle-nt; neō, spin, has once neu-nt for ne-nt (Tib.); sciō, know, sci-s, sci-t, sci-mus, sci-tis, sciu-nt.

838. Most present stems formed by adding the suffix -iō to a root ending in -1-, -r-, or -n-, and all formed by adding -iō to a long syllable, have the form of denominatives in -ire in the present system: as, saliō, leap, salire, aperiō, open, aperire, veniō, come, venire; farciō, cram, farcire.

II. DENOMINATIVES.

839. The present stem of denominatives is formed by attaching a variable vowel -o|e-, for an older -io|e-, to a theme consisting of a noun stem: as,

UNCONTRACTED PRESENT STEM.	Verb.	From Theme.
cēnao e-	cēnō, <i>dine</i>	cēnā-
flōre∘ e-	floreo, blossom	flöre-
vestiole-	vestio, dress	vesti-
acuol _{e-}	acuo, point	acu-

The noun stem ending is often slightly modified in forming the theme: thus, laud- becomes laudā- in laudō for *laudā-ō, and flor- becomes flore- in flore-ō.

840. In most of the forms, the final vowel of the theme is contracted with the variable vowel: as,

laudō, laudā-s, laudā-mus, laudā-tis; monē-s, monē-mus, monē-tis; audī-s, audī-mus, audī-tis (166). The long ā, ē, or ī, is usually shortened in some of the forms, as may be seen in the paradigms. In a few forms no contraction occurs: as, moneō, audiō, audiu-nt, audie-ntis, &c., audie-ndus, &c. (97). Denominatives from stems in -u-, as acuō, are not contracted, and so have the forms of verbs in -ere (367).

PRESENT SUBJUNCTIVE.

841. The suffix of the present subjunctive of sum, am, is -ī-, which becomes -i- in some of the persons: si-m, sī-s, si-t, sī-mus, sī-tis, sī-nt. So also in the singular and in the third person plural, dui-m, &c. (756), and edi-m, &c. (769), and in all the persons, veli-m, &c. (noli-m, &c. māli-m, &c.). An old suffix is -iē- (-ie-), in sie-m, siē-s, sie-t, and sie-nt.

842. (1.) The present subjunctive stem of verbs in -ere, -ere, and -ire, ends in -a-, which becomes -a- in some of the persons; this suffix replaces the variable vowel of the indicative: as,

rega-m, regā-s, rega-t, regā-mus, regā-tis, rega-nt; capia-m, capiā-s, &c.; monea-m, moneā-s, &c; audia-m, audiā-s, &c. ea-m, quea-m, fera-m, and the old fua-m (750), also have the formative subjunctive vowel.

843. (2.) The present subjunctive stem of verbs in -are ends in -a-, which becomes -e- in some of the persons: as,

laude-m, laudē-s, laude-t, laudē-mus, laudē-tis, laude-nt. dō, give, also has de²m, dē-s, &c.

IMPERATIVE.

844. Root verbs have a root as imperative stem (745-780): as, es, &c., fer, &c. But the imperative of nölö has a stem in -ī-, like verbs in -īre: thus, nölī, nölī-tō, nölī-te, nölī-tōte.

845. The imperative stem of verbs in -ere, and of verbs in -āre, -ēre, and -īre, is the same as that of the indicative: as, rege, regi-tō, regu-ntō, rege-re; cape, capi-tō, capiu-ntō; fi; laudā, &c.; monē, &c.; audī, &c.

845. The second person singular imperative active of dicō, dūcō, and faciō, is usually dic, dūc, and fac, respectively, though the full forms, dice, &c., are also used, and are commoner in old Latin. Compounds of dūcō may have the short form: as, ēdūc. ingerō has once inger (Catull.). sciō has regularly the singular sci-tō, plural sci-tōte, rarely sci-te.

IMPERFECT INDICATIVE.

847. The imperfect indicative stem ends in -ba-, which becomes -ba- in some of the persons: as,

daba-m, dabā-s, daba-t, dabā-mus, dabā-tis, daba-nt; ība-m; quība-m. In verbs in -ere and -ēre, the suffix is preceded by a form ending in -ē-: as, regēba-m; monēba-m; so also volēba-m (nolēba-m, mālēba-m), and ferēba-m; in verbs in -iō, -ere, and in -iō, -īre, by a form ending in -iē-: as, capiēba-m; audiēba-m; in verbs in -āre, by one ending in -ā-: as, laudāba-m. In verse, verbs in -īre sometimes have -ī- before the suffix (Plaut., Ter., Catull., Lucr., Verg., &c.): as, audība-t. āiō, say, has sometimes āiba-m, &c. (787)

848. The suffix of the imperfect indicative of sum, am, is $-\bar{a}-$, which becomes -a- in some of the persons; the s becomes r between the vowels (116): era-m, $er\bar{a}-\bar{s}$, era-t, $er\bar{a}-mus$, $er\bar{a}-tis$, era-nt.

IMPERFECT SUBJUNCTIVE.

849. The imperfect subjunctive stem ends in -re-, which becomes -re- in some of the persons: as,

dare-m, darē-s, dare-t, darē-mus, darē-tis, dare-nt; īre-m, fore-m, ferre-m. In verbs in -ere, the -rē- is preceded by a form ending in -e-: as, regere-m, capere-m; in verbs in -āre, -ēre, and -īre, by one ending in -ā-, -ē-, or -ī-, respectively: as, laudāre-m, monēre-m, audīre-m.

850. The suffix of the imperfect subjunctive of sum, am, is -sē-, which becomes -se- in some of the persons; esse-m, essē-s, esse-t, essē-mus, essē-sis, esse-nt; so also ēssē-s, &c. (769). volō, wish, nōlō, won't, and mālō, prefer, have welle-m, nōlle-m, and mālle-m respectively (146).

FUTURE.

851. The future stem of sum, am, is erole: ero, eri-s, eri-t, eri-mus, eri-tis, eru-nt. do has dabo, eo has Ibo, and queo has quibo.

852. (1.) The future stem of verbs in -ere and -ire ends in -a- in the first person singular, otherwise in -ē-, which becomes -e- in some of the persons: as,

rega-m, regē-s, rege-t, regē-mus, regē-tis, rege-nt; capia-m, capiē-s, &c.; audia-m, audiē-s, &c. The first person singular is not a future form, but the subjunctive present, used with a future meaning (842); an old form in -e- is also quoted: dice-m, facie-m (Cato). Verbs in -īre sometimes have -bole-, chiefly in the dramatists: as, scibō, opperībo-r (Plaut., Ter.), lēnību-nt (Prop.); rarely verbs in -ere (819): as, exsūgēbō (Plaut.). For reddibō, instead of the usual reddam, see 757.

853. (2.) The future stem of verbs in -are and -ere ends in -bo|e-, which is preceded by a form ending in long -a- or -e-respectively: as,

laudābō, laudābi-s, laudābi-t, laudābi-mus, laudābi-tis, laudābu-nt. monēbō, monēbi-s, &c.

II. THE PERFECT SYSTEM.

PERFECT INDICATIVE STEM.

854. There are two kinds of perfect stems: (A.) Some verbs have as perfect stem a root, generally with some modification, but without a suffix (858-866). (B.) Some perfects are formed with a suffix, -s-, or -v- or -u- (867-875).

855. Some perfects of primitives are formed not from a root, but from the present stem without the formative vowel, treated as a root: as, prehendl, seized, from prehend-(866); poposci, asked, fefelli, deceived (858); ilnxi, joined (867).

856. The first person of the perfect ends in -1, sometimes written ei (29). -t, -sti, sometimes written -stei (29), -stis, and -mus are preceded by short i; -re is always, and -runt is usually, preceded by long 6: as,

rēxī, rēxi-stī, rēxi-t, rēxi-mus, rēxi-stis, rēxē-runt (rēxe-runt), or rēxē-re.

5*

857. Sometimes -t is preceded by long I: as, iIt, petiIt, REDIEIT (29).
-runt is sometimes preceded by short e (Plaut., Ter., Lucr., Hor., Ov., Verg., Phaedr.).

(A.) PERFECT STEM WITHOUT A SUFFIX.

858. (1.) Some verbs in -ere form their perfect stem by prefixing to the root its initial consonant with the following vowel, which, if a, is usually represented by e; this is called the *Reduplicated Perfect*, and the first syllable is called the *Reduplication*: as,

PERFECT STEM.	Verb.	From Theme.
pu-pug-	pungō, <i>punck</i>	pug-
pe-pig-	pangō, <i>fix</i>	p a g -

Other examples are: cadō, full, cecidī (cad-, 74); pariō, bring forth, peperī (par-, 73); pellō, push, pepulī (pol-, 75); poscō, demand, poposcī (855); fallō, deceive, fefelli(855, 73); see also 923-932. caedō, cut, has cecīdī (86); and a few old forms are quoted from verbs having an o or an u in the root with e in the reduplication: as, memordī, pepugī.

859. Four verbs with vowel roots also have a reduplicated perfect stem: do, give, put, dare, dedi; bibō, drink, bibere, bibī; stō, stand, stāre, stetī, and sistō, set, sistere, -stitī, rarely stitī. Also four verbs in -ēre: mordeō, bite, momordī, pendeō, hang, pependī, spondeō, promise, spopondī, tondeō, clip, -totondī. In the root syllable of spopondī, promised, stetī, stood, stitī, set, and the old scicidī. clove, an s is dropped (133).

860. In compounds the reduplication is commonly dropped; as,

cecidī, fell, compound concidī, tumbled down. Compounds of cucurrī, ran, sometimes retain the reduplication: as, procucurrī. Compounds of bibī, drank, didicī, learned, poposci, asked, stitī, set, stetī, stood, and dedī, gave, put, retain it, the last two weakening e to i: as, restitī, staid back. abscondidī, hid away, usually becomes abscondī; in apparent compounds, e is usually retained: as, circum stetī, stood round, vēnum dedī, put for sale. The reduplication is also lost in the simple verbs tulī, carried, old tetulī, and in scindō, split, scidī, which last is rare as a simple verb.

861. Some compounds with re- drop only the vowel of the reduplication (95): as, reccidi, fell back; rettuli, brought back, also retuli; repperi, found; rettudi, beat back. Some perfects occur only in composition: as, percello, knock down, perculi; contundo, smah to pieces, contudi; diffindo, split apart, diffidi; but fidi also occurs a couple of times as a simple verb.

862. (2.) Some verbs in -ere have a perfect stem consisting of a consonant root with a long vowel: as,

	,	
PERFECT STEM.	VERB.	FROM THEME.
ēd−	edő, <i>eat</i>	e d-
lēg-	lego, pick up, read	leg-

Other examples are: fodio, dig, födi; fundo, pour, füdi; linquo, leave, liqui; see 936-946. Three verbs in -ēre also have this form, sedeo, sil, sedi, strīdeo, grate. strīdī, video, see, vidī; and one in -īre, venio, come, vēnī.

863. The following verbs in -ere with a in the present stem, have long ē in the perfect stem:

agō, do, ēgī, frangō, break, frēgī, pangō, fiz, rarely pēgī, but always compēgī, impēgī, oppēgī; capiō, take, cēpī, faciō, make, fēcī, iaciō, throw, iēcī. So also the old co-ēpī, began, common coepī.

864. Two verbs in -are and some in -ere have a perfect stem consisting of a root which ends in -v- and has a long vowel: iuvō, help, iuvare, iūvī, lavō, wash, lavare or lavere, lāvī; caveō, look out, cavēre, cāvī; see 996.

865. Verbs in -uō, -uere, both primitives and denominatives, have usually a perfect stem in short u of the theme (57): as, luō, ραγ, luī; acuō, sharρen, acuī: see 947, 948. Forms with long ū are old and rare (58): as, fūī, adnūī, cōnstitūī, institūī. fluō, flow, and struō, ρile, have flūxī and strūxī (830).

866. (3.) Some verbs in -ere from roots ending in two consonants have a perfect stem consisting of the root: as,

PERFECT STEM.	VERB.	FROM THEME.
mand-	mandō, chew	m a n d-
pand-	pandō, <i>open</i>	pand-

Other examples are: vortō or vertō, turn, vorti or vertī; scandō, climb, -scendī; prehendō, seise, prehendī (855); vollō or vellō, pluck, vollī or vellī; see 949—951. Similarly ferveō, boil, fervere or fervēre, has fervī or ferbuī (823), and prandēō, lunch, prandēre, has prandī.

(B.) PERFECT STEM IN -s-, OR IN -v- OR -u-.

PERFECT STEM IN -S-.

867. Many verbs in -ere form their perfect stem by adding the suffix -s- to a root, which generally ends in a mute: as,

PERFECT STEM.	Verb.	From Theme.
carp-s-	carpō, pluck	сагр-
scalp-s-	scalpō, <i>dig</i>	scalp-
ges-s-	gerō, bear	ges-
dīx-	dīcō, say	dic-

Other examples are: dūcō, lead, dūxī (47); fingō, mould, finxī (855); lūdō, play, lūsī (137); scrībō, write, scrīpsī (149); struō, pile, strūxī (149); vīvō, live, vixī (88). Some verbs with a short vowel in the present, have a long vowel in the perfect: as, regō, guide, rēxī (149); intellegō, understand, intellēxī (823); tegō, cover, tēxī; iungō, join, iūnxī (855). And some verbs with a long vowel in the present, have a short vowel in the perfect: as, ūrō, burn, ussī (830). See 952-961.

868. Some verbs in -ēre also have a perfect in -s-: as, algeō, am cold, alsī (136); haereō, stick, haesī (133): see 999, 1000. Also some in -īre: as, sarciō, patch, sarsī (136): see 1014, 1015.

PERFECT STEM IN -V- OR -u-.

869. (1.) Some verbs in -ere, with vowel roots, and almost all verbs in -are or -ire, form their perfect stem by adding the suffix -v- to a theme ending in a long vowel: as,

PERFECT STEM.	VERB.	From Theme.
crē-v-	crēscō, <i>grow</i>	crē-
laudā-v-	laudō, praise	laudā-
audī-v-	audiō, hear	audi-

For other verbs in -ere with a perfect stem in -v-, and particularly tero, cerno, sperno, and sterno, see 962-970.

870. A few verbs in -ere have a perfect stem in -v- attached to a presumed theme in long I: as, cupiō, want, cupivi; petō, aim at, petīvī; quaerō, inquire, quaesīvī; arcēssō, fetch, arcēssīvī; see 966-970.

871. A few verbs in -ēre also have a perfect stem in -v-: as, fleō, weep. flēre, flēvi; see 1001-1003. And three verbs in -ēscere have a perfect stem in -v-attached to a presumed theme in long ē: -olēscō, grow, -olēvī; quiēscō, get quiet, quiēvī; suēscō, get used, suēvī.

872. One verb in -ascere has a perfect stem in -v- attached to a presumed theme in long a: advesperascit, it gets dusk, advesperavit.

873. (2.) Many verbs in -ere form their perfect stem by adding the suffix -u- to a consonant root: as,

PERFECT STEM.	VERB.	FROM THEME.
al-u-	alō, nurture	a 1-
gen-u-	gignō, beget	gen-

Other examples are: colò, cultivate, colui; consulò, consult, consului; -cumbō, lie, -cubui; fremō, roar, fremui; Eliciò, draw out, Elicui; molò, grind, molui; rapiō, snatch, rapui; serō, string, -serui; stertō, snore, -stertui; strepō, make a racket, strepui; texō, weave, texui; volō, will, volui; compescò, check, compescui (855); see 971-976.

874. Some verbs in -āre also have a perfect stem in -u-: as, crepō, rattle, crepāre, crepuī (993); and many in.-ēre: as, moneō, warn, monēre, monuī: see 1004-1006; also four in -īre: as, saliō, leap, salīre, saluī (1019).

875. Very sew verbs have a perfect stem in -u- formed from a noun stem: as, mātūrēscō, get ripe, mātūruī (mātūro-); nigrēscō, get black, nigruī (nigro-).

PERFECT SUBJUNCTIVE.

876. The perfect subjunctive stem ends in -eri-, for which -eri- is sometimes used: as,

rēxeri-m, rēxeri-s, rēxeri-t, rēxeri-mus, rēxeri-tis, rēxeri-nt.

877. In the perfect subjunctive, long I is found before the person endings -s, -mus, and -tis, some 25 times, as follows: -is, 18 times (Plaut. 3, Pac., Enn., Ter., Hor., Tib., Sen., inscr., once each, Ov. 8), -imus, 4 times (Plaut. 3, Ter. 1), -itis, 3 times (Plaut. 2, Enn. 1).

878. In the perfect subjunctive, short i is found, as in the future perfect, some 9 times, thus: -is, 8 times (Plaut. in anapests 3, Verg. 2, Hor. 3), -imus once (Verg.). But before -tis, short i is not found.

PERFECT IMPERATIVE.

879. One verb only, memini, remember, has a perfect imperative; in this imperative, the person endings are not preceded by a vowel, thus: memen-to, memen-tôte.

PLUPERFECT INDICATIVE.

880. The pluperfect indicative stem ends in -erā-, which becomes -era- in some of the persons: as,

rēxera-m, rēxerā-s, rēxera-t, rēxerā-mus, rēxerā-tis, rēxera-nt.

PLUPERFECT SUBJUNCTIVE.

881. The pluperfect subjunctive stem ends in -isse-, which becomes -isse- in some of the persons: as.

rēxisse-m, rēxissē-s, rēxisse-t, rēxissē-mus, rēxissē-tis, rēxisse-nt.

FUTURE PERFECT.

882. The future perfect stem ends in -erō- and -eri-: as, rēxerō, rēxeri-s, rēxeri-t, rēxeri-mus, rēxeri-tis, rēxeri-nt.

883. In the future perfect, short i is found before the person endings -s, -mus, and -tis, some 40 times, as follows: -is, 20 times (Plaut. 2, Cic. I, Catull. 1, Verg. 7. Hor. 12, Ov. 4, Germ. 1, Juv. 1); -imus, 3 times (Plaut., Ter., Lucr.); -itis, 8 times (Enn. 1, Plaut. 5, Ov. 2).

884. In the future perfect, long I is found, as in the perfect subjunctive, some 33 times, thus: -Is, 28 times (Plaut. 3, Hor. 5, Ov. 15, Prop., Stat., Mart., Priap., inscr., once each), -Imus, once (Catull.), -Itis, 4 times (Ov. 3, Priap. 1).

SHORT OR OLD FORMS.

- 885. (1.) Some shorter forms in the perfect system are principally found in old Latin.
- 886. (a.) Shorter forms in the perfect indicative, the pluperfect subjunctive, and the infinitive, most of them from perfects in -s- (867), occur chiefly in verse: thus,

Perfect indicative, second person singular, common: as, dixti (Plaut., Ter., Cic.); plural, rare: as, accestis (Verg.). Pluperfect subjunctive singular, not very common: as, exstinxem (Verg.), intellexes (Plaut.), vixet (Verg.); plural, once only, erepsemus (Hor.). Infinitive, dixe (Plaut.), consumpse (Lucr.).

887. (b.) A perfect subjunctive stem in -si- or in -ssi-, and a future perfect indicative stem in -so|e- or in -sso|e-, occur chiefly in old laws and prayers, and in dramatic verse: as,

Perfect subjunctive: faxim, faxīs, Faxseis (inscr. 145 B.C.), faxit, faxīmus, faxītis, faxint; ausīm, ausīs, ausīt; locāssim, amāssīs, servāssit, amāssint, prohibēssīs, prohibēssit, cohibēssit, licēssit.

Future perfect indicative: faxō, faxis, faxit, faxitis, capsō, recepsō, iussō, occisit, capsimus; levāssō, invitāssitis, mulcāssitis, exoculāssitis, prohibēssis, prohibēssint. Denominatives in -āre have also, in old Latin, a future perfect infinitive: as, impetrāssere.

- 888. Passive inflections, as future perfect faxitur, turbassitur, deponent MERCASSITUR (inscr. III B.C.), are very rare; and, indeed, with the exception of faxo and ausim, even the active forms had become antiquated by 150 B.C. Denominatives in -Ire never have the above formations. But ambiō, canvass, is thought to have a future perfect ambīssit twice (Plaut. prol.).
- 889. (2.) Shortened forms from perfect stems formed by the suffix -v- (869) are very common in all periods.
- 890. (a.) In tenses formed from perfect stems in -av-, -ev-, and -ov-, v is often dropped before -is-, -ev-, or -ev-, and the vowels thus brought together are contracted: as,

laudāvistī, laudāstī; laudāvistis, laudāstis; laudāvērunt, laudārunt (but the form in -re, as laudāvēre, is never contracted); laudāverim, laudārim, &c.; laudāveram, laudāram, &c.; laudāvissem, laudāssem, &c.; laudāverō, laudārō, &c.; laudāvisse, laudāsse.

-plēvistī, -plēstī; -plēvistis, -plēstis; -plēvērunt, -plērunt; plēverim, -plērim, &c.; -plēveram, -plēram, &c.; -plēvissem, -plēssem, &c.; -plēverō, -plērō, &c.; -plēvisse, -plēsse.

novistī, nostī; novistis, nostīs; novērunt, norunt; noverim, norim, &c.; noveram, noram, &c.; novissem, nossem, &c.; novero always retains the v, but cognoro, &c.; novisse, nosse.

891. The verbs in which v is not a suffix, but belongs to the root (864), are not thus shortened, except moveo, mostly in compounds. iuvo, however, has iuerint (Catull.), adiuero (Enn.), once each, and twice adiuerit (Plaut., Ter.).

892. Contractions in the perfect before -t and -mus are rare: as, inrītāt, disturbāt; suēmus or suemus (Lucr.), nomus (Enn.), consuemus (Prop.).

893. (b.) In tenses formed from perfect stems in -īv-, v is often dropped before -is-, -ēr-, or -er-; but contraction is common only in the forms which have -is-: as,

audīvistī, audīstī; audīvistis, audīstis; audīvērunt, audiērunt; audīverim, audierim, &c.; audīveram, audieram, &c.; audīvissem, audīssem, &c.; audīvissem, &c.; audīvissem, &c.; audīvissem, audīssem, &c.; audīvissem, audīssem, &c.; audīvissem, audīs, audīt. Intermediate between the long and the short forms are audīerās and audīerīt, once each (Ter.). In the perfect subjunctive, sinō has sīverīs (Plaut., Cato), sīrīs (Plaut., Cato, Liv.), sīrēis (Pac.), or seirīs (Plaut.), sīrīt (Plaut., Liv.), sīrītis (Plaut.), sīverint (Plaut., Curt.), sierint (Cic., Curt.), or sīrint (Plaut.). dēsinō is thought to have dēsīmus in the perfect indicative a couple of times (Sen., Plin. Ep.).

NOUNS OF THE VERB.

INFINITIVE.

894. The active infinitive has the ending -re in the present, and -isse in the perfect: as,

dare; regere, capere; laudāre, monēre, audīre. rēxisse; laudāvisse or laudāsse, monuisse, audīvisse or audīsse.

895. For -rē in old Latin, see 65. The infinitive of fiō, become, ends in -rī, flerī, which is not a passive form; twice flere (Enn., Laev.). An older form for -re is -se, found in esse, to be, Esse, to eat, and their compounds. For velle, to wisk (mālle, nōlle), see 146. In the perfect, eō, go, sometimes has -iisse in compounds (766), and in poetry, petō, go to, has rarely petisse.

896. The present infinitive passive of verbs in -ere has the ending -I; that of other verbs has -rI: as,

regi, capi; laudāri, monēri, audirī. ferō, carry, has ferrī. The length of the ī is sometimes indicated by the spelling ei (29): as, DAREI.

897. A longer form in -ier for -ī, and -rier for -ī, is common in old laws and dramatic verse, and occurs sometimes in other poetry: as, PIGIER, to be posted, GNOSCIER, to be read (inscr. 186 B.C.); dīcier, to be said, cūrārier, to be looked after (Plaut.); dominārier, to be lord paramount (Verg.).

898. The place of the perfect passive, future active, and future passive infinitive is supplied by a circumlocution, as seen in the paradigms. For the future perfect -assere, see 887.

GERUNDIVE AND GERUND.

899. The gerundive stem is formed by adding -ndo-, nominative -ndus, -nda, -ndum, to the present stem: as,

dandus, stem dando-; regendus, capiendus; laudandus, monendus, audiendus. Verbs in -ere and -īre often have -undus, when not preceded by u or v, especially in formal style: as, capiundus; eo, go, always has eundum, and orior, rise, oriundus. For the adjective use, see 288. The gerund is like the oblique cases of the neuter singular. For -bundus, see 289; -cundus, 290.

SUPINE.

900. The supine stem is formed by the suffix -tu-, which is often changed to -su- (912).

This suffix is attached to a root or to a form of the present stem after the manner of the perfect participle (906): as, nüntiātum, to report, nüntiātu, in reporting, stem nüntiātu. Many of the commonest verbs have no supine: as, sum, eo, fero; rego, emo, tego; amo, dēleo, doceo, &c., &c.

PRESENT PARTICIPLE.

goi. The present participle stem is formed by adding -ntor -nti-, nominative -ns, to the present stem: as,

dāns, giving, stems dant-, danti-; regēns, capiēns; laudāns, monēns, audiēns.

902. The adjective sontem (accusative, no nominative), which was originally the participle of sum, has 0 before the suffix, and absēns and praesēns have e; the participle of eō has ē in the nominative singular, otherwise u, iēns, euntis, &c. n rarely drops before -s (131): as, LIBES (inscr.), exsultās (Enn.), animās (Lucr.).

903. Some adjectives which were originally present participles have no verb: as, clēmēns, merciful, ēlegāns, choice, ēvidēns, clear, frequēns, thick, petulāns, wanton, recēns, fresh, repēns, sudden, &c., &c. For potēns, powerful, see 922.

FUTURE PARTICIPLE.

904. The future participle suffix is -tūro-, nominative -tūrus, -tūra, -tūrum, which is often changed to -sūro-, nominative -sūrus, -sūra, -sūrum (912).

This suffix is added to a theme after the manner of the perfect participle (906): as, rēctūrus, going to guide; laudātūrus, going to praise.

905. Some future participles have a different formation from that of the perfect participle: as, mortuus, dead, moritūrus; see also in the dictionary arguō, fruor, orior, ruō, secō. And some verbs have two forms of the future participle: as, āgnōscō, ignōscō, hauriō, iuvō, pariō. Some verbs which have no perfect participle have a future participle: as, acquiēscō, appāreō, ārdeō, caleō, careō, doleō, ēsuriō, fugiō, haereō, incidō, iaceō. -nuō, parcō, rauciō, recidō, sonō, stō, valeō.

PERFECT PARTICIPLE.

906. The perfect participle suffix is -to-, nominative -tus, -ta, -tum, which is often changed to -so-, nominative -sus, -sa, -sum (912).

907. The perfect participle was originally active as well as passive, and some participles have retained the active meaning: as,

adultus, grown up: Emersus, rising out from; exõsus, perõsus, hating bitterly; placitus, engaging; iūrātus, sworn, coniūrātus, conspiring; prānsus, having lunched, cēnātus, having dined, pōtus, drunk, &c. The perfect participles of deponents are usually active, but sometimes passive: as, meditātus, having studied, or studied. Many verbs are not accompanied by a perfect participle (811), particularly verbs in -ēre, with a parallel adjective in -idus (287). Intransitive verbs have usually only the neuter. A perfect active participle meminēns is said to have been used twice (Plaut., Laev.).

- 908. The perfect participle is formed in one of two separate ways:
- 909. (1.) From a theme consisting of a root; in this way the participles of most verbs in -ere and -ere are formed: as,

gestus, carried, aptus, fit, solūtus, loosed (113), iūnctus, joined (831), sparsus, sprinkled (136); doctus, taught.

910. In some consonant root participles of verbs in -ere, -are, or -ere, which have the suffix -u- in the perfect stem (873), the -to- is preceded by a short i: as, genitus, born (971-976); domitus, tamed (993); monitus, warned (1003, 1004, 1009). In old Latin, e occurs: as, MERETA (inscr.); e is retained in vegetus, prightly. One participle has -tuo-: mortuus, dead.

- 911. Some verbs in -are have participles from consonant roots: as, frictus, rubbed, frico, fricare; see 993. Also some in -Ire: as, fartus, stuffed (136), farcio, farcire; fultus, propped, fulcio, fulcire; see 1011-1015, and 1017, 1019, 1020.
- 912. With some roots in -d- or -t-, in -l-, -m-, or -r-, and a few others, -to- becomes -so- (153): as, fossus, dug; pulsus, pushed; of two s's one is often dropped: as, divissus, divided, commonly divisus; with some participles always: as, fisus, trusting; and regularly when the root ends in two consonants: as, vorsus or versus, turned.
- 913. (2.) From a theme in long a or in long I; in this way participles are regularly formed from denominatives in -are or -ire respectively: as,

laudatus, praised; auditus, heard.

- 914. A few perfect participles of verbs in -ere are formed from a presumed theme in long \(\bar{\mathbf{l}}\), or long \(\bar{\mathbf{e}}\), or from one in long \(\bar{\mathbf{u}}\): as, petitus, aimed at; exoletus, grown out; see 967-970; trib\(\bar{\mathbf{u}}\) trus, assigned; see 947, 948.
- 915. (1.) Many perfect participles formed from consonant roots have a short root vowel: as,

adspectus, beheld; captus, taken; coctus, cooked; commentus, devising; cultus, tilled; dictus, said, verb dicō; ductus, led, dūcō; factus, made; fossus, dug; gestus, carried; inlectus, aliured; questus, complaining; raptus, seized; tersus, neat; textus, woven; vorsus, turned.

916. (2.) Some perfect participles formed from consonant roots have a long root vowel, sometimes even when the vowel of the parallel present stem is short: as,

fixus, fastened, verb figō; -flictus, dashed, -flīgō; pāstus, fed, pāscō; pollūctus, offered up, pollūceō; scriptus, written, scribō; ūstus, burnt, ūrō. Also āctus, driven, agō; ēmptus, bought, emō; frūctus, enjoying, fruor; lēctus, culled, legō; pīctus, painted, pingō; rēctus, ruled, regō; relictus, left, relinquō; strūctus, piled, struō; tēctus, covered, tegō; ūnctus, anointed, unguō; victus, conquered, vincō; ūltus, avenging, ulciscor. Furthermore, iūnctus, joined, iungō; sānctus, hallowed, sanciō (831); also, fūnctus, having performed, fungor.

917. (1.) Most perfect participles formed from vowel roots have a long root vowel: as,

latus, borne (125); natus, born; -plētus, filled; trītus, worn; notus, known; sūtus, sewed. So also rūtus, but only in the law phrase rūta caesa, or rūta et caesa, diggings and cuttings, i.e., minerals and timber.

918. (2.) Ten perfect participles formed from vowel roots have a short root vowel; they are:

citus, datus, hurried, given
itum, ratus, gone, thinking
litus, quitus, besmeared, been able

919. As citus, so always percitus and incitus (once incitus, doubtful); usually concitus, rarely concitus; excitus and excitus equally common; always accitus. ambitus always has long i (763). Agnitus, recognized, cognitus, known, and the adjectives inclutus or inclitus, of high renown, and putus, clean, have a short root vowel. For defrutum, defrutum, see 62.

LIST OF VERBS

ARRANGED ACCORDING TO THE PRINCIPAL PARTS.

- **920.** I. The principal parts of root verbs and of verbs in **-ere** are formed in a variety of ways and are best learned separately for every verb (922-986).
- 921. II. The principal parts of verbs in -are, -ere, and -ire, are usually formed as follows:

laudō, praise	laudāre	laudāvi	leudātus
moneō, advise	monēre	monui	monitus
audiō, <i>hear</i>	audīre	audīvī	audītus

For other formations, see 989-1022.

I. PRIMITIVE VERBS.

(A.) ROOT VERBS.

922. Root verbs have their principal parts as follows:

sum, am	esse	fui	
, become, get, am			
For fuam, &c., for system of sum.	rem, &c., tore	, see 750. fui, &c., se	rves as the perfect

941. (26.) The following verbs in -ere have a perfect stem consisting of a consonant root with a long vowel (862), and the perfect participle, when used, in -sus (912).			
942. (a.) With the	present stem in -c	¦e- (829).	
cūdō, hammer	cüdere	-cūdī	-cūsu s
943. (b.) With redu	plication and -ole-	in the present sten	n (829).
sīdō, settle	sidere	sīdī, -sīdī, -sēdī	-sessus
944. (c.) With the p		asalized root followe	d by -o e- (831).
fundo, pour	fundere	fūdī	fūsus
945. (d.) With the	present stem in -s	ole- for -tole- (835)).
viso, go to see	visere	visi	
946. (e.) With the 1	present stem in -io	P •- (836).	
fodio, dig	fodere	födī	fossus
For forms in -Ire, se	e 791.		
	149		

947. (2 c.) The following verbs in -ere (367) with the present stem in -|-| (837, 840), have the perfect stem in -u- or in -v- of the theme (865), and the perfect participle, when used, in -tus:

```
acuo, sharpen
                                        acui
                                                         active adjective
                       acuere
arguo, make clear
                       arguere
                                        argui
                                                         argūtus rare
con-grud, agree
                       con-gruere
                                        con-grui
ex-uo, doff
                                        ex-ui
                                                         ex-fitus
                       ex-uere
im-buo, give a smack of im-buere
                                        im-bul
                                                         im-būtus
                                                         ind-ūtus
ind-uo, don
                       ind-uere
                                        ind-ui
in-gruo, impend
                       in-gruere
                                        in-grui
luo, pay, atone for
                       luere
                                        luī
                                                         -lutus, washed
                       metuere
                                                         metūtus once
metuð, fear
                                        metui
-nuo, nod
                       -nuere
                                        -nui
                                        pluit, plūvit
pluit, it rains
                       pluere
ruo, tumble down
                       ruere
                                        rui
                                                         -rutus
so-lvo, loose
                                                         so-lūtus
                       so-lvere
                                        so-lvi
spuō, spit
                       spuere
                                        -spuī
statuō, set
                       statuere
                                        statui
                                                         statūtus
   Compounds have i for a throughout: as, con-stituo, con-stituere, &c.
volvo, roll
                       volvere
                                        volvi
                                                         volūtus
suo, sew
                       sucre
                                        -sui
                                                         sūtus
tribuo, assign
                       tribuere
                                        tribuī
                                                         tribūtus
```

948. Two verbs in -ere with the present stem in -nuo|e- (833), have the perfect stem in -nu- (865), and the perfect participle, when used, in -tus: minuō, lessen minuere minuī minūtus sternuō, sneese sternuē

949. (3.) The following verbs in -ere have a perfect stem consisting of a root ending in two consonants (866), and the perfect participle in -sus (912):

```
950. (n.) With the present stem in -0/e- (829); most have a nasal (831).
-cendo, light .
                       -cendere
                                        -cendi
                                                         -cēnsus
                                                         -fēnsus
-fendo, hit
                       -fendere
                                        -fendī
                                                        mānsus
mando, chew
                       mandere
                                        mandi once
pando, open
                      pandere
                                       pandi
                                                        pāssus, pānsus
   For dis-pennite (Plaut.), see 146.
                                       dis-pando, dis-pendo, has perfect
participle dis-pessus (Plaut., Lucr.), dis-pansus (Lucr., Plin., Suet.).
                                        pre-hendî
pre-hendo, seize
                       pre-hendere
                                                        pre-hēnsus
   Rarely prae-hendo; but very often prendo, prendere, prendi, prensus.
                                                         -scēnsus
scando, climb
                       scandere
                                        -scendī
   Compounds have e for a throughout: as, de-scendo, de-scendere, &c.
                       vorrere, verrere -vorri, -verri
                                                        vorsus, versus
vorro, verro, sweep
                       vortere, vertere vorti, verti
                                                        vorsus, versus
vortō, vertō, turn
   951. (b.) With the present stem in -10/e- (833).
```

vollo, vello, tear vollere, vellere volli, velli volsus, vulsus

Late perfect vulsi (Sen., Luc.); -vulsi (Laber., Col., Sen., Luc.).

(B.) PERFECT STEM IN -s-, OR IN -v- OR -u-.

PERFECT STEM IN -S-.

952. (1a.) The following verbs in -ere have the perfect stem in -z-(867), and the perfect participle, when used, in -tus:

953. (a.) With the present stem in -0|e- (829).

953 . (a.) With the	present stem in	160 (029).		
carpo, nibble, pluck	carpere	carpsi	carptus	
Compounds have e for a : as, de-cerpo, de-cerpere, de-cerpsi, de-cerptus.				
com-būrō, burn up	com-bürere	com-bussi	com-būstus

tegō, cover	tegere	tēxī	tēctus	
trahō, drag	trahere	trāxī	trāctus	
ūrō, burn	ürere	ussi	üstus	
vehō, cart	vehere	vexi	vectus	
vivō, <i>live</i>	vivere	vīxi		

```
954. (b.) With the present stem in a nasalized root followed by -0|e- (831).
cingo, gird
                       cingere
                                        cinxi
com-pungo, prick over com-pungere
                                        com-punxi
                                                          com-punctus
   A compound of pungo (925, 823).
ē-mungo, clean out
                       ē-mungere
                                        ĕ-munxi
                                                          ē-munctus
                       ex-pungere
                                        ex-punxi
ex-pungo, prick out
                                                          ex-punctus
   A compound of pungo (925, 823).
                       fingere
                                         finxi
                                                          fictus
fingo, mould
                                         iūnxī
iungō, join
                       iungere
                                                          iunctus
pingo, paint
                       pingere
                                        pinxī
                                                          pictus
                       plangere
                                        planxi
                                                          planctus
plango, beat
stinguo, poke, poke out
                       stinguere
                                         -stinxī
                                                          -stinctus
stringo, peel, graze
                       stringere
                                         strinxi
                                                          strictus
tingo, wel
                       tingere
                                        tinxi
                                                          tinctus
                                         unxi
                                                          finctus
unguo, anoint
                       unguere
   Sometimes ungo, ungere, &c., in the present system.
   955. (c.) With the present stem in -no(e-(833)).
temno, scorn
                       temnere
                                        (con-tempsi)
                                                          (con-temptus)
   956. (d.) With the present stem in -io|_{e-} (836).
                       ad-licere
                       in-licere
                                                          in-lectus
in-licio, inveigie
                                        in-lexī
pel-licio, lead astray
                       pel-licere
                                         pel-lexi
                                                          pel-lectus
                       -spicere
                                         -spexi
                                                          -spectus
-spicio, spy
   Forms of the simple verb are old and rare: as, specitur, spicit, spece (Plaut.),
specimus (Varr.), spiciunt (Cato), spēxit (Naev., Enn.).
   957. (1 b.) The following verbs in -ere have the perfect stem in -s-
(867), and the perfect participle, when used, in -sus (912):
    958. (a.) With the present stem in -0|0- (829).
cēdo, move along
                       cēdere
                                         cessi
                                                          cessus
                       claudere
                                         clausi
claudo, shut
                                                          clausus
   Sometimes cludo, cludere, clusi, clusus.
                                                 Compounds have to for au
throughout.
                        di-videre
                                                          di-visus
di-vido, separate
                                         dī-visi
                                         fixi
                                                          fixus, twice fictus
figo, pin
                       figere
fluo. Row
                       fluere
                                         flüxi
                                                          fluxus adjective
laedo, hurt
                       laedere
                                         laesī
                                                          laesus
    Compounds have I for ae throughout: as, in-lido, in-lidere, &c.
lūdo. play
                       lüdere
mitto, send
                       mittere
                                         misi
                                                          missus
mergo, dip, duck
                       mergere
                                         mersi
                                                          mersus
                       plaudere
                                         plausi
plaudo, clap
                                                          plausus
    Also ap-plaudo, ap-plaudere, &c. Other compounds have usually of for au
throughout: as, ex-plodo, &c.; but ex-plaudo (Lucr.).
                                         pressi
                       premere
                                                          pressus
   Compounds have i for e in the present system: as, com-primo, &c.
```

Also in the present system, con-tremisco, con-tremiscere, &c.			
tumēscō, swell up	tumëscere	-tumuī	
valēscō, get strong	valëscere	-valui	
vanēsco, mans	vanëscere	(č-vānui)	
		•	

DEPONENTS IN -i.

977. (1.) The following deponents in -I have the perfect participle in -tus, except morior, which has -tuus:

978. (a). With the present stem in $-0|_{\mathbf{e}}$ (829). fruor, enjoy frui früctus loquor, speak loqui locūtus queri queror, complain questus sequi sequor, follow secutus

979. (b.) With the present stem in a nasalized root followed by -0|e- (831). fungor, get quit fungi functus

980. (c.) With the present stem in $-scol_{e-}$ (834).

apiscor, lay hold of apisci aptus

Compounds have i and e for a: as, ad-ipiscor, ad-ipisci, ad-eptus. com-miniscor, devise com-minisci com-mentus ex-pergiscor, stretch myself, wake ex-pergisci ex-per-rēctus

Perfect participle rarely ex-pergitus (Lucil., Lucr.).

nanciscor, get nancisci nactus, nanctus näscor, am born născi nātus ob-litus ob-liviscor, forget ob-livisci paciscor, bargain pacisci pactus Compounds: de-peciscor, de-pecisci, de-pectus; com-pectus.

pro-ficiscor, start on pro-ficisci pro-fectus ulciscor, avenge ulcisci filtus

981. (d.) With the present stem in $-i \circ |_{e}$ (836).

morior, die mori mortuus orior, rise orīrī ortus potior, master potiri potitus

For forms in -Iri of these three verbs, see 791. For potiri, twice poti (Enn., Pac.).

982. (2.) The following deponents in -I have the perfect participle in -sus (912):

983. (a.) With the present stem in $-9|_{e}$ (829).

labor, tumble down lābī lapsus nitor, rest on nītī nīsus, nīxus ttor, use ūtī fisus

984. (b.) With the present stem in -scole- (834). de-fetiscor, get tired out dē-fetīscī dē-fessus

985. (c.) With the present stem in $-to|_{e-}$ (835).

am-plector, hug round am-plecti am-plexus com-plector, hug up com-plecti com-plexus

986. (d.) With the present stem in $-io|_{e}$ (836).

gradior, step gradi gressus patior, suffer pati passus

Compounds of these two verbs have e for a: as, ad-gredior, per-petior, per-pessus; for forms of -gredior in -iri, see 791.

II. DENOMINATIVE VERBS.

987. Most verbs in -āre, -ēre, and -īre (or in -ārī, -ērī, and -īrī), are denominatives.

988. Some primitives from vowel roots have the form of denominatives in the present system, or throughout; and some verbs with a denominative present system have the perfect and perfect participle formed directly from a root.

(1.) VERBS IN -are.

(A.) PERFECT STEM WITHOUT A SUFFIX.

989. (1.) The following verb in -are has a reduplicated perfect stem (859):

Sto, stand

stāre stetī

For -stiti, see 860. The compound prac-sto has rarely the perfect participle prac-status (Brut., Plin.), and prac-stitus (Liv.).

990. (2.) The following verbs in -are have a perfect stem consisting of a root which ends in -v- and has a long vowel (864), and the perfect participle in -tus:

iuvõ, *help*

iūvī

iütus once

For iuerint, ad-iuero, and ad-iuerit, see 891. Perfect participle usual only in the compound ad-iutus.

lavo. bathe

lavāre

lautus

Forms in -ere are very common in the present tense (820): lavis (Plaut., Hor.), lavit (Plaut., Lucr., Catull., Verg., Hor.), lavimus (Hor.), lavitur (Val. Fl.), lavito (Cato), lavere often, lavi (Pomp.). Perfect participle often lotus (81) in writers of the empire; supine, lautum, lavatum.

(B.) PERFECT STEM IN -v- OR -u-.

PERFECT STEM IN -V-.

991. (1a.) Two verbs in -are have the perfect stem in -v- (869), and the perfect participle, when used, in -tus, both preceded by a long -a- of the root:

flo, blow

fläre näre flāvī nāvī flātus

992. (1b.) Most verbs in -are have the perfect stem in -v- (869), and the perfect participle in -tus, both preceded by a form of the present stem in long -a-: as,

laudō, praise liberō, free nōminō, name

spērā, hope

laudāre līberāre nōmināre spērāre laudāvī līberāvī nomināvī spērāvī laudātus līberātus nominātus spērātus

158

PERFECT STEM IN -u-.

993. (2.) The following verbs in -are have the perfect stem in -u-(874), and the perfect participle, when used, in -tus; in some participles, -tus is preceded by a short 1, thus, -itus (910): crepare crepui crepo, rattle (in-crepitus) Forms of the perfect system in -v- (823) are: in-crepavit (Plaut.), discrepāvit (Varr.), in-crepārit (Suet.). cubo, lie cubui Forms of the perfect system in -v- (823) are: ex-cubaverant (Caes.), cubaris (Prop.), in-cubavere (Plin.), cubasse (Quintil.). Compound perfect participle in-cubitus (Plin.). domo, tame domāre domui domitus ē-necāre €-necui E-neco, murder **E-nectus** The simple verb has necavi, necatus; twice necuit (Enn., Phaedr.). Eneco sometimes has i for e in the present and perfect system; once (823) E-nicavit, and once (887) E-nicasso (Plaut.); perfect participle also E-necatus (Plin.). frico, rub down fricāre Perfect participle also fricatus (Vitr.), con-fricatus (Varr., Plin.), de-fricatus (Catull., Col., Plin.), in-fricatus (Col., Plin.), per-fricatus (Vitr., Plin.). mico, quiver micāre So the compounds; except di-mico, di-micavi, di-micatum; twice in pentameter verse (823) di-micuisse (Ov.). -plicare -plicui -plicitus A few forms of the present system of the simple verb occur. In the perfect and perfect participle usually -plicāvī, -plicātus; but sometimes ap-plicuī (Cic. once, Tib., Ov., Liv., Sen., &c.); com-plicuī (Sen.), ex-plicuī (Verg., Hor., Liv., Sen., &c.), im-plicuī (Verg., Tib., Ov., Sen., &c.); ap-plicitus (Col., Quintil., Plin. Ep.), ex-plicitus (Caes., Sen., Plin. Ep.), im-plicitus (Plaut., Cic., Liv.); once re-plictus (Stat.). seco, cut secāre secui sectus The compound with ex sometimes has i for e; once (823) exicaveris (Cato). sono, sound sonāre sonui Also (820) sonit, sonunt (Enn., Acc.), sonere (Acc., Lucr.); re-sonunt (Enn.). Perfect (δ23) re-sonārint (Hor.), re-sonāvit (Man.), sonātūrus (Hor.). tono, thunder (at-tonitus) Once (820) tonimus (Varr.). Perfect participle once in-tonatus (Hor.). veto, forbid In old Latin, voto, &c. (107). Perfect once (823) vetavit (Pers.).

DEPONENTS IN -ari.

994. There are many deponents in -arī, with the perfect participle in -atus: as,

hortor, exhort hortari hortatus

For the primitive fari, speak, and compounds, see the dictionary.

(2.) VERBS IN -ēre.

(A.) PERFECT STEM WITHOUT A SUFFIX.

995. (1.) The following verbs in -ere have a reduplicated perfect stem (859), and the perfect participle, when used, in -sus (912): mordeo, bite mordēre momordi The compound prae-mordeo has once (823) prae-morsisset (Plaut.). pendeo, am hung pendēre pependi The compound pro-pendeo has the perfect participle pro-pensus. spopondi sponded, covenant spondēre sponsus For de-spondi and re-spondi, see 860; rarely de-spopondi (Plaut.). tondēre -totondī, -tondī tonsus tondeo, shear

For de-tondunt (Varr.), see 821. Perfect only in the compounds at-tondi and de-tondi (860); once de-totonderat (Varr.), and perhaps de-totondit (Enn.).

996. (2a.) The following verbs in -ēre have a perfect stem consisting of a root which ends in -v- and has a long vowel (864), and the perfect participle, when used, in -tus:

caveo, look out	cavēre	cāvi	cautus
faveo, am friendly	favëre	fāvī	
foveo, warm, cherish	fovēre	fōvī	fōtus
moveo, move	movēre	mõvī	mõtus
For short forms in th	e perfect system,	particularly in co	mpounds, see 8

For short forms in the perfect system, particularly in compounds, see 891.

VOVEO, vow VOVETE VOVI VOTUS

997. (26.) Three verbs in -8re have a perfect stem consisting of a consonant root with a long vowel (864), and the perfect participle in -8us (912):

sedeō, sit sedēre sēdī -sessus

Real compounds have i for e in the present system: as, ob-sideo, &c. Compounds with dis-, prae, and re- have no perfect participle.

strideo, grate strider stride

Often with a present system in -ere (821).

videō, see vidēre vidī visus

998. (3.) The following verbs in -ere have a perfect stem ending in two consonants (866), and the perfect participle, when used, in -sus (912):

(B.) PERFECT STEM IN -s-, OR IN -v- OR -u-.

PERFECT STEM IN -S-.

999. (1a.) The following verbs in -ēre have the perfect stem in -e- (868), and the perfect participle, when used, in -tus:

1000-1001.] The Verb: List of Verbs.

					
augeō, increase in-dulgeō, am kind lüceō, beam lügeo, mourn torqueō, twist	augëre in-dulgëre lücëre lügëre torquëre	auxi in-dulsi lüxi lüxi torsi	auctus ————————tortus		
1000. (1b.) The -4- (868), and the pe	following verberfect participle	os in -ēre have th e, when used, in -s	e perfect stem inus (912):		
algeō, feel cold ārdeō, blaze cō-nīveō,wink and bli	algëre ärdëre «kcō-nivëre	alsī ārsī cō-nīxī, cō-nīvi			
The perfects co-nix fulgeo, flash	ti (Turp.), cō-ni fulgēre	vī (Crass.), occur once fulsī	e each.		
Forms of the prese Lucr.), fulgere (Pac.,	nt in -ere (821) Acc., Lucil., Lucr.	occur in verse: ful; , Verg.); ef-fulgere	git (Pomp., Lucil., (Verg., Claud.).		
haereð, stick iubeð, order In old Latin, 10VBE	haerēre iubēre o, &c., 10vs1, 1vs	haesī iūssī sī, &c. (inscrr.).	iūssus		
maneō, stay mulceō, stroke	manēre mulcēre	mānsi mulsi	mānsum mulsus adjective		
Perfect participle per-mulsus rare (Cornif., Varr.).					
mulgeō, milk rīdeō, laugh suādeō, adviss tergeō, wips	mulgëre ridëre suädëre tergëre	mulsī rīsī suāsī tersī	mulsus once -rīsus suāsus tersus		
For forms in -ere see δ_{21} .	in the present, as	s tergit, &c. (Varr.,	Prop., Stat., Col.		
turged, am swelling	turgēre	tursī once			
Of the perfect system	n, turserat (Enr	n.).			
urgeð, push	urgēre	ursi			
PERFECT STEM IN -v- OR -u					
	PERFECT ST	TEM IN -V			
1001. (1a.) The -v- (869), and the p-5- of the root:	e following ver perfect particip	bs in -ēre have the le in -tus, both pro-	ne perfect stem in receded by a long		
dē-leō, wipe out fleō, weep neō, spin	dē-lēre flēre nēre	dë-lëvi flëvi nëvi	dē-lētus flētus		
For neunt (Tib.),	-	_10_0	-194		
-pleō, <i>fill</i> 6	-plēre	-pl ëvi 61	-plētus		

1002. (16.) The following verb in -ere has the perfect stem in -v-(869), preceded by long -I-, and the perfect participle in -tus, preceded by short -i- of the root:

cieo, set a going

ciēre

cīvī

citus

Somewhat defective; also with a form in -ire (821). For the perfect participle of compounds, see 919.

1003. (1c.) The following verb in -ere has the perfect stem in -v-(869), and the perfect participle in -itus (910):

ab-oleō. destrov

ab-olēre

ab-olitus

PERFECT STEM IN -u-.

1004. (2a.) Most verbs in -**ere** have the perfect stem in -u-(874), and the perfect participle, when used, in -tus, which is usually preceded by a short i (910): as,

doceo, teach habeð, have

docēre habēre docui habuī doctus habitus

So also post-habeo; other compounds have i for a: as, pro-hibeo, prohibëre, pro-hibuï, pro-hibitus; twice contracted, probet, probeat (Lucr.). Compounds with de and prae are regularly contracted, debeo, praebeo, &c.: but in Plautus once de-hibuisti, and regularly prae-hibeo, &c., throughout.

mered, earn

merēre

meritus

Often deponent (800): mereor, mereri, meritus.

misceo, mix

miscēre

miscui

mixtus, mistus

The present stem is an extension of the suffix -sco|e- (834); -sc- of the present runs over into the perfect.

moneo, advise placeo, am pleasing monere placēre monuī placui monitus placitus

So the compounds com-placeo and per-placeo; dis-pliceo has i for a throughout.

taceo, hold my tongue tacēre tacui

tacitus adjective

The compound re-ticeo has i for a and no perfect participle.

teneo. hold tenēre tenuī -tentus

Compounds have i for e in the present and perfect: as, de-tineo, de-tinui,

terreo, scare torreo, roast terrēre torrēre

terruī torruī

territus tostus

1005. (2b.) The following verb in -ere has the perfect stem in -u-(874), and the perfect participle in -sus (912):

censed, count, rate

cënsëre

cēnsuī

cēnsus

The Verb: List of Verbs. [1006-1008.

1006. (3.) The following verbs in -ere have the perfect stem in -u- (874), and no perfect participle (907):						
arceō, check	arcēre	arcui				
The compounds co-erce $\bar{\mathbf{o}}$ and ex-erce $\bar{\mathbf{o}}$ have $\bar{\mathbf{e}}$ for $\bar{\mathbf{a}}$, and perfect participles co-ercitus and ex-ercitus.						
caleō, am warm	calëre	calui				
candeō, glow white	candēre	candui				
Careo, have not	carêre	carui				
doleð, ache	dolēre	doluí				
egeō, need	egēre	egui				
The compound ind-i	geō, ind-igēre, ii	nd-iguī, ——, h	as i for e.			
ē-mineō, stick out	ë-minëre	ē-minuī				
flöreö, <i>bloom</i>	flörëre	flörui				
horreð, bristle up	horrēre	horrui				
iaceō, <i>lie</i>	iacēre	iacuī				
lateō, <i>lie kid</i>	latëre	latui				
liceo, am rated	licēre	licuī				
liqueo, am melted	liquēre	licuí				
madeō, am soaked	madēre	madui				
niteō, skine	nitēre	nituī				
noceō, am hurtful	nocēre	nocui				
oleō, smell	olēre	olui				
For forms in -ere in	the present system,	see 821.				
palled, look pale	pallēre	palluī				
pared, wait on, amobedien	pārēre	pārui				
pateo, am open	patëre	patui				
Tigeo, am stiff	rigëre	riguī				
sileo, am silent	silēre	siluī				
sorbed, suck up	sorbēre	sorbui				
The perfect system of the simple verb is rare: sorbuit, sorbuerint (Plin.); also (823) sorpsit (Val. Max.); ab-sorbeō and ex-sorbeō have -sorbuī; but ab-sorpsī (Plin.), ex-sorpsī (Luc.).						
studeō, am eager	studēre	studui				
stuped, am dazed	stupēre	stupui				
timeo, fear	timēre	timui				
valeo, am strong	valēre	valui				
vigeo, feel strong	vigēre	vigui				
1007. For audeō, gaudeō, and soleō, see 801; for lubet or libet, licet, miseret, oportet, paenitet, piget, pudet, taedet, see 815 and 816.						
DEPONENTS IN -Eri.						
1008. (1 a .) The following deponent in -erf has the perfect participle in -tus:						
reor, reckon, think	rērī		ratus			
163						

1009. (1b.) The following deponents in -err have the perfect participle in -tus, which is preceded by a short i (910):

liceor, bid misereor, pity liceri miserērī licitus miseritus

Perfect participle also misertus (Val. Max., Sen., Curt.). Active forms are: miserēte, miserētent (Enn.), misereas (Ter.), miseret (Lucr.), miserent (Val. Fl.). Passive forms are sometimes used impersonally (724): as, miseretur, &c.

tueor, look to, protect

Forms in -I also occur in verse (821). As perfect participle, generally tütātus. vereor, am awed at verērī veritus

1010. (2.) One deponent in -eri has the perfect participle in -sus (912):

fateor, confess

fatērī

fessus

Compounds have i and e for a: as, con-fiteor, con-fessus.

(3.) VERBS IN -ire.

(A.) PERFECT STEM WITHOUT A SUFFIX.

1011. (1a.) The following verb in -Ire has a reduplicated perfect stem (861), and the perfect participle in -tus:

re-perio, find

re-perire

re-pperi

re-pertus

1012. (1b.) The following verb in -Ire has no reduplication in the perfect stem, and the perfect participle in -tus: com-perire

com-perio, find out As deponent: com-periar (Ter.), com-perior (Sall., Tac.).

com-peri

com-pertus

1013. (2.) The following verb in -Ire has a perfect stem consisting of a consonant root with a long vowel (862), and the perfect participle in -tus:

venio, come

venire

vění

ventum, -ventus

For E-venunt, E-venat, E-venant, ad-venat, per-venat, see 822.

(B.) PERFECT STEM IN -s-, OR IN -v- OR -u-.

PERFECT STEM IN -S-.

1014. (1.) The following verbs in -Ire have the perfect stem in -s-(868), and the perfect participle in -tus:

farcio, stuff

farcire

farsī

fartus

Compounds have usually e for a throughout.

fulcio, prop haurio, drain fulcīre haurire fulsī hausi fultus haustus

A perfect subjunctive haurierint is quoted from Varro (823).

1015-1020.] The Verb: List of Verbs.

saepio, hedge in saepire saepsi sacptus sanxi sanctus adjective sancio, hallow sancire Perfect participle rarely sancitus (Lucr., Liv.). A pluperfect sancierat is quoted from Pomponius Secundus (823). sarcio, patch sarcire sarsī sartus vincio, bind vincīre vinxi vinctus

1015. (2.) The following verb in -īre has the perfect stem in -s-(868), and the perfect participle in -sus (912):

sentiō. feel sentire sēnsī sēnsus

sentio, feel sentire sensi

The compound with ad is generally deponent (800).

PERFECT STEM IN -V-.

1016. (1a.) The following verb in -Ire has the perfect stem in -v-(869), and the perfect participle in -tus, both preceded by a long I of the root:

BCio, know

scīre

scīvī

scītus

1017. (16.) The following verb in -Tre has the perfect stem in -v-(869), and the perfect participle in -tus:

sepelio, bury

sepelire

sepelivi

sepultus

1018. (1c.) Most verbs in -Ire have the perfect stem in -v-(869), and the perfect participle in -tus, both preceded by a form of the present stem in long -I-: as,

audio, hear

audire

andivi

auditus

PERFECT STEM IN -u-.

1019. (2.) The following verbs in -Ire have the perfect stem in -u- (874), and the perfect participle, when used, in -tus:

am-iciō, don

am-icīre am-icuī

Perfect rare: once am-icui (Brut.), once am-ixi (Varr.).
eriō, open ap-erire ap-erui

ap-eriō, open op-eriō, cover over saliō, leap ap-erire op-erire salire

op-erui salui ap-ertus op-ertus

am-ictus

Compounds have i for a throughout: as, in-silio. A perfect system in -v-(823, 893), as ex-silivi, occurs in late writers (Col., Sen., Plin., &c.).

DEPONENTS IN -iri.

1020. (1a.) The following deponents in -IrI have the perfect participle in -tus:

ex-perior, try
op-perior, wait for

ex-periri
op-periri

ex-pertus op-pertus

Perfect participle once op-peritus (Plaut.).

165

1021-1022.] Words: Inflection.

1021. (16.) The following deponents in -IrI have the perfect participle in -Itus:

blandior, am agreeable blandiri blandītus largior, shower largiri largitus mentior, tell lies mentīrī mentitus molior, work hard möliri mõlitus partior, share partiri partītus sortior, draw lots sortiri sortītus

1022. (2.) The following deponents in -IrT have the perfect participle in -sus (912):

mētior, measure mētīrī mēnsus ordior, begin ordīrī orsus

PART SECOND & SENTENCES

THE SIMPLE SENTENCE AND ITS PARTS.

- 1023. A SENTENCE is a thought expressed by means of a verb. The Subject is that which is spoken of. The PREDICATE is that which is said of the subject.
- 1024. A SIMPLE SENTENCE is one which has only one subject and one predicate.

Thus, Rhodanus fluit, the Rhone flows, is a simple sentence: the subject is Rhodanus and the predicate is fluit.

1025. The sentence may be declarative, stating a fact, exclamatory, crying out about something, interrogative, asking a question, or imperative, giving a command.

THE SUBJECT.

- 1026. The subject is a substantive, or any word or words having the value of a substantive.
- 1027. The subject of a verb is in the nominative case.
- 1028. The subject may be expressed, or may be merely indicated by the person ending.
- ro29. (1.) With the first or the second person, the subject is expressed by a personal pronoun (ego tū, nōs vōs) only when somewhat emphatic, or in an indignant question. Otherwise the verb of the first or second person is not attended by a personal pronoun: as, eram, I was, eras, thou wert.
- 1030. The subject is regularly omitted when it is general and indefinite, in the first person plural; as, intellegimus, we understand; and second person singular, as: putares, you, or anybody would have thought.
- 1031. The subject of the first or second person is sometimes a substantive, contrary to the English idiom: as, Hannibal petō pācem, I Hannibal am suing for peace. pars spectātōrum sclis, a part of you spectators knows. exoriāre aliquis nostrīs ex ossibus ūltor, from out our bones mayst some avenger spring. trecentī coniūrāvimus, three hundred of us have sworn an oath together.

1032. (2.) With the third person the subject is regularly expressed, unless the general 'he she it,' or 'they' implied in the person ending is definite enough.

1033. The third person plural often refers to people in general, particularly of verbs meaning say, name or call, think, and, with wollgo added, of other verbs also: as, ferunt, they say, people say, or the world says. The singular verb inquit, is rarely used in the sense of says somebody, it will be said, or quotha.

1034. Some verbs have no subject at all in the third person singular; these are called *Impersonal*. Such are: a few verbs expressing 'operations of nature,' five verbs of 'mental distress,' and any verb used to denote merely the occurrence of action, without reference to any doer: as,

(a.) lücet, it is light, lücēscit, it is getting light: pluit, it rains, fulget, it lightens, tonat, it thunders. (b.) miseret, it moves to pity, paenitet, it repents, piget, it grieves, pudet, it puts to shame, taedet, it bores. (c.) bene erat, it went well; pügnätur, there is fighting, pügnätum est, there was fighting. See also 816.

THE PREDICATE.

1035. The predicate is either a verb alone, or a verb of indeterminate meaning with a predicate nominative added to complete the sense.

Verbs of indeterminate meaning are such as mean am (something), become, remain, seem, am thought, am called or named, am chosen.

1036. The verb is sometimes omitted, when it is easily understood. So particularly such everyday verbs as mean am, do, say, come, and go, in proverbs and maxims, in short questions, and in emphatic or lively assertion or description: as,

quod homines, tot sententiae, sc. sunt, as many men, so many minds. omnia praeclara rara, sc. sunt, all that's very fair is rare. mortuus Cumis, sc. est, he died at Cumae. bene mihi, sc. sit, be it well with me, i.e. a health to me. haec hactenus, sc. dicam, thus much only, or no more of this.

ENLARGEMENT OF THE SIMPLE SENTENCE.

- 1037. The parts of the simple sentence may be enlarged by additions. The commonest enlargements of the subject and of the predicate are the following.
- 1038. I. The subject may be enlarged by the addition of attributes, appositives, or objects.
- 1039. (1.) An ATTRIBUTE is an essential addition to a substantive, uniting with it as one idea. The attribute may be:
- 1040. (a.) Genitive of a substantive of different meaning, denoting the agent, possessor, or the like: as, metus hostium, fear of the enemy, i. e. which they feel. hostium castra, camp of the enemy.
- 1041. (b.) Genitive or ablative of a substantive with an adjective in agreement: as, puer sedecim annorum, a boy of sixteen years; boves mira specie, kine of wondrous beauty.

- 1042. (c.) A noun in the same case, either an adjective or participle, or else a substantive used adjectively: as, pugna Cannensis, the battle of Cannae; civitates victae, the conquered communities; victor Romulus rex, victorious king Romulus.
- 1043. (d.) A substantive in the accusative or ablative with a preposition: as, pugna ad Cannas, the battle near Cannae. vir sine metu, a man without fear (1427).
- 1044. An attribute is rarely attached immediately to a proper name: as, fortem Gyān, Gyas the brave. Q. Lūcānius, Eiusdem Ordinis, Lucanius, of the same rank. It is much oftener attached to a general word in apposition with the proper name: as, vir clārissimus, M. Crassus, the illustrious Crassus.
- 1045. (2.) An Appositive is a separate substantive added as an explanation to another substantive, and in the same case, but not like the attribute uniting with it as one idea: as,
- avitum malum, regni cupido, the ancestral curse, ambition for a crown. Hamilcar, Mars alter, Hamilcar, a second Mars. Cornelia, mater Gracchorum, Cornelia, mother of the Gracchi. Teutomatus, Olliviconis filius, rex Nitiobrogum, Teutomatus, the son of Ollivico, the king of the Nitiobroges.
- 1046. (3.) The OBJECT of a substantive is another substantive of different meaning in the genitive, denoting that on which action is exerted: as.

metus hostium, fear of the enemy, i. e. which is felt towards them. venditio bonorum, sale of the goods.

- 1047. A substantive in any case may be modified like the subject.
- 1048. II. The predicate may be enlarged by the addition of accusatives, datives, predicate nouns, or adverbial adjuncts.
- 1049. (1.) The Accusative denotes the object of the verb; also extent, duration, and aim of motion. See 1124.
- 1050. (2.) The DATIVE denotes that for or to which something is or is done. See 1175.
- 1051. (3.) A predicate noun, either substantive or adjective, denoting 'office, time, age, order, condition,' or the like, is often added to other verbs besides those of indeterminate meaning (1035): as,

Iunius aedem dictator dedicavit, Junius dedicated a temple in his capacity as dictator, not Junius the dictator. litteras Graecas senex didici, I learned Greek when I was an old man. princeps in proelium ibat, ultimus excedebat, he was always the first to go into battle, the last to come out. For the predicative dative of the substantive, see 1219.

- 1052. In like manner a noun may be added as a predicate in agreement . with a substantive in any oblique case: as,
- se incolumes recipiunt, they come back safe. ante me consulem, before my consulship. Dolabella hoste decreto, Dolabella having been voted an enemy. natura duce, with nature as a guide.

Digitized by Google

1053. (4.) An ADVERBIAL ADJUNCT is either an oblique case of a noun, often with a preposition, or an adverb denoting 'place, time, extent, degree, manner, cause,' or 'circumstances' generally: as,

silentio proficiscitur, he marches in silence. in eo flumine pons erat, over that river there was a bridge.

1054. A predicate substantive may be modified like the subject. An adjective, either of the subject or of the predicate, may be modified by an oblique case or by an adverb.

COMBINATION OF SENTENCES.

1055. Simple sentences may be combined in two different ways. The added sentence may be I. Coordinate; or II. Subordinate.

Thus, in he died and we lived, the two sentences are coordinate, that is, of equal rank. But in he died that we might live, the sentence beginning with that is subordinate. In either combination the separate sentences are often called Clauses or Members, in contradistinction to the more comprehensive sentence of which they are parts.

I. THE COMPOUND SENTENCE.

1056. A COMPOUND SENTENCE is one which consists of two or more coordinate simple sentences: as,

tū mē amās, ego tē amō, Pl. Most. 305, thou art in love with me, I'm in love with thee. nox erat et caelō fulgēbat lūna serēnō inter minōra sīdera, H. Epod. 15, 1, 'twas night, and in a cloudless sky, bright rode the moon amid the lesser lights. \$\frac{1}{2}\$ tē petō, mē dēfendās, Fam. 15, 8, I ask it of you, protect me.

1057. A compound sentence is usually abridged when the members have parts in common: as,

valēbant precēs et lacrimae, Mil. 34, prayers and tears had weight, compound subject, for valēbant precēs et valēbant lacrimae. rogat oratque tē, RA. 144, he begs and entreats you. compound predicate, for rogat tē oratque tē. arma virumque cano, V. 1, 1, arms and the man I sing, compound object, for arma cano virumque cano. diū atque acriter pūgnātum est, 1, 26, 1, there was long and sharp fighting, for diū pūgnātum est atque acriter pūgnātum est.

II. THE COMPLEX SENTENCE.

1058. A COMPLEX SENTENCE is one which consists of a main and a subordinate sentence: as,

Agreement: The Verb. [1059-1062.

centuriones praemitti (main sentence), qui locum idoneum castris deligant (subordinate sentence), 2, 17, 1, he sends some officers ahead to select a suitable spot for the camp. nunc scio (main sentence), quid sit Amor (subordinate sentence), V. E. 8, 43, now, now I know what Eros is. \(\bar{a} \) tepeto (main sentence), ut me defendes (subordinate sentence), Fam. 15, 7, I ask it of you that you protect me.

1059. Several sentences are often subordinate to one and the same main sentence, and subordinate sentences may in their turn be main sentences to other subordinate sentences.

Thus, in the following sentence b is subordinate to A, and c to Ab: (c.) qualis esset natūra montis, (b) qui cognoscerent, (A.) misit, 1, 21, 1, he sent some people to see what the character of the hill was.

1060. Subordinate sentences may be coordinated with each other, as well as main sentences.

Thus, in the following sentence, b and b are both subordinate to A, but coordinate with each other: (A.) his rebus fiebat, (b.) ut et minus late vagarentur (b.) et minus facile finitimis bellum inferre possent, 1, 2, 4, so it came to pass that, in the first place, they did not room round much, and secondly, they could not so easily make aggressive war on their neighbours.

1061. A subordinate sentence introductory in thought to the main sentence, though not necessarily first in the order of the words, is called a *Protasis*; the main sentence which completes the thought is called an *Apodosis*: as,

quom vidēbis (protasis), tum sciēs (apodosis), Pl. B. 145, when thou see'st, then thou'lt know. ut sementem fēceris (protasis), ita metēs (apodosis), DO. 2, 261, as a man soweth, so shall he reap. sī sunt dī (protasis), beneficī in hominēs sunt (apodosis), Div. 2, 104, if there are gods, they are kind to men.

AGREEMENT.

(A.) OF THE VERB.

1062. A verb agrees with its subject in number and person: as,

praedia mea tū possidēs, ego aliēnā misericordiā vīvō, RA. 145, you, sir, hold my estates, it is by the compassion of other people that I am supported. Rhodanus fluit, 1, 6, 2, the Rhone flows. nos, nos, dicto apertē, consulēs dēsumus, C. 1, 3, it is ourselves, yes, ourselves, I will speak without reserve, the consult, who fail in our duty. vos vobis consulite, 7, 50, 4, do you look out for yourselves diffūgēre nivēs, H. 4, 7, 1, scattered and gone are snows.

- 1063. With a compound subject, two constructions are admissible, as follows.
- 1064. (1.) With two or more singular subjects, the verb is often in the plural: as,
- (a.) Without connectives: persons: issdem ferë temporibus fuërunt C. Cotta, P. Sulpicius, Q. Varius, Cn. Pompönius, Br. 182, in about the same times lived Cotta, Sulpicius, Vurius, and Pomponius. Things: fidës Römäna, iüstitia imperätöris in forö et cüriä celebrantur, L. 5, 27, 11, the chivalrous principle of Rome and the square dealing of her captain are trumpeted in market place and council hall. (b.) With atque, et, or -que: persons: ex his Cotta et Sulpicius facile primäs tulërunt, Br. 182, of these Cotta and Sulpicius indisputably bore the palm. Things: nox et amor vinumque nihil moderābile suādent, O. Am. 1, 6, 59, darkness and love and wine to nothing governable tempt. cum senātus populusque Rōmānus pācem comprobāverint, L. 37, 45, 14, when the senate and the people of Rome sanction peace. (c.) With et . . . et: persons: et Q. Māximus ct L. Paullus iis temporibus fuērunt, Fam. 4, 6, 1, both Maximus and Paullus lived in such times. Things: utrōsque et laudis cupidiža et timor īgnōminiae excitābant, 7, 80, 5, both of these eagerness for glory in the first place and secondly fear of disgrace spurred on.
- 1065. The plural is sometimes demanded by the meaning of the verb: as, iūs et iniūria nātūrā diiūdicantur, Leg. 1, 44, right and wrong are naturally distinguished from each other.
- 1066. (2.) Often, however, with two or more singular subjects, the verb is put in the singular. as,
- (a.) Without connectives: persons: tum Gorgiās, Thrasymachus, Prodicus, Hippiās in māgnō honōre fuit, Br. 30, at that time Gorgias, Thrasymachus, Prodicus, and Hippias were in high renown. Things: persuāsit nox, amor, vīnum, adulēscentia, T. Ad. 470, the witchery was night, flirtation, wine, and youth. (b.) With atque, et, or -que: persons: cūr Lysiās et Hyperīdēs amātur? Br. 68, why is a Lysias and a Hyperides idolized? Things: Gallōs ā Belgīs Matrona et Sēquana dividit, 1, 2, 1, the Matrona and Sequana cut off the Gauls from the Belgians. senātus populusque Rōmānus voluit, L. 21, 40, 3, senate and people of Rome or dained. (c.) With et ... et: persons: illam rationem et Pompēius et Flaccus secūtus est, Flacc. 32, that rule both Pompey and Flaccus followed. Things: tālis senātōrum et dīgnitās et multitūdō fuit, Ph. 13, 13, both the position and number of the senators was such.
- 1067. With two or more singular subjects denoting things, and making a compound idea, a singular verb is very common, agreeing either with the subjects taken as a unit, or with the nearest: as,
- (a.) cum tempus necessităsque postulat, decertandum manu est, Off. 1, 81, when the emergency requires, we must fight it out by hand. tanta laetitia ac gratulătio fuit, L. 10, 26, 4, so great was the demonstration of joy. (b.) Cingetorigi principătus atque imperium est trāditum, 6, 8, 9, the headship and command was assigned to Cingetorix.
- 1068. (3.) With mixed subjects, singular and plural, the verb may likewise be either plural or singular: as,

- (a) vita mors, divitiae paupertas omnis homines permovent, Off. 2, 37, life and death, riches and poverty, tell much on everybody. (b.) quanto in periculo et castra et legiones et imperator versaretur, 2, 26, 5, in what imminent peril camp and legions and commander were involved. hoc miss et Peripatetici et Academia concedit, Ac. 2, 113, this point both Peripatetics and Academy grant me.
- 1069. The plural is sometimes used with a singular subject limited by an ablative with cum, with: as, Syrus cum illo vostro consusurrant, T. Hau. 473, Syrus and you man of yours are whispering together. Bocchus cum peditibus postremam Romanorum aciem invadunt, S. I. 101, 5, Bocchus with the infantry falls on the rereward line of the Romans. Cicero commonly uses a singular verb in this combination, Caesar has the plural once only.
- 1070. (4.) When the subjects are connected by nec . . . nec, aut, or aut . . . aut, the verb is likewise either plural or singular: as,
- (a.) neque multitūdo hostium neque tēlorum vis arcēre impetum ēius virī potuērunt, L. 26, 5. 17, neither the numbers of the enemy nor the shower of missiles could arrest the onslaught of that intrepid soul. Sī quid Socratēs aut Aristippus fēcerint, Off. 1, 148, if a Socrates or an Aristippus had done anything. (b.) neque pēs neque mēns satis suom officium facit, T. Eu. 729, nor foot nor mind its duty doth aright. Sī Socratēs aut Antisthenēs diceret, TD. 5, 26, if a Socrates or an Antisthenes should say it.
- 1071. Collectives have usually a singular verb. But the plural is sometimes used, especially when the subject is separated from its verb, or is to be supplied from a preceding clause: as,
- cum tanta multitūdo lapides conicerent, 2, 6, 3, when such a throng were throwing stones. is civitāti persuāsit, ut de finibus suis exirent, 1, 2, 1, this person succeeded in inducing the community to leave their territory.
- 1072. The verb sometimes agrees with an appositive explaining the subject, or with a substantive in the predicate: as,
- (a.) flammae lätë füsae, certioris clädis indicium, progredi longius prohibuit, L. 10, 43, 11, wide-spread flames, sign of a surer disaster, prevented a further advance. When urbs, oppidum, civitäs, or the like, is added to plural names of places, the predicate usually agrees with the appellative: as, Corioli oppidum captum, L. 2, 33, 9, Corioli town was taken. (b.) amantium Irae amoris integratiost, T. Andr. 555, lovers' tiffs are love's renewal. summa omnium fuerunt ad milia CCCLXVIII, I, 29, 3, the grand total was about three hundred and sixty-eight thousand. The verb regularly agrees with the predicate substantive when the subject is an infinitive: as, contentum suis rebus esse māximae sunt divitiae, Par. 51, for a man to be content with his own estate is the greatest possible rickes.
- 1073. The verb sometimes agrees with a substantive introduced by such words as quam, quantum, nisi, or praeterquam: as, quis illum consulem nisi latrones putant? Ph. 4, 9, who but brigands think that man a consul? So also a predicate adjective or participle: as, mihi non tam copia quam modus quaerendus est, IP. 3, I must aim not so much at comprehensiveness as at moderation.
- 1074. A speaker in referring to himself sometimes uses the first person plural, as a more modest form of expression: as. Moloni dedimus operam, Br. 307, we attended Molo's instruction, i.e. I. Similarly nos in all its cases for ego, &c., and noster, &c., for meus, &c.

1075. The singular imperative age is sometimes used in addressing more than one, particularly in old Latin: as, age licemini, Pl. St. 221, come, people, give a bid. age igitur intro abite, Pl. MG. 928, come then go in. Similarly, cave cirumpatis, Pl. Posn. 117, mind you don't break it off. Similarly ain.

1076. If the subjects are of different persons, the first person is preferred to the second or the third, and the second to the third: as,

sī tū et Tullia, lūx nostra, valētis, ego et suāvissimus Cicerō valēmus, Fam. 14, 5, 1, if you and Tullia, our sunbeam, are well, darling Cicero and I are well. But sometimes in contrasts the verb agrees with the nearest person: as, quid indicat aut ipse Cornēlius aut vōs? Sull. 54, what information does Cornēlius himself give, or you people?

(B.) OF THE NOUN.

(1.) THE SUBSTANTIVE.

1077. A substantive which explains another substantive referring to the same thing is put in the same case.

This applies to the substantive used as attribute, appositive, or predicate. The two substantives often differ in gender or number, or both. (a.) Attribute: tirone exercitu, Fum., 7, 3, 2, with a raw army. A mima uxore, Ph. 2, 20, from an actress-wife. mendicos homines, Pl. St. 135, beggar-men. oculi hominis histrionis, DO. 2, 193, the eyes of an actor man. nēmini homini, Pl. As. 466, to no human being. Servom hominem, T. Ph. 292, a servant man. hominēs sicārios, RA. 8, professional bravoes. (b.) Appositive: quid dicam dē thēsauro rērum omnium, memoria? Do. 1, 18, what shall I say of that universal storehouse, the memory? duo fulmina nostrī imperii, Cn. et P. Scīpionēs, Balb. 34, the two thunderbolts of our realm, the Scipios, Gnaeus and Publius. (c.) Predicate: Ira furor brevis est, H. E. 1, 2, 62, wrath is a madness brief. Dolābellā hoste dēcrēto, Fh. 11, 16, Dolabella having been voted a public enemy. Some apparent exceptions will be noticed from time to time hereafter.

1078. Mobile substantives take also the gender and number of the masculines or feminines they explain: as,

stilus optimus dicendi magister, DO. 1, 150, pen is the best professor of rhetoric. vita rüstica parsimoniae magistra est, RA. 75, country life is a teacher of thrift. fluviorum rex Eridanus, V. G. 1, 482. Eridanus, of rivers king. et genus et formam regina pecunia donat, H. E. 1, 6, 37, both birth and shape the almighty dollar gives. ut omittam illas omnium doctrinarum inventrices Athenas, DO. 1, 13, to say nothing of the great originator of all intellectual pursuits, Athens.

1079. A substantive explaining two or more substantives, is put in the plural: as,

foedus inter Romam Laviniumque urbes renovatum est, L. 1, 14, 3, the treaty between the cities of Rome and Lavinium was renewed. Cn. et P. Scipiones, Balb. 34, the Scipios, Gnaeus and Publius.

1080. A plural subject, expressed or implied, is sometimes defined by a singular word, which is generally a collective or distributive:

ut ambo exercitus suas quisque abirent domos, L. 2, 7, 1, so that both armies went back to their respective homes. uterque edrum ex castris exercitum educunt, Caes. C. 3, 30, 3, they bring their army out of camp, each of them. heus foras exite huc aliquis, Pl. E. 398, hallo, you boys, come out of doors here, somebody. alius alium percontamur, Pl. St. 370, we ask of one another. cum accidisset ut alter alterum videremus, Fin. 3, 8, when it came to pass that we each saw the other. The verb sometimes agrees with the defining singular: as, quando duo consules, alter morbo, alter ferro periisset, L. 41, 18, 16, since the two consuls had died, one a natural death, the other by the sword.

1081. A substantive in the accusative or nominative is sometimes in apposition to a thought or clause: as,

manus intentantes, causam discordiae, Ta. 1, 27, shaking their fists, a provocation to quarrel. pars ingenti subière feretro, triste ministerium, V. 6, 222, a part put shoulder to the mighty bier, a service sad. nec Homerum audio, qui Ganymeden ab dis raptum ait propter formam; non iusta causa cur Laomedonti tanta fieret iniuria, TD. 1, 65, nor will I lend an ear to Homer, who asserts that Ganymede was carried off by the gods for his beauty; no just reason for doing Laomedon such injustice.

(2.) THE ADJECTIVE.

1082. An adjective, adjective pronoun, or participle, agrees with its substantive in number, gender, and case:

vir bonus, H. Ep. 1, 16, 40, a good man, bona uxor, Pl. MG. 684, a good wife, oleum bonum, Cato, RR. 3, good oil. Gallia est omnis divisa in partes tres, I, I, I, Gaul, including everything under the name, is divided into three parts. et variae volucres nemora avia pervolitantes aera per tenerum liquidīs loca vocibus opplent, Lucr. 2, 145, and motley birds, in pathless woods that flit through lither sky, fill space with carols clear.

- 1083. An adjective or participle, either attributive or predicate, sometimes takes the number and gender of the persons or things implied in the substantive: as,
- (a.) concursus populi mirantium quid rei esset, L. 1, 41, 1, a gathering of the public, wondering what was the matter. (b.) pars subcuntium obruti, pars confixi, Ta. H. 2, 22, a part of those who came up were crushed, a part were run through. Samnitium caesi tria milia ducenti, L. 10, 34, 3, of the Samnites were slain three thousand two hundred.
- 1084. (1.) An attributive adjective referring to several substantives is commonly expressed with one only, generally with the first or the last: as,

res erat multae operae et laboris, 5, 11, 5, it was a job that required much work and trouble. semper amavi ingenium, studia, mores tuos, O. 33, I have always admired your ability, your scholarly tastes, and your character. In lively style, the adjective is often used with every substantive.

1085. Two or more attributive adjectives in the singular connected by a conjunction may belong to a plural substantive: as,

circă portăs Collinam Ésquilinamque, L. 26, 10, 2, about the gates, the Colline and the Esquiline. But the substantive may also be in the singular: as, inter Ésquilinam Collinamque portam, L. 26, 10, 1, between the Esquiline and the Colline gate.

1086. The combined idea of a substantive with an attributive adjective may be qualified by one or more adjectives: as,

nāvis longās trīgintā veterēs, L. 27, 22, 12, thirty old men-of-war. prīvāta nāvis onerāria māxima, V. 5, 136, a very large private freighting vessel. āter aliēnus canis, T. Ph. 706, a strange black dog.

- 1087. (2.) A predicate adjective or participle referring to two or more substantives is usually in the plural; its gender is determined as follows:
- 1088. (a.) If the substantives denote persons of the same gender, that gender is used; if they denote persons of different gender, the masculine is used: as,

veneno absumpti Hannibal et Philopoemen, L. 39, 52, 8, it was by poison that Hannibal and Philopoemen were taken off: quam pridem pater mihl et mater mortul essent, T. Eu. 517, how long my father and my mother had been dead.

1089. (b.) If the substantives denote things, and are of different genders, the neuter plural is used; also commonly when they are feminines denoting things: as,

mūrus et porta dē caelō tācta erant, L. 32, 29, 1, the wall and town-gate had been struck by lightning ira et avāritia imperiō potentiōra erant, L. 37, 32, 13, hot blood and greed proved stronger than authority.

- rogo. (c.) If the substantives denote both persons and things, either the gender of the substantives denoting persons is used, or the neuter. The gender of the substantives denoting things is very rarely used: as,
- et rēx rēgiaque clāssis ūnā profectī, L. 21, 50, 11, the king too and the king's fleet set sail in his company. inimīca inter sē līberam cīvitātem et rēgem, L. 44, 24, 2, that a free state and a monarch were irreconcilable things. Dolopas et Athamāniam ēreptās sibī querēns, L. 38, 10, 3, complaining that the Dolopians and Alhamania were wrested from him.
- rogi. When the verb is attached to the nearest only of two or more subjects, a predicate participle or adjective naturally takes the gender of that substantive: as, ibl Orgetorigis filia atque tinus & filiis captus est, 1, 26, 5, there the daughter of Orgetorix and one of the sons too was made prisoner. ut brachia atque umeri liberi esse possent, 7, 56, 4, so that their arms and shoulders might be unhampered.
- 1092. The ablative singular absente is once used by Terence with a plural substantive: absente nobis, T. Eu. 649, while we were out.

1003. A neuter adjective or pronoun is sometimes used as a substantive in the predicate (1101): as,

triste lupus stabulis, V. E. 3, 80, a baleful thing the wolf for folds. quod ego fui ad Trasumennum, id tu hodie, L. 30, 30, 12, what I was myself at Trasumene, that you are today.

1094. A demonstrative, determinative, or relative pronoun used substantively takes the number and gender of the substantive it represents; the case depends on the construction of the clause in which it stands: as.

erant peditēs, quos dēlēgerant; cum hīs in proeliīs versābantur; ad eos se recipiebant; hi concurrebant, 1, 48, 5, there were foot-soldiers whom they had picked out; with these men they kept company in action; upon them they would full back; these people would always rally. Hippias gloriatus est anulum quem haberet, pallium quo amictus, soccos quibus indutus esset, se sua manu confecisse, DO. 3, 127, Hippias bragged he had made with his own hand the ring which he wore, the cloak in which he was wrapped, and the slippers which he had on.

1095. Sometimes, however, the number and gender of these pronouns are determined by the sense, and not by the form of the substantive represented: as.

equitatum omnem praemittit, qui videant, 1, 15, 1, he sends all the horse ahead, for them to see. hic sunt quinque minae. hoc tibi erus me iussit ferre, Pl. Ps. 1149, here are five minae; this my master bade me bring for thee. Domitius Massiliam pervenit atque ab ils receptus urbī praeficitur, Caes. C. 1, 36, 1, Domitius arrived at Massilia, and was received by the people and put in charge of the town. ad hirundininum nidum visast simia adscensionem ut faceret admolirier; neque eas eripere quibat inde, Pl. R. 598, up to a swallow-nest methought an ape did strive to climb; nor could she snatch the nestlings thence; the eas refers to hirundines, implied in hirundinīnum.

1006. A pronoun representing two or more substantives sometimes takes the number and gender of the nearest. But usually it is plural, and its gender is determined like that of an adjective (1087).

1097. A demonstrative, determinative, or relative pronoun used substantively is generally attracted to the number and gender of a predicate substantive in its own clause: as,

haec est nobilis ad Trāsumennum pūgna, L. 22, 7, 1, such is the far-famed fight at Trasumene, 217 B.C. ista quidem vis est, Suet. Iul. 82, now that I call an outrage, Caesar's dying words, 44 B.C. But with a negative, usually the neuter: as, nec sopor illud erat, V. 3, 173, nor was that sleep.

1098. A demonstrative, determinative, or relative pronoun in agreement with a substantive is often equivalent to a genitive limiting the substantive:

hoc metu vagari prohibebat, 5, 19, 2, by fear of this he stopped the prowling round. is pavor perculit Romanos, L. 21, 46, 7, the panic occasioned by this demoralized the Romans qua spe adducti, 4, 6, 4, impelled by the hope of this.

THE SIMPLE SENTENCE.

(A.) USE OF THE NOUN.

NUMBER AND GENDER.

1099. The singular of a word denoting a person is sometimes used in a collective sense.

This singular is generally a military designation: as, miles, eques, pedes, hostis, Rōmānus, Poenus. But other substantives and adjectives are occasionally thus used.

1100. A substantive or adjective denoting a person is often used in the singular as representative of a class, particularly when two persons are contrasted: as,

sī tabulam dē naufrāgiō stultus adripuerit, extorquēbitne eam sapiēns? Off. 3, 89, if a fool has seized a plank from a wreck, will the sage twitch it away?

IIOI. The neuter singular of certain adjectives is used as an abstract substantive.

These adjectives have commonly stems in -o-, and are often used in the partitive genitive (1250). The nominative is rare, also the accusative and ablative, except in prepositional constructions. Such are: bonum, malum; rectum, pravum; decorum, indecorum; honestum; verum, falsum; instum, initistum; aequum; ambiguum; ridiculum. Utile, inane, commune, insigne, simile, &c.

1102. Certain adjectives, which originally agreed with an appellative denoting a thing, have dropped the appellative and become substantives.

Such are: Āfricus, sc. ventus; Āfrica, sc. terra; calda, sc. aqua; cānī, sc. capillī; circēnsēs, sc. lūdī; decuma, sc. pars; fera, sc. bēstia; hīberna, sc. castra; merum, sc. vīnum; nātālis, sc. diēs; patria, sc. terra; praetexta, sc. toga; summa, sc. rēs; trirēmis, sc. nāvis, and some others.

IIO3. Certain adjectives denoting relationship, friendship, hostility, connection, or age, may be used in both numbers as substantives.

Such are: (a.) adfinis, cognātus, consanguineus, gentīlis, necessārius, propinquus; (b.) adversārius, amīcus, inimīcus, familiāris, hostis, intimus, invidus, socius, sodālis; (c.) contubernālis, manipulāris, vicīnus; (d.) adulēscēns, aequālis, iuvenis, senex.

1104. The masculine plural of many adjectives is used substantively to denote a class.

Such are: boni, the good, the well-disposed, conservatives, patriots, our party; improbi, the wicked, the dangerous classes, revolutionists, anarchists, the opposite party; docti, indocti; pii, impii, and the like.

1105. Proper names of men are used in the plural to denote different persons of the same name, or as appellatives to express character, oftenest good character: as,

duo Metelli, Celer et Nepōs, Br. 247, the two Metelluses, Celer and Nepos. quid Crassōs, quid Pompēiōs evertit? J. 10, 108, what overthrew a Crassus, Pompey what? i.e. men like Crassus and Pompey.

1106. The neuter plural of adjectives of all degrees of comparison is very often used as a substantive.

Such adjectives are usually in the nominative or accusative, and may have a pronoun, a numeral, or an adjective, agreeing with them. In English the singular is often preferred. Such are: bona, mala; vēra, falsa; haec, this; omnia, everything; haec omnia, all this, &c., &c.

1107. Names of countries are sometimes used in the plural when the country consists of several parts which are called by the same name as the whole country; as, Galliae, the Gauls; Germaniae, the Germanies.

1108. Material substantives are often used in the plural to denote different sorts of the substance designated, its constituent parts, or objects made of it: as,

aeta, lumps of bronze, bronzes. coppers. aquae, water in different places, medicinal springs. Cetae, pieces of wax, tablets, wax masks, waxworks. matmota, kinds of marble, blocks of marble, works of marble. nives, snowfakes, snowdrifts, snowstorms, repeated snows. Spumae, masses of foam. Sulpura, lumps of sulphur. Vina, wines, different kinds of wine.

IIOG. Abstract substantives are often used in the plural to denote different kinds or instances of the abstract idea, or an abstract idea pertaining to several persons or things: as,

sunt domesticae fortitudines non inferiores militaribus, Off. 1, 78, there are cases of heroism in civil life fully equal to those in war. te conscientiae stimulant maleficiorum tuorum, Par. 18, you are tormented by pricks of conscience for your sins. propter siccitates paludum, 4, 38, 2, because the swamps were dry everywhere.

IIIO. The plural is sometimes used in generalizations, and in poetry to magnify a single thing, to give mystery to the statement, or often merely for metrical convenience: as, advēnisse familiārēs dīcitō, Pl. Am. 353, say that the people of the house are come, the plural familiārēs denoting one person. Priamī dum rēgna manēbant, V. 2, 22, while Priam's realms still stood. externōs optāte ducēs, V. 8, 503, choose captains from a foreign strand, i.e. Acneas.

CASE.

1111. There are two groups of cases, the principal and the secondary.

The principal cases are the nominative and the accusative. The principal cases, which have more complete inflections than the secondary, express the two chief relations of the noun in the sentence, those of the subject and of the object. The secondary cases are used to express subordinate or supplementary relations.

THE NOMINATIVE.

1113. The nominative is principally used as the subject or predicate noun of a verb or of an infinitive. Besides this use, the nominative occurs in titles, exclamations, and addresses (1114-1123).

THE NOMINATIVE OF TITLE.

1114. The nominative is used in inscriptions, notices, titles, or headings: as,

L'CORNELIVS'CN'F'CN'N'SCIPIO, CIL. I, 34, on a tomb, Lucius Cornelius Scipio, son (filius) of Gnaeus, grandson (nepos) of Gnaeus. LABYRINTHVS HIC HABITAT MINOTAVRYS, CIL. IV, 2331, on a plan of the Labyrinth scratched by a Pompei schoolboy, The Maze. Here lives Minotaur. PRIVATVM PRECARIO ADEITVR, CIL. I, 1215, Private Grounds. No Admittance without leave. Themistocles, Neocli filius, Athèniënsis, N. 2, 1, Themistocles, son of Neocles, of Athens.

III5. The title proper of a book is often put in the genitive, dependent on liber or libri: as, Cornēli Taciti Historiārum Liber Prīmus, Tacitus's Histories, Book First. Or prepositional expressions are used: as, M. Tulli Ciceronis dē Fātō Liber, Cicero, Fate, in One Book. Cornēli Taciti ab Excessū dīvī Augusti Liber Prīmus, Tacitus's Roman History from the Demise of the sainted Augustus, Book First.

III6. Sometimes the nominative of a title or exclamation is retained in a sentence for some other case: as, Gabiniō cōgnōmen 'Cauchius' üsürpāre concessit, Suet. Cl. 24, he allowed Gabinius to take the surname 'Cauchius'; (compare Catō quasi cōgnōmen habēbat Sapientis, L. 6, Cato had the virtual surname of the Wise). 'Marsya' nōmen habet, O. 6, 400, it has the name of 'Marsyas'; (compare nōmen Dānuvium habet, S. Fr. 3, 55, it has the name Danube). resonent mihi 'Cynthia' silvae, Prop. 1, 18, 31, let woods reecho 'Cynthia' for me: (compare tū, Tītyre, fōrmōsam resonāre docēs Amaryllida silvas, V. E. 1, 4, thou, Tityrus, dost teach the woods to echo Amaryllis Fair).

THE NOMINATIVE OF EXCLAMATION.

III7. The nominative is sometimes used in exclamations: as, förtünae filius, omnēs, H. S. 2, 6, 49, 'the child of Fortune,' all exclaim. This nominative is often accompanied by an interjection, such as ecce, ēn, heu, ō, prō, vāh: as, ēn Priamus, V. 1, 461, lo, Priam here. ō fēstus diēs, T. Eu. 560, oh day of cheer. For eccilla, see 667.

THE VOCATIVE NOMINATIVE AND VOCATIVE PROPER.

1118. The vocative nominative is used when a person or thing is addressed: as,

quō fisque tandem abūtēre, Catilina, patientiā nostrā? C. I, I, in heaven's name, how long, Catiline, wilt trifle with our patience? valēte, dēsīderia mea, valēte, Fam. 14, 2, 4, good bye, my absent loves, good bye. Instead of a proper name, an emphatic tū is often used: as, advorte animum sīs tū, Pl. Cap. 110, just pay attention, sirrah, please.

1119. Masculine stems in -o- commonly use the special form for the second person singular called the vocative: as,

urbem, urbem, mī Rūfe, cole, Fam. 2, 12, 2, stick to town, dear Rufus, yes, to town. But the vocative nominative is sometimes used even of -ostems: as, audī tū, populus Albānus, L. 1, 24, 7, hear thou, the people of Alba.

1120. Poets use the vocative nominative or vocative proper very freely, sometimes for liveliness, but often simply in place of other cases not allowed by the metre: as,

ora manüsque tuo lavimus, Feronia, sonte, H. S. 1, 5, 24, our faces and our hands, Feronia, in thy spring we wash. occiderat Tatius, populisque aequata duobus, Romule, iura dabas, O. 14, 805, now dead was Tutius, and to peoples twain thou gavest, Romulus, impartial laws. longum tibi, Daedale, crimen, O. 8, 240, a lasting stigma, Daedalus, to thee. In these three examples, Feroniae, Romulus, and Daedalo would be impossible. In poetry, the vocative is particularly common in questions.

1121. Nominative forms and vocative forms are often combined: as, dulcis amice, H. E. 1, 7, 12, sweet friend. mi vir, Pl. Am. 716, my husband. Innepater, J. 6, 394, thou father Janus.

1122. In verse the vocative is occasionally used even in the predicate: as, quo moriture ruis? V. 10, 811, whither, on death intent, fliest thou? quibus, Hector, ab oris exspectate venus? V. 2, 282, out of what limboes, Hector, dost thou gladly welcomed come?

1123. The vocative nominative or vocative proper is sometimes accompanied by δ , but only in impassioned addresses: as, δ fortunate adulescens, $Arch.\ 24$, oh thou thrice blest youth; also by pro in addresses to gods, by eho and heus in calls on men. Rarely by au, ehem, hem, theu, tia or heia, io.

THE ACCUSATIVE.

1124. The accusative is used primarily with verbs, or with expressions equivalent to verbs. The relations expressed by the accusative are all of one general kind; but they vary somewhat, according to the nature of the verb.

1125. I. With most verbs, the accusative either (a.) denotes that which is affected or apprehended, or is produced by the action of the verb (1132); or, less frequently (b.) it repeats the meaning of the verb in the form of a substantive (1140).

Such accusatives, called accusatives of the *Object*, are never attended by a preposition, and become nominative in the passive construction.

1126. II. With some verbs, the accusative denotes (a.) extent or duration (1151); with others it denotes (b.) aim of motion (1157).

Both these accusatives sometimes have their places taken by a prepositional expression, or by an adverb; in the passive construction, they are not convertible into a nominative, but remain accusative.

Digitized by Google

1127-1135.] Sentences: The Simple Sentence.

- 1127. Two or even three accusatives are sometimes used with one and the same verb: see 1167-1174.
- 1128. The accusative is sometimes disengaged from the verb, with which it originally stood, and used with a noun or a preposition.
- 1129. (1.) With substantives, the accusative is rare; it is used (a.) in a few attributive expressions, chiefly old set forms, and rarely to denote (b.) aim of motion.
- Thus (a.) the predicative id aetātis, in id aetātis iam sumus, we are now of that age, becomes attributive in hominēs id aetātis, people of that age. And (b.) as domum, home, is used with the verb redeō, go back, so also rarely with the substantive reditiō, a return.
- 1130. With adjectives, the accusative is commonly that of extent: so with altus, high, latus, wide, and longus, long, sometimes with crassus, thick.

Thus, in eos surculos facito sint longi pedes binos, see that the scions be two feet long, the accusative pedes, which belongs with the predicate sint longi, may be used with the attributive adjective longus alone, thus: surculi longi pedes binos, scions two feet long.

II3I. (2.) The accusative is used with many prepositions: see 1410.

I. THE ACCUSATIVE OF THE OBJECT.

1132. The object of a verb is put in the accusative: as,

- (a.) oppida sua omnia incendunt, 1, 5, 3, they set all their towns aftre. conspexit adrasum quendam, H. E. 1, 7, 49, he spied a man all shaven and shorn. (b.) duas fossas perduxit, 7, 72, 3, he made two trenches. This accusative, is, as may be seen above, either (a.) receptive, i.e. existing independently of the action of the verb, and only affected or apprehended by it; or (b.) of product, i.e. produced by the action of the verb.
- 1133. Verbs thus used with an object are said to be used transitively. Such verbs may also be used intransitively, that is without an object, when stress is put on the action merely: thus,
- (a.) Transitively: tū mē amās, ego tē amō, Pl. Most. 305, thou lovest me, and I love thee. nova dīruunt, alia aedificant, S. C. 20, 12, they pull down new structures, and build up others. (b.) Intransitively: amō, Pl. B. 511, I'm in love. dīruit, aedificat, H. E. 1, I, 100, it pulleth down, it buildeth up.
- 1134. Some verbs, in addition to the accusative, often take an infinitive also: thus, eum vident sedēre, V. 5, 107, they see him sit, they see that he is sitting. Here the accusative eum, originally the object, they see him, becomes at the same time the subject of the new statement appended, sedēre, sit, thus giving rise to the construction known as the accusative with the infinitive.
- 1135. Instead of the proper accusative of the object, another accusative is sometimes substituted, denoting the ultimate result: as,

rupëre viam, L. 2, 50, 10, they broke a path, i. e. they broke through the obstacles, and so made a path. foedusque feri, E. 33, and strike a covenant, i. e. strike a victim, and so make a covenant.

- 1136. In Plautus, quid tibl with a substantive of action in -tio and est, has an accusative like a verb used transitively: as, quid tibl hanc curatiost rem? Pl. Am. 519, what business hast thou with this?
- 1137. Many verbs ordinarily used intransitively, particularly verbs of motion, have a transitive use when compounded with a preposition.

Such prepositions are, ad, circum, ex, in, ob, per, prae, praeter, trans, and some others: as, plures paucos circumsistebant, 4, 26, 2, a good many took their stand round a few. Caesar omnem agrum Picenum percurrit, Caes. C. 1, 15, 1, Caesar runs over the whole Picene territory. praeterire nemo pristrinum potest, Pl. Cap. 808, no man can pass the mill. flumen transierunt, 4, 4, 7, they crossed the river.

- 1138. A few verbs with a transitive use, have, when compounded with circum and trans, besides the accusative of the object, a second accusative of the thing to which the preposition refers: as, istum circumduce hasce aedis, Pl. Most. 843, take that man round this house. Caesar funditores pontem traducit, 2, 10, 1, take that she slingers over the bridge. transfer limen aureolos pedes, Cat. 61, 166, over the threshold put thy little golden foot. In the passive, the accusative connected with the preposition is sometimes retained: as, Apolloniam praeter-vehuntur, Caes. C. 3, 26, 1, they sail by Apollonia.
- 1139. Verbs of weeping and wailing, and some other verbs of feeling, which commonly have an intransitive use, sometimes have a transitive use with an accusative: as.
- (a.) lüget senātus, maeret equester ōrdō, Mil. 20, the senate is in mourning, the equestrian order betrays its sadness. (b.) mātrōnae eum lūxērunt, L. 2, 7, 4, the married women wore mourning for him. meereō cāsum ōius modī, Fam. 14, 2, 2. I cannot help showing my grief over a misfortune of such a kind. quid mortem congemis ac flēs, Lucr. 3, 934, why dost thou death bewail and weep? Such verbs are fleō, weep, gemō, vail, lāmentor, queror, bevail, doleō, am distressed, lūgeō, mourn, maereō, betray sadness. Similarly, horreō, shudder, reformīdō, am in dread, fastīdiō, feel disdain, rīdeō, laugh, &c., &c. The object is oftener a thing than a person, and passive constructions are rare, and mostly confined to poetry.

THE EMPHASIZING OR DEFINING ACCUSATIVE.

- 1140. The meaning of a verb, even of one ordinarily intransitive, may be emphasized or more exactly defined by an accusative of kindred derivation added.
- (a.) Seldom without an adjective: as, dum vītam vīvās, Pl. Per. 494, as long as life thou līv'st, i. e. as long as you ever live and breathe. quōrum māiōrum nēmō servitūtem servivit, T. 29, of whose ancestors not one has served servitude, i. e. been a regular slave. vidē nē facinus faciās, Fin. 2, 95, mind you don't do a deed, i. e. a misdeed. (b.) Commonly with an adjective: as, scelestam servitūtem serviunt, Pl. Cu. 40, a wicked servitude they serve. facinus memorābile fēcistis, L. 24, 22, 16, you have done a deed well worth mentioning. mīrum atque īnscitum somniāvī somnium, Pl. R. 597, a utrange and silly dream dreamed I.

1141-1147.] Sentences: The Simple Sentence.

1141. The verb sometimes has an accusative of kindred meaning, but of different derivation: as,

ut vivās aetātem miser, Pl. Am. 1023, that thou mayst live thy days in woe. non pūgnāvit ingēns Idomeneus Sthenelusve solus dicenda Mūsis proelia, H. 4, 9, 19, not towering Idomeneus nor Sthenelus alone has battles fought for Muses to rehearse.

1142. The neuter singular accusative of a descriptive adjective is used, particularly by the poets, to denote manner: as,

magnum clamat, Pl. MG. 823, he's bellowing big. suave locus voci resonat conclusus, H. S. 1, 4, 76, sweet to the voice the pent-up place rings back. suave rubens hyacinthus, V. E. 3, 63, sweet-blushing hyacinth. cur tam cernis acutum? H. S. 1, 3, 26, why dost thou see so sharp? The plural is not so common: as, asper, acerba tuens, Lucr. 5, 33, V. 9, 794, rough, staring savageness.

1143. Some verbs of smell and of taste have an accusative defining what the smell or the taste is: as, pāstillōs Rūfillus olet, Gargōnius hīrcum, H. S. 1, 2, 27, of lozsnges Rufillus smells, Gargonius of the goat. doctrinam redolet pueriem, DO. 2, 109, it smacks of ABC studies. non omnes possunt olere unguenta exotica, Pl. Most. 42, not every man can of imported ointments reek. meliora unguenta sunt quae terram quam quae crocum sapiunt, Cic. in Plin. NH. 17, 5, 3, 38, essences that smell of earth are better than those that smell of saffron.

1144. Any verb or verbal expression may be defined in a general way by the neuter accusative of a pronoun or of an enumerative word. as.

id gaudeo, T. Andr. 362, I'm glad of that. id maestast, Pl. R. 397, she's mournful over this. id prodeo, T. Eu. 1005, I'm coming out for this. cetera adsentior Crasso, DO. 1, 35, on all the other points I agree with Crassus. So also quod, for which, on account of which, aliquid, quicquam, nihil, &c., &c., and particularly quid, why, in what respect, wherein, what, or what... for: as, quid venisti, Pl. Am. 377, why art thou come? quid tibi obsto, RA. 145, wherein do I stand in your way?

1145. The accusative of an appellative is rarely used adverbially: as, magnam partem ex iambis nostra constat oratio, O. 189, our own speech is made up a great deal of iambs. maximam partem lacte vivunt, 4, 1, 8, they live on milk the most part, i. e. chiefly. Prepositional expressions are commoner: as, magna ex parte, 1, 16, 6, principally. For vicem, instead of, for, or like, see the dictionary.

1146. The accusative is sometimes disengaged from a verb, and qualifies a substantive as an attribute, chiefly in a few set expressions (1129): as, orationes autaliquid id genus, Att. 13, 12, 3, speeches or something that kind. aucupium omne genus, Cat. 114, 3, fowling of every kind. nügäs höc genus, H. S. 2, 6, 43, small talk—this kind. höc genus in rebus, Lucr. 6, 917, in matters of this kind. cum id aetātīs filiō, Clu. 141, with a son of that age. Similarly dies quindecim supplicatio, 2, 35, 4, a fortnight thanksgiving.

THE ACCUSATIVE OF THE PART CONCERNED.

1147. Poets use the accusative to express the part concerned, especially a part of the human body: as,

tremit artūs, Lucr. 3, 489, V. G. 3, 84, he shivers in his limbs. tremis ossa pavore, H. S. 2, 7, 57, thou tremblest in thy bones with fear. viridi membra sub arbuto strātus, H. 1, 1, 21, stretching—his limbs—beneath an arbute green. Os umerosque deo similis, V. I, 589, in face and shoulders like a god.

THE ACCUSATIVE OF THE THING PUT ON.

1148. The accusative is used with reflexive verbs in poetry to denote the thing put on: as,

comantem Androgei galeam induitur, V. 2, 391, Androgeus' high-haired helm he dons. exuviss induitus Achilli, V. 2, 275, clad in Achilles' spoils. Rarely to denote the thing taken off: as, priores exuitur vultus, St. Th. 10, 640, she doffs her former looks.

THE ACCUSATIVE OF EXCLAMATION.

- 1140. The accusative is used in exclamations, sometimes merely to call attention to something, but generally with a predicate to express a judgment with emphasis.
- (a.) In calling attention, ecce or em is used in old Latin: as, ecce mē, Pl. MG. 663, behold, your humble servant. em Davom tibl, T. Andr. 842, there, Davos sir. For ellum, eccillum, &c., see 667 and 673. Also, from Cicero on, En: as, En quattuor aras, V. E. 5, 65, see, altars four. (b.) In emphatic judgments sometimes the accusative alone: as, fortunatum Nicobulum, Pl. B. 455, lucky man that Nicobulus. testis Egregios, Cael. 63, mighty fine witnesses; sometimes with an interjection: as, o imperatorem probum, Pl. B. 759, oh what a good commander; rarely so with ecastor, edepol, euge, bravo, heu, ilicet, all's up, cheu. Interrogatively: hancine impudentiam? V. 5, 62, possible, shamelessness like this?
- 1150. The accusative is used in excited orders, appeals, and questions, without any verb expressed, or even distinctly felt: as, Tiberium in Tiberim, Suet. Tib. 75, Tiberius to the Tiber. di vostram fidem, T. Andr. 716, ye gods your help. pro fidem, Thebani cives, Pl. Am. 376, oh help, or murder, ye citisens of Thebes. So with unde, quo, and quando, often followed by mini or tibl: as, quo mini fortunam, si non conceditur uti? H. E. 1, 5, 12, why wealth for me, if wealth I may not use?

II. THE ACCUSATIVE OF SPACE AND TIME, AND OF AIM OF MOTION.

THE ACCUSATIVE OF SPACE AND TIME.

1151. Extent of space or duration of time is denoted by the accusative: as,

1152-1157.] Sentences: The Simple Sentence.

- (a) mīlia passuum XX procedit, 5, 47, 1, he pushes on twenty miles. trīdui viam progressī, 4, 4, 4, having advanced three days journey. aggerem lātum pedēs CCCXXX, altum pedēs LXXX exstrūxērunt, 7, 24, 1, they built up a mound three hundred and thirty feet wide, and eighty feet high (1130). (b.) mātronae annum lūxērunt, L. 2, 7, 4, the married women wore mourning a year. ūndēvīgintī annos nātus erat, Br. 229, he was nineteen years old. secūtae sunt continuos complūrēs dies tempestātēs, 4, 34, 4, there followed a good many days a succession of storms. triennium vagātī, 4, 4, 2, having led a nomad life three years. ūnum diem supplicātio habita est, L. 10, 47, 7, a thanksgiving was held one day. dies quindecim supplicātio, 2, 35, 4, a fortnight thanksgiving (1129). Sometimes per is added: as, lūdī per decem dies factī sunt, C. 3, 20, games were celebrated ten days long.
- 1152. The idea of traversing is sometimes not expressed: as, mīlia passuum tria ab eorum castrīs castra ponit, 1, 22, 5, he pitches camp three miles away from their camp, quadringentos inde passūs constituit sīgna, L. 34, 20, 4, four hundred paces from there he set up the standards.
- II53. With absum and disto, the ablative of amount of difference is sometimes used (1393): as, certior factus est Ariovisti copiās a nostris milibus passuum quattuor et xx abesse, 1, 41, 5, he was informed that Ariovistus's troops were four and twenty miles away from ours. If the place is not mentioned from which distance is reckoned, ab or a is sometimes used before the expression of distance: as, positis castris a milibus passuum xv, 6, 7, 3, pitching camp fifteen miles away.
- 1154. The accusative is used with abhinc, ago: as, quaestor fuisti abhinc annos quattuordecim, V. 1, 34, you were a quaestor fourteen years ago. The ablative occurs once or twice with abhinc, meaning before (1393): as, comities abhinc diebus trigint factis, V. 2, 130, the election having been held thirty days before.
- II55. The accusative singular is used with ordinals, to show the number of days, months, or years since a particular event, including the day, month, or year of the event itself: as, quod annum iam tertium et vicēsimum rēgnat, IP. 7, the circumstance that he has now been on the throne two and twenty years.
- 1156. The accusative in some pronominal expressions and adverbs passes over from 'time through which' to a loose 'time at which': as, id temporis, RA. 97, at that time. hoc noctis, Pl. Am. 163b, at this time of night. tum, then, num, nunc, now, nunc ipsum, Pl. B. 940, Att. 10, 4, 10, this very minute, commodum, just in time. For the locative ablative exceptionally used to denote duration, see 1355.

THE ACCUSATIVE OF THE AIM OF MOTION.

1157. (1.) Proper names of towns and of little islands or peninsulas are put in the accusative to denote the aim with expressions of motion: as,

Labiënus Lutetiam proficiscitur, 7, 57, 1, Labienus starts for Lutetia. Leucadem vēnimus, Fim. 16, 9, 1, we came to Leucas. nocturnus introitus Zmyrnam, Ph. 11, 5, the entrance into Smyrna by night (1129). Plautus uses Accherûns a few times like a town name: as, vivom mē accersunt Accheruntem mortui, Most. 509, the dead are taking me to Acheron alive.

- 1158. With singular names of towns and little islands, Plautus has the accusative alone twenty times, and twenty times with in; Terence has, including Lemnum, Ph. 567, and Cyprum, Ad. 224, 230, the accusative alone six times, and twice with in, in Lemnum, Ph. 66, and in Cyprum, Ad. 278. Plural town names never have in.
- 1159. An appellative urbem or oppidum accompanying the accusative of a town name is usually preceded by in or ad: as, ad urbem Fidenas tendunt, L. 4, 33, 10, they make for the city of Fidenae. Iugurtha Thalam pervenit, in oppidum magnum, S. 1. 75, 1, Jugurtha arrived at Thala, a large town.
- 1160. When merely 'motion towards' or 'nearness' is meant, ad is used: as, tres viae sunt ad Mutinam, Ph. 12, 22, there are three roads to Mutina. mi-les ad Capuam profectus sum, CM. 10, I went to the war as a private, to the region round about Capua.
- 1161. Proper names of countries are also sometimes put in the accusative in poetry, to denote aim of motion: as, abilt Alidem, Pl. Cap. 573, he went away to Elis. So in prose also, Aegyptus in Cicero, Caesar, Nepos, Livy, and Tacitus: as, Germānicus Aegyptum proficiscitur, Ta. 2, 59, Germanicus sets out for Egypt. Rarely and in poetry names of peoples: as, sitientis ibimus Āfrōs, V. E. 1, 64, to thirst-parched Afrians we shall go. In general the accusative of country cames it proceeded by increased the accusative of country. names is preceded by in or ad, as are also appellatives regularly in prose; but in poetry, even appellatives without a preposition are common.
- 1162. (2.) The accusatives domum, rus, and forus, are used like proper names of towns: as.
- (a.) eō domum, Pl. Mer. 659, I'm going home. equitēs domum contendērunt, 2, 24, 4. the cavalry hurried home. domum reditionis spē sublata, 1, 5, 3, the hope of a return home being out of the question (1129). (b.) rus ībo, T. Eu. 216, I shall go out of town. (c.) effügi foras, T. Eu. 945, I ran out of doors.
- 1163. The singular domum is always retained by Caesar, even when two or more separate persons or parties are spoken of. Plautus and Sallust have the plural domos once each, and Cicero and Livy use it occasionally.
- 1164. The accusative domum or domos sometimes has an attribute, usually a possessive pronoun: as, domum suam quemque reverti, 2, 10, 4, for every man to go back to his home. alius alium domos suas invitant, S. I. 66, 3, they invite each other to their homes. aurum domum regiam comportant, 8. 1. 76, 6, they bring all the gold to the house royal. cum domum regis devertises, D. 17, when you went to stay at the king's palace. The preposition in is sometimes used when the attribute is a genitive, and commonly so when it is any adjective but a possessive pronoun.
- 1165. (3.) In old Latin, exsequias and infitias are also used with eo. and sometimes malam crucem and malam rem, though these last more commonly have in: as,
- exsequias Chremeti ire, T. Ph. 1026, to go to Chremes's funeral. ut eas malam crucem, Pl. Men. 328, that thou mayst get thee to the accursed cross. Later writers, as Nepos, Livy, and Quintilian, use infitias eo again, and, from Sallust on, vēnum eo and vēnum do sometimes occur for vēneo and vendo.
- 1166. With the accusative in -tum (or -sum), called the supine, the idea of 'aim' passes over into that of 'purpose:' as mīlitātum abiīt, T. Hau. 117, he's gone away a soldiering (2270).

TWO ACCUSATIVES COMBINED.

OBJECT AND PREDICATE.

1167. Many verbs may take two accusatives, an object and a predicate.

Such are verbs signifying make, keep, choose, name or call, have, think, recognize or find, show oneself, &c., &c.: as, longiorem mensem faciunt, V. 2, 129, they make the month longer. eum certiorem faciunt, 5, 37, 7, they let him know. Ancum Märcium regem populus creavit, I.. 1, 32, 1, the people made Ancus Marcius king. me cepere arbitrum, T. Hau. 500, they've chosen me as referee. Duellium 'Bellium' nominaverunt, O. 153, Duellius they named 'Bellius.' vicinam Capreis insulam 'Aprägopolim' appellabat, Suet. Aug. 98, the island next to Capreae he called the Castle of Indolence.' conlegas adiutores habebat, Sest. 87, he had his colleagues as assistants. te sapientem existimant, L. 6, they consider you a sage. quem virum P. Crassum vidimus, CM. 61, what a man we saw in Crassus, severum me praebeo, C. 4, 12, I show myself stern. In the passive both the object and the predicate become nominatives: as, Caesar certior factus est, 3, 19, 5, Caesar was informed.

1168. In the sense of consider as equivalent to, dūcō and habeō, less frequently putō, have the ablative with prō. Other constructions with these and the above verbs may be found in the dictionary.

Person and Thing.

1169. (1.) Some verbs of teaching and hiding, demanding and questioning, may take two accusatives, one of a person and one of a thing.

The commonest of these verbs are doceo and its compounds, and celo; flagito, oro, posco, and rogo, interrogo. The thing is usually the neuter of a pronoun or enumerative word (1144): as, (a.) peior magister te istaec docuit, non ego, Pl. B. 163, a worse instructor taught thee that, not I. quid te litteras doceam? Pis. 73, why should I teach you your AB C's? (b.) non te celavi sermonem T. Ampii, Fam. 2, 16, 3, I have not kept you in the dark about the talk with Ampius. (c.) interim cotidie Caesar Aeduos frumentum flagitare, 1, 16, 1, meantime Caesar every day a dunning the Aeduans for the grain. Milesios navem poposcit, V. 1, 86, he called on the Miletus people for a vessel. quid me istud rogas? Fin. 5, 83, why do you ask me that? Racilius me sententiam rogavit, QFr. 2, 1, 3, Racilius asked me my opinion.

1170. With doceo, meaning inform, celo, rogo, and interrogo, the ablative of the thing with de is also used. And with flagito and posco, sometimes the ablative of the person with ab, with celo the ablative of the person with de.

1171. In the passive the person becomes the subject, and the accusative of a neuter pronoun or adjective is retained: as,

nosne hoc celatos tam diu, T. Hec. 645, for us not to be told of this so long; rarely with reversed construction: quor haec celata me sunt? Pl. Ps. 490, why was this hid from me? Accusatives of appellatives are rare: as, omnis militiae artis edoctus fuerat, L. 25, 37, 3, he had been thoroughly taught all the arts of war. interrogatus sententiam, L. 36, 7, 1, being asked his opinion. Other constructions of doctus, and of the passive of celo, flagito, posco, rogo and interrogo, may be found in the dictionary.

1172. (2.) Verbs of wishing, reminding, inducing, and accusing, and some others, also sometimes take an accusative of the person and one of the thing.

Such are volo, moneo and its compounds, hortor and cogo; accuso, arguo, insimulo, obiurgo. The thing is usually the neuter of a pronoun or enumerative word (1144): as, quid mē voltis? Pl. Mer. 868, what do you want of me? illud tē esse admonitum velim, Cael. 8, on this point I want you to be reminded (1171). In old Latin, accusatives of appellatives also are thus used, and sometimes also with dono and condono.

1173. (3.) The defining accusative is sometimes combined with an accusative of the person: as, tam të bāsia multa bāsiāre, Cat. 7, 9, thee to kiss so many kisses (1140). But usually with an accusative of the person, the ablative takes the place of the defining accusative: as, ödissem të odio Vatīniāno, Cat. 14, 3, I should hate thee with a Vatīnian hate.

OBJECT AND EXTENT, DURATION, OR AIM.

- 1174. The accusative of extent or duration, or of aim of motion is often combined with that of the object: as,
- (a.) mīlia passuum decem novem mūrum perdūcit, 1, 8, 1, he makes a wall nineteen miles (1151). mātronae annum eum lūxērunt, L. 2, 7, 4, the married women wore mourning for him a year (1151). (b.) Ancus multitūdinem omnem Romam trādūxit, L. 1, 33. 1, Ancus moved the whole population over to Rome (1157). eos domum remittit, 4, 21, 6, he sends them home again (1162). For other combinations, see 1138, 1198, and 2270.

THE DATIVE.

1175. The dative denotes that for or to which a thing is or is done, and either accompanies single words, such as verbs, adjectives, sometimes adverbs, rarely substantives, or serves to modify the entire sentence. It has two principal uses.

1176. I. The dative is used as a complement. Complements may be roughly distinguished as essential or optional. But these two complements are not always separated by a sharp line, and the same dative may sometimes be referred indifferently to either head.

1177-1181.] Sentences: The Simple Sentence.

1177. (1.) The ESSENTIAL COMPLEMENT is a dative of the person or thing added to an idea which is felt as incomplete without the dative (1180).

Thus, paret, he is obedient, is a statement which is felt as incomplete without a dative added to denote what it is he is obedient to, in the sentence paret senatu, he is obedient to the senate. But when stress is put on the action merely, without reference to its bearing, such a verb may be used without a dative: as, paret, he is obedient, he yields obedience.

1178. (2.) The OPTIONAL COMPLEMENT, that is, the dative of interest, advantage, or disadvantage, adds something to an idea that is already complete in itself (1205).

Thus, carmina canto, *I chant verses*, is a statement entirely complete in itself; it may be modified or not, at option, by a dative, thus: carmina virginibus puerisque canto, verses for maids and boys I chant.

1179. II. The dative of certain substantives is used predicatively (1219).

I. THE COMPLEMENTARY DATIVE.

(I.) THE ESSENTIAL COMPLEMENT.

THE DATIVE WITH VERBS.

1180. Many verbs require a dative to complete their meaning.

WITH VERBS OF INTRANSITIVE USE.

1181. (1.) Many verbs of intransitive use, particularly such as denote a state, disposition, feeling, or quality, take the dative: as,

quodne võbīs placeat, displiceat mihī? Pl. MG. 614, shall that which pleases you, displeasing be to me? sī Asiciō causa plūs profuit quam invidia nocuit, Cael. 23, if his case has been more helpful to Asicius than the hostility has been damaging. imperat aut servit collècta pecūnia cuique, H. E. I, 10, 47, for every man his garnered hoard or master is or slave. nonne huic lēgī resistētis? Agr. 2, 85, will you not stand out against this law? gymnasiīs indulgent Graeculi, Traj. in Plin. Ep. 40 [49], 2, our Greek cousins are partial to gymnasiums. īgnoscās velim huic festinātionī meae, in a letter, Fam. 5, 12, 1, please excuse haste. huic legionī Caesar confidēbat māximē, I, 40, 15, Caesar trusted this legion most of all. an C. Trebōniō ego persuāsī? cui nē suādēre quidem ausus essem, Ph. 2, 27, or was it I that brought conviction to Trebonius? a man to whom I should not have presumed even to offer advice. In the passive, such verbs are used impersonally, the dative remaining (1034); personal constructions are rare and poetical.

- am pleasing or displeasing, helpful or injurious, command, yield, or am obedient, am friendly, partial, or opposed; spare, pardon, threaten, trust, advise, persuade, happen, meet. But the English translation is not a safe guide: many of the verbs used with a dative are represented transitively in English; and some verbs of the meanings above are used transitively in Latin: as, delecto, iuvo, laedo, &c., &c.
- 1183. The dative is rarely used with a form of sum and a predicate noun corresponding in meaning with the verbs above (1181): as, quid mihi scelesstő tibí erat auscultātið? Pl. R. 502, i.e. quid tibí auscultābam? why did I, illstarred wretch, lend ear to thee? qui studiosus rêi nülli aliaest, Pl. MG. 802, i.e. qui studet, who lends his soul to nothing else. Or immediately with a noun: as, servitūs opulentō hominī, Pl. Am. 166, slavery to a millionaire. optemperātio lēgibus, Leg. 1, 42, obedience to the laws. aemula labra rosīs, Mart. 4, 42, 10, lips rivalling the rose.
- 1184. Some verbs have a variable use without any difference of meaning: thus, curd, decet, and vito, have sometimes the dative in old Latin, but usually the accusative. In Cicero, adulor has the accusative; from Nepos on, the dative as well. medeor, medicor, and praestolor take either the accusative or the dative.
- 1185. Some verbs have an accusative with one meaning, a dative of the complement, estatial or optional, with another: see aemulor, caveō, comitor, cōnsulō, conveniō, cupiō, dēspērō, maneō, metuō, moderor, prōspiciō, temperō, timeō, and the different uses of invideō, in the dictionary.
- 1186. In poetry, verbs of union, of contention, and of difference, often take a dative: as, (a.) haeret lateri lētālis harundō, V. 4. 73, sticks to her side the deadly shaft. So with coeō, concurrō, haereō, and similarly with iungō, misceō. (b.) quid enim contendat hirundō cycnīs? Lucr. 3, 6, for how can swallow cope with swans? So with bellō, certō, contendō, pūgnō. (c.) Infildō scurrae dīstābit amīcus, H. E. 1, 18, 4, a friend will differ from a faithless hanger-on. So with differō, discrepō, dissentiō, dīstō.
- 1187. A verb often takes the dative, when combined with adversum, obviam, or praesto, also with bene, male, or satis, and the like: as,
- fit ob viam Clodio, Mil. 29, he runs across Clodius. cui bene dixit umquam bono? Sest. 110, for what patriot had he ever a good word? nos, viri fortes, satis facere rei publicae videmur, C. 1, 2, we doughty champions fatter ourselves we are doing our whole duty by the state. Similarly with verbs of transitive use.
- 1188. (2.) Many verbs of intransitive use compounded with a preposition take a dative connected in sense with the preposition: as,
- manus extrēma non accessit operibus ēius, Br. 126, the last touch was not put upon his works. omnibus adfuit his pūgnis Dolābella, Ph. 2, 75, Dolabella was on hand in all these battles. ponto nox incubat ātra, V. 1, 89, over the deep, night broodeth black. cognitionibus de Christianis interfui numquam, Plin. Ep. ad Trai. 96 [97], I, I have never been to any of the trials of the Christians.
- 1189. The prepositions are chiefly ad, ante, com-, in, inter, ob, prae, sub, or super. In many compounds of these prepositions, however, the dative is due to the general meaning of the verb, as in confidit mini, he puts all trust in me (1181), as contrasted with consentit mini, he feels with me, nearly equivalent to sentit mecum (1188).

1190-1196.] Sentences: The Simple Sentence.

1190. Instead of the dative, such verbs often have a prepositional construction, particularly when place, literal or figurative, is distinctly to be expressed: as,

accēdere in fūnus, Leg. 2, 66, to go to a funeral. in morbum incidit, Clu. 175, he fell ill.

1191. Some verbs of intransitive use take, when compounded, either the dative or the accusative. See adiaceo, antecedo, antece, praecurro, praesto, incedo, insulto, invado, in the dictionary. And some compounds acquire a transitive use altogether, as obeo, oppugno: see 1137.

WITH VERBS OF TRANSITIVE USE.

1192. (1.) Many verbs of transitive use take the dative: as,

El filiam suam in mātrimonium dat, 1, 3, 5, he gives this person his own daughter in marriage. decima legio el grātiās egit, 1, 41, 1, the tenth legion gave him thanks. huic fert subsidium Pulio, 5, 44, 13, to him Pulio brings aid. multīs idem minātur Antonius, Ph. 11, 2, to many Antony threatens the same. reliquī sese fugae mandārunt, 1, 12, 3, the rest betook themselves to flight. commendo vodis meum parvum filium, C. 4, 23, unto your keeping do I commit the little son of mine. multī se alienissimīs crēdidērunt, 6, 31, 4, many people put themselves in the hands of utter strangers. equites imperat cīvitātībus, 6, 4, 6, he issues orders to the communities for horse.

1193. This dative is used with such verbs as do, trado, tribuo, divido, fero, praeseo, praesto, polliceor, promitto, debeo, nego, monstro, dico, narro, mando, praecipio, &c., &c. In the passive construction, the accusative becomes nominative, the dative remaining.

1194. (2.) Many verbs of transitive use compounded with a preposition take a dative connected in sense with the preposition: as,

nihil novī võbīs adferam, RP. 1, 21, I shall not lay any novelty before you. lēgēs omnium salūtem singulõrum salūtī antepõnunt, Fin. 3, 64, the law always puts the general safety before the safety of the individual. timõrem bonīs iniēcistis, Agr. 1, 23, you have struck terror into the hearts of patriots. nõluērunt feris corpus obicere, RA. 71, they would not cast his person before ravenous beasts. nēminem huic praeferõ, N. 8, 1, 1, there is nobody I put before him. hibernīs Labiēnum praeposuit, 1, 54, 2, he put Labienus over the winter-quarters. anitum õva gallīnīs saepe suppõnimus, DN. 2, 124, we often put ducks' eggs under hens.

1195. The prepositions are circum, de, ex, post, or those named in 1189. In many compounds of transitive use, however, the dative is due to the general meaning of the verb, as with those spoken of in 1189.

1196. With these verbs, a prepositional construction is often used, as with the verbs of intransitive use (1190): as,

iam diu nihil novi ad nos adferēbātur, Fam. 2, 14, no news has got to us this long time. For compounds of circum and trans with two accusatives, see 1138.

- 1197. Verbs of transitive use compounded with com- have oftener the ablative with cum: as, conferre hanc pacem cum illo bello, V. 4, 115, just compare this peace with that war. See also in the dictionary, conjungo and compono; also the indirect compounds comparo, compare, from compar, and communico.
- 1198. With a few compounds of ad or in, a second accusative is exceptionally used: as, arbitrum illum adegit, Off. 3, 66, he had the other man up before a daysman. So with inmitto, Pl. Cap. 548, Insinuo, Lucr. 1, 116, &c., &c. Regularly with animum adverto: as, animum adverti columellam, TD. 5, 65, I noticed a modest shaft. qua re animum adversa, Caes. C. 1, 80, 4, this fact being paid heed to: compare 1138.
- 1199. A few compound verbs admit either the dative of the person or thing and accusative of the thing, or the accusative of the person or thing and ablative of the thing; such are adspergo and inspergo, circumfo, circumfundo, exuo and induo, impertio, intercludo; also the uncompounded dono: as, praedam militibus donat, 7, 11, 9, he presents the booty to the soldiers. scribam tuum anulo donasti, V. 3, 185, you presented your clerk with a ring. For the different constructions of interdico, see the dictionary.

THE DATIVE WITH ADJECTIVES.

1200. The dative with many adjectives and some adverbs denotes that to which the quality is directed.

Such have the meaning of useful, neccessary, fit, easy, agreeable, known, near, belonging, friendly, faithful, like, and most of their opposites; the adjective is often predicative: as, ver utile silvis (1036), V. G. 2, 23, the spring is good for woods. 'est senstori necessarium nosse rem publicam, Leg. 3, 41, for a senator it is indispensable to be conversant with government. orationis genus pompae quam pugnae aptius, O. 42, a style better suited to the parade than to the field. convenienter naturae vivere, Off. 3, 13, to live in touch with nature.

- 1201. Some adjectives of this class have the dative of a person, the accusative with ad of a thing: so accommodātus, aptus, idōneus, necessārius, and ūtilis; and some denoting feeling have also the accusative with a preposition: aequus, inīquus, fidēlis with in, benevolus with ergā, and impius with adversus. propior and proximus sometimes accompany an accusative, like prope, propius, and proximē.
- 1202. The adjectives communis, proprius or alienus, sacer, totus, often accompany the construction of the genitive of the owner: see 1238. For alienus with the ablative, see 1306. Sometimes alienus has the ablative with ab.
- 1203. Some adjectives denoting relationship, connection, friendship or hostility, become substantives, and as such, admit the genitive also (1103): such are (a.) adfinis, cognatus; (b.) aequalis, familiaris, finitimus, par and dispar, propinquus, vicinus; (c.) adversarius, amicus, inimicus, necessarius.
- 1204. In Plautus and Terence, similis, the like, the counterpart, and its compounds, regularly take the genitive. The dative, as well as the genitive, is also used from Ennius on, particularly of a limited or approximate likeness: see the dictionary.

Digitized by Google

(2.) THE OPTIONAL COMPLEMENT.

1205. The dative of a person or thing interested, benefited, harmed, may be added at option to almost any verb: as,

conservate parenti filium, parentem filio, Cael. 80, save the son for the father, the father for the son. mea domus tibl patet, mihl clausa est, RA. 145, the very house I own is open for you, is shut upon me. cui flavam religas comam, simplex munditils? H. I, 5, 4, for whom bind'st thou in wreaths thy golden hair, plain in thy neatness? non auderet facere haec viduae mulieri, quae in me fecit, T. Hau. 953, he durst not to an unprotected female do what he hath done towards me.

1205. The place of a verb with the dative of interest is sometimes filled by an interjection, ecce, ei, em, or vae: as, ei mihi quālis erat, E. 1, 7, V. 2, 274, ah me, how ghastly he did look. vae victis, Pl. Ps. 1317, said by Brennus, 390 B. C., L. 5, 48, 9, woe worth the worsted. vae capiti atque aetāti tuae, Pl. R. 375, a murrain on thy head and life.

1207. The dative is often added to the entire sentence, where either a genitive or a possessive pronoun limiting a substantive might be used.

In such cases the dative expresses interest, advantage, or disadvantage, while the genitive would simply indicate the owner or the object: as, trānsfigitur scūtum Pulioni, 5, 44, 7, unfortunately for Pulio, his shield gets pierced through and through. militanti in Hispāniā pater ēi moritur, L. 29, 29, 6, while serving in Spain he had the misfortune to lose his father. huic ego mē bello ducem profiteor, C. 2, 11, I here proclaim myself captain for this war. sēsē Caesarī ad pedēs proiēcērunt, 1, 31, 2, they cast themselves at Caesar's feet. nostrīs militibus spem minuit, 5, 33, 5, it dashed the hopes of our soldiers. extergē tibi manūs, Pl. Most. 267, wipe off thy hands. vellunt tibi barbam lascīvī puerī, H. S. 1, 3, 133, the wanton gamins pull thy beard, foor soul.

1208. This dative is sometimes detached from the verb, and used immediately with a substantive, instead of the genitive: as, Philocomasio custos, Pl. MG. 271, the keeper for Philocomasium. rector iuveni, Ta. 1, 24, a mentor for the young man. So particularly with a gerundive in official expressions: as, curator muris reficiencis, OG. 19, commissioner for rebuilding the walls.

1209. Verbs of warding off sometimes take a dative, especially in poetry, also those of robbing and ridding: as, (a.) hunc quoque arcebis gravido pecori, V. G. 3, 1.44, him also wilt thou for the pregnant herd keep far. solistium pecori defendite. V. E. 7, 47, the summer's heat keep distant for the flock. (b.) torquem detraxit hosti, Fin. 1, 35, he pulled a torque away from his enemy. Eripies mihi hunc errorem, Att. 10, 4, 6, you will rid me of this mistake.

1210. With verbs of motion the dative of the person interested denotes in poetry the end of motion also: as, multos Danaum demittimus Orco, V. 2, 398, we send down many a Danaan for the nether king. So also the dative of personified words of place: as, it clamor caelo, V. 5, 451, up goes a shout for heaven, i. e. heaven hears a shout. sedibus hunc refer ante suis, V. 6, 152, first bear him duly to his place of rest, i. e. let his expectant grave receive him.

THE EMOTIONAL DATIVE.

1211. The dative of the personal pronoun is often used with expressions of emotion, interest, surprise, or derision: as,

quid mihi Celsus agit? H. E. 1, 3, 15, how fares me Celsus? Tongilium mihi Edüxit, C. 2, 4, he took out Tongilius, bless my soul. at tibi repente, cum minime exspectarem, venit ad me Caninius mane, Fam. 9, 2, 1, but bless you, sir, when I least dream of it, who should drop in on me all at once but Caninius, bright and early.

THE DATIVE OF THE POSSESSOR.

1212. The dative is used with forms of sum to denote the possessor: as,

est homini cum deō similitūdō, Leg. 1, 25, man has a resemblance to god. an nescis longās rēgibus esse manūs? O. E. 16, 166, aost possibly not know kings have long arms? suos cuique mōs, T. Ph. 454, to every man his own pet way. So also with the compounds absum, dēsum, supersum: as, hōc ūnum Caesari dēfuit, 4, 26, 5, this was all Caesar lacked.

1213. (1.) With mihi est nomen, the name is put either in the dative or in the nominative: as,

mihl nomen est Iulio, or mihl nomen est Iulius, Gell. 15, 29, 1, my name is Julius. In old Latin and in Sallust, the dative: as, nomen Mercuriost mihl, Pl. Am. prol. 19, my name is Mercury; later the nominative: as, canibus pigris nomen erit Pardus, Tigris, Leo, J. 8, 34, the craven cur shall sport the name of 'Lion, Tiger, Pard.' Cicero uses either the dative or the nominative, Livy oftener the dative than the nominative. Tacitus puts adjectives in the dative, substantives in the nominative, rarely in the genitive. Caesar does not use the construction.

1214. (2.) With the actives nomen do, indo, pono, tribuo, &c, the name may be in the dative or in the accusative; with the passive of these expressions, the name may be in the dative or in the nominative: as,

qui tibi nomen insano posuere, H. S. 2, 3, 47, who've put on thee the nickname Crank. qui filiis Philippum atque Alexandrum nomina inposuerat, L. 35, 47, 5, who had given his sons the names Philip and Alexander. A genitive dependent on nomen is used once by Tacitus and in very late Latin.

1215. With a gerundive, the dative of the possessor denotes the person who has the action to do: see 2243. For the ablative with ab, or for habeo, see 2243, 2245.

1216. This dative is sometimes used with the perfect participle, and the tenses formed with it: as, mihi est elaboratum, Caecil. 40, I have it all worked out. carmina nülla mihi sunt scripta, O. Tr. 5, 12, 35, no poerry have I ready made. Rarely with passives of the present system: as, nülla placere dü nec vivere carmina possunt, quae scribuntur aquae potoribus, H. E. 1, 19, 2, no verse can take or be longlived that by teetotallers is writ.

THE DATIVE OF RELATION.

1217. The dative may denote the person viewing or judging: as, eris mihi māgnus Apollo, V. E. 3, 104, thou shalt to me the great Apollo be. Quintia formosa est multis, mihi candida, longa, rēcta est, Cat. 86, 1, in many eyes is Quintia fuir, to me she's bonny, tall, and straight. From Caesar on, participles are often used to denote the person viewing or judging: as, est urbe ēgressis tumulus, V. 2, 713, there is, as you get out of town, a mound. in Universum aestimanti, Ta. G. 6, looking at it generally.

rai8. In imitation of a Greek idiom, volēns, cupiēns, or invītus, is used by Sallust and Tacitus in agreement with a dative dependent on a form of sum, the combination being equivalent to a subject with a form of volō, cupiō, or invītus sum, respectively: as, cēterīs remanēre volentibus fuit, Ta. H. 3, 43, i.e. cēterī remanēre voluērunt, the rest were minded to bide where they were. Once in Livy.

II. THE PREDICATIVE DATIVE.

THE DATIVE OF TENDENCY OR RESULT.

1219. (1.) Certain datives are used with a form of sum to denote what a thing tends to, proves, or is. This dative is generally accompanied by a dative of the person interested: as,

auxiliò Is fuit, Pl. Am. prol. 92, he was a help to them. odiò sum Ròmānis, L. 35, 19, 6, I am an abomination in the eyes of Rome. potestne bonum cuiquam malò esse? Pur. 7, can good prove bad for any human being? L. Cassius identidem quaerere solebat, cui bonò fuisset, RA. 84, Cassius used to ask for ever and ever, who the person benefited was, or who the gainer was. nēmini meus adventus labori aut sümptui fuit, V. 1, 16, my visit did not prove a bother or an expense to a soul. rès et fortūnae tuae mihī māximae cūrae sunt, Fam. 6, 5, 1, your money-matters are an all-absorbing interest to me.

1220. There are many of these datives, mostly abstracts and all singular; some of the commonest are cūrae, ūsuī, praesidiō, cordī, odiō, auxiliō, impedīmentō, salūtī, voluptātī. The adjectives māgnus, māior, māximus, or tantus and quantus, are sometimes used in agreement with them; and the dative frūgī sometimes has bonae.

122I. Instead of the dative of tendency, a predicative nominative or accusative is rarely used: thus, possessionem liberam Dardaniae solacio fore, L. 40, 57, 9, that the unrestricted occupancy of Dardania would prove comforting, but, domestica quies solacium fuit, L. 6, 30, 9, the peace that prevailed at home was a solid comfort. Prepositional expressions with pro and in also occur.

1222. (2.) The dative is also used with a few verbs of considering or accounting to denote what a thing is accounted.

So with such verbs as do, dûco, habeo, tribuo, and verto: as, vitio mihi dant, quod mortem hominis necessarii graviter fero, Matius in Fam. 11, 28, 2, the world scores it against me that I take the murder of a near and dear friend to heart. postquam paupertas probro haberi coepit, S. C. 12, 1, after lack of wealth began to count as a stigma.

THE DATIVE OF PURPOSE OR INTENTION.

1223. A few datives are used to denote what a thing is intended to be. This dative is generally accompanied by a dative of the person interested.

So (a.) dono and muneri: as, ēmit eam dono mihī, T. Eu. 135, he bought her as a gift for me. centum bovēs militibus dono dedit, L. 7, 37, 3, he gave the soldiers a hundred oxen as a present. Also (b.) auxilio, praesidio, and subsidio, used of military operations, chiefly with verbs of motion: as, if, qui praesidio contra castra erant relicti, subsidio suis ierunt, 7, 62, 8, the men that had been left as a protection against the camp, went as a reinforcement to their own side.

1224. For the datives dono and muneri, a predicative nominative or accusative is sometimes used: as, coronam Iovi donum in capitolium mittunt, L. 2, 22, 6, they send a crown to the capitol as a present for Tupiter. Prepositional expressions are also used for auxilio, &c.: as. ad praesidium, L. 3, 5, 3, in praesidium, L. 31, 16, 7, for protection, auxilii causa, L. 2, 24, 4, to help.

1225. The dative receptul is also used in military language to denote purpose: as, Caesar receptul cani iussit, 7, 47, 1, Caesar ordered the retreat sounded. Quinctius receptul canere iussit, L. 34, 39, 13. This dative is sometimes attached immediately to a substantive: as, receptul signum, Ph. 13, 15, the trumpet for retreat.

THE GENITIVE.

1226. The genitive is principally used with nouns, less frequently with verbs. Sometimes even when it seems to be dependent on a verb, it really depends on a substantive understood, or on a noun virtually contained or implied in the verb. Some verbs require an accusative also, in addition to the genitive.

I. THE GENITIVE WITH SUBSTANTIVES.

1227. A substantive is often limited by another substantive in the genitive.

The things denoted by the two words are usually distinct: as, metus hostium, the fear of the enemy, i.e. either (a.) which they feel (1231), or (b.) which is felt towards them (1260); māgnī ponderis saxa, stones of great weight (1239). Sometimes, however, they are more or less the same: as, militum pars, part of the soldiers (1242); māgna multitūdo perditorum hominum, a perfect swarm of desperadoes (1255).

1228-1233.] Sentences: The Simple Sentence.

- 1228. Two or even three genitives expressing different relations, sometimes limit one substantive: 28, Superiorum dierum Sabini cunctătio, 3, 18, 6, Sabinus's dilatoriness in days preceding. eorum dierum consuetudine itineris nostrī exercitus perspectă, 2, 17, 2, studying up the order of march followed by our army in those days.
- 1229. The limited substantive is often omitted, when it is obvious from the context: as, ventum erat ad Vestae, sc. aedem, H. S. 1, 9, 35, to Vesta's were we come, i. e. to her temple. aberam bīduī, sc. iter, Att. 5, 17, 1, I was two days distant. Usually so, when it is expressed with another gentive, which generally precedes: as, quis est, qui possit conferre vitam Trebonii cum Dolābellae? Ph. 11, 9, who is there that can compare the life of Trebonius with Dolabella's?
- 1230. Instead of the genitive depending on a substantive, an equivalent adjective or a prepositional expression is often used. Such substitutions will be mentioned below in their appropriate places.
- 1231. The relations expressed by the limiting genitive vary very much according to the context. These relations may be put in classes, as below (1232-1260). But it must be remembered that as the genitive connects substantives in a loose way, the same construction may sometimes be referred to more than one head.

THE GENITIVE OF THE SUBJECT, CAUSE, ORIGIN, OR OWNER.

1232. (1.) The genitive is used to denote that which does the action, or which causes, originates, or possesses the object designated by the substantive it limits: as,

metus hostium, Gell. 9, 12, 13, the fear of the enemy, i. e. which they feel. adventus Caesaris, 6, 41, 4, the arrival of Caesar. bellum Venetōrum, 3, 16, 1, the war with the Venetans. illud Solōnis, CM. 50, Solon's memorable words. Canachi signa, Br. 70, statues by Canachus. Cupidinis signum, V. 4, 135, the statue representing Cupid. hūus signīs, V. 3, 9, with statues belonging to this man. pācem Ariovistī, 1, 37, 2, a peaceful policy on Ariovistus's part. Canaārum pūgna, L. 23, 43, 4, the battle of Canace (1427). abacī vāsa omnia, V. 4, 35, all the vessels on the sideboard. prīdiē ēius diēt, 1, 47, 2, the day before that day (1413). labrōrum tenus, Lucr. 1,940, the length of the lips (1420).

1233. Instead of the genitive, an adjective is often used to express such relations; less frequently a prepositional construction: as,

(a.) odium paternum, N. 23, I, 3, the hatred felt by his father. servili tumultū, I, 40, 5, in the slave insurrection. bello Cassiano, I, 13, 2, in the war with Cassius. illud Cassianum, cui bono fuerit, Ph. 2, 35, Cassius's test question, 'volo the gainer was.' erilis patria, Pl. B. 170, my master's birthplace. intrā domesticos parietēs, C. 2, I, within the walls of our houses. So usually with names of countries and of towns: as, anus Corinthia, T. Hau. 600, an old woman of Corinth. pūgna Cannēnsis, L. 22, 50, I, the battle of Cannae. Often in a generalizing sense: as, paternus māternusque sanguls, RA. 66, the blood of a father and of a mother. (b.) ad Cannās pūgnam, L. 22, 58, I, the battle of Cannae.

1234. The possessive pronoun is regularly used instead of the possessive genitive of a personal or reflexive pronoun (1230): as,

mea domus, RA. 145, my own house. in tua quadam epistola, Att. 9, 10, 3, in a letter of yours. But sometimes, for emphasis, the genitive of the personal or reflexive is used: as, magno sul cum periculo, 4, 28, 2, with great personal risk; commonly so with omnium or utriusque: as, voluntati vestrum omnium parui, DO. 3, 208, I yielded to your joint wish; see however 1234.

1235. A word in apposition with the possessive pronoun is put in the genitive: as, meā ūnīus operā, Pis. 6, by my sole instrumentality. ad vestram omnium caedem, C. 4, 4, for the murder of you all (1230). So particularly ipse, omnis, solus, and ūnus.

1236. The genitive is often used predicatively with verbs meaning am, belong, become, make, seem, am accounted, &c., &c.: as,

litterārii ista sunt lūdī, Quint. 1, 4, 27, such questions belong to the infant school. hic versus Plauti non est, hic est, Fam. 9, 16, 4, this line is not Plautus's, this one is. omnia, quae mulieris fuērunt, virī fiunt, Top. 23, everything which was the woman's becomes the man's. neque se iūdicāre Galliam potius esse Ariovisti quam populī Romānī, 1, 45, 1, and that he did not think Gaul was any more Ariovistus's than it was the Romans'. hostiumst potīta, Pl. E. 562, into the foemen's hands she fell.

1237. The possessive genitive of a person or of an abstract is particularly common when the subject of the verb is an infinitive or sentence: as,

(a.) scyphis pügnäre Thrācum est, H. 1, 27, 1, to fight with bowls is Vandal work. erat āmentis, cum aciem vidērēs, pācem cōgitāre, Lig. 28, it was a madman's act, dreaming of peace when you saw the troops in battalia. temporī cēdere semper sapientis est habitum, Fam. 4, 9, 2, shaping your course to circumstance has always passed as the sign of a wise man. mentīrī non est meum, T. Hau. 549, telling lies is not my style (1234). (b.) non est pudoris meī, mē propūgnātorem P. Scīpionis profitērī, V. 4, 80, it is not in keeping with my delicacy to set up as the champion of Scipio. hārum esse dēfēnsorem māgnī animī est, Sest. 99, to be the defender of these interests takes heroism. hōc sentīre prūdentiae est, facere fortitūdinis, Sest. 86, to think thus shows wisdom, to act thus, courage. negāvit mōrīs esse Graecorum, ut in convīviō virōrum accumberent mulierēs, V. 1, 66, he said it was not manners among the Greeks to have women at table at a men's dinner-party.

1238. With the possessive genitive, the limited substantive is sometimes defined by communis, proprius or aliënus, sacer, or tötus added: as, höc proprium virtütis existimant, 6, 23, 2, this they consider a special characteristic of bravery. omnia quae nostra erant propria, RA. 150, everything which was our peculiar property (1234). illa insula eorum deorum sacra putatur, V. 1, 48, that island is considered the hallowed property of those gods. iam mē Pom Pi tötum esse scīs, Fam. 2, 13, 2, you are awarc that I am become Pompey's, out and out.

THE GENITIVE OF QUALITY.

1239. (2.) The genitive with an adjective in agreement is used to denote quality, either attributively or predicatively: as,

1240-1243.] Sentences: The Simple Sentence.

- (a.) Attributively: māgnī ponderis saxa, 2, 29, 3, stones of great weight. summae speī adulēscentēs, 7, 63, 9, young men of high promise. diērum vigintī supplicātiō, 4, 38, 5, a twenty day thanksgiving. bēlua multōrum es capitum, II. E. 1, 1, 76, a many-headed beast art thou. ēius modī cōnsilium, 5, 29, 5, such a plan. dēmittō auriculās ut inīquae mentis asellus, II. S. 1, 9, 20, I drop my ears like Neddy in the sulks (269). vāllō pedum IX, 5, 42, 1, with a nine foot palisade. (b.) Predicatively: māgnae habitus auctōritātis, 7, 77, 3, passing for a man of great influence. filūminis erat altitūdō circiter pedum trium, 2, 18, 3, the depth of the river was about three feet. The genitive of quality resembles the ablative of quality (1375); the two are sometimes combined: as, hominem māximī corporis terribilīque faciē, N. 15, 3, 1, a man of gigantic frame and with an awe-inspiring presence. But the genitive is common in designations of size and number.
- 1240. A substantive expressing quality with aequus, par, similis, or dissimilis in agreement, is put not in the genitive, but in the ablative, by Cicero, Caesar, Nepos, and Livy.

THE PARTITIVE GENITIVE.

- 1241. (3.) The partitive genitive denotes a whole of which the limited substantive denotes a part. There are two kinds of partitive genitive, the numerical and the quantitative: as,
- (a.) militum pars, 6, 40, 8, part of the soldiers, numerical partitive (1242).
 (b.) multum aestātis, 5, 22, 4, much of the summer, quantitative partitive (1247).
- 1242. (a.) The numerical partitive is a plural or a collective, limiting a word expressing part of the number: as,

mīlitum pars, 6, 40, 8, part of the soldiers. pars equitātūs, 4, 16, 2, part of the cavalry. alter consulum, L. 6, 35, 5, one of the two consuls. uter est insānior horum? II. S. 2, 3, 102, which of these two is crasier? eorum neuter, Pis. 62, neither of the two. multae istārum arborum, CM. 59, many of the trees you see there. quis omnium mortālium? V. 5, 179, who among all the sons of men? nēmo nostrūm, RA. 55, not one of us. nihil horum, RA. 138, none of these things. Stertinius, sapientum octāvos, H. S. 2, 3. 296, Stertinius, of sages eighth. o māior iuvenum, H. AP. 366, O elder of the youths. horum omnium fortissimi sunt Belgae, 1, 1, 3, of all these the stoutest fighters are the Belgians. Also with superlative adverbs: as, deorum māximē Mercurium colunt, Ta. G. 9, of the gods, they revere Mercury most. minumē gentium, Pl. Poen. 690, T. Eu. 625, no, never in the world.

1243. uterque, each, both, often takes the genitive plural of a pronoum: as, quōrum uterque, uterque eōrum, hōrum, nostrūm, &c.; sometimes of a substantive and pronoun conbined: as, utriusque hārum rērum, TD. 1, 65, of each of these things. quārum cīvitātum utraque, V. 5, 56, each of these communities. With a substantive alone, it is oftener attributive: as, uterque dux, Marc. 24, each commander; and sometimes with neuter pronouns: as, quod utrumque, Brut. in Fam. 11, 1, 1, N. 25, 2, 4. The plural utrīque is used both ways: as, ab utrīsque vestrūm, Fam. 11, 21, 5, and ab utrīsque nōbīs, Brut. in Fam. 11, 20, 3.

1244. The plurals tot, totidem, and quot, are not used partitively, and omnes and cuncti only so by poets and late prose writers. plerique is used either way, in agreement, or with the genitive.

1245. The numerical partitive is exceptionally used in poetry with the positive of a descriptive adjective: as, sancte deorum, V. 4, 576, thou holy of the gods. And in late prose, particularly with words denoting a class of persons: as, cum delectis peditum, L. 26, 5, 3, with the pick of the infantry. levis cohortium, Ta. 3, 39, the light-armed of the cohorts.

1246. Instead of the numerical partitive, a prepositional expression with ante, inter, or in, or with ex or de, is sometimes used: as, ante alios acceptissimus, L. 1, 15, 8, most welcome before others. So particularly quidam and tinus, duo, tres, with ex or de: as, quidam ex his, 2, 17, 2, one of these. tinus de multis, Fin. 2, 66, one of the common herd. But tinus sometimes has the genitive: as, tinus multorum, H. S. 1, 9, 71. And usually so in a series, when tinus is followed by alter, alius, tertius, &c.

1247. (b.) The quantitative partitive is usually a singular, limiting a neuter singular word denoting amount. The limited word is either a nominative, or an accusative without a preposition. This genitive often borders very closely on the genitive of definition (1255): as,

multum aestātis, 5, 22, 4, much of the summer. amplius obsidum, 6, 7, something more extensive in the way of hostages. minus dubitātionis, 1, 14, 1, less of hesitation. quam minimum spatii, 3, 19, 1, as little time as possible. id aetatis, DO. 1, 207, at that time of life. id temporis, Fin. 5, 1, at that time of day. quid causae est? Ac. 1, 10, what earthly reason is there? hoc litterularum, Att. 12, 1, 1, this apology for a letter, or this hasty line. hoc sibi solacii proponebant, 7, 15, 2, they laid this flattering unction to their souls.

1248. Such neuters are: multum, plērumque, plūrimum, amplius, plūs, paulum, minus, minimum, tantum, quantum, tantundem, nimium; in poetry and late prose, also many other adjectives singular and plural. Furthermore, id, hoc, illud, quod, quid, &c., and nihil; also abunde, adfatim, largiter, nimis, partim, parum, and satis.

1249. A few adjectives of place and time indicating a particular part of an object, are commonly used in immediate agreement with their substantives: as.

summus mons, 1, 22, 1, the highest part of the mountain, or the mountaintop. extrema hieme, media aestate, IP. 35, at the end of the winter, in midsummer. Such are: primus, intimus, medius, extremus, postremus, ultimus, summus, infimus, imus, reliquus. But the neuter is sometimes used partitively: as, aestātis extrēmum erat, S. I. 90, 1, it was the end of summer. summa pectoris, Fam. 1, 9, 15, the upper parts of the breast.

1250. The limiting genitive is often the neuter singular of an adjective used substantively: as,

aliquid boni, T. Andr. 398, something good. aliquit mall, T. Eu. 999, something bad. numquid tandem novi? Br. 10, nothing new, pray? This use is ordinarily confined to stems in -o-; rarely otherwise: as, plus inanis, Lucr. 1, 365, more of the void; and usually only when joined with an -ostem: as, nihil solidi, nihil eminentis, DN. 1, 75, no solidity, no projection. 7*

20 T

1251. The partitive construction sometimes extends to the predicate: as, id erit signi më invitum facere, RA. 83, this will be something of an indication that I act with reluctance; signi is here in the predicate, and yet made dependent on id. quid ergo est tui consilii? Brut: in Fam. 11, 1, 3, what then is your advice? quid sui consilii sit ostendit, 1, 21, 2, he explains what his plan is. quid est enim huic reliqui? Sull. 89, for what is there left for my client? hi milites nihil reliqui victis fecere, S. C. 11, 7, these soldiers left nothing over to the conquered. nihil ad celeritätem sibi reliqui fecerunt, 2, 26, 5, as for speed, they left no effort unspared.

1252. The accusative with a preposition also sometimes has the genitive: as, in id redactus sum loci, T. Ph. 979, I am reduced to such a strait. ad id loci, S. C. 45, 3, to that spot. ad id locotrum, S. I. 63, 6, up to that time. in multum dieli, L. 9, 44, 11, till late in the day. In Cicero, also the ablatives eo, eodem, and quo, with loci: as, eo loci, Sest. 68, in that position. And in later writers, other ablatives, with or without a preposition, also have a genitive.

1253. Some appellatives of place are put in the genitive with adverbs of place: as, ubinam gentium? Pl. Mer. 434, C. 1, 9, where in the world? nusquam gentium, T. Ad. 540, nowhere in the world. Similarly, loci with adverbs of time or order, as with intereā in Plautus and Terence, postideā in Plautus, posteā in Sallust, and inde in Lucretius; also locorum with adhūc and postid in Plautus.

1254. In Sallust, Livy, and Tacitus, genitives of abstracts are used with the adverbs eo, quo, and huc: as, eo miseriarum, S. I. 14, 3, to that pitch of distress. Once with ut: ut quisque audentiae habuisset, adcurrerent, Ta. 15, 53, they should run up, with a speed commensurate in every case to their daring.

THE GENITIVE OF DEFINITION.

1255. (4.) The genitive is used to define that of which a thing consists: as,

māgna multitūdo perditorum hominum, 3, 17, 4, a perfect swarm of desperadoes. innumerābile pondus aurī, Sest. 93, a weight of gold too great to count. mīlle numero nāvium clāssem, V. 1, 48, an armada a thousand sail strong.

1256. The genitive of an explicit word containing the leading idea is sometimes used to define a more general word; as,

praedae pecudum hominumque, L. 24, 20, 5, booty consisting of cattle and human beings. plegnora coniugum ac liberorum, L. 2, 1, 5, pledges in the shape of wives and children. confisus munitione fossae, Caes. C. 1, 42, 3, relying on the defensive works in the shape of a moat. Rarely in poetry and late prose, the proper name of a place, with urbs, promunturium, &c.: as, urbem Patavi, V. 1, 247, the city of Patavium (1045). Particularly with the words vox, nomen, genus, and especially causa: as, haec vox voluptatis, Fin. 2, 6, this word 'pleasure' nomen amicitiae, Fin. 2, 78, the name of friendship'. Compare nomen fraternum, 1, 36, 5, the name of brothers (1233). haec Ignominiae causa. Clu. 120, this reason, namely the censor's stigma. parvulae causae vel falsae suspicionis vel terroris repentini, Caes. C. 3, 72, 4, insignificant causes, as for instance ungrounded suspicion or a panic. propter eam causam sceleris istius, V. 4, 113, for this reason, namely the crime of the defendant.

1257. The genitive of definition is very common with causa, less common with grātiā, to define what the motive or cause is: as,

amīcitiae causā, 1, 39, 2, from motives of friendship. Compare vestrā magis hōc causā volēbam, quam meā, DO. 1, 164, I wished this more for your sake than for my own (1234). honestātis amplitūdinisque grātiā, RA. 15, in compliment to their respectability and high social standing. So also sometimes with nōmine, and in old or official Latin, with ergō.

248. Conversely, the genitive of a generic word denoting a person is sometimes added to a leading word defining the kind of a person: as, früstum pueri, Pl. Pers. 849, thou hit of a boy. monstrum hominis, T. Eu. 696, thou hend in human shape. quaedam pestes hominum, Fam. 5, 8, 2, some regular flagues in the shape of men.

1259. quidquid est, quantum est, quod est, or quodcumque est, with a genitive, is equivalent to an emphatic omnis: as, quidquid patrum est, L. 3, 17, 5, whatever there is in the shape of senators, i. e. every single senator. quod est pecuniae, tradit, Caes. C. 2, 20, 8, what there is in the way of money, he hands over. Similarly tantum for tot: as, tantum hominum, Pl. Poen. 619, such a mass of men.

THE OBJECTIVE GENITIVE.

1260. (5.) The objective genitive denotes the object of the action expressed in the limited substantive: as,

metus hostium, Gell. 9, 12, 13, the fear of the enemy, i. e. which is felt towards them. vēnditio bonorum, RA. 110, sale of the goods. luctu filli, DO. 2, 193, from grief for his son. This construction is freely used, even when the parallel verb has a dative, an ablative, or a prepositional expression: as, fiducia loci, 7, 19, 2, from confidence in the position. liberationem culpae, Lig. 1, acquittal from guilt. militiae vacationem, 6, 14, 1, exemption from military service. opinione trium legionum deiectus, 5, 48, 1, disappointed in his hope of three legions. deorum opinio, TD. 1, 30, a conception of the gods. miserrima est contentio honorum, Off. 1, 87, a scramble for office is a pitiful thing.

1261. Instead of the objective genitive, a prepositional expression is sometimes used with greater precision: as,

metus **a** vi atque ira deorum, DN. 1, 45, fear of the might and wrath of the gods. So especially the accusative, usually denoting a person, with in, erga, or adversus, combined with substantives denoting feeling: as, odium in hominum universum genus, TD. 4, 25, hatred to all mankind. Vestra ergā mē voluntās, C. 4, 1, your good-will towards me.

1262. A possessive pronoun or adjective is sometimes used for the objective genitive: as,

(a.) odio tuo, T. Ph. 1016, from hate to thee. tua fiducia, V. 5, 176, from his reliance on you. aspectuque suo, Lucr. 1, 91, and at the sight of her. (b.) metus hostīlis, S. J. 41, 2. fear felt of the enemy. servilis percontātio, DO. 2, 327, crossquestioning of the servant-girls. firmus adversus militarem largitionem, Ta. H. 2, 82, dead-set against any largess to the military.

II. THE GENITIVE WITH ADJECTIVES.

1263. (1.) The genitive is used with many adjectives to denote the object.

Such are chiefly adjectives meaning (a.) desirous, (b.) knowing, or remembering, (c.) participating, controlling, or guilty, (d.) full, and most of their opposites: as, (a.) aurī cupidus, Pl. Poen. 179, eager for gold. sapientiae studiosos, id est enim philosophos, TD. 5, 9, devotees of wisdom, for that is what 'philosophers' means. So also aemulus, avidus, fastīdiosus, invidus. (b.) gnārus rēī pūblicae, Br. 228, familiar with government. rēī militāris perītissimus, 1, 21, 4, a master of the art military. hominēs adulēscentulos, inperītos rērum, T. Andr. 910. mere hobbledehoys, not up in the world's ways. imperītus morum, RA. 143, behind the times. immemor beneficiorum, memor patriae, Ph. 2, 27, forgetful of kindnesses, never forgetting his country. So also conscius, consultus, Inscius, Insolēns, Insolitus, Insuētus, iēūnus, providus, prūdēns, rudis. (c.) praedae participēs, S. acas. C. 3, 82, 1, sharing in the booty. manifestus tantī sceleris, S. I. 35, 8, caught in committing this atrocious crime. expers gloriae, IP. 57, without a share in the glory. So also adfinis, compos, consors, exhērēs, potēns, reus. (d.) negotī plēnus, Pl. Ps. 380, full of business. fons plēnissimus piscium, V. 4, 118, a fountain swarming with fish. referto praedonum marī, IP. 31, when the sea was crammed with corsairs. So also fertilis, inops, liberālis, nūdus, profiūsus.

1264. In poetry and late prose, a great many other adjectives of these meanings, besides those mentioned above, are also used with the genitive. Such are principally: (a.) avārus, cūriōsus, incūriōsus, secūrus. (b.) nescius, praesāgus, praescius, scītus. (c.) exsors, immūnis, impos, impotēns, innocēns, innoxius, Insōns, noxius, suspectus. (d.) abundāns, dīves, egēnus, inānis, indigus, largus, parcus, pauper, prōdigus, sterilis, vacuus.

1265. With conscius and the genitive of a thing, the dative of a person is sometimes added: as, tot flagitiorum exercitui meo conscius, Ta. 1, 43, a participant with my army in so many outrages. Sometimes conscius has the dative of a thing: as, mens conscius factis, Lucr. 3, 1018, the mind of guilt aware.

1266. (2.) The genitive of the object is often used with present participles which express permanent condition.

These participles are chiefly from verbs which have a transitive use. Not common in old Latin: as, amantem uxōris, Pl. As. 857, devoted to his wife. fugitāns lītium, T. Ph. 623, inclined to dodge a suit at law. Very common in Cicero: as, semper appetentēs glōriae praeter cēterās gentīs fuistis, IP. 7, you have always been more hungry for glory than any other nation. Especially in set expressions: as, homo amantissimus patriae, Sull. 34, vir amantissimus rēi pūblicae, C. 4, 13, ever a devoted patriot. negōtii gerentēs, Sest. 97, business men. aliēni appetēns, DO. 2, 135, S. C. 5, 4, always hankering after other people's things. In Caesar seldom: as, fugiēns labōris, C. 1, 69, 3, apt to shirk exertion.

1267. The genitive is hardly ever found with adjectives in -ax (284): as, hūius rēt mendācem, Pl. As. 855, untruthful in this point. But in poetry, from Vergil and Horace on, and in late prose, a few genitives occur with adjectives whose parallel verbs have a transitive use, such as capāx, edāx, tenāx, &c.: as, tempus edāx rērum, O. 15, 234, thou all-devourer—time.

1268. Some of the adjectives which usually take the genitive have occasionally other constructions.

Thus, with adfinis the dative also occurs (1200), rarely with aemulus (1183); the ablative with adjectives of fulness, as dives, plēnus, and refertus (1387); iure with consultus and peritus (1385). For vacuus, &c., see 1306. Prepositional constructions also occur with these adjectives, such as the accusative with ad or in, or the ablative with ab, de, or in: see the dictionary.

1269. For the genitive, with words denoting relationship, connection, friendship, or hostility, see 1203; with similis, 1204. With dignus and indignus, worthy and unworthy, the ablative is regularly used (1392); rarely the genitive: as, non ego sum dignus salutis? Pl. Tri. 1153, don't I deserve a greeting too? indignus avorum, V. 12, 649, unworthy of my sires.

1270. (3.) In poetry and late prose, the genitive is used very freely with many adjectives of various meanings, often merely to indicate what they apply to: as,

nēmō mīlitāris rēl callidior habēbātur, Ta. H. 2, 32, at soldiering nobody was thought to have a greater knack. vetus operis ac labōris, Ta. 1, 20, an o'd hand at the toil and moil of army life. aevī mātūrus Acestes, V. 5, 73, Acestes, ripe in years. sērl studiōrum, H. S. 1, 10, 21, what laggards at your books. integer vītae scelerisque pūrus, H. 1, 22, 1, the man unspotted in his life and clean of sin. fessī rērum, V. 1, 178, in travail spent. satin tū sānu's mentis aut animī tuī? Pl. Tri. 454, art thou quite right in thy five wits? (1339).

III. THE GENITIVE WITH VERBS.

VERBS OF VALUING.

1271. A few neuter adjectives of quantity are put in the genitive with verbs of valuing to denote the amount of estimation; such genitives are:

māgnī; plūris, plūrimī; parvī, minōris, minimī; tantī, quantī.

The verbs with which these genitives are used are aestimo, duco, facio, habeo, pendo, puto, and sum; rarely existimo: as, magni opera dius aestimata est, N. 24, 1, 2, his services were rated high. non magni pendo, Pl. As. 460, I don't care much. sua parvi pendere, S. C. 12, 2, a setting small store by what they had of their own. Verresne tibi tanti fuit? V. I, 77, was Verres so important in your eyes? est mihi tanti. C. 2, 15, it is well worth my while. quanti is a civibus suis fieret ignorabas? V. 4, 19, did not you know how the man was prized by his own townsmen? Rarely maximi: as, maximi aestimare, Clu. 159, to think all the world of.

1272-1278.] Sentences: The Simple Sentence.

1272. In expressions of worthlessness, other genitives are also used thus; such are nihili, or, usually with a negative, assis, flocci, nauci, pill, terunci: as, non assis facis? Cat. 43, 13, car'st not a doit? So also huius: as, huius non faciam, T. Ad. 163, I shall not care a snap.

1273. With aestimo, the ablatives magno and permagno are sometimes used: as, quid? tū ista permagno aestimas? V. 4, 13, tell me, do you rate that sort of thing very high yourself? Compare 1390.

1274. The genitives tanti and quanti, plūris and minōris are also used with verbs of buying and selling, hiring and letting, and costing. But other words are put in the ablative with these verbs: see 1391. For māgnī, &c., with rēfert and interest, see 1279.

1275. A similar genitive occurs in one or two set forms, such as aequi bonique dicō, or faciō, aequi faciō, and boni cōnsulō: as, istūc, Chremēs, aequi bonique faciō, T. Hau. 787, I count that, Chremes, fair and good. aequi istūc faciō, Pl. MG. 784, that's all the same to me.

THE VERBS refert AND interest.

1276. refert and interest, it concerns, are much alike in meaning and in construction. But with refert, the person concerned is oftenest expressed in old Latin, less frequently in classical Latin; with interest, the person or thing concerned is first expressed by Cicero.

- 1277. (1.) With refert and interest, a first or second person concerned is denoted by the possessive pronoun forms mea, tua, nostra, vestra; and the third person reflexive by sua: as,
- (a.) quid id refert meë? Pl. Cur. 395, what's that to me? tuë istüc refert mäxume, Pl. Tri. 319, that is of most concern to thee. non suë referre, Quinct. 19, that it did not concern him. non nostrë magis quam vestrë refert vos non rebellëre, L. 34, 17, 7, it is not more for our interest than for your own that you should not make war again. Without the verb: as, quid istüc nostrë, or quid id nostrë? T. Ph. 800, 940, what's that to us? (b.) tuë et meë mëxime interest të valëre, Fam. 16, 4, 4, your health is a matter of the highest importance to you and to me. vestrë hoc mëxime interest, Sull. 79, this is of vital moment to you.
- 1278. (2.) With interest, a third person or thing concerned is denoted by the genitive. Also with refert, a few times from Sallust on: as,
- (a.) quid ēius intererat? RA. 96, what concern was it of his? interesse rēl pūblicae sē cum Pompēiō colloquī, Caes. C. 1, 24, 5, that it was of importance to the common weal that he should have a parley with Pompey.

 (b.) faciundum aliquid, quod illorum magis quam suā rētulisse vidērētur, S. I. 111, 1, that he must do something which should seem more for the other side's good than his own. For the accusative with ad with these verbs, or for the dative with rēfert, see the dictionary.

1279. The matter of concern is expressed by a sentence or infinitive, or by a neuter pronoun; rarely by an appellative: as, non quo meä interesset loci nātūra, Att. 3, 19, 1, not that the character of the place concerned me. The degree of concern is expressed by an adverb, as māgnopere, by a neuter accusative, as multum, or by a genitive of estimation, māgni, permāgni, plūris, parvi, tanti, quanti (1271).

JUDICIAL VERBS.

- 1280. Verbs of accusing, convicting, condemning, and acquitting, take a genitive of the charge: as,
- C. Verrem insimulat avāritiae, V. 1, 128, he charges Verres with avarice. accūsātus est proditionis, N. 1, 7, 5, he was charged with treason. capitis arcēssere, D. 30, accuse on a capital charge. proditionis damnātus est, N. 2, 8, 2, he was convicted of treason. Pollis pecūniae pūblicae est condemnātus, Flace. 43, Pollis was condemnad for embezsiement of government money. māiestātis absolūti sunt permulti, Clu. 116, a good many were acquitted of high treason. With this genitive, an ablative, crīmine, indicio, nomine, or lēge, is sometimes expressed (1377): as, nē quem umquam innocentem iūdicio capitis arcēssās, Off. 2, 51, that you are never to accuse any innocent man on a charge affecting his status as a citizen.
- 1281. The charge is sometimes denoted by a prepositional construction: as, sescenti sunt, qui inter sicarios et de veneficiis accusabant, RA. 90, there are hundreds and hundreds that brought charges of murder, by steel and by poison. So also de alea, of gambling, in Cicero regularly de pecuniis repetundis, of extortion, and necessarily de vi, of an act of violence, as vis has no genitive. For the neuter accusative, see 1172.
- 1282. The penalty also is sometimes denoted by the genitive: as, cupio octupli damnārī Apronium, V. 3, 28, I want to have Apronius condemned to a payment of eightfold. damnātusque longī Sisyphus Aeolidēs laboris, H. 2, 14, 19, and Sisyphus the Aeolid, amerced with penance long. Sometimes by the ablative: as, capite, V. 5, 109. So usually from Livy on, when the penalty is a definite sum of money or fractional part of a thing.

IMPERSONAL VERBS OF MENTAL DISTRESS.

1283. A genitive of the thing, commonly with an accusative of the person, is used with five impersonals of mental distress:

miseret, paenitet, piget, pudet, taedet: as,

tûl më miseret, mêl piget, E. in Div. I, 66, I pity thee, I loathe myself. frātris mē pudet pigetque, T. Ad. 391, my brother stirs my shame and my disgust. mī pater, mē tûl pudet, T. Ad. 681, dear father, in thy presence I'm abashed. galeātum sēro duellī paenitet, J. I, 169, too late, with casque on head, a combatant rețenteth him of war. So also miserētur, and in old Latin inceptively, miserēscit, commiserēscit.

1284. These verbs sometimes have a sentence or a neuter pronoun as subject: as, non te haec pudent? T. Ad. 754, does not this make thee blush for shame? Rarely an appellative: as, me quidem haec condicio non paenitet, Pl. St. 51, for my part, with my wedded state I'm well content. Or a person: as, pudeo, Pl. Cas. 877, I feel ashamed. For participles and gerundives, see 817.

1285-1291.] Sentences: The Simple Sentence.

1285. The genitive is used with the personals misereor or misereo, and in poetry with miseresco: as,

aliquando miseremini sociorum, V. 1, 72, do take pity on your allies, it is high time. neminis miserere certumst, quia mei miseret neminem, Pl. Cap. 764, I'm bound to care for nobody, as no one cares for me. Arcadii miserescite regis, V. 8, 573, take pity on the king of Arcady.

1286. Personal verbs of desiring, loathing, admiring, and dreading, sometimes take the genitive: as, pol, quamquam domi cupio, opperiar, Pl. Tri. 841, although I yearn for home, I vow I'll wait (1263). fastidit mei, Pl. Aul. 245, he views me with disdain (1263). illstitiaene prius mirer, belline laborum? V. 11, 126, thy justice first shall I admire? thy toils in war? ne tui quidem testimonii veritus, All. 8, 4, 1, not having any awe about your recommendation either.

VERBS OF MEMORY.

1287. The genitive is used with verbs of remembering and forgetting: as,

vivorum memini, nec tamen Epicuri licet oblivisci, Fin. 5, 3, I remember the living, and yet it will not do for me to be forgetful of Epicurus. reminisceretur incommodi populi Romani, 1, 13, 4, he had better call to mind the rebuff dealt out to Rome. flagitiorum suorum recordabitur, Pis. 12, he will bethink him of his abominable actions. oblitusque meorum obliviscendus et illis, H. E. 1, 11, 10, and friends forgetting and by friends forgot. See 1263.

1288. With verbs of remembering and forgetting the thing is sometimes expressed by the accusative, and regularly when it is a neuter pronoun. meminī takes also the accusative of a person we have known: as, Cinnam meminī, vidī Sūllam, Ph. 5, 17, I can remember Cinna, I have seen Sulla. recordor takes the accusative much oftener than the genitive.

1289. The ablative also with dē occurs with meminī: as, dē pallā mementō, Pl. As. 939, don't forget about the gown. Likewise with recordor, particularly of persons: as, recordare dē cēterīs, Sull. 5, bethink yourself about the rest of the men.

1200. The impersonal venit in mentem also takes the genitive: as, venit mihî Platonis in mentem, Fin. 5, 2, Plato comes into my head; very exceptionally the ablative with de. But the verb in this combination is often used personally, with the thing occurring to the mind as the subject, and regularly in Cicero, when it is res or genus, or a neuter pronoun.

1291. Verbs of reminding take the accusative of a person and sometimes with it the genitive of a thing: as,

admonēbat alium egestātis, alium cupiditātis suae, S. C. 21, 4, he reminded one man of his beggary, another of his greed. So also commoneō, commonēfaciō, and, in Tacitus only, moneō. Oftener however the thing is in the ablative with dē, or, if it is a neuter pronoun or adjective, in the accusative (1172). Rarely a substantive equivalent to a neuter pronoun: as, eam rem nōs locus admonuit, S. I. 79, 1, the place has reminded me of that.

VERBS OF PARTICIPATION AND MASTERY.

1292. Verbs of participation and mastery sometimes take the genitive in old Latin and in poetry: as, servom sui participat consili, Pl. Cist. 163, she makes a and in poetry: as, servom sui participat consils, Pl. Cist. 163, she makes a slave a sharer in her flot (1263). qua Daunus agrestium regnivit populorum, H. 3, 30, 11, where Daunus was the lord of rural folk (1260). So, even in prose, potior, which usually has the ablative (1379): as, totius Galliae sese potiri posse sperant, 1, 3, 8, they hope they can get the masters over the whole of Gaul. Especially with persons, or with the genitive plural rerum: rerum potior, get to be, or often, am, master of the situation, or I am monarch of all I survey. Similarly in Tacitus apiscor, adipiscor: as, arma, quis Servius Gallba rerum adeptus est, Ta. 3, 55, the war by which Galba became master of the throne. In Plautus credo sometimes has the genitive of a thing and dative of a person.

VERBS OF FULNESS AND WANT.

1293. The genitive is sometimes used with verbs of filling, abounding. and lacking, as it is with the corresponding adjectives (1263): as,

convivium vicinorum cotidie compleo, CM. 46, I fill out a dinnerparly every day with neighbours. have res vitae me, soor, saturant, Pl. St. 18, these things, my sister, sicken me of life. terra ferarum nunc etiam scatit, Lucr. 5, 39, still teems the earth with ravin beasts. So with egeo sometimes: as, egeo consilii, Att. 7, 22, 2, I am in need of some advice. And usually with indigeo: as, hoc bellum indiget celeritatis, Ph. 6, 7, this war requires rapid action. But, from Livy on, the ablative is commoner with indigeo: see 1305.

1294. With verbs of separating and abstaining, the ablative is regularly used (1302). But the genitive is sometimes found in poetry: as, me omnium laborum levas, Pl. R. 247, thou riddest me of all my woes. abstincto irarum calidaeque rixae, H. 3, 27, 69, from bursts of rage keep thou and hot affray.

IV. THE GENITIVE OF EXCLAMATION.

1295. In poetry, the genitive with an adjective in agreement occurs two or three times in exclamation: as, foederis heu taciti, Prop. 5, 7, 21, alas, that secret covenant. Usually the nominative (1117), or the accusative (1149).

THE ABLATIVE.

1296. The ablative is used principally with verbs and their participles, or with adjectives, and consists of three cases that were originally distinct.

1297. I. The ABLATIVE proper denotes that from which something parts or proceeds (1302).

Digitized by Google

1298-1302.] Sentences: The Simple Sentence.

The ablative proper is often accompanied by the prepositions ab, de, ex, prae, pro, sine, or tenus.

1298. With the ablative proper two other cases, originally distinct, a locative case and an instrumental case, were confounded, and merged under the common name of the ablative.

1299. II. The LOCATIVE case denotes the place in, at, or on which action occurs. A few forms of the locative proper are still preserved (1331). But ordinarily the locative ablative is used to denote the place where (1342).

The locative ablative is often accompanied by the prepositions in or sub.

1300. III. The INSTRUMENTAL case denotes that by which or with which a main person or thing is attended (1356).

The instrumental ablative is often accompanied by the prepositions cum or coram.

1301. The ablative or locative is sometimes attached immediately to a substantive.

Thus, (a.) sometimes to a substantive which denotes or implies action: as, interitus ferro, destruction with the sword, like intereo ferro; see 1307, 1331, 1342, 1376, 1377. (b.) In constructions in which the ablative is due to an older combination with a verb: as, vir singulari virtute, a man of unexampled bravery. See 1309 and 1375.

I. THE ABLATIVE PROPER.

THE ABLATIVE OF SEPARATION AND WANT, AND OF DEPARTURE.

1302. Verbs of separation take an ablative of the thing from which separation takes place: as,

(a) caruit ford posted Pompēius, caruit senātū, caruit pūblicd, Mil. 18, after that Pompey had to keep away from the market place, from the senate, from highways and byways. adhūc Q. Ligārius omnī c¹¹pā vacat, Lig. 4, thus fur Ligarius proves devoid of any guill. eged consilid, Alt. 15, 1, A, 5, I need advice (1305). (b.) Italiā prohibētur: non tū eum patriā prīvāre, quā caret, sed vītā vīs, Lig. 11, he is kept out of Italy; you want to deprive him not of his country, from which he is debarred, but of life. līberēmus cūrā populum Romānum, L. 39, 51, 9, Hannibal's words when he took poison, 183 B. C, let me relieve Rome of anxiety.

1303. This ablative is used (a.) with such verbs as mean abstain, abstined, desisto, superseded; am devoid of, cared, vaco; need, eged; and in addition to the accusative of the object, (b.) with verbs used transitively, such as mean keep off, arced, exclude and interclude, prohibed; drive away, remove, pello, moved, and their compounds; free, expedio, libero, levo, solvo and exsolvo; deprive, orbo, privo, spolio, nudo, fraudo.

1304. A preposition, ab or ex, is often used with these verbs, and regularly when the ablative denotes a person. But careo and egeo, and exsolvo and levo, never have a preposition.

1305. With egeō, the genitive is sometimes used, and often with indigeō: see 1293. Also in poetry, with verbs of abstaining and separating: see 1294.

1306. The ablative of separation is sometimes used with such adjectives as ali-Enus, expers, liber, nūdus, vacuus, &c.: as, negant id esse alienum māiestāte deōrum, Div. 2, 105, they maintain that this is not at variance with the greatness of the gods. vacuī cūrīs, Fin. 2, 46, devoid of cares. arce et urbe orba sum, E. Tr. 114, of tower and town bereft am 1. But sometimes the genitive: see 1263 and 1264; sometimes also prepositional constructions: for these, and particularly for the different constructions of alienus, see the dictionary.

TOWN AND ISLAND NAMES.

1307. (1.) Proper names of towns and of little islands are put in the ablative with verbs of motion, to denote the place from which motion proceeds: as,

Dāmarātus fūgit Tarquiniōs Corinthō, TD. 5, 109, Damaratus ran away from Corinth to Tarquinii. sīgnum Carthāgine captum, V. 4, 82, the statue carried off from Carthage. Megaribus, Pl. Per. 137, from Megara. Lēmnō, Pl. Tru. 90, from Lemnos. Rōmā accēperam litteris, Att. 5, 8, 2, I had got a letter from Rome. Rarely with a substantive of motion (1301): as, dē illius Alexandrēā discessū, Att. 11, 18, 1, about his departure from Alexandrea. Also in dating letters: as, v kal. Sextīl., Rēgiō, Fam. 7, 19, Regium, 17 July: less often the locative: as, Idibus Iūniia, Thessalonicae, QFr. 1, 3, 10, Thessalonica, 13 June. Like a town name: Ācherunte, poet. in TD. 1, 37, from Acheron. With an attribute: ipsā Samō, V. 1, 51, from Samos itself. Teānō Sidicīnō, Att. 8, 11, B, 2, from Sidicinian Teanum.

1308. Singular town or island names sometimes have ex in old Latin: thus, Carystō, Pl. Ps. 730, from Carystus, or, ex Carystō, Ps. 737, indifferently. ex Andrō, T. Andr. 70, from Andros. In classical Latin, town names rarely have ab: as, ab Athēnis proficiscī, Serv. in Fam. 4, 12, 2, to start from Athens; chiefly of neighbourhood: as, ab Gergoviā, 7, 43, 5: 7, 59, 1, from camp at Gergovia; or direction: as, ā Salōnīs ad Oricum, Caes. C. 3, 8, 4, from Salonae to Oricum; regularly with longē: as, longē ā Syrācūsis, V. 4, 107, far from Syracuse.

1309. The ablative of a town or country name is rarely attached immediately to a substantive, to denote origin: as, Periphanēs Rhodo mercātor dīves, Pl. As. 499, Periphanes from Rhodes a chapman rich. videō ibl hospitem Zacynthō, Pl. Mer. 940, I see the friend there from Zacynthus. Rarely in Cicero: as, Teānō Apulō laudātōrēs, Clu. 197, eulogists from Apulian Teanum; in Caesar twice. In Livy with ab only: as, Turnus ab Arīciā, L. 1, 50, 3. Turnus from Aricia. But the Roman tribe one belongs to, is regularly in the ablative: as, Q. Verrem Rōmiliā, sc. tribū, V. a. pr. 1, 23, Verres of the tribe Romilia.

1310-1315.] Sentences: The Simple Sentence.

1310. With a verb, country names regularly have a preposition, and always in Cicero, Sallust, and Livy: as, & Cilicia decedens. Br. 1, going away from Cilicia. The ablative alone is rare: as, Aegyptō adveniō domum, Pl. Most. 440, from Egypt I come home. Chiefly in Tacitus: as, Aegyptō remeans, 2, 6, coming back from Egypt. In Caesar, by attraction: cōgēbantur Corcyrā atque Acarnāniā pābulum supportāre, C. 3, 58, 4, they were forced to fetch fodder from Corcyra and even Acarnania.

- 1311. (2.) The ablatives domō and rūre, and in poetry humō, are used like proper names of towns: as,
- (a.) domō excesserant, 4, 14, 5, they had gone away from home. Also metaphorically: as, domō doctus, Pl. Mer. 355, by home-experience taught. (c.) rure rediit uxor mea, Pl. Mer. 705, my wife's come back from out of town. (c.) humō, in Vergil first: as, vix oculōs attollit humō, O. 2, 448, scarce from the ground her eyes she lifts.

THE ABLATIVE OF SOURCE, STUFF, OR MATERIAL.

1312. The verb nascor and participles of origin take an ablative to denote parentage or rank in life.

Such participles are: nātus, prōgnātus, and ortus; in poetry and late prose, also crētus, ēditus, generātus, genitus, satus, and oriundus: as, (a.) Rōmulus deō prōgnātus, L. I, 40, 3, Romulus, sprung from a god. dīs genite, V. 9, 642, thou sired of gods. Of a parent, ex is sometimes used: as ex mē hīc nātus nōn est, T. Ad. 40, he's not my son; and of remoter ancestors, ab. (b.) locō nātus honestō, 5, 45. 2, respectably descended. summō locō nātus, 5, 25, I, of high birth. familiā antīquissimā nātum, 33, 4, a member of an old family. Rarely with dē: as, quō dē genere gnātust Philocrates? Pl. Cap. 277, what is the parentage of Philocrates?

- 1313. The ablative with an attribute, attached to a substantive, sometimes denotes stuff or material: as, aere cavo clipeum, V. 3, 286, a targe of hollow bronze. perenni fronde coronam, Lucr. 1, 118, a crown of amaranthine leaf. 80-lidoque adamante columnae, V. 6, 552, and pillars of the solid adamant. This construction borders closely on the ablative of quality (1375). Rarely without an attribute: as, pictas abiete puppis, V. 5, 663, painted sterns of fir.
- 1314. A substantive denoting stuff or material is generally put in the ablative with de or ex; thus,
- (a.) Directly with a substantive: pōcula ex aurō, V. 4, 62, cups of gold.
 (b.) Oftener with an auxiliary verb or participle: signum erat hōc Cupidinis & marmore, V. 4, 5, this statue of Cupid was made of marble. scūtis ex cortice factis, 2, 33, 2, with long shields made out of bark. ex ūnā gemmā pergrandī trūlla excavāta, V. 4, 62, a ladle scooped out of a single enormous semi-precious stone.
- 1315. The ablative with forms of facio and sum denotes that with which or to which something is done: as, quid hoc homine facias? Sest. 29, what can you do with such a fellow? quid me filet? T. Andr. 709, what will become of me? But often the dative (1205): as, quid tib! faciam? Att. 7, 3, 2, what shall I do to you? Or the ablative with de: as, de fratre quid fiet? T. Ad. 996, as to my brother, what will come to pass?

THE ABLATIVE OF CAUSE, INFLUENCE, OR MOTIVE.

1316. The ablative is used to denote cause, influence, or motive: as,

madeō metū, Pl. Most. 395, I'm drenched with dread. tū imprūdentiā lāberis, Mur. 78, you, sir, slip from inadvertence. maerōre et lacrimīs cōnsenēscēbat, Clu. 13, she just pined away in sorrow and tears. Irā incendor, Pl. Ps. 201, I'm getting hot with wrath. premor lūctū, Att. 3, 22, 3, Iam bowed down with grief. quod ego nōn superbiā faciēbam, DO. 1, 99, I did not act thus from supercilionsness, not I. nōn movētur pecūniā, V. 4, 18, he is not moved by money. boat caelum fremitū virūm, Pl. Am. 232, the welkin rings with roar of men. dēlictō dolēre, corrēctione gaudēre, L. 90, be pained by the sin, take pieasure in the reproof. aetāte nōn quis optuērier, Pl. Most. 840, owing to age thou canst not sec. Iovis iūssū veniō, Pl. Am. prol. 19, at Jove's behest I come. Sēiānus nimiā fōrtūnā sōcors, Ta. 4. 39, Sejanus giddy with over-prosperity. ferōx praedā glorāque exercitus, Ta. H. 1, 51, the army flushed with booty and glory. exercitūs nostrī interitus ferrō, Pis. 40, the annihilation of our army by the sword (1301).

1317. Instead of the ablative, other constructions often occur, especially with verbs used transitively; such are:

(a.) Prepositional constructions with de or ex, and in Livy with ab; also with ob, per, or propter: as, multi in oppidum propter timorem seese recipiunt, Caes. C. 2, 35, 6, a good many retreated to the town from fear. Sometimes with prae: as, prae amore exclusti hunc fores, T. Eu. 98, it was for love you turned him out of doors: in classical Latin, usually of hindrance: as, solem prae iaculorum multitudine non videbitis, TD. 1, 101, you won't see the sun for the cloud of javelins. (b.) Circumlocutions with cause, less frequently with gratia (1257). (c.) Ablatives absolute, or participles, particularly auxiliary participles with an ablative to express cause, oftener motive, such as captus, ductus, excitatus or incitatus, impulsus, incensus, inflammatus, motus, perterritus: as, nonnulli pudore adducti remanebant, 1, 39, 3, some stuck by from shame.

1318. The person by whom the action of a passive verb is done, is denoted by the ablative with ab or \(\tilde{a}\). Also occasionally with verbs equivalent to a passive, such as cad\(\tilde{b}\), intere\(\tilde{b}\), v\(\tilde{e}\), v\(\tilde{e}\), \(\tilde{c}\), \(\tilde{c}\). Things or animals are sometimes represented as persons by the use of \(\tilde{a}\)b: as, \(\tilde{a}\) animus bene \(\tilde{i}\)n\(\tilde{c}\) animus \(\tilde{a}\) n\(\tilde{t}\) \(\tilde{c}\). I, 13, \(a\) soul meetly fashioned by dame nature.

1319. In poetry, an ablative denoting a person, with an adjective in agreement, is sometimes equivalent to an expression with an abstract substantive: as, et adsiduo ruptae lectore columnae, J. 1, 13, and pillars by persistent reader riven, i. e. adsiduitate lectoris, or adsidua lectione. curatus inaequali tonsore capillos, H. E. 1, 1, 94, my locks by unsymmetric barber trimmed.

THE ABLATIVE OF COMPARISON.

1320. (1.) The ablative may be used with a comparative adjective, when the first of two things compared is in the nominative, or is a subject-accusative.

1321-1325.] Sentences: The Simple Sentence.

Such an ablative is translated by than: as, (a.) lûce sunt clăriora nobis tua consilia, C. I, 6, your schemes are plainer to us than day. O mâtre pulchră filia pulchrior, H. I, 16, I, O daughter fairer than a mother fair. Particularly in sentences of negative import: as, quis Karthāginiensium plūris fuit Hannibal? Sest. 142. of all the sons of Carthage, who was rated higher than Hannibal? nec mihi est të iūcundius quicquam nec cārius, Fam. 2, 10, I, and there is nothing in the world nearer and dearer to me than you. (b.) illud cognosces profecto, mihi të neque căriorem neque iūcundiorem esse quemquam, Fam. 2, 3, 2, one thing I am sure you will see, that there is nobody nearer and dearer to me than you.

1321. (2.) The ablative of comparison is occasionally used when the first member of comparison is an accusative of the object: as,

exegi monumentum aere perennius, H. 3, 30, I, I have builded up a monument more durable than bronze. Particularly so in sentences of negative import: as, hōc mihī grātius facere nihil potes, Fam. 13, 44, you can do nothing for me more welcome than this. Also with predicate adjectives dependent on a verb of thinking (1167): as, Hērodotum cūr vērāciorem dūcam Enniō? Div. 2, 116, why should I count Herodotus any more truthful than Ennius? Regularly when the second member of comparison is a relative: as, quā pecude nihil genuit nātūra fēcundius, DN. 2, 160, nature has created nothing more prolific than this animal, i.e. the sow.

1322. (3.) In poetry, the ablative of comparison may be used with the first member of comparison in any case: as, Lücili ritü, nostrüm meliöris utrõque, H. S. 2, 1, 29, after Lucilius's way, a better man than thou or I.

1323. (4.) In sentences of negative import, the ablative is sometimes used with alter and alius, as with a comparative: as, neque mest alter quisquam, Pl. As. 492, and there's no other man than 1. nec quicquam aliud libertate communi quaesisse, Brut. and Cass. in Fam. 11, 2, 2, and to have aimed at nothing else than freedom for all. But in prose, quam is commonly used.

1324. (1.) The second member of comparison is often introduced by quam, than, or in poetry by atque or ac. This member, whatever the case of the first member, is sometimes made the subject of a form of sum in a new sentence: as,

meliorem quam ego sum suppono tibl, Pl. Cur. 256, I give you as a substitute a better than I am myself. verba M. Varronis, hominis quam fuit Claudius doctioris, Gell. 10, 1, 4, the words_of Varro, a better scholar than Claudius ever was. ut tibl maiori quam Africanus fuit, me adiunctum esse patiare, Fam. 5, 7, 3, so that you will allow me to be associated with you, a bigger man than Africanus ever was.

1325. (2.) When the first member is in the nominative or accusative, quam is commonly a mere coordinating word, with both members in the same case: as,

(a.) plūris est oculātus testis ūnus quam aurītī decem, Pl. Tru. 490, a single witness with an eye rates higher than a dozen with the ear. (b.) tū velim exīstimēs nēminem cuiquam neque cāriorem neque iūcundiōrem umquam fuisse quam tē mihī, Fam. 1, 9, 24, I hope you will be convinced that nobody was ever nearer and dearer to anybody than you to me.

- 1326. An introductory ablative of a demonstrative or relative pronoun sometimes precedes the construction with quam: as, quid hoc est clarius, quam omnis Segestae matronas et virgines conveniese? V. 4, 77, what fact is there better known than this, to wit, that all the women in Segesta, married and single, came streaming together?
- 1327. The ablative is sometimes used with comparative adverbs also.

So particularly in sentences of negative import: as, nihil lacrimā citius ārēscit, Corn. 2, 50, nothing dries up quicker than a tear. Less frequently in positive sentences in prose: as, fortūna, quae plūs consilis hūmānis pollet, contrāxit certāmen, L. 44, 40, 3, fortune, who is mightier than the devices of man, precipitated the engagement. Very commonly, however, quam is used with comparative adverbs.

1328. Designations of number or extent are often qualified by amplius, longius, or plus, over, or by minus, under.

The word thus qualified is put in the case which the context would require without any such qualification: as, plūs septingenti capti, L. 41, 12, 8, over seven hundred were taken prisoners. tēcum plūs annum vixit, Q. 41, he lived with you over a year (1151). cum equis plūs quingentis, L. 40, 32, 6, with over five hundred horses. Less frequently with quam. When these words are felt as real substantives in the nominative or accusative, the ablative of comparison may be used (1320): as, plūs trīduō, RA. 74, more than three days.

1329. In expressions of age with natus, the adjectives maior and minor are used as well as amplius and minus, and with the same construction (1328): as, annos natus maior quadraginta, RA. 39, over forty years ald. For other constructions, see the dictionary. Similarly confectus aquae digitum non altior unum, Lucr. 4, 414, a pool no deeper than a finger's breadth (1130). But commonly with comparative adjectives of extent, quam is used, or the ablative (1320): as, palus non latior pedibus quinquaginta, 7, 19, 1, a marsh not wider than fifty feet.

1330. With a comparative adjective or adverb, the ablatives opinione, exspectatione, and spe, and some others, chiefly in poetry, take the place of a sentence with quam: as,

opinione melius, Pl. Cas. 338, better than you thought. minora opinione, Caes. C. 2, 31, 5, more insignificant than is thought. latius opinione disseminatum est hoc malum, C. 4, 6, this infection is more sweeping than anybody dreams. spe omnium serius, L. 2, 3, 1, later than was generally expected.

II. THE LOCATIVE ABLATIVE.

(A.) THE LOCATIVE PROPER.

1331. (1.) Singular proper names of towns and of little islands are put in the locative to denote the place in or at which action occurs: as,

quid Romae faciam? mentiri nescio, J. 3, 41, what can I do in Rome? I don't know how to lie. Corinthi et Karthägini, Agr. 2, 90, at Corinth and at Carthage. Lacedaemoni, N. praef. 4, in Lacedaemon. Tiburi, Att. 16, 3, 1, at Tibur. Rhodi, Fum. 4, 7, 4, at Rhodes. mānsionēs diutinae Lēmni, T. Ph. 1012, protracted stays at Lemnos (1301). Sometimes in dates: as, data Thessalonicae, Att. 3, 20, 3, given at Thessalonica (1307). The locative rarely means near: as, Antii, L. 22, I, 10, round about Antium. In Plautus only two singular town names with consonant stems occur, and these regularly in the locative, Carthägini and Sicyōni, three times each; once in a doubtful example, Sicyōne, Cist. 128. Terence has no examples of these stems. From Cicero on, the locative ablative is commoner with them (1343).

1332. With an adjective attribute also, the locative is used: as, Teānī Āpulī, Clu. 27, at the Apulian Teanum. Suessae Auruncae, L. 32, 9, 3, at the Auruncan Suessa. The appellative forum, market place, used, with an attribute, as a proper name, is sometimes put in the accusative with ad: as, Claternae, ad Forum Cornelium, Fam. 12, 5, 2, at Claterna and at Forum Cornelium; sometimes in the locative ablative: Foro Iuli, Plin. Ep. 5, 19, 7.

1333. When the locative is further explained by an appellative following, the appellative is put in the locative ablative, either alone, or with in: as, Antiochiae, celebri quondam urbe, Arch. 4, at Antioch, once a bustling town. Neapoll, in celeberrimo oppido, RabP. 26, at Neapolis, a town swarming with people. An appellative in the ablative with in may be further defined by a proper name in the locative: as, duabus in insulis, Melitae et Sami, V. 5, 184, in two islands—at Melita and Samos. in oppido, Antiochiae, Att. 5, 18, 1, within town walls—at Antioch. in secessil, Apolloniae, Suet. Aug. 94, out of town—at Apollonia. Or in the ablative: as, in oppido Citlo, N. 5, 3, 4, in the town of Citium. in urbe Roma, L. 39, 14, 7, in the city of Rome.

1334. In Plautus, singular town names with stems in -\(\bar{a}\)- or -\(\mathbf{o}\)- are put in the locative ten or twelve times, in the ablative with in some fifteen times. Three such have only in, never the locative: in Anactori\(\bar{o}\), Poen. 866, in Seleuci\(\bar{a}\), Tri. 901, in Spart\(\bar{a}\), Poen. 663; furthermore, in Epidamn\(\bar{o}\), Men. 267, 380 twice, in Ephes\(\bar{o}\), B. 309, MG. 441, 778, and in Epidaur\(\bar{o}\), Cur. 341, 429, E. 540, 541, 554, but also Epidamni, Men. prol. 51. Ephes\(\bar{o}\), B. 336, 1047, MG. 648, and Epidaur\(\bar{o}\), E. Terence, who has only -\(\mathbf{o}\)- stems, uses the locative six times, the ablative with in four times: only with in: in Andr\(\bar{o}\), Andr\(\bar{o}\), 337, in Imbr\(\bar{o}\), Hec. 171. Furthermore in L\(\bar{e}\)mn\(\bar{o}\), Ph. 873, 1004, but also L\(\bar{e}\)mni, Ph. 680, 942, 1013. Also Mil\(\bar{e}\)tilde{\text{times}}, Ad. 654, Rhod\(\bar{o}\), Eu. 107, S\(\bar{o}\)nii, Eu. 519.

1335. A town name is sometimes put in the ablative with in by assimilation with a parallel in: as, in Illyricō, in ipsā Alexandrēā, Att. 11, 16, 1, in Illyricum, and at Alexandrea itself. Antiochum in Syriā, Ptolemaeum in Alexandriā esse, L. 42, 25, 7, that Antiochus was in Syria, Ptolemy at Alexandria. in monte Albāno Lāviniōque, L. 5, 52, 8, on the Alban mount and at Lavinium. Also without assimilation: as, nāvis et in Cāiētā est parāta nobis et Brundusii, Att. 8, 3, 6, we have a vessel all chartered, one in Cajeta and one at Brundusium. in Hispalī, Caes. C. 2, 18, 1, in Hispalis.

1336. With country names, the locative is very exceptional: as, Chersonësi, N. 1, 2, 4, at the Peninsula. Aegypti, Val. M. 4, 1, 15, in Egypt. Similarly Accherunti, Pl. Cap. 689, 998, Mer. 606, Tru. 749, in Acheron: Accherunte however once: Accheruntest, Pl. Poen. 431. In Sallust, Romae Numidiaeque, I. 33, 4, with assimilation of Numidiae to Romae.

1337. (2.) The locatives domi, rūrī, humī, and rarely orbī, are used like proper names of towns: as,

- (a.) cēnābō domī, Pl. St. 482, I shall dine at home. Metaphorically, domī est, nāscitur, or habeō, I can get at home, I need not go abroad for, or I have in plenty: as, id quidem domī est, Att. 10, 14, 2, as for that, I have it myscif. With a possessive pronoun or aliēnus in agreement, either the locative is used, or the ablative with in; for domuī, as, Off. 3, 99, see 594; with other adjectives the ablative with in. (b.) rūrī, T. Ph. 363, up in the country; for rūre, see 1344 and 1345. (c.) humī, on the ground, or to the ground, in Terence first: as, hunc ante nostram iānuam appōne:: obsecrō, humīne? T. Andr. 724, set down this baby at our door:: good gracious; on the ground? iacēre humī, C. 1, 26, sleeping on bare ground. (d.) orbī with terrae or terrārum: as, amplissimum orbī terrārum monumentum, V. 4, 82, the grandest monument in the wide world.
- 1338. The locatives belli, older duelli, and militiae are sometimes used in contrast with domi: as, domi duellique, Pl. Cap. prol. 68, domi bellique, L. 5, 50, 11, domi militiaeque, TD. 5, 55, militiae et domi, T. Ad. 495, at home and in the field. Rarely without domi: as, belli, RP. 2, 56, militiae. S. I. 84, 2.
- 1339. (3.) Other appellatives rarely have the locative: as, proxumae viciniae, Pl. B. 205, MG. 273, in the next neighbourhood. terrae, L. 5, 51, 9, in the earth. With verbs of suspense, doubt, and distress, and with many adjectives, animi, in soul, is not infrequent; and animi being mistaken for a genitive, mentis is also used: as, desipiedam mentis, Pl. E. 138, I was beside myself. Oftener animō (1344).
- 1340. Many original locatives have become set as adverbs: as, peregri, abroad. Particularly of pronouns: as, illi, Pl. Am. 249, off there, oftener illic; isti or istic, hic; sometimes further defined by an added expression: as, hic viciniae, T. Ph. 95, here in the neighbourhood. hic proxumae viciniae, MG. 273, here in the house next door. hic in Veneris fano meae viciniae, Pl. R. 613, here, in the shrine of Venus, in my neighbourhood. hic Romae, Arch. 5, here in Rome.
- 1341. The locative proper sometimes denotes time when: as, lūcī, by light, temperī, betimes, herī or here, yesterday, vesperī, at evening, herī vesperī, DO. 2, 13, last evening. In Plautus, die septimī, Men. 1156, Per. 260, on the seventh day, māne sānē septimī, Men. 1157, bright and early on the seventh, die crāstinī, Most. 881, tomorrow. Often with an adjective juxtaposed: as, postrīdie, the day after, postrīdie māne, Fam. 11, 6, 1, carly next day, cotidie, each day, daily, prīdie, the day before.

(B.) THE ABLATIVE USED AS LOCATIVE.

PLACE IN, ON, OR AT WHICH.

1342. (1.) Plural proper names of towns and of little islands are put in the locative ablative to denote the place in or at which action occurs: as,

mortuus Cümis, L. 2, 21, 5, he died at Cumae. Athēnis tenue caelum, crassum Thēbis, Fat. 7, in Athens the air is thin, at Thebes it is thick. locus ostenditur Capreis, Suet. Tib. 62, the place is pointed out at Capreae. Rarely with substantives of action (1301): as, mānsiō Formis, Att. 9, 5, 1, the stay at Formiae. With an attribute: Athēnis tuis, Att. 16, 6, 2, in your darling Athens. Curibus Sabīnis, L. 1, 18, 1, at the Sabine Cures.

1343. (2.) Singular proper names of towns with consonant stems are oftener put in the locative ablative than in the locative proper: as,

adulēscentium gregēs Lacedaemone vidimus, TD. 5, 77, we have seen the companies of young men in Lacedaemon. Karthāgine, Alt. 16, 4, 2, at Carthage. Tibure, H. E. 1, 8, 12, at Tibur. Nārbōne, Ph. 2, 76, at Narbo. See 1331. So also Acherunte, Lucr. 3, 984, in Acheron. Calydōne et Naupāctō, Caes. C. 3, 35, 1, at Calydon and Naupactus, with Naupāctō attracted by Calydōne. With an attribute: Carthāgine Novā, L. 28, 17, 11, at New Carthage. Acherunte profundō, Lucr. 3, 978, in vasty Acheron.

1344. (3.) A few general appellatives are used in the locative ablative without an attribute, especially in set expressions, to denote the place where: as,

terrā marique, IP. 48, by land and sea; less commonly marī atque terrā, S. C. 53, 2, by sea and land. dextrā Pīraeus, sinistrā Corinthus, Cael. in Fam. 4, 5, 4, Pīraeus on the right, Corinth on the left. Rarely, rūre, Pl. Cas. 110, H. E. 1, 7, 1, in the country, for rūrī (1337). So animō, animīs, with verbs of feeling: as, angor animō, Br. 7, I am distressed in soul, or I am heart-broken. Metaphorically: locō, (a.) in the right flace, also suō locō, or in locō. (b.) locō, instead; numerō, in the category, both with a genitive. prīncipiō, initō, in the beginning.

1345. Certain appellatives, with an attribute, often denote the place where by the locative ablative; so especially loco, locis, rûre, libro, libris, parte, partibus: as, remoto, salübri, amoeno loco, Fam. 7, 20, 2, in a sequestered, healthy, amoeno loco, 5, 51, 1, on unsuitable ground. campestribus ac démissis locis, 7, 72, 3, in level and sunken places. rûre meo, H. E. 1, 15, 17, at my own country box. rûre paterno, H. E. 1, 15, 60, J. 6, 55, on the ancestral farm. alio libro, Off. 2, 31, in another book.

1346. Substantives are often used in the locative ablative with tōtus in agreement, less often with cūnctus, omnis, or medius, to denote the place where: as, tōtā Galliā, 5, 55, 3, all over Gaul. tōtīs trepidātur castrīs, 6, 37, 6, there is a panic all over the camp. omnibus oppidīs, V. 2, 136, in all the towns. omnibus oppidīs marītimīs, Caes. C. 3, 5, 1, in all the seaports. mediā urbe, L. 1, 33, 8, in the heart of Rome. But sometimes in is used, or the accusative with per.

1347. (4.) With country names and most appellatives, the place where is generally expressed by the ablative with in. But even without an attribute, the ablative alone is sometimes used, especially in poetry: as,

Italia, V. I, 263, in Italy, litore, V. I, 184, upon the beach, corde, V. I, 209, in heart, pectore, V. I, 657, in breast, thalamo, H. I, 15, 16, in bower, umero, V. I, 501, on shoulder, Esquiliis, DN. 3, 63, on the Esquiline. Once in Plautus Alide, Cap. 330, in Elis, but eight times in Alide.

1348. The locative ablative is sometimes used with such verbs as teneo and recipio: as, (a.) Ariovistus exercitum castris continuit, 1, 48, 4, Ariovistus keft his infaniry in camp. oppido sese continebant, 2, 30, 2, they keft inside the town. (b.) oppidis recipere, 2, 3, 3, to receive inside their towns. IEX ecquis est, qui senatorem tecto ac domo non invitet? V. 4, 25, is there a monarch in the wide world that would not welcome a senator to house and home?

1349. The locative ablative is used with fido and confido, glorior, laetor, nitor, sto, and with fretus: as, barbari confisi loci natura in acie permanserunt, 8, 15, 1, the natives, trusting in the nature of their position, kept their stand in battle array. superioribus victoriis freti, 3, 21, 1, relying on their former victories. For other constructions with these words, see the dictionary.

Time at which or Time within which.

1350. (1.) The locative ablative is used to denote the point of time at which action occurs.

So particularly of substantives denoting periods or points of time, thus: hieme, 5, 1, 1, in the winter. Kalendis, H. Epod. 2, 70, upon the first, i. e. of the month. Generally with an attribute: as, primō vēre, 6, 3, 4, in the first month of spring. Mārtiis Kalendis, H. 3, 8, 1. upon the first of March. With a parallel locative (1341): vesperī eodem die, Att. 8, 5, 1, the evening of the same day.

1351. Words not in themselves denoting periods or points of time, are in the same way put in the ablative: as,

patrum nostrorum memoria, 1, 12, 5, in the memory of our fathers. non modo illis Pünicis bellis, sed etiam hac praedonum multitüdine, V. 4, 103, not only in the Punic wars of yore, but also in the present swarm of pirates. proxumis comitiis, 7, 67, 7, at the last election. spectaculis, Att. 2, 19, 3, at the shows. Especially substantives of action in -tus or -sus (235): as, solis occasa, 1, 50, 3, at sunset. adventū in Galliam Caesaris, 5, 54, 2, at Caesar's arrival in Gaul. eorum adventū, 7, 65, 5, after these people came. discessū cēterorum, C. 1, 7, when the rest went away.

1352. (2.) The locative ablative is used to denote the space of time within which action occurs: as,

paucis diebus opus efficitur, 6, 9, 4, the joò is finished up in a few days. tribus hōris Adustucam venire potestis, 6, 35, 8, in three hours you can get to Aduatuca. Quae hīc monstra fiunt, anno vix possum eloqui, Pl. Most. 505, what ghost-transactions take place here I scarce could tell you in a year. cum ad oppidum Senonum Vellaunodunum vēnisset, id bīduo circumvāliāvit, 7, 11, I, arriving at Vellaunodunum, a town of the Senons, in two days time he invested it. quicquid est, bīduo sciemus, All. 9, 14, 2, whatever it may be, we shall know in a couple of days.

1353. The ablative of the time at or within which action occurs is sometimes accompanied by in: as, in bello, 6, 1, 3, in the war. in tempore, T. Hau. 364, in the nick of time. in adulescentia, Pl. B. 410, in my young days. in tall tempore, Lucr. 1, 93, L. 22, 35, 7, in such a stress, at such an hour. in hoc triduo, Pl. Ps. 316, within the next three days. Especially of repeated action, in the sense of a or every, with numerals: as, ter in anno, Pl. B. 1127, RA. 132, three times a year. in hord saepe ducentos versus dictabat, H. S. 1, 4, 9, two hundred verses in an hour he'd often dictate off, of Lucilius, father of satire, 150-103 B. C. Other expressions of time with in, also with inter, intra, sub, &c., may be found in the dictionary.

1354. An ablative of the time within which action occurs is sometimes followed by a relative pronoun sentence, with the relative pronoun likewise in the ablative: as, quadriduō, quō haec gesta sunt, rēs ad Chrysogonum dēfertur, RA. 20, within the four days space in which this occurred, the incident is reported to Chrysogonus, i. e. four days after this occurred. diēbus decem, quibus māteria coepta erat conportārī, omnī opere effectō, 4, 18, 1, the job being all done ten days after the carting of the stuff had begun.

1355. The ablative is exceptionally used to denote duration of time: as, tota nocte continenter ierunt, 1, 26, 5, they went on and on all night without interruption. Regularly, however, the accusative (1151).

III. THE INSTRUMENTAL ABLATIVE.

(A.) THE ABLATIVE OF ATTENDANCE.

THE ABLATIVE OF ACCOMPANIMENT.

- 1356. A few indefinite designations of military forces denote accompaniment by the ablative alone, or oftener with cum: as,
- (a.) ad castra Caesaris omnibus copiis contenderunt, 2, 7, 3, they marched upon Caesar's camp with all their forces. omnibus copiis ad Herdam proficiscitur, Caes. C. 1, 41, 2, he marches before Ilerda, horse, foot, and dragoons. (b.) is civitati persuasit, ut cum omnibus copiis exirent, 1, 2, 1, well, this man induced the community to emigrate in a body, bag and baggage.
- 1357. The participles iunctus and confunctus take the ablative of the thing joined with: as, defensione functa laudatio, Br. 162, a eulogy combined with a defence. But sometimes the ablative with cum is used, or the dative (1186).

THE ABLATIVE OF MANNER.

- 1358. (1.) Certain substantives without an attribute are put in the ablative alone to denote manner; but usually substantives without an attribute have cum.
- (a.) Such adverbial ablatives are iure and iniuria, ratione et via, silentio, vitio, ordine, sponte, consuttudine, &c.: as, Aratus iure laudatur, Off. 2, &1, Aratus is justly admired. iniuria suspectum, C. 1, 17, wrongfully suspected. in omnibus, quae ratione docentur et via, O. 116, in everything that is taught with philosofhic method. silentio egressus, 7, 58, 2, going out in silence. censores vitio creati, L. 6, 27, 5, censors irregularly appointed. Ordine cuncta exposuit, L. 3, 50, 4, he told the whole story from beginning to end, i. e. with all the particulars. (b.) With cum: face rem hanc cum cura geras, Pl. Per. 198, see that this job with care thou dost cum virtute vivere, Fin. 3, 29, to live virtuously.
- 1359. (2.) The ablative of a substantive with an attribute is often used to denote manner, sometimes with cum: as,

- (a.) I pede faustö, H. E. 2, 2, 37, go with a blessing on thy foot. dat sonitä mägnö strägem, Lucr. 1, 288, it deals destruction with a mighty roar. ferärum rītū sternuntur, L. 5, 44, 6, they throw themselves down beast-jashion. apis Matinae mõre modõque operõsa carmina fingö, H. 4, 2, 27, in vay and wise of Matin bee laborious lays I mould. 'indoctus' dīcimus brevī prīmā litterā, 'īnsanus' prõductā, 'inhūmānus' brevī, 'infēlīx' longā, O. 159, we pronounce indoctus with the first letter short, insānus with it long, inhūmānus with it short, infēlīx with it long (167). tarnō consurgunt ördine rēmī, V. 5, 120, with triple bank each time in concert rise the oars. (b.) Allobroges māgnā cum cūrā suös finēs tuentur, 7, 65, 3, the Allobrogans guard their ovon territory with great care.
- 1360. With a substantive meaning way or manner, as modo, rîtû, &c., feeling or intention, as hac mente, aequo animo, condition, as ea condicione, or a part of the body, as in nûdo capite, bareheaded, cum is not used.
- 1361. Other expressions denoting manner, particularly prepositional expressions with per, may be found in the dictionary: as, per dolum, 4, 13, 1, by decail, per iocum, Agr. 2, 96, in fun, per litteräs, Att. 5, 21, 13, by letter, in writing, per vim, RA. 32, violently, per praestigiäs, V. 4, 53, by some hocus pocus or other, &c., &c. Sometimes the ablative with ex.

THE ABLATIVE ABSOLUTE.

1362. (1.) The ablative of a substantive, with a predicate participle in agreement, is used to denote an attendant circumstance of an action.

In this construction, which is called the Ablative Absolute, (a.) the present participle is sometimes used: as, nullo hoste prohibente incolumem legionem in Nantuātis perdūxit, 3, 6, 5, with no enemy hindering, he conducted the legion in safety to the Nantuates. Much oftener, however, (b.) the perfect participle: as, hoc responso dato discessit, 1, 14. 7, this answer given he went away. (c.) The future participle is also used in the ablative absolute from Livy on: as, hospite ventūro, cessābit nēmo tuorum, J. 14, 59, a visitor to come, your slaves will bustle each and all.

- 1363. A predicate ablative with a participle meaning made, kept, chosen, or the like, occurs in Cicero, Caesar, Nepos. and Livy, but is rare (1167): as, Dolābellā hoste dēcrētō, Ph. 11, 16, Dolabella having been voted an enemy of the state.
- 1364. The perfect participles of deponents used actively in the ablative absolute, are chiefly those of intransitive use, such as nātus, mortuus, ortus, profectus. From Sallust on, other perfect deponent participles also are used actively with an accusative. Cicero and Caesar use a few deponent participles, such as Emeritus, pactus, partitus, dēpopulātus, as passives, and later authors use many other participles so.
- 1365. (2.) The ablative of a substantive, with a predicate noun in agreement, is often used to denote an attendant circumstance of an action: as,

brevitātem secūtus sum tē magistro, Fam. 11, 25, 1, I aimed at brevity with you as a teacher. nātus dis inimīcīs, Pl. Most. 563, born under wrath of gods. M. Messālā et M. Pisone consulibus, 1, 2, 1, in the consulship of Messala and Piso. isto praetore vēnit Syrācūsās, V. 4, 61, in the defendant's praetorship he came to Syracuse.

1366. The nominative quisque, plerique, or ipse, sometimes accompanies the ablative absolute: as, causa ipse pro se dicta, damnatur, L. 4, 44, 10, he is condemned after pleading his case in person.

1367. The ablative absolute may denote in a loose way various relations which might be more distinctly expressed by subordinate sentences.

So particularly: (a.) Time: as, tertiā initā vigiliā exercitum ēdūcit, Caes. C. 3, 54, 2, at the beginning of the third watch he leads the army out. (b.) Cause or means: as, C. Flāminium Caelius rēligione neglēctā cecidisse apud Trāsumēnum scrībit, DN. 2, 8, Caelius writes that Flaminius fell at Trasumene in consequence of his neglect of religious observances. (c.) Concession: as, id paucis dēfendentibus expūgnāre non potuit, 2, 12, though the defenders were few, he could not take it by storm. (d.) Hypothesis: as, quae potest esse vitae iūcunditās sublātis amīcitiis? Pl. 80, what pleasure can there be in life, if you take friendships away? (c.) Description: as, domum vēnit capite obvolūto, Ph. 2, 77, he came home with his head all muffled up.

1368. It may be seen from the examples above that a change of construction is often desirable in translating the ablative absolute. Particularly in many set idiomatic expressions: as, nulla interposita mora, Caes. C. 3, 75, 1, without a moment's delay, instantly. equò admisso, 1, 22, 2, equò citato, Caes. C. 3, 96, 3, full gallop. clamore sublato, 7, 12, 5, with a round of cheers. bene re gesta salvos redeo, Pl. Tri. 1182, crowned with success I come back safe and sound.

1369. The substantive of the ablative absolute usually denotes a different person or thing from any in the main sentence. But exceptions to this usage sometimes occur: as,

quibus audītīs, eos domum remittit, 4, 21, 6, after listening to these men, he sends them home again. sī ego mē sciente paterer, Pl. MG. 559, if I should wittingly myself allow, more emphatic than sciens. sē iūdice nēmo nocēns absolvitur, J. 13, 2, himself the judge, no criminal gets free.

1370. Two ablatives absolute often occur together, of which the first indicates the time, circumstances, or cause of the second: as, exaudito clamore perturbatis ordinibus; 2.11, 5, the ranks being demoralized from hearing the shouts. consumptis omnibus tells gladiff destrictis, Caes. C. 1, 46, 1, drawing their swords after expending all their missiles.

1371. The substantive is sometimes omitted in the ablative absolute, particularly when it is a general word for a person or a thing which is explained by a relative: as, praemissis, qui repürgärent iter, L. 44, 4, 11, sending sappers and miners ahead to clear a way. relätis ördine, quae vidissent, L. 42, 25, 2, telling circumstantially all they had seen.

1372. The ablative neuter of some perfect participles is used impersonally (1034). This use is rare in old Latin, in classical Latin commonest in Cicero, and alterwards in Livy: as, auspicato, DN. 2, 11, with auspices taken. Sortito, V. 2, 126, lots being drawn, or by lot. Such ablatives readily become adverbs (704). Substantives are also sometimes used alone: as, austro, Div. 2, 58, when the wind is south. tranquillitate, Plin. Ep. 8, 20, 6, when it is calm. sereno, L. 37, 3, 3, the day being clear.

1373. The ablative neuter of some perfect participles is occasionally used in agreement with a sentence or an infinitive: as, cognito vivere Ptolomaeum, L. 31, 41, 5, it being known that Ptolomy was alive. This construction is not used in old Latin, and is rare in classical Latin, but common in Livy and Tacitus. So adjectives also: as, incerto quid vitarent, L. 28, 36, 12, it not being obvious what they were to steer clear of.

1374. The ablative absolute is sometimes attended, especially in Livy and Tacitus, by an explanatory word, such as etsi, tamen, nisi, quasi, quamquam, or quamvis: as, etsi aliquo accepto detrimento, tamen summa exercitus salva, Caes. C. 1, 67, 5, though with some loss, yet with the safety of the army as a whole.

THE ABLATIVE OF QUALITY.

- 1375. The ablative with an adjective in agreement or with a limiting genitive is used to denote quality, either predicatively or attributively: as,
- (a.) Predicatively: capillo sunt promisso, 5, 14, 3, they have long hair, or let their hair grow long. singulari fuit industria, N. 24, 3, 1, he had unparalleled activity. animo bono's, Pl. Aul. 732, be of good cheer. ad filmen Genusum, quod ripis erat impeditis, Caes. C. 3, 75, 4, to the river Genusus, which had impracticable banks. (b.) Attributively: difficili transitu filmen ripisque praeruptis, 6, 7, 5, a river hard to cross and with steep banks. interfectus est C. Gracchus, clarissimo patre, avo, maioribus, C. 1, 4, Gracchus was done to death, a man with an illustrions futher, grandfather, and ancestors in general (1044). bos cervi figura, 6, 26, 1, an ex with the shape of a stag. Compare the genitive of quality (1239).

THE ABLATIVE OF THE ROUTE TAKEN.

1376. The instrumental ablative is used with verbs of motion to denote the route taken: as.

Aurēliā viā profectus est, C. 2, 6, he has gone off by the Aurelia Road. omnibus viis sēmitīsque essedāriōs ex silvīs ēmittēbat, 5, 19, 2, he kept sending his chariot men out by all possible highways and byways. hīs pōntibus pābulātum mittēbat, Caes. C. 1, 40, 1, by these bridges he sent foraging. frūmentum Tiberī vēnit, L. 2, 34, 5, some grain came by the Tiber. lupus Esquilīna portā ingressus per portam Capēnam prope intāctus ēvāserat, L. 33, 26, 9, a wolf that came in town by the Esquilīne gate had got out through the Capene gate, almost unscathed. This construction gives rise to some adverbs: see 707. The ablative of the route is sometimes used with a substantive of action (1301): as, nāvigātiō inferō, Alt. 9, 5, 1, the cruise by the lower sea. eōdem flūmine invēctiō, Fin. 5, 70, entrance by the same river.

(B.) THE INSTRUMENTAL PROPER.

THE ABLATIVE OF INSTRUMENT OR MEANS.

1377. The ablative is used to denote the instrument or means: as,

1378-1383.] Sentences: The Simple Sentence.

pügnäbant armis, H. S. 1, 3, 103, they fought with arms. clare oculis video, sum pernix pedibus, manibus mobilis, Pl. MG. 630, I can see distinctly with my eyes, I'm nimble with my legs, and active with my arms. invabo aut re te aut opera aut consilio bono, Pl. Ps. 19, I'll help thee either with my purse or hand or good advice. lacte et carne vivunt, pellibusque sunt vestiti, 5, 14, 2, they live on milk and meat, and they are clad in skins. contentus paucis lectoribus, H. S. 1, 10, 74, content with readers few. centenague arbore flüctum verberat, V. 10, 207, and with an hundred beams at every stroke the wave he smites. Rarely with substantives denoting action (1301): as, gestöres linguis, auditores auribus, Pl. Ps. 429, reforters with their tongues and listeners with their ears. teneris labellis molles morsiunculae, Pl. Ps. 67°, caressing bites with velvet lips.

1378. When the instrument is a person, the accusative with per is used: as, haec quoque per exploratores ad hostes deferuntur, 6, 7, 9, this too is reported to the enemy through the medium of scouts. Or a circumlocution, such as virtute, beneficio, benignitate, or especially opera, with a genitive or possessive; as, deum virtute multa bona bene parta habemus, Pl. Tri. 346, thanks to the gods, we've many a pretty penny prettily put by. mea opera Tarentum recepisti, CM. 11, it was through me you got Tarentum back. Rarely the ablative of a person, the person being then regarded as a thing: as, iacent suis testibus, Mil. 47, they are cast by their own witnesses.

1379. The instrumental ablative is used with the five deponents fruor, fungor, potior, utor, vescor, and several of their compounds, and with usus est and opus est: as,

pace numquam fruemur, Ph. 7, 19, we never shall enjoy ourselves with peace, i.e. we never shall enjoy peace. fungar vice cotis, H. AP. 304, I'll play the whetstone's part. castris nostri potiti sunt, 1, 26, 4, our feople made themselves masters of the camp. vestra opera utar, L. 3, 46, 8, I will avail myself of your services. carne vescor, I'D. 3, 90, I live on meat. opust chlamyde, Pl. Ps. 734, there is a job with a cloak, i.e. we need a cloak.

1380. Instead of the instrumental ablative, some of the above verbs take the accusative occasionally in old Latin: thus, in Plautus and Terence, always abūtor, also fungor, except once in Terence; fruor in Cato and Terence, and perfruor in Lucretius, once each; potior twice in Plautus and three times in Terence, often also the genitive (1202). The gerundive of these verbs is commonly used personally in the passive, as if the verbs were regularly used transitively.

1381. Ütor often has a second predicative ablative: as, administris druidibus ütuntur, 6, 16, 2, they use the druids as assistants. facili më ütëtur patre, T. Hau. 217, an easy-going father he will find in me.

1382. Usus est and opus est sometimes take a neuter participle, especially in old Latin: as, viso opust cautost opus, Pl. Cap. 225, there's need of sight, there's need of care. Sometimes the ablative with a predicate participle: as, celeriter mi eo homine conventost opus, Pl. Cur. 302, I needs must see that man at once.

1383. With opus est, the thing wanted is often made the subject nominative or subject accusative, with opus in the predicate: as, dux nobis et auctor opus est, Fam. 2, 6, 4, we need a leader and adviser. Usually so when the thing needed is a neuter adjective or neuter pronoun: as, multa sibi opus esse, V. 1, 126, that he needed much. A genitive dependent on opus is found once or twice in late Latin (1227).

1384. Usus est is employed chiefly in comedy, but also once or twice in Cicero, Lucretius, Vergil, and Livy. Once with the accusative: Usust hominem astutum, Pl. Ps. 385, there's need of a sharp man.

THE ABLATIVE OF SPECIFICATION.

1385. The instrumental ablative is used to denote that in respect of which an assertion or a term is to be taken: as,

temporibus errāstī, Ph. 2, 23, you have slipped up in your chronology. excellēbat āctione, Br. 215, his forte lay in delivery. Helvētii rēliquos Gallos virtūte praecēdunt, 1, 1, 4, the Helvetians outdo the rest of the Kelts in bravery. hī omnēs linguā, Institūtis, lēgibus inter sē differunt, 1, 1, 2, these people all differ from each other in language, usages, and laws. sunt quidam hominēs non rē sed nomine, Off. 1, 105, some people are human beings not in reality but in name. Una Suēba nātione, altera Norica, 1, 53, 4, one woman a Suebe by birth, the other Noric. vīcistis cochleam tarditūdine, Pl. Poen. 532, you've beaten snail in slowness. dēmēns iūdicio volgī, H. S. 1, 6, 97, mad in the judgement of the world. sapiunt meā sententiā, T. Ph. 335, in my opinion they are wise. meā quidem sententiā, CM. 56, in my humble opinion. quis iūre peritior commemorārī potest? Clu. 107, who can be named that is better versed in the law?

THE ABLATIVE OF FULNESS.

1386. The instrumental ablative is used with verbs of abounding, filling, and furnishing: as,

villa abundat porco, haedo, agno, CM. 56, the country place is running over with swine, kid, and lamb. totum montem hominibus completi iussit, 1, 24, 3, he gave orders for the whole mountain to be covered over with men. Magonem poena adfecerunt, N. 23, 8, 2, they visited Mago with punishment. legiones nimis pulcris armis praeditas, Pl. Am. 518, brigades in goodliest arms arrayed. consulari imperio praeditus, Pis. 55, vested with the authority of consul. For the genitive with compleo and impleo, see 1293.

1387. The ablative is sometimes used with adjectives of fulness, instead of the regular genitive (1263). Thus, in later Latin, rarely with plēnus: as, mēxima quaeque domus servis est plēna superbīs, J. 5, 66, a grand establishment is always full of stuck-up staves. et ille quidem plēnus annīts ablit, plēnus honorītbus, Plin. Ep. 2, 1, 7, well, as for him, he has passed away, full of years and full of honours. So in Cicero and Caesar, once each. Also with dives in poetry, and, from Livy on, in prose. With refertus, the ablative of things is common, while persons are usually in the genitive (1263). With onustus, the ablative is generally used, rarely the genitive.

THE ABLATIVE OF MEASURE, EXCHANGE, AND PRICE.

1388. The instrumental ablative is used with verbs of measuring and of exchanging, and in expressions of value and price: as,

8

1389-1393.] Sentences: The Simple Sentence.

(a.) quod mägnös hominēs virtūte mētīmur, N. 18, 1, 1, because we gauge great men by their merit. (b.) nēmö nisi vīctor pāce bellum mūtāvit, S. C. 58, 15, nobody except a conqueror has ever exchanged war for peace. (c.) haec sīgna sēstertiūm sex mīlibus quingentīs esse vēndita, V. 4, 12, that these statues were sold for sixty-five hundred sesterces. aestimāvit dēnārīis 111, V. 3, 214, he valued it at three denars. trīgintā mīllibus dīxistis eum habitāre, Cael. 17, you have said he pays thirty thousand rent. quod non opus est, āsse cārum est, Cato in Sen. Ep. 94, 28, what you don't need, at a penny is dear. hem, istūc verbum, mea voluptās, vīlest vīgintī mīnīs, Pl. Most. 297, bless me, that compliment, my charmer, were at twenty minas cheap.

1389. With mūtō and commūtō, the ablative usually denotes the thing received. But sometimes in Plautus, and especially in Horace, Livy, and late prose, it denotes the thing parted with: as, cūr valle permūtem Sabīnā dīvitiās operōsiōres? H. 3, 1, 47, why change my Sabīne dale for wealth that brings more care? Similarly with cum in the prose of Cicero's age: as, mortem cum vitā commūtāre, Sulp. in Fam. 4, 5, 3, to exchange life for death.

1390. The ablative of price or value is thus used chiefly with verbs or verbal expressions of bargaining, buying or selling, hiring or letting, costing, being cheap or dear. Also with aestimo, of a definite price, and sometimes magno, permagno (1273).

1391. The ablatives thus used, are (a.) those of general substantives of value and price, such as pretium, (b.) numerical designations of money, or (c.) neuter adjectives of quantity, māgnō, permāgnō, quam plūrimō, parvō, minimō, nihilō, nōnnihilō: as, māgnō decumās vēndidī, V. 3, 40, I sold the tithes at a high figure. For tantī and quantī, plūris and minōris, see 1274.

1392. The ablative is also used with dignus and indignus: as,

dignī māiōrum locō, Agr. 2, 1, well worthy of the high standing of their ancestors. nūlla vox est audīta populi Rōmānī māiestāte indīgna, 7, 17, 3, not a word was heard out of keeping with the grandeur of Rome. See also dignor in the dictionary. Similarly in Plautus with condignē, decōrus, decet, aequē, aequos. For the genitive with dignus, see 1269; for the accusative with dignus and a form of sum, 1144.

THE ABLATIVE OF THE AMOUNT OF DIFFERENCE.

1393. The instrumental ablative is used to denote the amount of difference.

This ablative is used with any words whatever of comparative or of superlative meaning: as, find die longidrem mensem faciunt aut bldud, V. 2. 129, they make the month longer by a day, or even by two days. ubl adbibit paulo, T. Hau. 220, when he has drunk a drop too much. nummo divitior, Pl. Ps. 1323, a penny richer. biduo post, I, 47, I, two days after. multis ante diebus, 7, 9, 4, many days before. paucis ante diebus, C. 3, 3. a few days ago. nimio praestat, Pl. B. 396, 't is ever so much better. multo malim, Br. 184, I would much rather. multo maxima pars, C. 4, 17, the largest part by far.

Digitized by Google

1394. In expressions of time, the accusative is sometimes used with post, less frequently with ante, as prepositions, instead of the ablative of difference: as, post paucos dies, L. 21, 51, 2, post dies paucos, L. 37, 13, 6, paucos paucos dies, L. 33, 39, 2, after a few days. paucos ante dies, L. 39, 28, 4, dies ante paucos, L. 31, 24, 5, a few days before. With this prepositional construction, ordinals are common: as, post diem tertium, 4, 9, 1, after the third day, according to the Roman way of reckoning, i. e. the next day but one.

1395. (1.) When the time before or after which anything occurs is denoted by a substantive, the substantive is put in the accusative with ante or post: as,

paulo ante tertiam vigiliam, 7, 24, 2, a little before the third watch. biduo ante victoriam, Fam. 10, 14, 1, the day but one before the victory. paucis diebus post mortem Africani, L. 3, a few days after the death of Africanus.

1396. Sometimes in late writers, as Tacitus, Pliny the younger, and Suetonius, a genitive is loosely used: as, sextum post clādis annum, Ta. 1, 62, i.e. sextō post clādem annō, six years after the humiliating defeat. post decimum mortis annum, Plin. Ep. 6, 10, 3, ten years after his death. Similarly intrā sextum adoptionis diem, Suet. Galb. 17, not longer than six days after the adoption-day.

1397. (2.) When the time before or after which anything occurs is denoted by a sentence, the sentence may be introduced:

(a.) By quam: as, post diem tertium gesta res est quam dixerat, Mil. 44, it took place two days after he said it. With quam, post is sometimes omitted. Or (b.) less frequently by cum: as, quem tridue, cum has dabam litteras, exspectabam, Planc. in Fam. 10, 23, 3, I am looking for him three days after this writing (1601). For a relative pronoun sentence, see 1354.

1398. Verbs of surpassing sometimes have an accusative of extent (1151): as, mirāmur hunc hominem tantum excellere cēterīs? IP. 39, are we surprised that this man so far outshines everybody else? With comparatives, the accusative is rare: as, aliquantum iniquior, T. Haw. 201, somewhat too hard. Similarly permultum ante, Fam. 3, 11, 1, long long before.

1399. In numerical designations of distance, the words intervallum and spatium are regularly put in the ablative: as, rex vi milium passuum intervallo a Saburra consederat, Caes. C. 2, 38, 3, the king had pitched six miles away from Saburra.

TWO OR MORE ABLATIVES COMBINED.

1400. Two or more ablatives denoting different relations are often combined in the same sentence: as,

Menippus, með iūdicið (1385) tötā Asiā (1346) illis temporibus (1350) disertissimus, Br. 315. Menippus, in my opinion the most gifted steaker of that day in all Asia. hāc habitā örātiðne (1362) militibus studið (1316) pūgnae ārdentibus (1370) tubā (1377) signum dedit, Caes. C. 3, 90, 4, seeing that his soldiers were hot for battle after this speech, he gave the signal by trumpet.

USE OF CASES WITH PREPOSITIONS.

- 1401. Two cases, the accusative and the ablative, are used with prepositions.
- 1402. Prepositions were originally adverbs which served to define more exactly the meaning of a verb.

Thus, endo. in, on, the older form of in, is an adverb, in an injunction occurring in a law of the Twelve Tables, 451 B.C., manum endo iacito, let him lay hand on. Similarly, trans, over, in transque dato, and he must hand over, i. e. traditoque.

- 1403. In the course of time such adverbs became verbal prefixes; the verbs compounded with them may take the case, accusative or ablative, required by the meaning of the compound. Thus, amicos adeo, I go to my friends (1137); urbe exeo, I go out of town (1302).
- 1404. For distinctness or emphasis, the prefix of the verb may be repeated before the case: as, ad amīcōs adeō; ex urbe exeō. And when it is thus separately expressed before the case, it may be dropped from the verb: as, ad amīcōs eō; ex urbe eō.
- 1405. The preposition thus detached from the verb becomes an attendant on a substantive, and serves to show the relation of the substantive in a sentence more distinctly than the case alone could.
- 1406. A great many adverbs which are never used in composition with a verb likewise become prepositions: as, apud, circiter, infrā, iūxtā, pōne, propter, &c., &c. The inflected forms of substantives, prīdiē, postrīdiē (1413), tenus (1420), and finī (1410), are also sometimes used as prepositions. And vicem (1145), causā, grātiā, nōmine, ergō (1257), resemble prepositions closely in meaning.
- 1407. A trace of the original adverbial use of prepositions is sometimes retained, chiefly in poetry, when the prefix is separated from its word by what is called *Timesis*: as, Ire inque gredi, i. e. ingredique, Lucr. 4, 887, to walk and to step off. per mili mirum visum est, DO. 1, 214, passing strange it seemed to me.
- 1408. Even such words as are used almost exclusively as prepositions sometimes retain their original adverbial meaning also: as, adque adque, E. in Gell. 10, 29, 2, and up and up, and on and on, or and nearer still and still more near. Occisis ad hominum milibus quattuor, 2, 33, 5, about four thousand men being killed. susque deque, Att. 14, 6, 1, up and down, topsy turvy, no matter how.
- 1409. On the other hand, some verbal prefixes are never used as separate prepositions with a substantive. These are called *Inseparable Prepositions*; they are: amb-, round, an-, up, dis-, in two, por-, towards, red-, back. Usually also sed-, apart (1417).

PREPOSITIONS USED WITH THE ACCUSATIVE.

1410. The accusative is accompanied by the following prepositions:

ad, to, adversus or adversum, towards, against, ante, in composition also antid-, before, apud, near, at, circa, circum, circiter, round, about, cis, citra, this side of, contra, opposite to, erga, towards, extra, outside, infra, below, inter, between, intra, within, iuxta, near, ob, against, penes, in the possession of, per, through, pone, post, in Plautus postid, poste, pos, behind, praeter, past, prope (propius, proxime), propter, near, secundum, after, subter, under, supra, above, trans, across, tils, tiltra, beyond. For the various shades of meaning and applications of these prepositions, see the dictionary.

1411. Prepositions which accompany the accusative may be easily remembered in this order:

> ante, apud, ad, adversum, circum, cis, ob, trans, secundum. penes, pone, prope, per, post, and all in -ā and -ter.

1412. Of the above named words some are not used as prepositions till a relatively late period.

Thus, Infra is first used as a preposition by Terence; circa, citra, contra, and ultra, are first used as prepositions about Cicero's time. In Cicero and Sallust, iuxta is still used only as an adverb, in Caesar and Nepos as a preposition.

- 1413. The substantive forms pridie, the day before, and postridie, the day after, are sometimes used with an accusative like prepositions, mostly in Cicero, to denote dates: as, pridie nonas Maias, Att. 2, 11, 2, the day before the nones of May, i.e. 6 May. postridie lūdos Apollināris, Att. 16, 4, 1, the day after the games of Apollo, i.e. 6 July. For the genitive with these words, see 1232.
- 1414. The adverb vorsus or versus, wards, occurs as a preposition, standing after its accusative, once in Sallust, Aegyptum vorsus, J. 19, 3, Egyptwards, and once or twice in Pliny the elder. Exceptionally and late, usque: as, usque initium pontis, L. 44, 5, 6, even to the beginning of the bridge.
- 1415. clam, secretly, is ordinarily an adverb. But in old Latin it is used very often as a preposition, unknown to, with an accusative of a person. Terence has once the diminutive form clanculum, Ad. 52. Once in Caesar, and then with an ablative, clam vobis, C. 2, 32, 8, without your knowledge.
- 1416. subter, under, is used in poetry, once by Catullus and once by Vergil, with the locative ablative: as, Rhoeteo subter litore, Cat. 65, 7, beneath Rhoeteo teum's strand.

Prepositions used with the Ablative.

1417. The ablative is accompanied by the following prepositions:

abs, ab, or a, from, coram, face to face, de, down from, from, of, ex or E, out of, prae, at the fore, in front of, pro, before, quom or cum, with, sine, without. In official or legal language, also sed or se, without. For the different classes of ablatives with these prepositions, see 1297-1300; for the various shades of meanings and applications, see the dictionary.

1418. Prepositions which accompany the ablative may be easily remembered in this order:

abs (ab, ā), cum, cōram, dē, prae, prō, sine, ex (or ē).

1419. The ablative fini, as far as, is used in old Latin as a preposition with the ablative: as, osse fini, Pl. Men. 859, down to the bone. operito terra radicibus fini, Cato, RR. 28, 2, cover with loam the length of the roots. Also, as a real substantive, with a genitive (1255): as, ansarum infimarum fini, Cato, RR. 113, 2, up to the bottom of the handles. Rarely fine, and before the genitive: as, fine genus, O. 10, 537, as far as the knee.

1420. tenus, the length, was originally a substantive accusative (1151). From Cicero on, it is used as a preposition with the ablative, and standing after its case: as, Taurō tenus, D. 36, not further than Taurus. pectoribus tenus, L. 21, 54, 9, quite up to the breast. hactenus, thus far, only thus far. Also, as a real substantive, with a genitive, usually a plural, mostly in verse (1232): as, labrōrum tenus, Lucr. 1, 940, the length of the lips, up to the lips. Cümārum tenus, Cael. in Fam. 8, 1, 2, as far as Cumae.

1421. The adverbs palam, in presence of, procul, apart from, either near or far, simul, with, are rarely used in poetry and late prose as prepositions with the ablative. For the peculiar use of absque or apsque in a coordinate protasis, see the dictionary and 1701.

PREPOSITIONS USED WITH THE ACCUSATIVE OR THE ABLATIVE.

1422. Two cases, the accusative and the ablative, are accompanied by the prepositions in, older endo, indu, into, in, sub, under, and super, over, on.

- 1423. (1.) in and sub accompany the accusative of the end of motion, the locative ablative of rest: as,
- (a.) in cūriam vēnimus, V. 4, 138, we went to the senate-house. in vincla coniectus est, V. 5, 17, he was put in irons. hīc pāgus ēius exercitum sub iugum mīserat, 1, 12, 5, this canton had sent his army under the yoke. (b.) erimus in castrīs, Ph. 12, 28, we shall be in camp. viridī membra sub arbutō strātus, H. 1, 1, 21, stretched out his limbs all under an arbute green.
- 1424. Verbs of rest sometimes have in with the accusative, because of an implied idea of motion. And, conversely, verbs of motion sometimes have in with the ablative, because of an implied idea of rest: as,
- (a.) mihi in mentem fuit. Pl. Am. 180, it popped into my head, i. e. came in and is in (compare venit hoc mi in mentem, Pl. Aul. 226. in Eius potestätem venire nölēbant, V. 1, 150. in eōrum potestätem portum futūrum intellegēbant, V. 5, 98, they knew full well the haven would get under the control of these people). (b.) Caesar exercitum in hibernis conlocāvit, 3, 29, 3, Caesar put the army away in winter quarters, i. e. put them into and left them in. eam in lectō conlocārunt, T. Eu. 593, they laid the lady on her couch. So commonly with locō, conlocō, statuō, cōnstituō, pōnō, and its compounds. For expōnō and impōnō, see the dictionary.

1425. (2.) Super accompanies the ablative when it has colloquially the sense of dē, about, in reference to: as, hāc super rē scrībam ad tē Rēgiō, Att. 16, 6, 1, 1'll write you about this from Regium. In other senses, the accusaive, but sometimes in poetry the ablative, chiefly in the sense of on: as, ligna super foco large reponens, H. 1, 9, 5, piling on hearth the faggots high. nocce super mediā, V. 9, 61, at dead of night. paulum silvae super his, H. S. 2, 6, 3, a bit of wood to crown the whole.

COMBINATION OF SUBSTANTIVES BY A PREPOSITION.

- 1426. (1.) Two substantives are sometimes connected by a preposition, to indicate certain attributive relations (1043); such are particularly:
- (a.) Place: as, illam pügnam nāvālem ad Tenedum, Mur. 33, the seafight off Tenedus. excessum ē vitā, Fin. 3, 60, the departure from life.

 (b.) Source, origin, material: as, ex Aethiopiā ancillulam, T. Eu. 165, a lady's maid from Aethiopia. pōcula ex aurō, V. 4, 62, bowls of gold (1314).

 (c.) Direction of action, connection, separation: as, amor in patriam, Fl. 103, love of country. vestra ergā mē voluntās, C. 4, 1, your good will towards me. proelium cum Tūscīs ad Iāniculum, L. 2, 52, 7, the battle with the Tuscans at Janiculum. vir sine metū, TD. 5, 48, a man devoid of fear (1043).
- 1427. (2.) Very commonly, however, other constructions are used, even to indicate the relations above: as,

bellum Venetōrum, 3, 16, 1, war with the Venetans (1231). bellō Cassiānō, 1, 13, 2, in the war with Cassius (1233). in aureis pēculis, V. 4, 54, in golden bowls (1233). scūtis ex cortice factis, 2, 33, 2, with long shields made out of bark (1314). poet victōriam ēius belli, quod cum Persis fuit, Off. 3, 49, after the victory in the war with the Persians.

1428. Prepositional expressions are sometimes used predicatively: as, sunt omness sine macula, Pl. 6, 14, they are all without spot or blemish. And sometimes they are equivalent to adjectives: as, contra naturam, TD. 4, 11, unnatural, supra hominem, DN. 2, 34, superhuman. Or to substantives: as, sine pondere, O. 1, 20, things without weight. Or to adverbs: as, sine labore, Pl. R. 461, easily.

REPETITION OR OMISSION OF A PREPOSITION WITH SEVERAL SUBSTANTIVES.

1429. (1.) A preposition is often repeated with emphasis before two or more substantives: as,

in labore atque in dolore, Pl. Ps. 685, in toil and in trouble. Particularly so with et . . . et, aut . . . aut, non solum . . . sed etiam, non minus . . . quam, &c., &c.: as, et ex urbe et ex agris, C. 2, 21, from Rome ana from the country too.

1430. (2.) A preposition is often used with the first only of two or more substantives: as, in labore ac dolore, TD. 5, 41, in toil and trouble. incidit in eandem invidiam quam pater suus, N. 5, 3, 1, he fell under the selfsame ban as his father. Particularly when the second is in apposition: as, cum duobus ducibus, Pyrrho et Hannibale, L. 28, with two commanders, Pyrrhus and Hannibal.

Digitized by Google

Two Prepositions with one Substantive.

1431. (1.) When two prepositions belong to one and the same substantive, the substantive is expressed with the first. With the second, the substantive is repeated, or its place is taken by a pronoun: as,

contră legem proque lege, L. 34, 8, 1, against the law and for the law. partim contră Avitum, partim pro hoc, Clu. 88, partly against Avitus, partly for him. If, however, the two prepositions accompany the same case, the substantive need not be repeated: as, intră extrăque munitiones, Caes. C. 3, 72, 2, inside and outside the works.

1432. (2.) The second preposition is often used adverbially, without any substantive: as, et in corpore et extra, Fin. 2, 68, both in the body and outside.

Position of Prepositions.

- 1433. In general a preposition precedes its case: see 178.
- 1434. Disyllabic prepositions sometimes follow their substantives. Thus, in Cicero, contrā, tiltrā, and sine, sometimes stand after a relative; so likewise inter in Cicero, Caesar, and Sallust; occasionally also penes and propter. For versus, see 1414; for fini, 1419; for tenus, 1420.
- 1435. Of monosyllables, ad and de often follow a relative. Also cum often in Cicero and Sallust, and regularly in Caesar. With a personal or a reflexive pronoun, cum regularly follows, as mecum, nobiscum, secum.
 - 1436. In poetry and late prose, prepositions are freely put after their cases.
- 1437. In oaths and adjurations, per is often separated from its proper accusative by the accusative of the object: as, per të deos oro, T. Andr. 538, I beg thee by the gods, in the gods' name.

USE OF ADVERBS.

1438. Adverbs qualify verbs, adjectives, or adverbs.

(a.) With verbs, all sorts of adverbs are used: as, of Place: quis istic habet? Pl. B. 114, who lives in there? Time: turn dentës mihi cadëbant primulum, Pl. Men. 1116, my teeth were just beginning then to go. Number: bis consul fuerat P. Africanus, Mur. 58, Africanus had twice been consul. Degree, Amount: Ubil mägnopere öräbant, 4, 16, 5, the Ubians earnestly entreated. Dumnorix plürimum poterat, 1, 9, 3, Dumnorix was all-powerful. Manner: bene quiëvit, libenter cibum sümpsit, Plin. Ep. 3, 16, 4, he has slept beautifully, he has relished his food. (b.) With adjectives and adverbs, oftenest adverbs of degree or amount only, or their equivalents, such as bene, Egregië, &c.: as, valdë dligëns, Ac. 2, 98, very particular. Egregië fortis, DO. 2, 268, exceptionally brave. Adverbs of manner, however, are also used, especially in poetry: as, turpiter hirtum, H. E. 1, 3, 22, disreputably rough, i. e. disreputable and rough.

1439. An adverb is sometimes used with the meaning of an adjective: as,

rēliquīs deincēps diēbus, 3, 29, 1, the remaining successive days. dē suīs prīvātim rēbus, 5, 3, 5, in relation to their personal interests. undique silvae, Plin. Ep. 1, 6, 2, the surrounding woods. Particularly when the substantive expresses character, like an adjective: as, vērē Metellus, Sest. 130, a trublooded Metellus. rūsticānus vir, sed plānē vir, TD. 2, 53, a country man, but every inch a man.

1440. Perfect participles used as substantives are commonly qualified by an adverb, and not by an adjective. Particularly so dictum, factum, inventum, responsum, with bene and male, and their synonymes: as, recte ac turpiter factum, 7, 80, 5, heroism and cowardice. bene facta male locata male facta arbitror, E. in Off. 2, 62, good deeds il put, bad deeds I count. In superlative qualifications, however, the adjective is preferred.

1441. Other substantives also may be qualified by an adverb, when a verb construction or a participle is implied: as, C. Flaminius consul iterum, Div. 1, 77, Flaminius in his second consulship. O totions servos, H. S. 2, 7, 70, time and again a slave. ictū comminus, Caecin. 43, by a hand-to-hand blow. pūblicē testem, V. 2, 156, a government witness. populum läte regem, V. 1, 21, a nation regnant wide. läte tyrannus, H. 3, 17, 9, lord paramount far and near.

1442. An adverb sometimes takes the place of a substantive: as, cum amīcī partim dēseruerint mē, partim etiam prodiderint, QFr. 1, 3, 5, since my friends have some of them abandoned ma, and others again have actually betrayed me, i. e. aliī... aliī. postquam satis tūta circā vidēbantur, L. 1, 58, 2, finding every thing round about looked pretty safe, i. e. quae circā erant. palam laudārēs, sēcrēta male audiēbant. Ta. H. 1, 10, his outward walk yow would have admired; his private life was in bad odour, i. e. quae palam fīēbant.

NEGATIVE ADVERBS.

1443. (1.) The negative oftenest used in declaration or interrogation is non, not: as,

non metuo mihi, Pl. B. 225, I fear not for myself. non semper imbres nubibus hispidos manant in agros, H. 2, 9, 1, not always from the clouds do showers on stubbly fields come dripping dropping down. non dices hodie? H. S. 2, 7, 21, will you not say without delay?

1444. non is a modification of noenum or noenu, compounded of ne, no, and the accusative oinom or oenum, the older form of unum, one thing. noenum occurs in Plautus twice, in Ennius, Lucilius, Afranius, and Varro, once each, and noenu occurs twice in Lucretius (140).

1445. Negation is often expressed by other compounds of ne. In such cases the Latin idiom frequently differs from the English, and a transfer of the negative is required in translation.

Such compounds are: (a.) Verbs, such as negō, nequeō, nesciō, nōlō: as, negat vērum esse, Mur. 74, he maintains it is not true. (b.) Nouns, such as nēmō, neuter, nūllus, nihil: as, nēmnī meus adventus labōrī fuit, V. 1, 16, my visit did not trouble anybody. (c.) Adverbs, such as numquam, nusquam. (d.) Similarly, the conjunction neque is used for and not, but not, unless a single word is to be emphasized or contrasted: as, nec frūstrā, 8. 5, 3, and not in vain.

Digitized by Google

- 1446. A form nec is used rarely in old Latin in the sense of non: as, tū dis nec rēctē dīcis, Pl. B. 119, thou dost abuse the gods, i.e. non rēctē or male dīcis. After Plautus's time, nec for non occurs in a few set combinations, such as nec opināns, not expecting, and, from Livy on, necdum, not expecting, i.e. nondum.
- 1447. The form ne usually introduces an imperative or a subjunctive, as will be explained further on. But ne is also used in the combination ne ... quidem, not even, not ... either, with the emphatic word between ne and quidem: as, ne tum quidem, 1, 50, 2, not even then. ne Vorenus quidem sesse vallo continet, 5, 44, 6, Vorenus did not keep inside the palisade either.
- 1448. The adjective nullus is sometimes used, chiefly in colloquial language, for non or no (1051): as, Philotimus nullus venit, Att. 11, 24, 4, no Philotimus has shown himself. nullus credues, Pl. Tri. 606, you needn't believe it at all.
- 1449. (2.) The negative haut or haud, not, is used principally with adjectives and adverbs, less frequently with verbs: as,
- (a.) haud mediocris vir, RP. 2, 55, no ordinary man. rem haud sane difficilem, CM. 4, a thing not particularly hard. haud procul, CM. 15, not far. In all periods of the language often combined with quisquam, fillus, umquam, usquam. (b.) In old Latin haud is freely used with all sorts of verbs, especially with possum. In Cicero, it occurs here and there with a few verbs, such as adsentior, erro, Ignoro, nitor, amo, but is principally confined to scio, in the combination haud scio an, I don't know but (3026). Caesar uses haud once only, and then in this combination.
- 1450. A shorter form, hau, occurs often in old Latin, and a few times in the classical period: as, heic est sepulcrum hau pulcrum pulcrai feminae, ClL. I, 1007, 2, on the burial site of a woman, here is the site not sightly of a sightly dame. In Plautus it is juxtaposed with scio, making hauscio, i.e. nescio.
- 1451. (3.) Negation may also be intimated by such words as vix, hardly, parum, not ... enough, not quite, minus, less, not, minime, least of all, male, &c.
- 1452. Two negatives in the same sentence are usually equivalent to an affirmative.

Thus, with non first, an indefinite affirmative: as, non nomo, somebody, a certain gentleman, one or another. non nullus, some. non nihil, something, somewhat. non numquam, sometimes. With non second, a universal affirmative: as, nomo non, everybody, every human being. nullus non, everynihil non, every thing. numquam non, always. non possum non confiteri, Fam. 9, 14, 1, I must confess. nomo ignorat, V. 2, 111, everybody knows.

1453. Sometimes, however, in old Latin, a second negation is used merely to emphasize the negative idea: as, lapideo sunt corde multi, quos non miseret nemnins, E. in Fest, p. 162, there's many a man with heart of stone, that feels for nobody. For doubled negatives in compound sentences, see 1660.

USE OF DEGREES OF COMPARISON.

THE POSITIVE.

1454. The positive sometimes expresses an idea of disproportion: as, pro multitudine hominum angustos se finis habere arbitrabantur, 1, 2, 5, in view of their large numbers they thought they had a cramped place to live in. Generally, however, disproportion is expressed as in 1460 or 1461.

THE COMPARATIVE.

1455. When two things only are compared, the comparative is used: as,

uter igitur melior? Div. 2, 133, which of the two then is the better? uter est insanior horum? H. S. 2, 3, 102, which of these two is crasier? uter eratis, tun an ille, maior? Pl. Men. 1119, you were — which of the two thebigger, thou or he?

1456. The superlative is sometimes loosely used when only two things are meant: as, Numitōrī, quī stirpis māximus erat, rēgnum lēgat, L. 1, 3, 10, to Numitor, who was the eldest of the family, he bequeaths the crown, of two brothers, Numitor and Amulius. id meā minumē rēfert, quī sum nātū māxumus, T. Ad. 881, that is of small concern to m:, who am the eldest son, says Demea, who has only one brother.

1457. From Cicero on, an adjective or adverb is sometimes compared with another adjective or adverb. In such comparisons quam is always used.

In this case: (a.) Both members may have the positive form, the first with magis: as, Celer disertus magis est quam sapiëns, Att. 10, 1, 4, Celer is more eloquent than wise. magis audäcter quam parätë, Br. 241, with more assurance than preparation. Or (b.) Both members may have the comparative suffix: as, lubentius quam vērius, Mil. 78, with greater satisfaction than truth. pestilentia minäcior quam perniciosior, L. 4, 52, 3, a plague more alarming than destructive.

- 1458. Tacitus sometimes puts the second member in the positive, even when the first has the comparative suffix: as, acrius quam considerate, H. 1, 83, with more spirit than deliberation. And sometimes both members: as, claris maioribus quam vetustis, 4, 61, of a house famous rather than ancient.
- 1459. The comparative may be modified by ablatives of difference, such as multō, far, aliquantō, considerably, paullō or paulō, a little, nimiō, too much, ever so much (1393). Also by etiam, even, still, and in late Latin by longē, far, adhūc, still.
- 1460. The comparative of an adjective or adverb often denotes that which is more than usual or more than is right: as,

solēre āiunt rēgēs Persārum plūrēs uxorēs habēre, V. 3, 76, they say the Persian kings generally have several wives. senectūs est nātūrā loquācior, CM. 55, age is naturally rather garrulous. stomachābātur senex, sī quid asperius dixeram, DN. 1, 93, the old gentleman always got provoked if I said anything a bit rough.

1461. The comparative of disproportion is often defined by some added expression: as,

privatis māiōra focis, J. 4, 66, something too great for private hearths (1321). flāgrantior aequō non dēbet dolor esse viri, J. 13, 11, the indignation of a man must not be over hot (1330). In Livy and Tacitus by quam prō with the ablative: see the dictionary. Sometimes a new sentence is added: as, sum avidior, quam satis est, gloriae, Fam. 9, 14, 2, I am over greedy of glory. For quam ut or quam qui, see 1896.

1462-1468.] Sentences: The Simple Sentence.

1462. The comparative with a sentence of negative import is often preferred to the superlative with a positive sentence: as,

elephantō bēluārum nūlla prūdentior, DN. 1, 97, of the larger beasts not one is more sagacious than the elephant, or the elephant is the most sagacious of beasts. sequāmur Polybium, quō nēmō fuit diligentior, RP. 2, 27, let us follow Polybius, the most scrupulous of men. For nēmō or quis, the more emphatic nihil or quid is often used: as, Phaedrō nihil ēlegantius, nihil hūmānius, DN. 1,93, Phaedrus was the most refined and symfathetic of men.

1463. In colloquial language, a comparative suffix is sometimes emphasized by the addition of magis: as, mollior magis, Pl. Aul. 422, more tenderer. And sometimes by a mixture of construction, the comparative is modified by aequē, like the positive: as, homo mē miserior nūllus est aequē. Pl. Mer. 335, there's not a man so weebegone as I, for miserior alone, or aequē miser.

1464. The comparative with the ablative is particularly common, when a thing is illustrated by some striking typical object, usually an object of nature. In such illustrations, the positive with as is commonly used in English: as, lūce clārius, V. 2, 186, plain as day. ō fōns Bandusiae, splendidior vitrō, H. 3, 13, 1, ye waters of Bandusia, as glittering as glass. melle dulcior ōrātiō, E. in CM. 31, words sweet as honey. ventīs ōcior, V. 5, 319, quick as the winds. vacca candidior nivibus, O. Am. 3, 5, 10, a cow as white as driven snow. caelum pice nigrius, O. H. 17, 7, a sky as black as pitch. dūrior ferrō et saxō, O. 14, 712, as hard as steel and stone.

THE SUPERLATIVE.

1465. When more than two things are compared, the superlative is used to represent a quality as belonging in the highest degree to an individual or to a number of a class: as,

proximi sunt Germanis, I, I, 3, they live the nearest to the Germans. horum omnium fortissimi, I, I, 3, the bravest of these all.

1466. The superlative may be strengthened by the addition of such words as finus, preeminently, usually with a genitive, maxime, quam, with or without a form of possum, as possible, &c., &c. (1892). From Cicero on, by longe, far, and vel, perhaps, even: as,

confirmaverim rem unam esse amnium difficillimam, Br. 25, I am not afraid to avouch it is the one hardest thing in the world. longe nobilissimus, 1, 2, 1, the man of highest birth by far. quam maximis potest itineribus in Galliam contendit, 1, 7, 1, he pushes into Gaul by the quickest marches he can. quam maturrime, 1, 33, 4, as early as possible.

1467. The superlative is also used to denote a very high degree of the quality.

This superlative, called the Absolute Superlative, or the Superlative of Eminence, may be translated by the positive with some such word as most, very: as, homo turpissimus, V. 4. 16, an utterly unprincipled man. Often best by the positive alone: as, vir fortissimus, Pīsō Aquītānus, 4, 12, 4, the heroic Piso of Aquitain (1044).

1468. In exaggerated style, the superlative of eminence may be capped by a comparative: as, stultior stultissumo, Pl. Am. 907, a greater than the greatest fool. ego miserior sum quam tū, quae es miserrima, Fam. 14, 3, 1, I am myself more unhappy than you, who are a most unhappy woman.

(B.) USE OF THE VERB.

VOICE.

THE ACTIVE VOICE.

1469. In the active voice, the subject is represented as performing the action of the verb.

1470. By action is meant the operation of any verb, whether active or passive, and whether used intransitively or transitively.

1471. The active of one verb sometimes serves as the passive of another: thus, pereo, go to destruction, die, serves as the passive of perdo, destroy, and veneo, go to sale, am sold, as the passive of vendo, put for sale, sell. Similarly fio, become, get to be, am made, is used in the present system as the passive of facio, make (785).

THE PASSIVE VOICE.

1472. In the passive voice, the subject is represented as acted upon.

1473. The object accusative of the active voice becomes the subject of the passive voice (1125); and the predicate accusative of the active voice becomes a predicate nominative with the passive voice (1167).

Thus (a.) in the active construction: illum laudābunt bonī, hunc etiam ipsī culpābunt malī, Pl. B. 397, the one the good will praise, the other e'en the bad themselves will blame. In the passive: laudātur ab hīs, culpātur ab illīs, H. S. I, 2, II, he's praised by some, by others blamed. Active: cīvēs Romānos interficiunt, 7, 3, I, they slay some citizens of Rome. Passive: Indutiomarus interficiurt, 5, 58, 6, Indutiomarus is slain. (b.) Active: militēs certiorēs facit, 3, 5, 3, he informs the soldiers. Passive: certior factus est, 2, 34, he was informed.

1474. Verbs which have two accusatives, one of the person and one of the thing in the active voice, generally have the person as subject in the passive, less frequently the thing: see 1171.

1475. An emphasizing or defining accusative, or an accusative of extent or duration, is occasionally made the subject of a passive: as,

haec illic est pūgnāta pūgna, Pl. Am. 253, this fight was fought off there (1140). tōta mihī dormītur hiems, Mart. 13, 59, 1, all winter long by me is slept, i. e. tōtam dormīō hiemem (1151).

1476-1483.] Sentences: The Simple Sentence.

- 1476. The person by whom the action is done is put in the ablative with ab or ā (1318); the thing by which it is done is put in the instrumental ablative (1377); as,
- (a.) non numquam latro a viatore occiditur, Mil. 55, once in a while the robber gets killed by the wayfurer. respondit, a cive se spoliari malle quam ab hoste venire, Quintil. 12, 1, 43, he said in reply that he would rather be plundered by a Roman than sold by an enemy (1471). (b.) unius viri prudentia Graecia liberata est, N. 2, 5, 3, Greece was aved from slavery by the sagacity of a single man, i. e. Themistocles. Very often, however, the person or thing is not expressed, particularly with impersonals.
- 1477. When the person is represented as a mere instrument, the ablative is used without ab (1378); and when collectives, animals, or things without life are personified, the ablative takes ab (1318): as,
- (a.) neque vērō minus Platō dēlectātus est Diōne, N. 10, 2, 3, and Plato on his part was just as much bewitched with Dion. (b.) ēius ōrātiō ā multitūdine et ā forō dēvorābātur, Br. 283, his oratory was swallowed whole by the untulored many and by the bar.
- 1478. Sometimes the person by whom the action is done is indicated by the dative of the possessor: see 1216. And regularly with the gerund and gerundive construction (2243).
- 1479. Only verbs of transitive use have ordinarily a complete passive. Verbs of intransitive use have only the impersonal forms of the passive (1034): as,
- diù atque acriter pugnatum est, 1, 26, 1, there was long and sharp fighting. tötis trepidatur castris, 6, 37, 6, all through the camp there was tumult and affright. mihi quidem persuaderi numquam potuit, animos amori, CM. 80, for my part, I never could be convinced that the soul becomes extinct at death (1181). Similarly verbs which have a transitive use may also be used impersonally: as, dies noctisque estur, bibitur, Pl. Most. 235, there is eating and drinking all day and all night (1133).
- 1480. The complementary dative of a verb in the active voice is in poetry very rarely made the subject of a passive verb: as, invideor, H. AP. 56, I am cavied. imperor, H. E. 1, 5, 21, I charge myself.
- 1481. The passive had originally a reflexive meaning, which is still to be seen in the passive of many verbs: as,
- exercebatur plurimum currendo et luctando, N. 15, 2, 4, he look a great deal of exercise in running and wrestling. densos fertur in hostis, V. 2, 511, he tries to charge upon the servied foes. quod semper movetur, aeternum est, TD. 1, 53, anything that is always moving, is eternal.
- as, exercising, exercising oneself, exercising, ferens, tearing along, vehens, riding, and invehens, mounted on, pascens, browsing, versans, being, volvens, rolling. Also the gerund: as, its vehendi, the privilege of riding.
- 1483. Passive forms of coepi and desino are commonly used in the perfect system, when a dependent infinitive is passive: as,

litteris ōrātiō est coepta mandārī, Br. 26, oratory began to be put in black and white. veterēs ōrātiōnēs legī sunt dēsitae, Br. 123, the old speeches ceased to be read. But the active forms are sometimes used by Cornificius, Sallust, and Livy, and regularly by Tacitus. The active forms are used with fierī also, which is not passive (788); but even with fierī, Livy uses the passive forms.

1484. Similar attractions with a passive infinitive occur in potestur, &c., quitur and quitus sum, nequitur, &c., rarely, and mostly in old Latin: as, forma in tenebris nosci non quitast, T. Hec. 572, her shape could hardly be distinguished in the dark.

1485. Some perfect participles have an active meaning: as, adultus, grown up. See 907, and also in the dictionary cautus, consultus, concretus, deflägratus, inconsideratus, occasus, nupta.

DEPONENTS.

- 1486. Many verbs have only passive inflections, but with the meaning of active inflections. Such verbs are called *Deponents*.
- 1487. In many deponents, a reflexive, passive, or reciprocal action is still clearly to be seen: as,
- nascor, am born; moror, delay myself, get delayed; ûtor, avail myself; amplectimur, hug each other; fabulamur, talk together; partimur, share with one another.
- 1488. Some verbs have both active and deponent inflections: as, adsentiō, agree, more commonly adsentior. mereō, earn, and mereor, deserve. See also in the dictionary altercor, auguror, comitor, cōnflictor, fabricor, faeneror, mūneror, ōscitor, palpor, populor, revertor. The following have active inflections in the present system and deponent inflections in the perfect system: audeō, cōnfidō and diffidō, gaudeō, soleō: see also 801.
- 1489. In old Latin especially, many verbs which afterwards became fixed as deponents occur with active inflections also: as, adulo, arbitro, aucupo, auspico, lucto, ludifico, moro, partio, venero, &c., &c.
- 1490. Verbs which are usually deponent are rarely found with a passive meaning: as, Süllänäs rēs dēfendere criminor, LAgr. 3, 13, I am charged with defending Sulla's policy.
- 1491. When it is desirable to express the passive of a deponent, a synonyme is sometimes used: thus, the passive of mīror, admire, may sometimes be represented by laudor, am praised. Or some circumlocution: as, habet venerātionem quidquid excellit, DN. 1, 45, anything best in its kind is looked on with respect, as passive of veneror. familia in suspīcionem est vocāta, V. 5, 10, the household was suspected, as passive of suspicor.
- 1492. The perfect participle of deponents is sometimes used with a passive meaning. Some of the commonest of these participles are: adeptus, commentus, complexus, confessus, ēmentītus, expertus, meditātus, opīnātus, pāctus, partitus, testātus, &c., &c.

MOOD.

THE INDICATIVE MOOD.

DECLARATIONS.

1493. The indicative mood is used in simple, absolute declarations: as,

arma virumque cano, V. 1, 1, arms and the man I sing. leve fit quod bene fertur onus, O. A. 4, 2, 10, light gets the load that's bravely borne.

1494. The negative used with the indicative is commonly non, not (1443). For other negative expressions, see 1445-1451.

1495. Certain verbs and verbal expressions denoting ability, duty, propriety, necessity, and the like, mostly with an infinitive, are regularly put in the indicative, even when the action of the infinitive is not performed.

This applies to declarations, questions, or exclamations: as, (a.) possum de ichneumonum utilitäte dicere, sed nölö esse longus, DN. 1, 101, I might expatiate on the usefulness of the ichneumon, but I do not care to be long-winded. inter feräs satius est actatem degere quam in hac tanta immanitate versari, RA. 150, it would be better to pass your days in the midst of howling beasts than to live and move among such brutish men. (b.) stultierat sperare, Ph. 2. 23, it would have been folly to hope. quid enim facere poteramus? Pis. 13, for what else could we have done? (c.) licuit uxorem genere summo ducere, Pl. MG. 680, I might have married a wife of high degree. non potuit pictor rectius describere eius formam, Pl. As. 402, no painter could have hit his likeness more exactly. (d.) quanto melius fuerat promissum patris non esse servatum, Off. 3, 94, how much better it would have been, for the father's word not to have been kept.

1496. The principal verbs and verbal expressions thus used are: (a.) possum, liet, dēbeō, oportet, convenit, decet. (b.) aequum, aequius, iūstum, fās, necesse est; consentāneum, satis, satius, optābile, optābilius est; ūtilius, melius, optimum, pār, rēctum est; facile, difficile, grave, Infinītum, longum, māgnum est; est with the predicative genitive, or a possessive pronoun (1237). (c.) Similarly, but without an infinitive, sum with a gerund, a gerundive, or a future participle.

1497. The imperfect of most of the above verbs and verbal expressions often relates to action not performed at the present time: as,

his alias poteram subnectere causas; sed eundum est, J. 3, 315, to these I might add other grounds; but I must go. The context must determine whether the imperfect relates (a.) to action not performed either in the present as here, or in the past as in 1495, or (b.) to action performed in the past: as, sollicitare poterat, audēbat, C. 3, 16, he had at once the assurance and the ability to play the tempter's part.

1498. Forms of possum are sometimes put in the subjunctive (1554). Thus, possim, &c., often (1556), also possem, &c., usually of present time (1560), less frequently of past time (1559), potuissem, &c., particularly in sentences of negative import (1561), rarely potuerim, &c. (1558). Sometimes also deberem, &c., of present time (1560), debuissem, &c., chiefly in apodosis.

QUESTIONS.

1499. The indicative is the mood ordinarily used in enquiries and in exclamations: as,

(a.) huic ego 'studes?' inquam. respondit 'etiam.' 'ubl?' 'Mediolani.' 'cur non hic?' 'quia nullos hic praeceptores habemus,' Plin. Ep. 4, 13, 3, said I to the boy, 'do you go to school?' 'yes, sir,' said he; 'where?' 'at Mediolanum;' 'why not here?' 'oh because we haven't any teachers here.' (b.) ut ego tuum amorem et dolorem desidero, Att. 3, 11, 12, how I always feel the absence of your affectionate sympathy.

1500. Questions and exclamations are used much more freely in Latin than in English. Particularly common are two questions, of which the first is short and general, leading up to the real question: as,

sed quid ais? ubi nunc adulescens habet? Pl. Tri. 156, but tell me, where is the youngster living now? estne? vici? et tibi saepe litteras do? Cael. in Fam. 8, 3, 1, is it true? have I beaten? and do I write to you often? The real question is often preceded by quid est, quid dicis, or by quid, quid vero, quid tum, quid postea, quid igitur, quid ergo, &c., &c.: as, quid? canis nonne similis lupo? DN. 1, 97, why, is not the dog like the wolf?

1501. There are two kinds of questions: (1.) Such questions as call for the answer yes or no in English: as, is he gone? These may conveniently be called Yes or No Questions. (2.) Questions introduced by an interrogative pronoun, or by a word derived from an interrogative pronoun: as, who is gone? where is he? These are called Pronoun Questions.

YES OR NO QUESTIONS.

1502. (1.) Yes or No questions are sometimes put without any interrogative particle: as,

Thraex est Gallina Syrō pār? H. S. 2, 5, 44, of two gladiators, is Thracian Bantam for the Syrian a match? Often intimating censure: as. rogās? Pl. Aul. 634, dost ask? or what an absurd question. prompsistitu illi vinum?:: non prompsi, Pl. MG. 830, thou hast been broaching wine for him?:: not I. Especially with non: as, patere tua consilia non sentis? C. I, I, you don't see that your schemes are out? It is often doubtful whether such sentences are questions, exclamations, or declarations.

1503. (2.) Yes or No questions are usually introduced by one of the interrogative particles -ne or -n, nonne, num, an, anne.

1504. A question with -ne or -n may enquire simply, without any implication as to the character of the answer, or it may either expect an affirmative answer like nonne, or less frequently a negative answer like num: as,

(a.) valen? Pl. Tri. 50, art well? habetin aurum? Pl. B. 269, have you got the gold? (b.) itssin in splendorem dari bullas has foribus? Pl. As. 426, didn't I give orders to polish up the bosses of the door? facitne ut dixi? Pl. Am. 526, is n't he acting as I said? (c.) isto immenso spatio quaero, Balbe, cur Pronoea vestra cessaverit. laboremne fugiebat? DN. 1, 22, I want to know, Balbus, why your people's Providence lay idle all that immeasurable time; it was work she was shirking, was it? quid, mundum praeter hunc umquamne vidisti? negabis, DN. 1, 96, tell me, did you ever see any universe except this one? you will say no.

1505. Sometimes the -ne of an interrogative sentence is transferred to a following relative, chiefly in Plautus and Terence: as, rogās? quīne arrabōnem ā mē accēpistī ob mulierem? Pl. R. 860, how can you ask, when you have got the hansel for the girl from me? Similarly, ō sērī studiōrum, quīne putētis difficile, H. S. 1, 10, 21, what laggards at your books, to think it hard, i. e. nonne estis sērī studiōrum, quī putētis difficile? Compare 1569.

1506. To a question with nonne, a positive answer is usually expected, seldom a negative: as,

(a.) nonne meministi?:: memini vēro, TD. 2, 10, don't you remember? :: oh yes. Sometimes a second or third question also has nonne, but oftener non: as, nonne ad te L. Lentulus, non Q. Sanga, non L. Torquatus vēnit? Pis. 77, did not Lentulus and Sanga and Torquatus come to see you? (b.) nonne cogitas? RA. 80, do you bear in mind? nonne is rare in Plautus, comparatively so in Terence, but very common in classical Latin.

1507. To a question with num a negative answer is generally expected. Less frequently either a positive or a negative answer indifferently: as,

(a.) num negāre audēs? C. 1, 8, do you undertake to deny it? num, tibi cum faucēs ūrit sitis, aurea quaeris pōcula? H. S. 1, 2, 114, when thirst thy throat consumes, dost call for cups of gold? Rarely numne: as, quid, deum ipsum numne vidisti? DN. 1, 88, tell me, did you ever see god in person? (b.) sed quid ais? num obdormīvistī dūdum? Pl. Am. 620, but harkee, wert asleep a while ago? numquid vīs? Pl. Tri. 192, hast any further wish?

1508. A question with an, less often anne, or if negative, with an non, usually challenges or comments emphatically on something previously expressed or implied: as,

an habent quas gallinae manüs? Pl. Ps. 29, what, what, do hens have hands? an is also particularly common in argumentative language, in anticipating, criticising, or refuting an opponent: as, quid dicis? an bello Siciliam virtüte tua liberatam? V. I, 5, what do you say? possibly that it was by your prowess that Sicily was rid of the war? at vēro Cn. Pompēi voluntatem a mē aliēnabat orātio mea. an ille quemquam plūs dilēxit? Ph. 2, 38, but it may be urged that my way of speaking estranged Pompey from me. why, was there anybody the man loved more? In old Latin, an is oftener used in a single than in an alternative question, while in classical Latin it is rather the reverse.

1509. (3.) Yes or No questions are sometimes introduced by ecquis, ecquo, ecquando, or en umquam: as,

heus, ecquis hic est? Pl. Am. 420, hollo, is c'er a person here? ecquid animadvertis horum silentium? C. 1, 20, do you possibly observe the silence of this audience? (1144). O pater, en umquam aspiciam te? Pl. Tri. 588, O father, shall I ever set mine eyes on thee?

1510. (4.) In Plautus, satin or satin ut, really, actually, sometimes becomes a mere interrogative or exclamatory particle: as, satin abilt ille? Pl. MG. 481, has that man really gone his way?

Positive and Negative Answers.

- 1511. There are no two current Latin words corresponding exactly with yes and no in answers.
- 1512. (1.) A positive answer is expressed by some emphatic word of the question, repeated with such change as the context may require: as,
- an non dixi esse hoc futürum?::dixti, T. Andr. 621, didn't I say that this would be?::you did. hūc abiit Clitipho::solus?::solus, T. Hau. 904, here Clitipho repaired::alone?::alone. The repeated word may be emphasized by sānē, vērō: as, dāsne manēre animos post mortem?::dō vērō, TD. 1, 25, do you grant that the soul lives on after death?::oh yes. Often, however, adverbs are used, without the repetition, such as certō, certō, etiam, factum, ita, ita enimvērō, ita vērō, sānē, sānē quidem, scīlicet, oh of course, vērō, rarely vērum.
- 1513. (2.) A negative answer is expressed by a similar repetition, with non or some other negative added: as,
- estne fräter intus?:: non est, T. Ad. 569, is brother in?:: he's not. Or, without repetition, by such words as non, non ita, non quidem, non hercle vēro, minimē, minimē quidem, minimē vēro, nihil minus.
- 1514. immo introduces a sentence rectifying a mistake, implied doubt, or understatement in a question: as, nûllane habës vitia?::immo alia, et fortasse minora, H. S. 1, 3, 20, have you no faults?:: I beg your pardon, other faults, and peradventure lesser ones. causa igitur non bona est? immo optima, Att. 9, 7, 4, is n't the cause a good one then? good? yes, more than good, very good.

ALTERNATIVE QUESTIONS.

- 1515. The alternative question belongs properly under the head of the compound sentence. But as the interrogative particles employed in the single question are also used in the alternative question, the alternative question is most conveniently considered here.
- 1516. In old English, the first of two alternative questions is often introduced by the interrogative particle whether, and the second by or: as, whether is it easier to say, Thy sins be forgiven thee, or to say Arise? In modern English, whether is not used thus.
- 1517. The history of the Latin alternative question is just the reverse of the English. In old Latin, the first question is very often put without any interrogative particle. Later, in the classical period, the use of -ne, or oftener of utrum, etymologically the same as whether, is overwhelmingly predominant.
- 1518. In the simplest form of the alternative sentence, neither question is introduced by an interrogative particle: as,
- quid ago? adeo, maneo? T. Ph. 736, what shall I do? go up and speak, or wait? (1531).

- 1519. Of two alternative questions, the first either has no interrogative particle at all, or is more commonly introduced by utrum, -ne, or -n. The second is introduced by an, rarely by anne, or if it is negative, by an non: as,
- (a.) album an atrum vinum potas? Pl. Men. 915, do you take light wine or dark? Tacitus es an Plinius? Plin. Ep. 9, 23, 3, are you Tacitus or Pliny? sortietur an non? PC. 37, will he draw lots or not? (b.) iam id porro utrum libentes an inviti dabant? V. 3, 118, then furthermore did they offer it voluntarily or did they consent to give it under stress? utrum cetera nomina in codicem accepti et expensi digesta habes an non? RC. 9, have you all other items methodically posted in your ledger or not? (c.) servosne es an liber? Pl. Am. 343, art bond or free? Esne tü an non es ab illo militi Macedonio? Pl. Ps. 616, art thou or art thou not the Macedonian captain's man? videon Cliniam an non? T. Hau. 405, do I see Clinia or not?
- 1520. necne for an non is rare: as, semina praeterea linquontur necne animai corpore in exanimo? Lucr. 3, 713, are seeds moreover left or not of soul within the lifeless frame? Twice in Cicero: as, sunt haec tua verba necne? TD. 3, 41, are these your words or not? But necne is common in indirect questions.
- 1521. Instead of a single second question with an, several questions may be used if the thought requires it, each introduced by an.
- 1522. Sometimes an introductory utrum precedes two alternative questions with -ne and an: as, utrum tū māsne an fēmina's? Pl. R. 104, which is it, art thou man or maid? This construction has its origin in questions in which utrum is used as a live pronoun: as, utrum māvīs? statimne nos vēla facere an paululum rēmigāre? TD. 4, 9, which would you rather do, have us make sail at once, or row just a lutle bit? In Horace and late prose, utrumne . . . an is found a few times.
- 1523. Sometimes a second alternative question is not put at all: as, utrum hoc bellum non est? Ph. 8, 7, in old English, whether is not this war?
- 1524. Two or more separate questions asked with -ne . . . -ne, or with num . . . num, must not be mistaken for alternative questions: as, num Homērum, num Hēsiodum coēgit obmūtēscere senectūs? CM. 23, did length of days compel either Homer or Hesiod to hush his voice? (1692).
- 1525. An alternative question is answered by repeating one member or some part of it, with such changes as the context may require.

PRONOUN QUESTIONS.

1526. Pronoun questions or exclamations are introduced by interrogative pronouns, or words of pronoun origin.

Such words are: (a.) quis qui, quoius, uter, qualis, quantus, quotus: as, quid rides? H. S. 2, 5, 3, why dost thou laugh? (1144). uter est insanior horum? H. S. 2, 3, 102, which of these is the greater crank? hora quota est? H. S. 2, 6, 44, what's o'clock? (b.) Or unde, ubl, quo, quor or cur, qui ablative, how, quin, why not, quam, how, quando, quotiens: as, unde venis et quo tendis? II. S. 1, 9, 62, whence dost thou come, and whither art thou bound? deus falli qui potuit? DN. 3, 76, how could a god have been taken in? (1495). quam bellum erat confiteri nescire, DN. 1, 84, how pretty it would have been to own up that you did not know (1495).

- 1527. Sometimes quin loses its interrogative force, and introduces an impatient imperative, particularly in Plautus and Terence, or an indicative of sudden declaration of something obvious or startling: as,
- (a.) quin me aspice, Pl. Most. 172, why look me over, won't you? i. e. me aspice, quin aspicis? (b.) quin discupio dicere, Pl. Tri. 932, why I am bursting with desire to tell.
- 1528. In Plautus, Terence, Horace, and Livy, ut, how, also is used in questions: as, ut valēs? Pl. R. 1304, how do you do? ut sēsē in Samniō rēs habent? L. 10, 18, 11, how is every thing in Samnium? Very commonly, and in Cicero only so, in exclamations also: as, ut fortūnātī sunt fabrī ferrāriī, quī apud carbōnēs adsident; semper calent, Pl. R. 531, what lucky dogs the blacksmiths be, that sit by redhot coals; they're always warm.
- 1529. In poetry, quis, uter, and quantus are found a few times with -ne attached; as, uterne ad casus dubios fidet sibi certius? H. S. 2, 2, 107, which of the two in doubtful straits will better in himself confide?
- 1530. Two or more questions or exclamations are sometimes united with one and the same verb: as,

unde quo vēni? H. 3, 27, 37, whence whither am I come? quot dies quam frigidis rebus absumpsi, Plin. Ep. 1, 9, 3. how many days have I frittered away in utter vapidities. quantae quotiens occasiones quam praeclarae fuerunt, Mil. 38, what great chances there were, time and again, spleudid ones too.

Some Applications of Questions.

- 1531. A question in the indicative present or future may be used to intimate command or exhortation, deliberation, or appeal: as,
- (a.) abin hinc? T. Eu. 861, will you get out of this? abin an non?:: abeo, Pl. Aul. 660, will you begone or not?:: I'll go. quin abis? Pl. MG. 1087, why won't you begone? or get you gone, begone. non taces? T. Ph. 987, won't you just hold your tongue? ecquis currit pollinctorem arcessere? Pl. As. 910, won't some one run to fetch the undertaker man? quin conscendimus equos? L. I, 57, 7, why not mount? or to horse, to horse. (b.) quid est, Crasse, imusne sessum? DO. 3, 17, what say you, Crassus, shall we go and take a seat? quoi dono lepidum novum libellum? Cat. I, 1, unto whom shall I give the neat new booklet? quid ago? adeo, maneo? T. Ph. 736, what shall I do? go up and speak, or wait? (c.) eon? voco huchominem?:: I, voca, Pl. Most. 774, shall I go, and shall I call him. See also 1623. Such indicative questions occur particularly in old Latin, in Catullus, in Cicero's early works and letters, and in Vergil.
- 1532. Some set forms occur repeatedly, especially in questions of curiosity, surprise, incredulity, wrath, or captiousness: as,
- sed quid ais? T. Andr. 575, but apropos, or but by the way (1500). quid istic? T. Andr. 572, well, well, have it your way: compare quid istic verba facimus? Pl. E. 141. ain ttl? Br. 152, no, not seriously? itane? T. Eu. 1058, not really? Frequently egone: as, quid nunc facere cogitas?:: egone? T. Hau. 608, what do you think of doing now?:: what, I? In Plautus, threats are sometimes introduced by scin quo modo? do you know how? i. e. at your peril.

1533. A question is sometimes united with a participle, or an ablative absolute, or thrown into a subordinate sentence: as,

quem früctum petentës scire cupimus illa quo modo moveantur? Fin. 3, 37, with what practical end in view do we seek to know how yon bodies in the sky keep in motion? qua frequentia prosequente creditis nos illinc profectos? L. 7, 30, 21, by what multitudes do you think we were seen off when we left that town? 'homines' inquit 'Emisti.' quid uti faceret? Sest. 84, 'you bought up men' says he; with what purpose?

THE INFINITIVE OF INTIMATION.

1534. The infinitive is principally used in subordination, and will be spoken of under that head. One use, however, of the present infinitive in main sentences, as a kind of substitute for a past indicative, requires mention here.

1535. In animated narration, the present infinitive with a subject in the nominative sometimes takes the place of the imperfect or perfect indicative: as,

interim cōtīdiē Caesar Aeduōs frūmentum flāgitāre, I, 16, I, there was Caesar meantime every day dunning and dunning the Aeduans for the grain. Diodōrus sordidātus circum hospitēs cursāre, rem omnibus nārrāre, V. 4, 41, Diodorus kept running round in sackeloth and ashes from friend to friend, telling his tale to everybody. intereā Catilina in prīmā aciē versārī, labōrantibus succurrere, S. C. 60, 4. Catiline meantime bustling round in the forefront of battle, helping them that were sore bestead. tum vērō ingentī sonō caelum strepere, et micāre īgnēs, metū omnēs torpēre, L. 21, 58, 5, at this crisis the welkin ringing with a dreadful roar, fires flashing, everybody paralyzed with fear. This infinitive occurs in almost all writers, for instance, Plautus, Terence, Cicero, Horace, and particularly Sallust, Livy, and Tacitus. Less commonly in Caesar. Usually two or more infinitives are combined, and infinitives are freely mixed with indicatives. The subject is never in the second person.

1536. This infinitive is used to sketch or outline persistent, striking, or portentous action, where description fails; and as it merely intimates the action, without distinct declaration, and without notation of time, number, or person, it is called the Infinitive of Intimation. It cannot be adequately represented in English.

1537. The infinitive of intimation is sometimes used without a subject, when emphasis centres in the action alone; as,

ubl turrim procul constitui viderunt, inridere ex muro, 2, 30, 3, when they saw the tower planted some way off, jeer after jeer from the wall. tum spectaculum horribile in campis patentibus: sequi fugere, occidi capi, S. I. 101, 11, then a heartrending spectacle in the open fields: chasing and racing, killing and catching.

1538. This infinitive has rarely an interrogative implication: as, rex te ergo in oculis::scilicet::gestare?::vero, T. Eu. 401, your king then always bearing you::of course, of course::in eye?::oh yes.

- 1539. It may be mentioned here, that the infinitive of intimation is sometimes used from Sallust on with cum, when. Also by Tacitus in a temporal protasis with ubl, ut, or postquam, coordinated with a present or imperfect indicative protasis: as,
- (a.) cingëbătur interim milite domus, cum Libō vocare percussorem, Ta. 2, 31, the house meantime was encompassed with soldiers, when Libo called for somebody to kill him (1869). (b.) ubl crīdēscere sēditio et ā conviciis ad tēla trānsībant, inicī catēnās Flāviānō iubet, Ta. H. 3, 10, when the riot was waxing hot, and they were proceeding from invectives to open violence, he orders Flavian to be clapped in irons (1933).

THE SUBJUNCTIVE MOOD.

DECLARATIONS.

I. THE SUBJUNCTIVE OF DESIRE.

(A.) WISH.

1540. The subjunctive may be used to express a wish.

Wishes are often introduced by utinam, in old and poetical Latin also by uti, ut, and curses in old Latin by qui; these words were originally interrogative, how. Sometimes the wish is limited by modo, only. In negative wishes në is used, either alone, or preceded by utinam or modo; rarely non, or the old-fashioned nec, not (1446).

- 1541. (1.) The present and perfect represent a wish as practicable; although a hopeless wish may, of course, if the speaker chooses, be represented as practicable: as,
- (a.) të spectem, suprëma mihî cum vënerit hora, Tib. 1, 1, 59, on thee I'd gase, when my last hour shall come. utinam illum diem videam, Att. 3, 3, I hope I may see the day. (b.) utinam conëre, Ph. 2, 101, I hope you may make the effort. (c.) di vortant bene quod agās, T. Hec. 196, may gods speed well whate'er you undertake. qui illum di omnës perduint, T. Ph. 123, him may all gods fordo. O utinam hibernae duplicentur tempora brümae, Prop. 1, 8, 9, oh that the winter's time may doubled be. utinam reviviscat fräter, Gell. 10, 6, 2, I hope my brother may rise from his grave. në istüc Iuppiter sîrit, L. 28, 28, 11, now Jupiter forefend. The perfect is found principally in old Latin.
 - 1542. The present is very common in asseveration: as,

peream, nisi sollicitus sum, Fam. 15, 19, 4, may I die, if I am not worried. sollicitat, ita vivam, me tua valētūdō, Fam. 16, 20, your state of health worries me, as I hope to live. ita vivam, ut māximōs sūmptūs faciō, Att. 5, 15, 2, as I hope to be saved, I am making great outlays. See also 1622.

1543-1548.] Sentences: The Simple Sentence.

- 1543. The perfect subjunctive sometimes refers to past action now completed: as, utinam abierit malam crucem, Pl. Poen. 799, I hope he's got him to the bitter cross (1165). utinam spem impleverim, Plin. Ep. 1, 10, 3, I hope I may have fulfilled the expectations.
- 1544. (2.) The imperfect represents a wish as hopeless in the present or immediate future, the pluperfect represents it as unfulfilled in the past: as,
- (a.) tēcum lūdere sīcut ipsa possem, Cat. 2, 9, could I with thee but play, e'en as thy mistress' self, to Lesbia's sparrow. utinam ego tertius võbis amīcus adscrīberer, TD. 5, 63, would that I could be enrolled with you myself, as the third friend, says tyrant Dionysius to Damon and Phintias. (b.) utinam mē mortuum prius vidissēs, Ofr. 1, 3, 1, I wish you had seen me dead first. (c.) utinam nē in nemore Pēlio secūribus caesa accēdisset abiēgna ad terram trabēs, E. in Cornif. 2, 34, had but, in Pelion's grove, by axes felled, ne'er fallen to the earth the beam of fir, i. e. for the Argo. utinam ille omnīs sēcum cōpiās ēdūxisset, C. 2, 4, I only wish the man had marched out all his train-bands with him.
- 1545. In old or poetical Latin, the imperfect sometimes denotes unfulfilled past action, like the usual pluperfect; as, utinam in Siciliä perbiterës, Pl. R. 494, would thou hadst died in Sicily. utinam të di prius perderent, Pl. Cap. 537, I wish the gods had cut thee off before.
- 1546. In poetry, a wish is sometimes thrown into the form of a conditional protasis with si or δ si: as, δ si urnam argenti fors quae mihi monstret, H. S. 2, 6, 10, oh if some chance a pot of money may to me reveal.
- (B.) Exhortation, Direction, Statement of Propriety.
- 1547. The subjunctive may be used to express an exhortation, a direction, or a statement of propriety.

The subjunctive of exhortation is sometimes preceded in old Latin by uti or ut, originally interrogative. In negative exhortations or directions, nē, nēmō, nihil, or numquam, &c., is used, rarely non.

- 1548. (1.) The present expresses what is to be done or is not to be done in the future: as,
- (a.) hoc quod coepi primum enarrem, T. Hau. 273, first let me tell the story I've begun. taceam nunc iam, Pl. B. 1058, let me now hold my tongue. considamus hic in umbra, Leg. 2, 7, let us sit down here in the shade. ne difficilia optemus, V. 4, 15, let us not hanker after impossibilities. (b.) HAICE VTEI: IN · COVENTIONID · EXDEICATIS, CIL. I, 196, 23, this you are to proclaim in public assembly. (c.) nomina declinare et verba in primis pueri sciant, Quintil. 1, 4, 22, first and foremost boys are to know how to inflect nouns and verbs. uti adserventur mägnä diligentia, Pl. Cap. 115, let them be watched with all due care. ne quis tamquam parva fastidiat grammatices elementa, Quintil. 1, 4, 6, let no man look down on the rudiments of grammar, fancying them insignificant.

1549. (2.) The perfect subjunctive is rare: as, idem dictum sit, Quintil. 1, 1, 8, the same be said, once for all. Mostly in prohibitions: as, morātus sit nēmō quō minus abeant, L. 9, 11, 13, let no man hinder them from going away.

1550. In positive commands, the second person singular often has a definite subject in old or epistolary Latin, and particularly sis, for the imperative es or estő. Usually however an indefinite subject (1030): as,

(a.) eas, Pl. R. 519, be off. hic apud nos hodie cenes, Pl. Most. 1129, dine here with us today. cautus sis, mi Tiro, Fam. 16, 9, 4, you must be careful, dear Tiro. (b.) isto bono ütare, dum adsit, CM. 33, enjoy this blessing while you have it with you.

1551. In prohibitions, the second person singular of the present is often used in old Latin with a definite subject. Usually however the perfect is employed, either with a definite or with an indefinite subject: as,

(a.) në illum verberës, Pl. B. 747, you must n't thrash the man. Once in Horace: në sis patruos mihi, S. 2, 3, 88, don't play stern governor to me. (b.) në trënsieris Ibërum, L. 21, 44, 6, do not cross the Iberus. quod dubitës në fëceris, Plin. Ep. 1, 18, 5, what you have doubt about, never do.

1552. (3.) The imperfect or pluperfect subjunctive is sometimes used to express past obligation or necessity: as,

(a.) Imperfect: quae hic erant cūrārēs, T. Hec. 230, thou shouldst have looked to matters here. paterētur, T. Hau. 202, he should have stood it. quod si meis incommodis laetābantur, urbis tamen periculō commovērentur, Sest. 54, well, if they did gloat over my mishaps, still they ought to have been touched by the danger to Rome. crās īrēs potius, Pl. Per. 710, you'd better have gone tomorrow, i. e. have resolved to go tomorrow. poenās penderēs, Pl. B. 427, thou hadst to pay a penalty. (b.) Pluperfect: restitissēs, rēpūgnāssēs, mortem pūgnāns oppetīssēs, Poet. in Sest. 45, thou shouldst have made a stand, fought back, and fighting met thy fate. quid facere dēbuistī? frūmentum nē ēmissēs, V. 3, 195, what ought you to have done? you should not have bought any wheat. Usually, however, past obligation or necessity is expressed by the gerundive construction, or by some separate verb meaning ought (1496).

(C.) WILLINGNESS, ASSUMPTION, CONCESSION.

1553. The subjunctive of desire may be used to denote willingness, assumption, or concession: as,

oderint dum metuant, Poet. in Suet. Cal. 30, they are welcome to hate, as long as they fear. ne sit sane summum malum dolor, malum certe est. TD. 2, 14, grant for aught I care that pain is not the worst evil, an evil it certainly is. nil fecerit, esto, J. 6, 222, he may be guiltless, be it so.

II. THE SUBJUNCTIVE OF ACTION CONCEIVABLE.

1554. The subjunctive is often used to represent action as conceivable, without asserting that it actually takes place.

In some of its applications, this subjunctive is often more exactly defined by an expression of doubt or of assurance: as, fors fuat an in Plautus, forsitan from Terence on (rarely forsan, fors), fortasse, may be, perhaps; opinor, haud scio an, I fancy; facile, easily, sine ulla dubitatione, unhesitatingly, &c., &c. The negative used with this subjunctive is non.

1555. This subjunctive is particularly common in guarded or diffident statements: thus, velim, I could wish, nolim, I should not be willing, mālim, I would rather, dixerim, I should say, are often preferred to a blunter volo, I insist, nolo, I won't, mālo, I prefer, or dico, I say.

1556. The present denotes action in an indefinite future: as,

- (a.) ego försitan in grege adnumerer, RA. 89, as for me, I might perhaps be counted in the common herd. mütuom argentum rogem, Pl. Tri. 758, money I might borrow. haud scið an rēctē dīcāmus, Sest. 58, I rather think we may say with propriety. (b.) The second person singular generally has an imaginary subject (1030): as, dīcās hic försitan, J. 1, 150, here peradventure thou mayst say, i. e. anybody may say. rogēs mē quid sit deus, auctore ūtar Simōnidē, DN. 1, 60, you may ask me what god is; I should follow the lead of Simonides. migrantis cernās, V. 4, 401, thou canst descry them on the move (1635). Often with some generalizing word, such as saepe, numquam, plūrēs: as, saepe videās, H. S. 1, 4, 86, thou oft canst see. Förtūnam citius reperiās quam retineās, Publil. Syr. 168, dame Fortune thou mayst sooner find than bind. (c.) nunc aliquis dīcat mihi, H. S. 1, 3, 19, now somebody may say te me (more commonly dīcet aliquis, dīcēs, 1620). försitan aliquis dīcat, L. 5, 52, 5, perhaps somebody may say. mīrum förtasse hōc vōbīs videātur, V. 3, 109, perhaps this may seem strange to you.
- 1557. (1.) The perfect is rarely used of past time. In this use it resembles the perfect of concession (1553): as,
- (a.) försitan temere fēcerim, RA. 31, peradventure I may have acted rashly. errāverim förtasse, Plin. Ep. 1, 23, 2, I may have been mistaken perhaps. (b.) concēdō; försitan aliquis aliquandō ēius modī quippiam fēcerit, V. 2, 78, I grant it; perhaps somebody, at some time or other, may have done something of the sort. haec ipsa försitan fuerint non necessāria, Br. 52, even this may perhaps have been superfluous.
- 1558. (2.) The perfect is oftenest used with a future meaning, and particularly the first person singular active of verbs meaning *think* or say: as,
- (a.) non facile dixerim, TD. 5, 121, I could not readily say. hoc sine ulla dubitatione confirmaverim, Br. 25, this I can assert without any hesitation. Pace tua dixerim, TD. 5, 12, by your leave I would say. The first person plural occurs first in Cornificius, and is rare: as, hunc deum rite beatum dixerimus, DN. 1, 52, such a god we should be right in pronouncing happy. (b.) plane perfectum Demosthenem facile dixeris, Br. 35, you would readily pronounce Demosthenes absolutely perfect (1030). tu vero eum nec nimis valde umquam nec nimis saepe laudaveris, Leg. 3, 1, oh no, rest assured you never can praise him too emphatically nor too often. conluviem istam non nisi metu coercueris, Ta. 14, 44, such a molley rabble you can only keep under by terrorism. (c.) forsitan quispiam dixerit, Off. 3, 29, perhaps somebody may say.

- 1559. (1.) The imperfect sometimes denotes action which might have taken place in the past: as,
- (a.) non ego hoc ferrem calidus iuventă consule Planco, H. 3, 14, 27, this I should not have brooked in my hot youth, in Plancus' consulate. (b.) The second person singular, particularly of verbs meaning see, make out, think, say, generally has an imaginary subject (1030): as, videres, H. S. 2, 8, 77, thou mightst have seen. cerneres, L. 22, 7, 12, you might have descried. nescires, L. 3, 35, 3, you could not have told. të columen rei publicae diceres intueri, Sest. 19, you would have sworn you were gazing on a pillar of the state. (c.) qui videret, urbem captam diceret, V. 4, 52, anybody who saw it, would have said it was a captured city. dicī hoc in te non potest, posset in Tarquinio, cum regno esset expulsus, TD. 1, 88, this cannot be said in your case; it might have been said in Tarquin's, when he was driven from the throne.
- 1560. (2.) The imperfect often denotes action not performed at the present time; so especially vellem (nöllem, mällem): as,
- (a.) nimis vellem habēre perticam, Pl. As. 589, I wish so much I had a stick. vellem adesse posset Panaetius; quaererem ex eō, TD. 1, 81, I only wish Panaetius could be with us: I should ask him (Panaetius was dead). cuperem voltum vidēre tuum, Att. 4, 16, 7, I should like to see the expression of your face. māllem Cerberum metuerēs, TD. 1, 12, I would rather you stood in dread of Cerberus. possem idem facere, TD. 1, 84, I could do the same. (b.) melius sequerēre cupīdine captam, O. 14, 28, better for thee it were a loving bride to woo. (c.) in hāc förtūnā perūtilis ēius opera esset, Att. 9, 17, 2, in the present pinch his services would be extremely valuable.
- 1561. The pluperfect represents action which did not take place in the past: as,
- (a.) vellem quidem licēret: hōc dīxissem, RA. 138, I only wish it were allowed; I should have said so and so. (b.) dedissēs huic animō pār corpus, fēcisset quod optābat, Plin. Ep. 1, 12, 8, you might have given this spirit a body to match; he would have done what he craved to do. (c.) urbēs et rēgna celeriter tanta nēquitia dēvorāre potuisset, Ph. 2, 67, such colossal prodigality might have been capable of swallowing down cities and kingdoms speedily. vīcissent inprobōs bonī; quid deinde? Sest. 43, the good might have overpowered the bad; what next?
- 1562. It may be mentioned here, that the subjunctive of action conceivable often extends to subordinate sentences: see 1731.

QUESTIONS.

1563. I. The subjunctive is often used to ask what action or whether any action is desired, commanded, proper, or necessary.

In many instances a negative answer or no answer at all is expected. The negative is nē, sometimes non.

- (a.) quo me vertam? Scaur. 19, which way shall I turn? quid faciam, praescribe:: quiesces:: ne faciam, inquis, omnino versus? H. S. 2, 1, 5, lay down the law, what I'm to do:: keep still:: wilt have me write, sayst thou, no verse at all? quid igitur faciam? non eam? T. Eu. 46, what then am I to do? not go? quid ni meminerim? DO. 2, 273, why should not I remember? or of course I remember. huic cedamus? huius condiciones audiamus? Ph. 13, 16, shall we bow the knee to him? shall we listen to his terms? (b.) quid tandem me facere decuit? quiescerem et paterer? L. 42, 41, 12, what in the world ought I to have done? keep inactive and stand it?
- 1564. Such questions sometimes have the alternative form: as, Corinthiis bellum indicāmus, an non? Inv. 1, 17, are we to declare war against Corinth, or not? utrum indicāre mē êt thēnsaurum aequom fuit, an ego alium dominum paterer fierī hīsce aedibus? Pl. Tri. 175, should I have pointed out the hard to him, or should I have allowed another to become the owner of this house? here paterer is equivalent to aequom fuit pati (1495).
- 1565. II. The subjunctive is often used to ask whether action is conceivable: as,
- (a.) quis putet celeritätem ingenii L. Brūtō dēfuisse? Br. 53, who can suppose that Brutus lacked ready wit? i. e. nēmō putet (1556), putābit (1620), or putāre potest. si enim Zēnōnī licuit, cūr nōn liceat Catōnī? Fin. 3, 15, for if it was allowed Zeno, why should not it be allowed Cato? (b.) hōc tantum bellum quis umquam arbitrārētur ab ūnō imperātōre cōnficī posse? IP. 31, who would ever have dreamed that this stupendous war could be brought to a close by a single commander? The imperfect sometimes denotes action not performed at the present time (1560): quis enim cīvis rēgī nōn favēret? D. 6, for what Roman would not feel for the king? (c.) ego tē vidēre nōluerim? QFr. 1, 3, 1, I have objected to seeing you?
- 1566. The subjunctive is often used in interrogative outbursts of surprise, disapprobation, indignation, or captious rejoinder. In such questions a pronoun, ego, tū (ille), is usually expressed. The negative is non.

This subjunctive occurs in Plautus and Terence, in Cicero, oftenest the letters, in Horace, Vergil, and Livy. Not in Caesar nor Sallust.

- 1567. (1.) The question may have no interrogative word, or may have -ne, especially in comedy: as,
- (a.) non taces?:: taceam? T. Ph. 987, you hold your tongue:: I hold my tongue? ne fie:: egone illum non fieam? Pl. Cap. 139, weep not:: what, I not weep for him? ti pulses omne quod obstat? H. S. 2, 6, 30, what, you, sir, punch whatever's in your way? faveas ti host? ille litteras ad te mittat? Ph. 7, 5, you, sir, sympathize with the enemy? he correspond with you? sapiënsne non timeat? Ac. 2, 135, a sage not be afraid? (b. ego mihl umquam bonorum praesidium defutirum putärem? Mil. 94, could I have dreamed that I should ever lack the protection of the patriotic? (c.) 'apud exercitum mihl fueris' inquit 'tot annos?' Mur. 21, 'to think of your having been with the army, bless my soul,' says he, 'so many years.' (d.) mihl cliusquam salüs tanti fuisset, ut meam neglegerem? Sull. 45, could anybod's safety have been so important in my eyes as to make me disregard my own?

1568. (2.) The question may have uti or ut: as,

të ut ülla rës frangat? të ut umquam të corrigës? C. 1, 22, any thing break you down? you ever reform? pater ut obesse filio debeat? Planc. 31, a father morally bound to work against his son?

1569. (3.) The question with uti or ut is sometimes attended by a remnant of another question with -ne or -n. In this combination, -ne either precedes, joined to an emphatic word, or it is attached directly to uti or ut: as,

(a.) egone ut të interpellem? TD. 2, 42, what I? interrupt you? illine ut impune concitent finitima bella? L. 4, 2, 12, what, they be allowed to stir up border warfare with impunity? virgo haec liberast:: meane ancilla libera ut sit, quam ego numquam ëmisi manu? Pl. Cur. 615, this girl is free:: my servant-girl? she to be free, when I have never set her free? (b.) utne tegam spurco Dāmae latus? H. S. 2, 5, 18, what, I'm to shield a nasty Dama's side? somnium. utine haec ignorāret suom patrem? T. Ph. 874, oh bosh, not to have known the father that begat her? See 1505 and 1532.

1570. It may be mentioned here, that the interrogative subjunctive is often used in subordinate sentences: see 1731.

THE IMPERATIVE MOOD.

COMMAND.

1571. The second person of the imperative mood is used in commands, either particular or general.

Commands are very often attended by a vocative or vocative nominative, or by tu, sir, sirrah, or vos, gentlemen, you people (1118). They are of various kinds, as follows: (a.) Order, often to an inferior: thus, to an official: lictor, conliga manus, Rab. 13, L. 1, 26, 7, Gell. 12, 3, 2, lictor, tie up his wrists. To soldiers: as, desilite milites, 4, 25, 3, overboard, my men. signifer, statue signum, L. 5, 55, 1, standardbearer, plant your standard. Infer miles signum, L. 6, 8, 1, advance your standard, man, or charge. To sailors: as, huc dirigite naves, L. 29, 27, 13, head your galleys this way. To slaves: as, convorrite aedes scopis, agite strenue, Pl. B. 10, sweep up the house with brooms, be brisk. Also to an equal: as, aperite aliquis, Pl. Mer. 130, open the door there somebody (1080). Or to a superior: as, heus, exi, Phaedrome, Pl. Cur. 276, ho Phaedromus, come out. (b.) Exhortation, entreaty, summons, request, prayer, imprecation, wish, concession, &c. : as, vos vobis consulite, 7, 50, 5, every man of you for himself. Es, bibe, animo obsequere, Pl. MG. 677, eat, drink, and be merry. sperne voluptätes, H. F. 1, 2, 55, scorn thou delights. quin tū i intro, Pl. Most. 815, go in, go in, won't you go in? (1527). patent portae, proficiscere, educ tecum etiam omnis tuos, C. I, 10, the gates are open, march forth; take out all your myrmidons with you too. audi, Iuppiter, L. 1, 32, 6, bow down thine ear, Jupiter. I in crucem, Pl. As. 940, get you gone to the cross. vive valeque, H. S. 2, 5, 109, long live and thrive, or farewell. tibl habe, Pl. Men. 690, you keep it yourself.

- 1572. The imperative is often softened by the addition of amābō, obsecrō, quaesō, prithee, I beg, or sīs, sultis, sōdēs, please (774). It is sharpened by age, agedum or agidum, age sīs, mark me, or ī, go, come on, or by modo, only. The concessive imperative sometimes has sānē, for all me.
- 1573. In Plautus and Terence, the enclitic dum, a while, a minute, just, is often attached to the imperative: as, manedum, Pl. As. 585, wait a minute. In classical Latin, dum is retained with age and agite: as, agedum conferte cum illius vitā P. Süllae, Sull. 72, come now, compare Sulla's life with that man's (1075).
- 1574. It may be mentioned here, that the imperative is often used in the protasis of a conditional sentence: as,
- tolle hanc opinionem, luctum sustuleris, TD. 1, 30, do away with this notion, and you will do away with mourning for the dead. Once only in old Latin, but often in late Latin, with a copulative: as, perge, ac facile ecfeceris, Pl. B. 695, start on, and you will do it easily.
- 1575. (1.) The third person, and the longer forms of the second person, are used particularly in laws, legal documents, and treaties, and also in impressive general rules and maxims: as,
- (a.) rēgiō imperio duō suntō, Leg. 3, 8, there shall be two men vested with the power of kings. amicitia rēgi Antiochō cum populō Rōmānō hīs lēgibus estō, L. 38, 38, 1, there shall be amity between king Antiochus and Rome on the following terms. (b.) vīcīnīs bonus estō, Cato, RR. 4, always be good to your neighbours. mōrībus vīvitō antīquis, Pl. Tri. 295, live thou in old-time ways. The longer forms are often called the Future Imperative.
- 1576. (2.) The longer forms of the second person are also sometimes used in the ordinary speech of everyday life: as, cavētō, QFr. 1, 3, 8, beware. In old Latin, often ēs, be thou, but in classical Latin. oftene estō (or sis). Usually habētō, meaning keep, or consider, regularly scitō, scitōte, you must know (846). In verse, the long forms may sometimes be due to the metre: as, hic hodiē cēnātō, Pl. R. 1417, take dinner here today. pār prō parī refertō, T. Eu. 445, pay tit for tat. But also without such necessity: as, aufertō intrō, Pl. Tru. 914, take it within. quiētus estō, inquam, T. Ph. 713, be not concerned, I say.
- 1577. (3.) It may be mentioned here, that the longer forms are very often used in the apodosis of a complex sentence, particularly with a future or a future perfect protasis: as,
- sī iste ībit, Itō, Pl. Ps. 863, if he shall go, go thou. medicō mercēdis quantum poscet, promitti iubētō, Fam. 16, 14, 1, you must order your medical man to be promised all he shall charge in the way of a fee. ubi nihil erit quod scrībās, id ipsum scrībitō, Att. 4, 8 b, 4, when you don't have anything to write, then write just that. cum ego P. Grānium testem prodūxerō, refellitō, sī poteris, V. 5, 154, when I put Granius on the witness stand, refut him if you can.
- 1578. In such combinations, however, the shorter forms are sometimes found: a ubi volēs, accerse, T. Andr. 848, fatch me when you will. And conversely the longer forms are also found with a present protasis: as, unum illud vidēto, sī mē amās, Fam. 16, 1, 2, attend to this one thing, an thou lovest me.
- 1579. A command is sometimes expressed by the subjunctive, accompanying fac, facito, fac ut, facito ut, cura ut, curato ut, vide, vide ut, volo, or particularly velim: as,

magnum fac animum habeas et spem bonam, QFr. 1, 2, 16, see that you keep up an heroic soul and unabated hope (1712). fac cogites, Fam. 11, 3, 4, see that you bear in mind. cura ut valeas, Fam. 12, 29, 3, take good care of yourself. velim existimes, Fam. 12, 29, 2, I should like to have you consider. For commands in the subjunctive alone, see 1547; in the future indicative, 1624; in the form of a question, 1531.

1580. A periphrastic perfect passive form is rare: as, iure caesus esto, Twelve Tables in Macrob. Sat. 1, 4, 19, he shall be regarded as killed with justifying circumstances. probe factum esto, L. 22, 10, 6, let it be considered justified. at vos admoniti nostris quoque casibus este, O. Tr. 4, 8, 51, but be ye warned by our misfortunes too.

PROHIBITION.

- 1581. (1.) In prohibitions with the second person, the imperative with në is used in old Latin, and with neve as a connective, rarely neque: as,
- në fië, Pl. Cap. 139, weep not. në saevi tanto opere, T. Andr. 868, be not thus wroth. Sometimes in classical poetry also, in imitation of old style: as, në saevi, mägna sacerdos, V. 6, 544, rave not, thou priestess grand. Once in Livy: në timëte, 3, 2, 9, be not afraid.
- 1582. From Ovid on, non is used a few times for no: as, non caris aures onerate lapillis, O. AA. 3, 129, load not with precious stones your ears.
- 1583. (2.) Prohibitions in the second person are usually expressed by noli or nolite with the infinitive, particularly in classical prose: as,
- obiürgāre nölī, Att. 3, 11, 2, don't scold. nölīte id velle quod fierī nön potest, Ph. 7, 25, don't yearn after the unattainable.
- 1584. In poetry, equivalents for noli are sometimes used with the infinitive, such as fuge, parce or comperce, conpesce, mitte or omitte, absiste: as, quid sit futurum cräs, fuge quaerere, H. 1, 9, 13, what fate the morrow brings, forbear to ask. Livy has once parce, 34, 32, 20.
- 1385. (3.) A prohibition in the second person is often expressed by the subjunctive accompanying cave, cave ne, caveto ne, fac ne, vide ne, videto ne, cura ne, cura
- cave festines, Fam. 16, 12, 6, don't be in a hurry. caveto ne suscenses, Pl. As. 372, see that thou beest not wroth. hoc nolim me iocari putes, Fam. 9, 15, 4, I should hate to have you think I am saying this in fun. For prohibitions in the second person with ne and the present or perfect subjunctive, see 1551. For the subjunctive coordinated with cave, see 1711.
- 1586. In law language, prohibitions are expressed by the third person of the imperative with nē, and with nēve as a connective: as,

hominem mortuom in urbe në sepelito nëve urito, Twelve Tables in Leg. 2, 58, he shall not bury nor yet shall he burn a dead man in town. mulierës genäs në radunto nëve lessum funcis ergo habento, Twelve Tables in Leg. 2, 59, women shall not tear their cheeks nor shall they keen in lamentation for the dead (1257). Likewise with nëmo: as, nëmini pärento, Twelve Tables in Leg. 3, 8, they shall not be subject to anybody. See also 1548.

TENSE.

THE TENSES OF THE INDICATIVE.

THE PRESENT TENSE.

1587. The present indicative represents action as going on at the time of speaking or writing: as,

scribō, I write, or I am writing. nunc primum andiō, T. Andr. 936, for the first time I hear. notat ad caedem finum quemque nostrum, C. 1, 2, he is marking us out for death, each and all. domus aedificatur, Att. 4, 2, 7, the house is building.

1588. The present is used to denote action customary or repeated at any time, or a general truth: as,

agri cultūrae non student, 6, 22, 1, they do not apply themselves to farnzing. viri in uxores vitae necisque habent potestātem, 6, 19, 3, the married men have power of life and death over their wives. probitās laudātur et alget, J. 1, 74, uprightness gets extolled, and left out in the cold. dum vitant stulit vitia, in contrāria currunt, H. S. 1, 2, 24, while fools essay a vice to shun, into its opposite they run. mors sola fatētur quantula sint hominum corpuscula, J. 10, 172, death is the only thing that tells what pygmy things men's bodies be. stultorum plēna sunt omnia, Fam. 9, 22, 4, the world is full of fools. rīsū inepto rēs ineptior nūllast, Cat. 39, 16, there's nothing sillier than a silly laugh.

1589. The present, when accompanied by some expression of duration of time, is often used to denote action which has been going on some time and is still going on.

This present is translated by the English perfect: as, Lilybaei multõs iam annõs habitat, V. 4, 38, he has lived at Lilybaeum this many a year. iam dūdum auscultõ, H. S. 2, 7, 1, I have been listening for an age. satis diū hōc iam saxum vorsõ, T. Eu. 1085, I've trundled at this boulder long enough as 't is. nimium diū tē castra dēsiderant, C. 1, 10, the camp has felt your absence altogether too long. iam diū ignõrõ quid agās, Fam. 7, 9, 1, I have not known this long time how you are getting on. This use extends to the subjunctive and to nouns of the verb also. But if the action is conceived as completed, the perfect is used: as, sērō resistimus ēi, quem per annõs decem aluimus, Att. 7, 5, 5, it is too late to oppose a man whom we have been supporting ten long years.

1590. The present is often used to represent past action as going on now. This is called the *Present of Vivid Narration*: as,

trānsfigitur scūtum Pulioni et verūtum in balteo dēfigitur. āvertit hīc cāsus vāginam, inpedītumque hostēs circumsistunt, 5, 44, 7, Pulio has his shield run through, and a javelin sticks fast in his sword belt. This mischance puts his scabbard out of reach, and the enemy encompass him in this hampered condition. This present often stands side by side with a past tense. It is common in subordinate sentences also.

1591. The present is sometimes used in brief historical or personal memoranda, to note incidents day by day or year by year as they occur. This is called the *Annalistic Present*: as,

Proca deinde rēgnat. is Numitōrem prōcreat. Numitōrī rēgnum vetustum Silviae gentis lēgat, L. 1, 3, 9, after this Proca is king; this man begets Numitor; to Numitor he bequeaths the ancient throne of the Silvian race. duplicātur cīvium numerus. Caelius additur urbī mōns, L. 1, 30, 1, number of citizens doubled; Mt. Caelius added to city. in Māmurrārum lassī deinde urbe manēmus, H. S. 1, 5, 37, in the Mamurras' city then forspent we sleep. Particularly common with dates: as, A. Vergīnius inde et T. Vetusius cōnsulātum ineunt, L. 2, 28, 1, then Verginius and Vetusius enter on the consulship. M. Sīlānō L. Nōrbānō cōnsulibus Germānicus Aegyptum proficiscitur, Ta. 2, 59, in the consulship of Silanus and Norbanus, Germanicus leaves for Egypt.

1592. Verbs of hearing, seeing, and saying are often put in the present, even when they refer to action really past: as,

audio Valerium Mārtiālem dēcessisse, Plin. Ep. 3, 21, 1, I hear that Martial is dead, i. e. the epigrammatist, 102 A.D. Particularly of things mentioned in books, or in quoting what an author says: as, Hercyniam silvam, quam Eratostheni notam esse video, 6, 24, 2, the Hercynian forest, which I see was known to Eratosthenes. Plato 'Escam malorum' appellat voluptātem, CM. 44, Plato calls pleasure the 'bait of sin.'

1593. The present is sometimes loosely used of future action: as,

cras est mihi iūdicium, T. Eu. 338, tomorrow I've a case in court. ego sycophantam iam condūco de ioro, Pl. Tri. 815, for me, a sharper from the market place I'll straight engage. quam mox inruimus? T. Eu. 788, how soon do we pitch in? This present is also used in subordinate sentences with antequam and priusquam (1912, 1915), with dum, until (2006), and sometimes with si.

THE IMPERFECT TENSE.

1594. The imperfect indicative represents action as going on in past time: as,

scrībēbam, I was writing, or I wrote. ei mihi quālis erat, V. 2, 274, woe's me, how ghastly he appeared. multosque per annos errābant āctī fātīs, V. 1, 31, and they for many a year were roaming round, by fates pursued.

1595. The imperfect often denotes past action lasting while something else occurred: as,

an tum eras consul, cum mea domus ardebat? Pis. 26, were you perhaps consul at the time my house was burning down? neque vero tum ignorabat se ad exquisita supplicia proficisci, Off. 3, 100, and all the time he knew perfectly well that he was starting off to suffer studied torments.

1596. The imperfect is used to denote repeated or customary past action or condition: as,

commentābar dēclāmitāns cotīdiē, Br. 310, I always practised speaking my compositions every day. noctū ambulābat in pūblico Themistoclēs, TD. 4, 44, Themistocles used to promenade the streets nights.

1597-1603.] Sentences: The Simple Sentence.

1597. The imperfect, when accompanied by some expression of duration of time, is used to denote action which had been going on for some time, and was still going on.

This imperfect, which is translated by the English pluperfect, is analogous to the present in 1589: as, pater grandis nātū iam diū lectō tenēbātur, V. 5, 16, his aged father had long been bedridden. hōram amplius iam permultī hominēs mōliēbantur, V. 4, 95, something over an hour a good many men had been prizing away. But if the action is conceived as completed at a past time, the pluperfect is used: as, diem iam quintum cibō caruerat, 6, 38, 1, four whole days he had gone without eating.

1598. In a few examples, the imperfect is used to denote action suddenly recognized, though going on before: as, ehem, Parmeno, tun hic eras? T. Hec. 340, why bless me, Parmeno, were you here all this time?

1599. In descriptions of place or in general truths, where the present might be expected, the imperfect is sometimes used, by assimilation to past action in the context: as, ipsum erat oppidum Alesia in colle summo, 7, 69, 1, Alesia proper was situated on the top of a hill. Often also in subordinate sentences.

1600. For the imperfect indicative of certain verbs relating to action not performed at the present time, see 1497.

1601. In letters, the imperfect may denote action at the time of writing, the writer transferring himself to the time of the reader: as,

haec tibi dictābam post fānum putre Vacūnae, H. E. 1, 10, 49, I dictate this for thee behind Vacuna's crumbling shrine. nihil habēbam quod scrīberem, Att. 9, 10, 1, I have nothing to write. Similarly in the delivery of messages: as, scrībae ōrābant, H. S. 2, 6, 36, the clerks request. The present, however, is very often used where the imperfect would be applicable. Compare 1616.

THE PERFECT TENSE.

1602. The Latin perfect indicative represents two English tenses: thus, the preterite, I wrote, and the perfect, I have written, are both expressed by the perfect scripsi. In the first sense, this perfect is called the Historical Perfect; in the second sense, it is called the Perfect Definite.

THE HISTORICAL PERFECT.

1603. The historical perfect simply expresses action as having occurred at an indefinite past time, without implying anything as to the duration of the action: as,

scripsi, I wrote. vēni, vidi, vici, Caesar in Suet. Iul. 37, came, saw, overcame. apud Helvētiös longē nobilissimus fuit Orgetorix, 1, 2, 1, among the Helvetians, the man of highest birth by all odds was Orgetorix. Diodorus prope triennium domo caruit, V. 4, 41, for nearly three years Diodorus had to keep away from home. in Graeciā mūsici floruērunt, discebantque id omnēs, TD. 1, 4, in Greece musicians stood high, and everybody studied the art (1596).

Digitized by Google

1604. It may be mentioned here, that in subordinate sentences the historical perfect is sometimes loosely used from the writer's point of view, instead of the more exact pluperfect demanded by the context: as, aliquantum spatif ex eō locō, ubī pūgnātum est, aufūgerat, L. 1, 25, 8, he had run off some distance from the spot where the fighting had occurred.

THE PERFECT DEFINITE.

1605. The perfect definite expresses action already completed at the present time, and whose effects are regarded as continuing: as,

scripsi, I have written. dixerunt, Clu. 73, dixere, Quintil. 1, 5, 43, they have finished speaking. spectatores, fabula haec est acta, Pl. Most. 1181, ladies and gentlemen, this play is done.

1606. In old Latin, habed with the perfect participle is sometimes equivalent to a periphrastic perfect: as, illa omnia missa habed, Pl. Ps. 602, I've dropped all that, i.e. misī. But in classical Latin, the participle and a tense of habed are more or less distinct in their force: as, Caesar aciem instructam habuit, 1, 48,3, Caesar kept his line drawn up, not had drawn up. Compare 2297.

1607. With verbs of inceptive meaning the perfect definite is equivalent to the English present: as,

consisto, take my stand, constiti, stand, consuesco, get used, consuevi, am used, nosco, learn, novi, know. Similarly memini, remember, and odi, hate. The pluperfect of such verbs is represented by the English imperfect, and the future perfect by the English future.

1608. The perfect often denotes a present resulting state: as, vicine, peril, interil, Pl. Most. 1031, my neighbour, I am dead and gone. Particularly in the passive voice: as, Gallia est omnis divisa in partes tres, 1, 1, 1, Gaul, including everything under the name, is divided into three parts. Compare 1615.

1609. In the perfect passive, forms of fui, &c., are sometimes used to represent a state no longer existing: as, monumento statua superimposita fuit, quam diectam nuper vidimus ipsi, L. 38, 56, 3, on the monument there once stood a statue which I saw not long ago with my own eyes, lying flat on the ground. Similarly, in the pluperfect, fueram, &c.: as, arma quae fixa in parietibus fuerant, ea sunt humi inventa, Div. 1, 74, the arms which had once been fastened on the walls were found on the floor. Sometimes, however, forms of fui, &c., fueram, &c., and fuero, &c., are used by Plautus, Cicero, especially in his letters, Nepos, Sallust, and particularly Livy, in passives and deponents, quite in the sense of sum, &c.

1610. The perfect sometimes implies a negative idea emphatically by understatement: as,

fuit Ilium, V. 2, 325, Ilium has been, i.e. Ilium is no more. viximus, floruimus, Fam. 14, 4, 5, we have lived our life, we have had our day. filium unicum adulescentulum habed. Sh, quid dixi? habere me? immo habuī, T. Hau. 93, I have one only son, a growing boy. Ah me, what did I say, I have? Oh no, have had.

1611-1616.] Sentences: The Simple Sentence.

1611. The perfect may denote an action often done, or never done: as,

iam saepe homines patriam cerosque parentes prodiderunt, Lucr. 3, 85, time and again have men their land betrayed and parents dear. non aeris accervus et auri deduxit corpore febris, H. E. 1, 2, 47, no pile of brass and gold hath fevers from the body drawn. multi, cum obesse vellent, profuerunt et, cum prodesse, obfuerunt, DN. 3, 70, many a man has done good, when he meant to do harm, and when he meant to do good, has done harm. Common from Cicero, Sallust, and Catullus on, especially in poetry.

1612. The perfect is sometimes used as a lively future perfect to express completed future action: as,

quam mox coctumst prandium? Pl. R. 342, how soon is lunch all cooked? cui si esse in urbe licebit, vicimus, Att. 14, 20, 3, if he shall be allowed to stay in town, the day is ours. peril, si me aspexerit, Pl. Am. 320, I'm gone, if he lays eyes on me.

1613. It may be mentioned here, that the perfect is regularly used in a subordinate sentence denoting time anterior to a present of repeated action (1588). In such sentences the present is preferred in English: as,

reliqui, qui domi manserunt, se atque illos alunt, 4, 1, 5, the others, that stay at home, always support themselves and the above-mentioned also. si qui aut privatus aut populus eorum decreto non stetit, sacrificiis interdicunt, 6, 13, 6, if any man or any community does not abide by their decree, they always debar them from sacrifices. So also with quom or cum, quotiens, simul atque, ubl. Compare 1618.

THE PLUPERFECT TENSE.

1614. The pluperfect indicative expresses past action, completed before another past action expressed or understood: as,

scripseram, I had written. Pyrrhi temporibus iam Apollo versüs facere desierat, Div. 2, 116, in Pyrrhus's day Apollo had quite given up making poetry. mortuus erat Agis rex. filium reliquerat Leotychidem, N. 17, 1, 4, Agis the king had died; he had left a son Leotychides.

1615. The pluperfect often expresses a past resulting state: as,

castra oportunis locis erant posita, 7, 69, 7, the camp was pitched on favourable ground. Ita uno tempore et longus naves aestus complèverat, et onerarias tempestas adflictabat, 4, 29, 2, thus at one and the same time the tide had filled the menof-war, and the gale of wind kept knocking the transports about. This use is analogous to that of the perfect in 1608.

1616. In letters, the pluperfect is sometimes used to denote action occurring previous to the time of writing, the writer transferring himself to the time of the reader: as,

unam adhuc a të epistolam acceperam, Att. 7, 12, 1, I have only had one letter from you thus far. This use is analogous to that of the imperfect in 1601, and very often, where this pluperfect would be applicable, the perfect is used.

1617. The pluperfect is sometimes used where the perfect would be expected. Particularly so when it anticipates a past tense to follow in a new sentence: as, quod factum primō popularis coniūrātiōnis concusserat. neque tamen Catilinae furor minuēbātur, S. C. 24, 1, this terrified the conspirators at first; and yet Catiline's frenzy was not getting abated. Verbs of saying are also often put in the pluperfect in subordinate sentences referring to a preceding statement: as, Epidamniēnsis ille, quem dūdum dīxeram, adoptat illum puerum surruptīcium, Pl. Men. prol. 57, said man of Epidamnus that I named erewhile adopts said kidnapped boy.

1618. It may be mentioned here, that the pluperfect is used in a subordinate sentence denoting time anterior to a past tense of repeated action. In such sentences the preterite is preferred in English: as,

hostës ubi aliquos singulärës conspexerant, incitätis equis adoriëbantur, 4, 26, 2, every time the enemy caught sight of detached parties, they would always charge full gallop. Compare the analogous perfect in 1613.

THE FUTURE TENSE.

1619. The future indicative expresses future action, either momentary or continuous: as,

scrībam, I shall write, I shall be writing, or I will write, I will be writing. The future commonly expresses either prediction, or will, determination, promise, threat: as, (a.) tuās litterās exspectābō, Att. 5, 7, I shall be on the lookout for letters from you. (b.) vivum tē non relinquam; moriēre virgīs, V. 4, 85, I will not leave you alive; you shall die under the rod. But the sharp distinction which exists between shall and will in the English future and future perfect is utterly unknown in Latin: thus, in occidar equidem, sed victus non perībō, Cornif. 4, 65, I shall be murdered, to be sure, but I will not die a vanquished man, the difference between the prediction contained in I shall, and the determination contained in I will, cannot be expressed in Latin.

1620. The future is often used in diffident assertion, to express an assumption, a belief, conviction, or concession, of the speaker himself, without implying its universal acceptance: as,

dīcēs, TD. 2, 60, you will say. dīcet aliquis, TD. 3, 46, somebody will say (1556). dabit hōc Zēnōnī Polemō, Fin. 4, 51, Polemo will concede this point to Zeno. excüdent alii spīrantia mollius aera, crēdō equidem, V. 6, 847, with greater grace, I well believe, shall others shape the bronze that breathes. Particularly in conclusions: as, sequētur igitur vel ad supplicium beāta vīta virtūtem, TD. 5, 87, happiness then will walk with goodness even to the scaffold. Or in general truths: as, cantābit vacuus cōram latrōne viātor, J. 10, 22, the pourē man whan he goth by the weye, bifore the thevēs he may synge and pleye.

1621. The future sometimes predicts that a thing not yet known to be true will prove to be true: as, haec erit bono genere nāta, Pl. Per. 645, this maid, you'll find, is come of honest stock, i. e. esse reperiëtur. Compare the imperfect in 1508.

1622. In Plautus and Terence, the future is sometimes used in protestations or thanks: as, it a me di amabunt, T. Hau. 749, so help me heaven. di te amabunt, Pl. Men. 278, the gods shall bless thee. Usually, however, the subjunctive: see 1542 and 1541.

1623-1629.] Sentences: The Simple Sentence.

1623. The future is sometimes used in questions of deliberation or appeal: as, dēdēmus ergō Hannibalem? L. 21, 10, 11, are we then to surrender Hannibal? hancine ego ad rem nātam memorābō? Pl. R. 188, am I to say that I was born for such a fate? Oftener the present subjunctive (1563), or sometimes the present indicative (1531).

1624. The future is sometimes used, particularly in the second person, to express an exhortation, a direction, a request, a command, or with non a prohibition: as,

crās ferrāmenta Teānum tollētis, H. E. 1, 1, 86, tomorrow to Teanum you will take your tools. bonā veniā mē audiēs, DN. 1, 59, you will listen to me with kind indulgence. tū intereā non cessābis, Fam. 5, 12, 10, meantime you will not be inactive. haec igitur tibī erunt cūrae, Fam. 3, 9, 4, you will attend to this then, i. e. haec cūrābis.

1625. It may be mentioned here, that the future is used in sentences subordinate to a future, an imperative, or a subjunctive implying a future: as,

profecto nihil accipiam iniuriae, sī tu aderis, Att. 5, 18, 3, I am sure I shall suffer no harm, if you are with me. ut med esse voles, ita ero, Pl. Ps. 239, as you will have me be, so will I be. ut is qui audiet, cogitet plura, quam videat, DO. 2, 242, so that the hearer may imagine more than he sees. But sometimes a present is used (1593).

THE FUTURE PERFECT TENSE.

1626. The future perfect indicative expresses completed future action: as,

scripsero, I shall have written, or I will have written. The future perfect is very common in Latin, particularly in protasis with a relative, with cum, ubi, &c., with antequam or priusquam, with ut (...ita), as (...so), or with si, to express action anterior in time to a future; in English, this future perfect is usually represented by a loose present or perfect: as, quicquid feceris, adprobabo, Fam. 3, 3, 2, whatever you do, I shall think right. Examples will be given further on, in speaking of the complex sentence.

1627. It may be mentioned here that the future perfect in protasis and apodosis both denotes two actions occurring at one and the same time; these actions are usually identical: as,

qui Antônium oppresserit, is hôc bellum taeterrimum cônfēcerit, Fam. 10, 19, 2, the man that puts down Antony will put an end to this cruel war, i. e. putting down Antony will be ending the war. respirārô, sī tē viderô, Att. 2, 24, 5, I shall take breath again, if I set eyes on you.

1628. The future perfect sometimes denotes a future resulting state: as,

molestus certe ei fuero, T. Andr. 641, at all events I shall have proved a bane to him. meum rei püblicae atque imperatori officium praestitero, 4, 25, 3, I will have my duty all done to country and commander too.

1629. The future perfect is sometimes used to express rapidity of future action, often with the implication of assurance, promise, or threat: as,

abiero, Pl. Most. 590, I'll instantly be gone. iam huc revenero, Pl. MG. 863, B. 1066, I'll be back here again forthwith. primus impetus castra ceperit, L. 25, 38, 17, the first rush will see the camp carried.

1630. The future perfect often denotes action postponed to a more convenient season, or thrown upon another person.

Often thus with post, alias, and particularly mox: as, vobis post narravero, Pl. Ps. 721, I'll tell you by and by, i.e. I won't tell you now. ad fratrem mox iero, Pl. Cap. 194, I'll to my brother's by and by, i.e. not yet fuerit ista eius deliberatio, L. 1, 23, 8, that is a question for him to settle, i.e. not me. Especially videro: as, quae fuerit causa, mox videro, Fin. 1, 35, what the reason was, I won't consider now. recte secusne alias viderimus, Ac. 2, 135, whether right or not, we will consider some other time, i.e. never. vos videritis, L. 1, 58, 10, that is a question for you, i.e. not me.

1631. The future perfect sometimes denotes action which will have occurred while something else takes place: as,

non ero vobis morae: tibicen vos interea hic delectaverit, Pl. Ps. 573°, I will not keep you long; meantime the piper will have entertained you here. tū invita mulieres, ego accivero pueros, Att. 5, 1, 3, do you, sir, invite the ladies, and I will meantime have fetched the children.

1632. The future perfect is often not perceptibly different from the future, especially in the first person singular in old Latin: as,

ego mihī providero, Pl. Most. 526, I'll look out for myself. eros in obsidione linquet, inimīcūm animos auxerit, Pl. As. 280, he'll leave his owners in a state of siege, he'll swell the courage of the enemy. Similarly Cicero, in the protases sī potuero, sī voluero, sī licuerit, sī placuerit.

THE FUTURE ACTIVE PARTICIPLE WITH sum.

1633. The future active participle combined with the tenses of sum expresses action impending, resolved on, or destined, at the time indicated by the tense of the verb: as,

cum hoc equite pügnätüri estis, L. 21, 40, 10, with this kind of cavalry are you going to fight. bellum scriptūrus sum, quod populus Romānus cum Iugurthā gessit, Sall. I. 5, 1, I purpose to write the history of the war that the people of Rome carried on with Jugurtha. fiet illud, quod futūrum est, Div. 2, 21, whatever is destined to be, will be. Delphos petiīt, ubi columnās, quibus impositūri statuās rēgis Persei fuerant, suis statuis dēstināvit, L. 45, 27, 6, he went to Delphi, where he appropriated for his own statues the pillars on which they had intended to put statues of king Perses.

THE TENSES OF THE SUBJUNCTIVE.

1634. In simple sentences, the tenses of the subjunctive correspond in general to the same tenses of the indicative. But the present has a future meaning; the imperfect sometimes expresses past, sometimes present action; and the perfect sometimes expresses past action, and sometimes future action.

1635. The present subjunctive is sometimes used in reference to past action, like the indicative present of vivid narration (1590): as, migrantis cernãs, V. 4, 401, you can descry them swarming out (1556). comprehendi iüssit; quis non pertimēscat? V. 5, 14, he ordered them to be arrested; who would not be thoroughly scared? (1565).

THE COMPOUND SENTENCE, OR COORDINATION.

1636. Two or more independent simple sentences may be coordinated to form a compound sentence in one of two ways: either without a connective, or with a connective.

What applies to the coordination of sentences, also applies to the coordination of the parts of sentences in abridged sentences (1057).

(A.) WITHOUT A CONNECTIVE.

1637. When simple sentences or parts of sentences are coordinated without any connective, this mode of arrangement is called *Asyndetic Coordination* or *Asyndeton*.

Asyndeton, whether in unabridged or in abridged sentences, is more usual with three or more members than with two. It occurs particularly often in Plautus, Terence, Ennius, and Cato, also in Cicero, especially in his early works and letters.

- 1638. The sentences in which asyndeton occurs are commonly such as might be connected by words meaning and or but; less often by words meaning as, for, &c. Asyndeton is especially common:
- 1639. (a.) In animated narration of events happening at the same moment, in description, and in climaxes. Also in mention of colleagues in office, and in many set phrases and formulas: as,

vēnī, vidī, vīcī, Caesar in Suet. Iul. 37, came, saw, overcame. nostrī celeriter ad arma concurrunt, vāllum conscendunt, 5, 39, 3, our men rush speedily to arms, clamber up the palisade. huic s. c. intercessit C. Caelius, C. Pānsa, tribūnī pl., Fam. 8, 8, 7, this decree of the senate was objected to by Caelius and Pansa, tribunes of the commons. hī ferre agere plēbem, L. 3, 37, 7, there were these people worrying and harrying the commons (1535).

1640. (b.) In contrasts or antitheses: as,

opinionis commenta delet dies, naturae iudicia confirmat, DN. 2, 5, the fictions of speculation are swept away by time, but the judgements of nature are confirmed. Particularly when either member is positive, the other negative: vincere scis, Hannibal, victoria uti nescis, L. 22, 51, 4, you know how to conquer, Hannibal, but not how to use victory, says Maharbal after Cannae, 216 B. C.

1641. Asyndeton is very common with two or more imperatives: as, Egredere ex urbe, Catilina, libera rem publicam metu, in exsilium proficiscere, C. 1, 20, go forth from Rome, Catiline, relieve the commonwealth from its fear, depart into exile. Particularly when the first is age, come on, mark me, or 1, go (1572). But from Horace on, I nunc, go to now, is followed by et with a second imperative in derisive orders.

1642. Asyndeton is also common with parentheses. These often take the place of a modern foot-note: as, legatus capite velato filo (lanae velamen est) audi, Iuppiter,' inquit, L. 1, 32, 6, the envoy with his head covered with a filum' (that is to say a wrap of wood) says 'bow down thine ear, Jupiter.' Parentheses however are often introduced, from Terence on by nam, and from Sallust and Cicero on, by et, neque, autem, enim, &c.

(B.) WITH A CONNECTIVE.

(1.) CONJUNCTIONS AS CONNECTIVES.

1643. Simple sentences or parts of sentences may be connected by copulative, disjunctive, or adversative conjunctions.

(a.) COPULATIVE CONJUNCTIONS.

1644. Copulative conjunctions denote union, and connect both the sentences and their meaning. They are et, -que, atque or ac, and, and neque or nec, neither.

1645. (1.) et, and, is the commonest copulative, and connects either likes or unlikes; with two members only, it is either used between them, or is prefixed for emphasis to both: as,

Dumnorix apud Sēquanos plūrimum poterat et Helvētiis erat amīcus, 1, 9, 3, Dumnorix was very influential among the Sequani and a friend to the Helvetians. Democritus alba discernere et atra non poterat, TD. 5, 114, Democritus could not tell white and black apart. et discipulus et magister perhibebantur inprobi, Pl. B. 425, both pupil and master were rated as knaves.

1646. With three or more members, et is either used between the members or, frequently, prefixed for emphasis to all. Often, however, it is omitted throughout (1637), or a third member is appended by -que (1651):

persuadent Rauricis et Tulingis et Latovicis uti una cum his proficiscantur, 1, 5, 4, they induce the Rauricans, Tulingans, and Latovicans to join them in their march. is et in custodiam cives Romanos dedit et supplicătionem mihi decrevit et indices maximis praemiis adfecit, C. 4, 10, this person voted in the first place to put Roman citizens in ward, then to decree a thanksgiving in my honour, and lastly to reward the informers with

1647. Two members belonging closely together as a pair, and connected by et, atque, or -que, are sometimes put asyndetically with another member or members: as.

Aedui ferunt se deiectos principatu; queruntur fortunae commutātionem et Caesaris indulgentiam in se requirunt, 7, 63, 8, the Aeduans set forth that they were cast down from the chief place; they complain of the change of fortune, and say they miss Caesar's former kindness to them. nuntiatum est equites Ariovisti propius tumulum accedere et ad nostros adequitare; lapides in nostros conicere, 1, 46, 1, it was reported that Ariovistus's cavalry were moving nearer the hillock and galloping up to the Romans; that they were throwing stones at our men.

1648-1654.] Sentences: The Coordinate Sentence.

- 1648. et has sometimes the meaning of also or of and also, particularly when there is a change of speakers, or before a pronoun: as, et hoc scio, Plin. Ep. 1, 12, 11, 1 know that too. Sometimes also after verum, nam, and simul, especially when a pronoun follows. Not in Caesar.
- 1649. (2.) -que, and, combines members which belong together and make a whole, though they may be different or opposed to each other; the second member is often a mere appendage: as,
- rogat oratque të, RA. 144, he begs and entreats you, or he earnestly entreats you. Ilberti servolique nobilium, RA. 141, the freedmen and slaves of the great, or retainers, bond and free. omnës ea, quae bona vidaves or sequentur fugiuntque contrăria, TD. 4, 12, everybody runs after what seems good and avoids the opposite. -que is usually put after the first word of the new member. It is particularly common in old or legal style.
- 1650. The combination -que...-que, both...and, is very common in poetry: as, noctēsque diēsque, E. in CM. 1, both night and day. In prose, it is used by Sallust when the first word is a pronoun: as, mēque rēgnumque meum, I. 10, 2, both myself and my throne: and by Livy to connect two relative sentences: as, omnēs quique Rōmae quique in exercitū erant, 22, 26, 5, everybody, both people in Rome and people in the army.
- 1651. After two members without a connective, a third member is sometimes appended by -que: as,
- satis habebat hostem rapinis, pabulationibus, populationibusque prohibere, 1, 15, 4, he was satisfied with keeping the enemy from plundering, foraging, and ravaging.
- 1652. (3.) atque, or before any consonant except h often ao, and and besides, adds something belonging essentially to what goes before, but more important as a supplement or extension; as,
- se ex navi proiecit atque in hostes aquilam ferre coepit, 4, 25, 4, he sprang overboard and furthermore proceeded to bear the eagle upon the enemy. magna dis immortalibus habenda est atque huic Iovi Statori gratia, C. I, II, we owe a great debt of gratitude to the gods immortal in general, and to you fove the Stayer in particular. atque . . . atque occurs for et . . . et once in Vergil, and once in Silius Italicus.
- 1653. atque is used in comparisons, after words of likeness and unlikeness: as,
- parī spatiō trānsmissus, atque ex Galliā est in Britanniam, 5, 13, 2, the journey across is just as long as it is from Gaul to Britain. Idemque iūssērunt simulācrum Iovis facere māius et contrā, atque anteā fuerat, ad orientem convertere, C. 3, 20, and they furthermore gave orders to make a statue of Jupiter, a bigger one, and to turn it round to the east, the opposite of the way it originally faced. Sometimes et is thus used after alius, aliter, aequē, pariter, &c.: see the dictionary.
- 1654. With adjectives and adverbs in the comparative degree, atque sometimes takes the place of quam than, when the first member of comparison is negative (1895): as, amicior mihi nüllus vivit atque is est, Pl. Mer. 897, I have no greater friend alive than that man is. So in Plautus, Terence, Catullus, Vergil, rarely in Cicero. Horace uses atque thus, even when the first member is positive.

1655. A sentence is often introduced by et, -que, or atque, where but would be used in English, particularly so when a positive sentence follows a negative one: as,

Socrates nec patronum quaesivit nec iudicibus supplex fuit adhibuitque liberam contumăciam, TD. 1, 71, Socrates did not try to find an advocate nor bow the knee to his judges, but he was plain-spoken and defiant. nostrorum militum impetum hostes ferre non potuerunt ac terga verterunt, 4, 35, 2, the enemy could not stand the dash of our people, but turned their backs. hominis ne Graeci quidem ac Mysi potius, QFr. 1, 1, 19, a creature who is not even a Greek, but more of a Mysian.

1656. Two sentences, one of which would ordinarily be introduced by a subordinating temporal conjunction, are sometimes, mostly in poetry, coordinated by et or -que: as, dixit et in silvam pennis ablata refügit, V. 3, 258, she spake, and on her pinions sweeping, vanished to the wood, i.e. simul atque dixit, refugit.

1657. (4.) neque or nec, neither, nor, and ... not, but ... not, is used as a negative copulative, sometimes as a negative adversative:

opinionibus volgi rapimur in errorem nec vēra cernimus, Leg. 2, 43, we are swept into error by the delusions of the world and cannot make out the truth. non enim temere nec fortuito creati sumus, TD. 1, 118, for we were not created at adventure nor by accident. subsidio suis ierunt collemque ceperunt, neque nostrorum militum impetum sustinere potu-Erunt, 7, 62, 8, they went to aid their people and carried the hill, but they could not stand the fiery onset of our soldiers. neque or nec is often repeated: as, nec meliores nec beatiores esse possumus, RP. 1, 32, we can neither be better nor wiser.

1658. nec is rarely used in the sense of nē... quidem, not even, not... either: as, nec nunc, H. S. 2, 3, 262, not even now, a free quotation of nē nunc quidem, T. Eu. 46. nec... quidem, and not even, is used once or twice for the common ac nē... quidem or et nē... quidem.

1659. Instead of neque or nec, and not, the copulatives et, atque, rarely -que, followed by a negative, non, nemo, nihil, &c., are sometimes used in Cicero and Livy, less often in old Latin, and rarely in Caesar and Sallust: as, quid tu fēcissēs, si tē Tarentum et non Samarobrivam misissem? Fam. 7, 12, 1, what would you have done, if I had sent you to Tarentum, and not to Samarobriva? Particularly thus et non, or oftener ac non, in corrections. But ordinarily neque or nec is preferred to et non, and nec quisquam, &c., to et nemo, &c. (1445).

1660. When neque is followed by another negative, the assertion is positive (1452): as,

nec hoc ille non vidit, Fin. 4, 60, and the man did not fail to see this. This positive use begins with Varro. In old Latin two negatives, and particularly neque . . . haud, are often used, as in old English, to strengthen the negation (1453).

1661. After a general negative, a word may be emphasized by ne... quidem or non modo, or the parts of a compound sentence may be distributed by neque . . . neque, without destroying the negation: as,

nihil in locis communibus, në in fanis quidem, nihil istum neque privati neque publici tôtă in Sicilia reliquisse, V. 4, 2, that the defendant has lest nothing untouched in public places, no, not even in the temples, nothing either in the way of private or of public property, in all Sicily. Similarly when a coordinate member is appended with neque: 2s, nequeo satis mirari neque conicere, T. Eu. 547, I can't quite puzzle out or guess.

COMBINATION OF DIFFERENT COPULATIVES.

- 1662. Different copulatives are sometimes combined, as follows.
- 1663. (1.) The affirmative copulatives et and -que are sometimes combined, particularly in abridged sentences: as,
- et Epaminondas praeclare cecinisse dicitur, Themistoclesque est habitus indoctior, TD. 1, 4, Epaminondas in the first place is said to have played beautifully, and Themistocles was not considered exactly an educated man. This combination occurs in Ennius, is used by Cicero rarely, and by Horace in the satires.
- vergil, or Horace. -que...et is rare in old Latin, and not used by Caesar, Vergil, or Horace. -que...atque is first used by Lucretius, then by Vergil, Ovid, Livy, and Tacitus. atque...et, or atque...-que, does not occur.
- 1665. (2.) Affirmative and negative copulatives are sometimes combined. Thus neque or nec combined with et, in the sequences neque...et and et...neque, which is rare in old Latin, is common in Cicero: as,
- nec miror et gaudeo, Fam. 10, 1, 4, in the first place I am not surprised, and in the second place I feel glad; neque... et non, however, is rare. patëbat via et certa neque longa, Ph. 11, 4, there lay a road open at once plain and not long. neque...-que begins with Cicero, but is rare (1655), neque... ac begins with Tacitus.
- 1666. Of all the Latin writers, Tacitus aims most at variety by combination of asyndeton and by the use of different copulatives: as, regem Rhamsen Libya Aethiopia Medisque et Persis et Bactriano ac Scytha potitum, 2, 60, that king Rhamses got control of Libya and Aethiopia and the Medes and Persians, and the Bactrian and Scythian.

(b.) Disjunctive Conjunctions.

- 1667. Disjunctive conjunctions connect the sentences, but disconnect the meaning. They are aut, vel, sive or seu, -ve, and an, or. Of these conjunctions, aut, vel, and sive, are often placed before two or more members of a sentence in the sense of either ... or. And in poetry, -ve ... -ve sometimes occurs.
- 1668. (1.) aut, or, sometimes or even, or at least, is used between two members which are to be represented as essentially different in meaning, and of which one excludes the other: as,

hic vincendum aut moriendum, milites, est, L. 21, 43, 5, here you must conquer, my men, or die. horae momento cita mors venit aut victoria saeta, H. S. 1, 1, 7, within an hour's brief turn comes speedy death or victory glad. aut vivam aut moriar, T. Ph. 483, I shall either live or die. sideribus dubiis aut illö tempore quö se frigida circumagunt pigri serraca Bootae, J. 5, 22, when stars blink faint, or even at the time when round rolls slow Bootes' frigid wain. qua re vi aut clam agendum est, Att. 10, 12, 5 [10, 12 b, 2], so we must use force, or at any rate secrecy. Sometimes aut connects kindred ideas: as, equi icti aut vulnerāti consternābantur, L. 21, 33, 6, the horses kept getting frantic from being hit or wounded.

1669. aut, in the sense of otherwise, or else, sometimes introduces a statement of what necessarily follows, if something else is not done: as,

audendum est aliquid universis, aut omnia singulis patienda, L. 6, 18, 7, you must make some bold dash collectively, or else you must suffer every thing individually. vel is also occasionally used in this sense.

1670. (2.) vel, or, introduces an alternative as a matter of choice or preference, and often relates merely to the selection of an expression: as.

ēius modī coniunctionem tēctorum oppidum vel urbem appellāvērunt, RP. 1, 41, such a collection of dwelling-houses they called, well, a town or a city, whichever you please. vel imperatore vel milite me ütimini, S. C. 20, 16, use me as your generalissimo or as a private, whichever you will. Catilinam ex urbe vel ēiēcimus vel ēmīsimus vel ipsum ēgredientem verbīs prosecuti sumus, C. 2, 1, we have — what shall I say? — driven Catiline out of town, or allowed him to go out, or, when he was going out of his own accord, wished him a pleasant journey. vel is often followed by etiam, potius, or dicam. From Tacitus on, vel is sometimes used in the sense of aut: as, vincendum vel cadendum esse, Ta. 14, 35, they must do or die (1668).

1671. vel is sometimes used in the sense of if you will, even, or terhats, especially before superlatives, or in the sense of for instance: as,

hūius domus est vel optima Messānae, notissima quidem certē. V. 4, 3, this gentleman's house is perhaps the finest in all Messana, at any rate the best known. amant ted omnes mulieres, neque iniūria: vel illae, quae here pallio me reprehenderunt, Pl. MG. 58, the girls all idolize you, well they may; for instance those that buttonholed me yesterday.

1672. (3.) sive or seu, or, used as a disjunctive conjunction, denotes a distinction which is not essential, or the speaker's uncertainty as to some matter of detail; when used once only, it is chiefly in corrections, often with potius, rather, added; as,

is Ascanius urbem mătri seu novercae reliquit, L. 1, 3, 3, said Ascanius lest the city to his mother, or his stepmother, if you preser. dixit Pompeius, sive voluit, QFr. 2, 3, 2, Pompey made a speech, or rather attempted to make one.

1673. sive is often repeated in the sense of either, or no matter whether . . . or : as,

Digitized by Google

ita sīve cāsū sīve cōnsiliō deōrum, quae pars calamitātem populō Rōmānō intulerat, ea princeps poenās persolvit, 1, 12, 6, thus, no matter whether from chance or through special providence, the part which had done damage to Rome was the first to pay penalty in full.

1674. (4.) -ve rarely connects main sentences, usually only the less important parts of the sentence, or, oftener still, subordinate sentences: as,

cur timeam dubitemve locum defendere? J. 1, 103, why should I fear or hesitate to stand my ground? Appius ad me bis terve litter as miserat, Att. 6, 1, 2, Appius had written me two or three times. With ne it forms neve or neu, which is used as a continuation of ne or ut: see 1581; 1586; 1947.

1675. (5.) The interrogative particle an sometimes becomes a disjunctive conjunction, or, or possibly, or perhaps: as, Simonides an quis alius, Fin. 2, 104, Simonides or possibly somebody else. Common in Cicero, though not so in his speeches, and in Livy, commonest in Tacitus.

(c.) Adversative Conjunctions.

1676. Adversative conjunctions connect the sentences, but contrast the meaning. They are autem, on the other hand, sed, vērum, cēterum, but, vērō, but, indeed, at, but, tamen, nihilō minus, nevertheless.

Of these conjunctions, autem and vērō are put after one word, or sometimes after two closely connected words; tamen is put either at the beginning, or after an emphatic word.

1677. (1.) autem, again, on the other hand, however, simply continues the discourse by a statement appended to the preceding, without setting it aside: as,

horum principibus pecunias, civitati autem imperium totius provinciae pollicetur, 7, 64, 8, to the chieftains of this nation on the one hand he promises moneys, and to the community on the other hand the hegemony of the whole province. The opposition in a sentence introduced by autem, again, is often so weak that a copulative, and, might be used: as, ille qui Diogenem adulescens, post autem Panaetium audierat, Fin. 2, 24, the man who in his early youth had sat at the feet of Diogenes, and afterwards of Panaetius. autem is oftenest used in philosophical or didactic discourse, less frequently in history, oratory, or poetry.

1678. autem is often used in questions: as, metuo credere::credere autem? Pl. Ps. 304, I am afraid to trust::trust, do you say?

1679. (2.) sed or set, and vērum, but, are used either in restriction, or, after a negative, in direct opposition: as,

vēra dīcō, sed nēquīquam, quoniam non vis crēdere, Pl. Am. 835, I tell the truth, but all in vain, since you are bent not to believe. non ego erus tibī, sed servos sum, Pl. Cap. 241, I am not your master, but your slave.

1680. non modo, or non solum, not only, not alone, is followed by sed etiam or verum etiam, but also, by sed ... quoque, but ... as well, or sometimes by sed or verum alone: as,

qui non solum interfuit his rebus, sed etiam praefuit, Fam. 1, 8, 1, who has not had a hand only in these matters, but complete charge. qui omnibus negotiis non interfuit solum, sed praefuit, Fam. 1, 6, 1. non tantum is sometimes used by Livy, and once or twice by Cicero, but not by Caesar or Sallust, for non modo. Livy and Tacitus sometimes omit sed or vērum.

1681. non modo has sometimes the meaning of non dicam: as, non modo ad certam mortem, sed in magnum vitae discrimen, Sest. 45, I won't say to certain death, but to great risk of life,

1682. non modo or non solum, when attended by another negative, may also be followed by sed ne ... quidem, but not even, or sed vix, but hardly: as,

non modo tibi non irascor, sed në reprehendo quidem factum tuum, Sull. 50, so far from being angry with you I do not even criticise your action. When both members have the same predicate, usually placed last, the negation in ne... quidem or vix usually applies to the first member also: as, tālis vir non modo facere, sed ne cogitare quidem quicquam audēbit, quod non audeat praedicare, Off. 3, 77, a man of this kind will not only not venture to do, but not even to conceive anything which he would not venture to trumpet to the world, or will not venture to conceive, much less do.

1683. (3.) ceterum is sometimes used in the sense of sed, in Terence, Sallust, and Livy. Sometimes also in the sense of sed re vera, in Sallust and Tacitus, to contrast reality with pretence.

1684. (4.) vērō, but, indeed, introduces an emphatic contrast or a

sed sunt haec leviora, illa vero gravia atque magna, Pl. 86, however, all this is less important, but the following is weighty and great. scimus musicen nostris moribus abesse a principis persona, saltare vero etiam in vitiis poni, N. 15, 1, 2, we know that, according to our Roman code of ethics, music is not in keeping with the character of an eminent man, and as to dancing, why that is classed among vices. In Plautus, vero is only used as an adverb; its use as an adversative conjunction begins with Terence. In the historians, vērō is often equivalent to autem.

1685. (5.) at, but, denotes emphatic lively opposition, an objection, or a contrast: as,

brevis ā nātūrā nobīs vīta data est; at memoria bene redditae vītae sempiterna, Ph. 14, 32, a short life hath been given by nature unto man; but the memory of a life laid down in a good cause endureth for ever. at is often used before a word indicating a person or a place, to shift the scene, especially in history. In law language, ast sometimes occurs, and ast is also sometimes used, generally for the metre, in Vergil, Horace, and late poetry.

1686. (6.) tamen, nihilo minus, nevertheless.

accūsātus capitis absolvitur, multātur tamen pecūniā, N. 4, 2, 6, hc is accused on a capital charge and acquitted, but is nevertheless fined in a sum of money. minus dolendum fuit re non perfecta, sed poeniendum certe nibilo minus, Mil. 19, there was less occasion for sorrow because the thing was not done, but certainly none the less for punishment.

(2.) OTHER WORDS AS CONNECTIVES.

1687. Instead of a conjunction, other words are often used as connectives: as, pars...pars, alii...alii; adverbs of order or time: as, primum, first, or primō, at first...deinde...tum, &c.; and particularly adverbs in pairs: as, modo...modo, tum...tum less frequently quā...quā, simul...simul: as,

multitūdo pars procurrit in viās, pars in vestibulis stat, pars ex tēctīs prospectant, L. 24, 21, 8, part of the throng runs out into the streets, others stand in the fore-courts, others gaze from the house-tops. proferēbant aliī purpuram, tūs aliī, gemmās aliī, V. 5, 146, they produced some of them purple, others frankincense, others precious stones. prīmo pecūniae, deinde imperī cupīdo crēvit, S. C. 10, 3, at first a love of money waxed strong, then of power. tum hoc mihī probābilius, tum illud vidētur, Ac. 2, 134, one minute this seems to me more likely, and another minute that.

1688. Simple sentences may also be coordinated by words denoting inference or cause, such as ergō, igitur, itaque, therefore; nam, namque, enim, for, etenim, for you see: as,

adfectus animī in bonō virō laudābilis, et vīta igitur laudābilis bonī virī, et honesta ergō, quoniam laudābilis, TD. 5, 47, the disposition in a good man is praiseworthy, and the life therefore of a good man is praiseworthy, and virtuous accordingly, seeing it is praiseworthy. Of these words, nam, namque, and itaque are usually put first in the sentence; enim and igitur. usually after one word, rarely after two. But in Plautus regularly, and generally in Terence, enim has the meaning of indeed, verily, truly, depend upon it, and may stand at the beginning.

1689. In Plautus, the combination ergō igitur occurs, and in Terence and Livy, itaque ergō: as, itaque ergō consulibus dies dicta est, L. 3, 31, 5, accordingly then a day was set for the trial of the consuls.

1690. The interrogative quippe, why? losing its interrogative meaning, is also used as a coordinating word, why, or for: as, hoc genus omne maestum ac sollicitum est cantoris morte Tigelli: quippe benignus erat, H. S. 1, 2, such worthies all are sad, are weebegone over Tigellius the minstrel's death; why he was generosity itself.

1691. Simple sentences may also be coordinated by pronominal words, such as hinc, inde, hence, e5, ide5, idcirc5, proptere3, so, on that account, &c.: as,

nocte perveniëbant; eō custodias hostium fallebant, L. 23, 19, 10, they got there in the night; in that way they cluded the enemy's pickets. But eō and ideo are not used thus by Cicero, Caesar, or Sallust, or idcirco and propterea by Cicero or Caesar.

1692. In animated rhetorical discourse any word repeated with emphasis may serve as a copulative; this is called *Anaphora*: as,

miles in forum, miles in cūriam comitābātur, Ta. 1, 7, soldiers went with him to the forum, soldiers to the senate chamber. Erepti estis ex interitū, Erepti sine sanguine, sine exercitū, sine dīmicātione, C. 3, 23, you are rescued from death, rescued without bloodshed, without an army, without a struggle.

THE INTERMEDIATE COORDINATE SENTENCE.

1693. A sentence coordinate in form with another sentence is often equivalent in meaning to a subordinate sentence. Such sentences are called *Intermediate Coordinate Sentences*.

The most varied relations of a subordinate sentence may be thus expressed by a coordinate sentence, and the combination of the two coordinate sentences is in sense equivalent to a complex sentence.

1694. Such coordinated sentences are a survival of a more primitive state of the language. They occur oftenest in Plautus and Terence, in Cicero's philosophical works and letters, in Horace's satires and epistles, and in Juvenal. In general they have been superseded by complex sentences, even in the oldest specimens of the language.

1695. I. The relation of the two members may not be indicated by the mood, but left to be determined from the context.

Thus, in the combination amat, sapit, Pl. Am. 995, he is in love, he shows his sense, the two members amat and sapit are alike in form. But in sense, sapit is the main member and amat is the subordinate member. Just what the relation of the amat is, whether it is sī amat, if he is in love, cum amat, when he is in love, quod amat, because he is in love, or etsī amat, though he is in love, &c., &c., is left to the reader to make out. The following are some of the commonest combinations of this class:

1696. (1.) The coordinated member may stand instead of the commoner accusative and infinitive with a verb of perceiving, thinking, knowing, or saying (2175). Such are crēdō, fateor, opīnor, putō, certum est, &c.: as,

lūdos mē facitis, intellego, Pl. Per. 802, you are making game of me, I am aware. nārro tibī: plānē relēgātus mihī videor, Atl. 2, 11, 1, I tell you what, I seem to myself regularly banished. spēro, servābit fidem, Pl. E. 124, I hope he'll keep his word (2235).

1697. (2.) The coordinated member may be a direct question or an exclamation.

Thus (a.) in enquiries calling for an answer: as, signi dic quid est, Pl. Am. 421, tell me, what is there in the shape of seal? (1251). Or (b.) in ejaculation: as, viden ut astat furcifer? Pl. Most. 1172, seest how the knave is posing there? vidēte quaesō, quid potest pecūnia, Pl. St. 410, see pray how all-commanding money is. This construction occurs oftenest in comedy, and with an imperative meaning say, tell, or look. The subordinate construction is the rule: see 1773.

1698. (3.) The coordinated member rarely represents a relative sentence (1816): as,

urbs antiqua fuit, Tyril tenuere coloni, V. 1, 12, there was an ancient town, which Tyrian settlers held. est locus, Hesperiam Grai cognomine dicunt, V. 1, 530, there is a place, the Greeks by name Hesperia call, imitated from est locus Hesperiam quam mortales perhibebant, E. in Macrob. Sat. 6, 1, there is a place which sons of men Hesperia called.

1699-1702.] Sentences: The Coordinate Sentence.

1699. (4.) The coordinated member may represent a subordinate temporal member: as,

vēnit hiemps, teritur Sicuonia bāca trapētis, V. G. 2, 519, has winter come, in mills is Sicyon's olive ground (1860). vix proram attigerat, rumpit Sāturnia funem, V. 12, 650, scarce had he touched the prow, Saturnia snaps the rope, i. e. cum rumpit (1869). lūcēbat iam ferē, procēdit in medium, V. 5, 94, it was just about light, when he presents himself before them. fuit ornandus in Mānīliā lēge Pompēius; temperātā orātione ornandi copiam persecūtī sumus, O. 102, when I had to glorify Pompey in the matter of the Manilius law, I went through the ample material for glorification in moderate language.

1700. (5.) The coordinated member may be equivalent to a member with ut, expressing result (1965): as,

iam faxō sciēs, T. Eu. 663, I'll let you know at once, i. e. sciās (1712) or ut sciās (1965). iam faxō hīc erunt, Pl. B. 715, I'll warrant they shall soon be here. adeō rēs rediit, adulēscentulus vīctus est, T. Hau. 113, things came to such a pass the youngster was put down. cētera dē genere hōc, adeō sunt multa, loquācem dēlassāre valent Fabium, H. S. I, I, II, the other cases of the kind, so plentiful are they, might tire the gabbling Fabius out. ita haec ūmōre tīgna pūtent, nōn videor mihi sarcīre posse aedīs meās, Pl. Most. 146, so sopping rotten are these joists, I don't think I can patch my house. ita avidō ingeniō fuit, numquam indicāre id filiō voluit suō, Pl. Aul. prol. 9, so niggardly voas he, he'd never point it out to his own son. tanta incepta rēs est, haud somnīculōsē hōc agundumst, Pl. Cap. 227, so big a job have we begun, not drowsily must this be done.

1701. (6.) The coordinated member may be equivalent to a conditional protasis: as,

(a.) filiam quis habet, pecunia opus est, Par. 44, a man has a daughter, he needs money. trīstis es, indignor, O. Tr. 4, 3, 33, if you are sad, I feel provoked. (b.) sī iste ibit, itō; stābit, astātō simul, Pl. Ps. 863, if he shall move, move thou; but shall he stand, stand by his side. in caelum, iusseris, ibit, J. 3, 78, say but the word, he'll mount the sky. (c.) subduc cibum unum diem āthlētae, Iovem Olympium inplorābit, TD. 2, 40, cut off an athlete from his food just a day, he will pray to Jupiter aloft in Olympus (1574). (d.) Zēnonem rogēs, respondeat totidem verbūs, Fin. 4, 69, you may ask Zeno, he would answer in just as many words (1556). (e.) tū quoque māgnam partem opere in tantō, sineret dolor, īcare, habētēs, V. 6, 31, thou too a goodly space in work so vast, had grief allowed, O Icarus, hadst filled (1559). at darēs hanc vim M. Crassō, in forō saltāret, Off. 3, 75, but had you given this chance to Crassus, he would have capered in the market place (1559). nam absque tē esset, hodiē numquam ad solem occāsum viverem, Pl. Men. 1022, for were it not for you, I ne'er should live this blessed day till set of sun (1560). (f.) unā fuissēmus, consilium certē noōn dēfuisset, Att. 9, 6, 6, had we been together, we certainly should not have lacked a programme (1561).

1702. (7.) The coordinated member may be equivalent to a concession: as,

vincere scis, Hannibal, victoria uti nescis, L. 22, 51, 4, though you know how to conquer, Hannibal, you do not know how to reap the good of victory. ergo illi intellegunt quid Epicurus dicat, ego non intellego? Fin. 2, 13, do those gentlemen then understand what Epicurus means, and I not?

The Intermediate Coordinate Sentence. [1703-1707.

1703. (8.) The coordinated member may denote efficient cause or reason: as,

peregrinus ego sum, Sauream non novi, Pl. As. 464, I am a stranger, and I don't know Saurea. mulier &s., audacter iuras, Pl. Am. 836, because you are a woman, you are bold to swear. tacent, satis laudant, T. Eu. 476, their silence is sufficient praise.

1704. (9.) The coordinated member may represent the protasis of a comparative sentence with ut (1937): as,

ita më di ament, honestust, T. Eu. 474, so help me heaven, he is a proper man. sollicitat, ita vivam, më tua, mi Tiro, valëtudo, Fam. 16, 20, your health, dear Tiro, keeps me fidgety, as I hope to live.

1705. II. The subordinate idea is often indicated by the subjunctive of desire coordinated with another verb, usually with one which has a different subject.

Thus, the combination ames: oportet, you should love; it is right (1547), in which the two verbs are used separately, blends into one whole, ames oportet, Fin. 2, 35, it is right you should love. The verb with which the subjunctive is coordinated specifies more exactly the general idea of desire contained in the subjunctive itself. The tense of the coordinate subjunctive is regulated by that of the other verb.

1706. The negative employed with coordinated subjunctives is the adverb $n\bar{e}$, not.

Thus, the combination vide: ne me lūdes, see to it; don't you fool me (1547), in which the two verbs are used separately, blends into one whole, vide ne me lūdes, Pl. Cur. 325, see to it you don't fool me. Similarly, metuo: ne peccet, I am afraid; let her not slip up (1548), becomes metuo ne peccet, Pl. Per. 624, I am afraid she may slip up. From its frequent use in sentences of subordinate meaning, ne came at an early period to be regarded as a subordinating conjunction also, lest, that . . . not, as well as an adverb, and took the place of the less usual ut ne. Hence members with ne are more conveniently treated under the head of subordination (1947).

1707. (1.) The subjunctive is often coordinated with verbs of wishing. Such are volō, nōlō, rarely mālō, optō, placet, &c.: as,

animum advortās volō, Pl. Cap. 388, I wish you would pay heed (1548). quid vīs faciam? T. Hau. 846, what wilt thou I should do ? (1563). vin conmūtēmus? tuam ego dūcam et tū meam? Pl. Tri. 59, would you like to swap? I take your wife, and you take mine? (1563). mālō tē sapiēns hostis metuat, quam stultī cīvēs laudent, L. 22, 39, 20, I would rather a wise enemy should fear you, than stupid fellow-citizens admire you (1548). Coordination is the rule with velim, vellem, &c., used in the sense of utinam (1540): as, dē Menedēmō vellem vērum fuisset, dē rēgīnā velim vērum sit, Alt. 15, 4, 4, about Menedemus I could wish it had been true, about the queen I hope it may be true. tellūs optem prius īma dehīscat, V. 4, 24, I would the earth to deepest depths might sooner yawn. L. Domitius dixit placēre sibī sententiās dē singulīs ferrent, Caes. C. 3, 83, 3, Domitius said his view was they should vote on the men separately.

1708. (2.) The subjunctive is often coordinated with verbs of request, entreaty, encouragement, exhortation, charge, direction, command. Such are precor, rogō, ōrō, petō, hortor, postulō, moneō, cēnseō; mandō, imperō, praecipiō, dēcernō; and chiefly in old Latin, iubeō: as,

(a.) reddas incolumem precor, H. I, 3, 7, deliver him up safe I pray. rogat finem orandi faciat, 1, 20, 5, he requests him to make an end of entreaty. A të id quod suësti peto, më absentem defendas, Fam. 15, 8, 1 ask you to do as you always do, stand up for me when I am away. non hortor sõlum sed etiam rogõ atque örö, të colligas virumque praebeas, Fam. 5, 18, 1, I not only exhort you, but more than that I beg and entreat you, pull yourself together and quit you like a man. postulo etiam atque etiam consideres quo progrediare, L. 3, 45, 10, I charge you think again and again what you are coming to. te moneo videas, quid agas. magno opere censeo, desistas, V. 5, 174, I advise you to consider what you are doing. I earnestly recommend you to stop. hunc admonet iter caute faciat, 5, 49. 3, he warns him he must pursue his march with care. (b.) huic mandat Remos adeat, 3, 11, 2, he directs him to go to the Remans. praecipit anum omnes peterent Indutiomarum, 5, 58, 5, he says they must all concentrate their attack on Indutiomarus. huic imperat quas possit adeat civitates, 4, 21, 8, he orders him to visit such communities as he can. senatus decrevit darent operam consules ne quid res publica detrimenti caperet, S. C. 29, 2, the senate decreed the consuls must see to it that the commonwealth received no harm. iube maneat, T. Hau. 737, tell her she must stay. milites certiores facit, paulisper intermitterent proelium, 3, 5, 3, he tells the soldiers they must stop fighting a little while. abi, nuntia patribus urbem Romanam muniant, L. 22, 49, 10, go tell the fathers they must fortify Rome town. dixi equidem in carcerem ires, Pl. St. 624, I'm sure I told you you must go to jail. scribit Labieno cum legione veniat, 5, 46, 3, he writes to Labienus he must come with a legion. legationem mittunt si velit suos recipere, obsides sibi remittat, 3, 8, 5, they send an embassy, if he wishes to get his own men back, he must send back the hostages to them.

1709. (3.) The subjunctive is often coordinated with expressions of propriety or necessity. Such are oportet, optumum est, opus est, decet, necesse est.

më ipsum amës oportet, non mea, Fin. 2, 85, it is myself you should love, not my possessions. quoniam habës istum equum, aut ëmeris oportet, aut hërëditäte possideäs, aut surripueris necesse est, Inv. 1, 84, since you are in possession of that horse, you must either have bought him or inherited him, or else you must necessarily have stolen him. sed taceam optumumst, Pl. E. 60, but I'd best hold my tongue. nihil opust resciscat, Pl. Mer. 1004, she need n't find it out at all. condemnetur necesse est, RA. 111, be condemned he needs must.

1710. (4.) The subjunctive is sometimes coordinated with verbs of permission or concession. Such are permitto in Sallust and Livy, concedo, also sino, mostly in the imperative, chiefly in old Latin and poetry, and the impersonal licet: as,

supplementum scriberent consules, permissum, L. 27, 22, 11, leave was given that the consuls might fill up the army. sine sciam, L. 2, 40, 5, let me know. sine modo adveniat senex, Pl. Most. 11, let but the old man come. fremant omnes licet, dicam quod sentio, DO. 1, 195, though everybody may growl, I will say what I think.

1711. (5.) The subjunctive is often coordinated with the imperative cave, caveto, cavete, beware, used in the sense of ne (1585): as,

cave facias, Att. 13, 33, 4, don't do it. cave dirumpatis, Pl. Poen. prol. 117, don't break it off (1075). Often, however, with ne.

1712. (6.) The subjunctive is often coordinated with verbs of giving, persuading, accomplishing, taking care. In this case the subjunctive has the meaning of purpose or result. Such are the imperative cedo, and do, persuaded, impetro, curo, also facio, particularly fac and facito: as,

cedo bibam, Pl. Most. 373, give me to drink. date bibat tibicini, Pl. St. 757, give the piper to drink. huic Sp. Albinus persuadet regnum Numidiae a senatu petat, S. I. 35, 2, Albinus induces him to ask of the senate the throne of Numidia. tandem inpetravi abiret, Pl. Tri. 591, at last I've coaxed him to clear out. fac sciam, Fam. 7, 16, 3, let me know. faxo scias, Pl. Men. 644, I'll let you know, much oftener scies or scibis (1700). fac bellus revertare, Fam. 16, 18, 1, mind you come back a beauty (1579).

1713. A subjunctive is now and then loosely coordinated with verbs in general, to indicate the purpose of the action: as,

ēvocāte hūc Sōsiam, Blepharōnem arcēssat, Pl. Am. 949, call Sosia here, let him fetch Blepharo. clārē advorsum fābulābor, hīc auscultet quae loquar, Pl. Am. 300, I'll speak distinctly face to face, that he may hear what I shall say. operam hanc subrupui tibl, ex mē scirēs, Pl. Am. 523, I did this secretly for you, that you might learn from me. manibus date līlia plēnīs, purpureōs apargam florēs, V. 6, 883, lilies in handfuls give, I fain would scatter purple flowers, that is, that I may scatter.

THE COMPLEX SENTENCE, OR SUBORDINATION.

- 1714. In a complex sentence, that is one consisting of a main and a subordinate sentence, the subordinate member is introduced by some subordinating word: such are,
- I. Interrogative words, in indirect questions; II. Relative pronouns; III. Relative conjunctive particles, or conjunctive particles not of relative origin.
- 1715. Subordinate sentences may have the value of a substantive, usually as subject or as object; of an attributive; or of an adverb or adverbial adjunct: as,
- (a.) eadem nocte accidit ut esset luna plēna, 4, 29, 1, it came to pass the same night that there was a full moon. video quid agas, Fam. 16, 17, I see what you are driving at. (b.) fundus qui est in agro, qui Sabinus vocatur, eum meum esse aid, Mur. 26, the estate which is in the territory which is called Sabine, that I maintain is mine, lawyers' wordiness for fundus Sabinus. (c.) cum advesperasceret, ad pontem Mulvium pervēnērunt, C. 3, 5, when it was getting dark, they reached the Mulvius bridge, i. e. vesperi, or primo vespere.

1716-1722.] Sentences: The Subordinate Sentence.

- 1716. Subordinate sentences which express time or place, are called *Temporal* or *Local* sentences; comparison or manner, *Comparative* or *Modal* sentences; condition, cause, or concession, *Conditional*, *Causal*, or *Concessive* sentences; purpose, *Final* sentences; result, *Consecutive* sentences.
- 1717. In a main sentence, the indicative present, future, and future perfect, and the imperative, are called *Primary Tenses*; the indicative imperfect, historical perfect, and pluperfect, and the infinitive of intimation, are called *Secondary Tenses*. The perfect definite and the present of vivid narration are sometimes regarded as primary tenses, oftener as secondary tenses.
- 1718. Verbs which have an implication of futurity, such as those meaning can, ought, must, &c., with an infinitive, also subjunctives of wish (1540) or of exhortation (1547), may be called *Virtual Futures*.
- 1719. Sometimes the subjunctive serves as a main sentence: see 1762; sometimes a noun of the verb: see 1766.

MOOD OF THE SUBORDINATE SENTENCE.

1720. The indicative and the subjunctive are both used in subordinate sentences, as will be shown in the treatment of the several words of subordination. Some general uses may be mentioned collectively here.

THE INDICATIVE MOOD.

1721. The indicative is ordinarily used in sentences introduced by a relative pronoun, or by a causal conjunctive word other than cum.

pontem, qui erat ad Genāvam, iubet rescindi, 1, 7, 2, he orders the bridge which was near Geneva torn up. concedo, quia necesse est, RA. 145, I give up, because I have to. In sentences of this class, however, the subjunctive is often required, particularly in indirect discourse (1722), or in cases of attraction (1728).

THE SUBJUNCTIVE MOOD.

THE SUBJUNCTIVE OF INDIRECT DISCOURSE AND OF ATTRACTION.

1722. The subjunctive is used in relative, causal, temporal, and conditional sentences in indirect discourse, and in cases of attraction.

- 1723. A direct quotation or question gives the words of the original speaker without alteration. When the original words of a quotation or question are changed to conform to the construction of the sentence in which they are quoted, it is called *Indirect Discourse*.
- 1724. In the complete form of indirect discourse, the subjunctive is subordinate to an infinitive or an accusative with the infinitive, dependent on a verb of saying or thinking (2175): as,
- negat Epicūrus iūcundē posse vīvī, nisi cum virtūte vīvātur, TD. 3, 49, Epicurus avers there is no living happily, without living virtuously; directly, iūcundē vīvī non potest, nisi cum virtūte vīvītur. Socratēs dīcere solēbat, omnēs in eo quod scirent, satis esse ēloquentēs, DO. 1. 63, Socrates used to maintain that all men were eloquent enough in a matter they knew; directly, omnēs in eo quod sciunt satis sunt ēloquentēs.
- 1725. The idea of saying or thinking is often not formally expressed in the main sentence, and the indirect discourse is intimated by the subordinate subjunctive only: as,
- noctū ambulābat in pūblicō Themistoclēs, quod somnum capere non posset, TD. 4, 44, Themistocles used to walk the streets nights, 'because he could not sleep,' given as Themistocles's reason; the writer's would be poterat. Paetus omnēs librōs, quōs frāter suus reliquisset, mihī dōnāvit, Att. 2, I. 12, Paetus made me a present of all the books 'that his brother had left.' dum rēliquae nāvēs eō convenīrent, in ancoris expectāvit, 4, 23, 4, he waited at anchor till the rest of the vessels should gather there (2005). pervēnit priusquam Pompēius sentīre posset, Caes. C. 3, 67, 4, he got there before Pompey should be able to learn of his coming (1919). Kerxēs praemium prōposuit, quī invēnisset novam voluptātem, TD. 5, 20, Xerxes offered a reward to anybody who should devise a new form of entertainment (2110).
- 1726. A speaker or writer may quote his own thoughts in the indirect form, like another person's: as, haec tibi dictabam post fanum putre Vacunae, except quod non simul esses, cetera laetus, H. E. 1, 10, 49, I write thee this behind Vacuna's mouldering pile, in all else well, except that thou'rt not here the while (1601).
- 1727. Instead of an intimation of indirect discourse by a mere subjunctive, a verb of thinking or saying is sometimes introduced by qui, or especially quod, sometimes by cum, and put illogically itself in the subjunctive: as, litteria, quas me sibi misisse diceret, recitavit, Ph. 2, 7, he read off a letter, which he said I sent him, i.e. quas misissem. impetrare non potui, quod religione se impediri dicerent, Sulpicius in Fam. 4, 12, 3, I could not get leave, because they said they were hampered by religious scruple, i. e. quod impedirentur. cum diceret, DN. 3, 83, saying as he did. This construction is common in Cicero, somewhat so in Caesar, rare in Sallust.
- 1728. The subjunctive is used in sentences expressing an essential part of the thought, which are subordinate to another subjunctive, or to an infinitive. This is called the Subjunctive of Attraction, or of Assimilation: as,

Digitized by Google

1729-1731.] Sentences: The Subordinate Sentence.

vereor në, dum minuere velim laborem, augeam, Leg. 1, 12, I am afraid I may make the work harder, while I am aiming to make it less. Si solos eos dicerës miseros, quibus moriendum esset, nëminem eorum, qui viverent exciperës, TD. 1, 9, if you should pronounce only such people unhappy as had to die, you would not except one of those who were living. mos est Syrācūsis, ut si quā dē rē ad senātum referātur, dicat sententiam quī velit, V. 4, 142, it is the custom at Syracuse, that if any question is discussed in the senate, anybody who pleases may express his opinion. Sapiēns non dubitat, sī ita melius sit, migrāre dē vītā, Fin. 1, 62, the sage does not hesitate, if this be the better course, to withdraw from life. mos est Athēnīs laudārī in contione eos, quī sint in proeliis interfectī, O. 151, it is the custom in Athens to eulogize in public assembly such as have fallen in action.

1729. The indicative is kept in subordinate statements added or vouched for by the person reporting, and also in circumlocutions equivalent to a substantive: as,

nûntiātum est Ariovistum ad occupandum Vesontiōnem, quod est oppidum māximum Sēquanōrum, contendere, 1, 38, 1, it was reported that Ariovistus was pressing on to seize Vesontio, which is the most considerable two of the Sequans. prüdentissima cīvitās Athēniēnsium, dum ea rērum potīta est, fuisse trāditur, RA. 70, Athens is said to have been passing wise, as long as she held the hegemony. vīs. quae restant, mē loquī? T. Andr. 195, wilt have me tell the rest? i. e. rēlicua. fierī potest, ut id quod sentit politē ēloquī nōn possit, TD. 1, 6, it may be that he cannot express his thought in polished style, i. e. sententiam suam.

THE SUBJUNCTIVE OF REPEATED ACTION.

1730. The subjunctive is sometimes used in relative, temporal, or conditional sentences, to express action repeated or occurring at no particular time: as,

(a.) neque aliter sī faciat, ūllam inter suōs habet auctōritātem, 6, 11, 4, and if he does not do this, he never has any ascendancy at all over his people. With the present and perfect, however, this subjunctive is confined principally to the indefinite second person singular (1030): as, bonus sēgnior fit, ubī neglegās, S. I. 31, 28, the good man always gets slacker, when you are neglectful. siquoi mūtuom quid dederīs, fit prō propriō perditum, Pl. Tri. 1050, if you've lent anything to any man, 't is not your own, but lost. (b.) The imperfect and pluperfect subjunctive begin with Catullus and Caesar, and get to be common with Livy and Tacitus: as, sī quis prehenderētur, cōnsēnsū mīlitum ēripiēbātur, Caes. C. 3, 110, 4, every time a man was taken up, he was rescued by the joint action of the rank and file. quemcumque lictor prēndisset, tribūnus mittī iubēbat, L. 3, 11, 2, every man the lictor arrested, a tribune would order released.

THE SUBJUNCTIVE AS IN THE SIMPLE SENTENCE.

1731. The subjunctive of wish, of action conceivable, or of interrogation, is sometimes used in a subordinate sentence exactly as in main sentences: as,

haec die netell med scripsi, quo utinam susceptus non essem, Att. 11, 9, 3, this I have written on my birthday, on which day I wish I had never been lifted from the ground (1544). ut videss, Lucr. 3, 348, so that you can see (1556). neque id facio, ut forsitan quibusdam videar, simulatione, Fam. 1, 8, 2, nor do I do it, as perhaps I may seem to some to do, from hypocrisy (1556). etiamst paucis vos quod monitos voluerim, Pl. Cap. 53, there's one point more, on which I'd have you briefly warned (1558). erant Eiusmodi situs oppidorum, ut neque pedibus aditum haberent neque navibus, quod minuente aestu neque in vadis adflictentur, 3, 12, 1, the towns were so situated that there was no access to them by land, nor by boat either, because at ebb tide vessels would pound on the shoals (1559). vix erat hoc imperatum, cum illum spoliatum videres, V. 4, 86, hardly was the order from his lips, when you might have seen the man stript (1559). quo me vertam nesciò, Clu. 4, I don't know which way to turn (1563).

TENSE OF THE SUBORDINATE SENTENCE.

THE TENSES OF THE INDICATIVE.

- 1732. I. The tense of a subordinate indicative often indicates a close relation of time with the tense of the leading verb, particularly in cases of repeated contemporaneous or antecedent action. The subordinate sentence in such combinations is said to have *Relative* time.
- 1733. (1.) The subordinate indicative tense may express action concurrent with the main action. Two concurrent sentences are usually put in the same tense.

Concurrent action is said to be (a.) congruent, when two actions merely cover the same time: as, dum lego, adsentior, TD. 1, 24, as long as I am reading, I assent. dum necesse erat, finus omnia poterat, RA. 139, so long as it had to be, one man controlled the world. dum Latinae loquentur litterae, quercus huic loco non deerit, Leg. 1, 2, as long as Latin literature has the gift of speech, this spot will not lack its oak. vixit, dum vixit, bene, T. Hec. 461, he lived well all the time he lived. quoad potuit, fortissime restitit, 4, 12, 5, as long as he could, he made a manful stand. Or (b.) coincident, when one action is virtually the same as the other: as, cum tacent, clamant, C. 1, 21, while they are dumb, they cry out, i. e. their silence is as telling as a shout. fecisti mihi pergratum, quod Serapionis librum misisti, Att. 2, 4, 1, you have obliged me very much by sending Serapio's book.

- 1734. (2.) The subordinate indicative tense may express action contemporaneous, antecedent, or subsequent, in relation to the main action.
- 1735. (a.) Action contemporaneous with a main present is expressed by a present, with a main future or virtual future, by a future, with a main secondary tense by an imperfect: as,

quod est, eo decet liti, CM. 27, what you have, that you should avail yourself of. horologium mittam, si erit sildum, Fam. 16, 18, 3, I will send the clock, if it is pleasant (1625). paulatim dabis, si sapies, T. Hau. 870, you'll give in driblets, if you are wise. cum relaxare animos volent, caveant intemperantiam, Off. 1, 122, when they want to unbend, let them beware of excess (1625; 1718). omnia deerant, quae ad reficiendas naves erant lisui, 4, 29, 4, they were out of everything that was serviceable for repairing their vessels.

1736. (b.) Action antecedent to a main present is expressed by a perfect, to a main future or virtual future by a future perfect, to a main secondary tense by a pluperfect: as,

quōcumque aspexistī tuae tibī occurrunt iniūriae, Par. 18, wherever you turn your gaze, you are confronted by your own abominable acts. cum posui librum, adsēnsiō omnis ēlābītur, TD. 1, 24, when I drop the book, all assent melts away (1860). quicquid fēceris, adprobābō, Fam. 3, 3, 2, no matter what you do, I shall think it well (1626). ut quisque istīus animum offenderat, in lautumiās statim coniciēbātur, V. 5, 143, any man that wounded his sensibilities was always flung into the quarries without any ado.

1737. (c.) Action subsequent to a main present is expressed by the future participle with a present form of sum, to a main future or virtual future by the future participle with a future form of sum, and to a main secondary tense by the future participle with an imperfect form of sum: as,

decem dies sunt ante ludos, quos Cn. Pompeius facturus est, V. a. pr. 31, there are ten days before the shows which Pompey is to manage. attentos faciemus, si demonstrabimus ea, quae dicturi erimus, magna esse, Inv. 1, 23, we shall make people attentive if we show that what we are going to say is important. rex, quia non interfuturus navali certamini erat, Magnesiam concessit, L. 36, 43, 9, as the king was not to have a hand in the action at sea, he moved off to Magnesia.

1738. II. A subordinate indicative tense is said to be *Inde*pendent when it simply expresses time of its own, without any close relation to the time of the main action.

Such independent tenses may denote general present action: as, Ibam forte viā sacrā, sīcut meus est mōs, H. S. I, 9, I, in Sacred Street, as is my wout, I happened to be promenading (relatively, erat mōs, 1735). nōn mē appellābis, sī sapis, Pl. Most. 515, you won't address me, if you have sense (relatively, sī sapiēs, 1735). Or past action, either continuous, completed, or indefinite: as, ut mōs fuit Bīthyniae rēgibus, lectīcā ferēbātur, V. 5, 27, he regularly rode in a litter, as was the practice of the despots of Bithynia; here fuit denotes action simply as past, without further definition of time (1603), whereas erat, relative to the time of ferēbātur, would imply which was then the practice (1595).

1739. With dum, in the time while, an independent present is used: see 1995. With postquam, &c., after, an independent perfect is used of a single action; see 1925.

THE TENSES OF THE SUBJUNCTIVE.

- 1740. Subordinate subjunctive sentences were originally independent coordinate sentences, in the tense required to express the thought. By degrees the subordinate sentence blended closely with the main sentence, and the combination of the two was regarded as one whole.
- 1741. I. The time of the subordinate subjunctive is usually *Relative*, that is either contemporaneous, antecedent, or subsequent, in relation to that of the main action.
- 1742. Action contemporaneous with the main action is expressed by a present or imperfect subjunctive. Action antecedent is expressed by a perfect or a pluperfect subjunctive. Action subsequent is expressed by the future participle with a form of sim or of essem.
- 1743. Subordinate sentences with verbs of will or aim, with verbs of fear, also final sentences and many consecutive sentences are expressed in Latin as contemporaneous with the main action, not as subsequent to it.
- 1744. II. The main and subordinate sentences may express wholly different spheres of time by tenses not commonly used together, when the thought requires it. In such cases the tense of the subordinate member is called *Independent*, like the analogous tenses of the indicative (1738).
- 1745. The use of subordinate subjunctive tenses relatively to the main tense, or what is commonly called the Sequence of Tenses, is as follows:

TENSE SUBORDINATE TO AN INDICATIVE.

- 1746. (1.) The present, or perfect subjunctive, or the future participle with a form of sim, is used in sentences subordinate to a primary tense (1717): as,
- (a.) të hortor, ut Romam pergës, QFr. 1, 3, 4, I urge you to repair to Rome. cûrë, ut quam primum veniës, Fam. 4, 10, 1, mind that you come as soon as you can. ego quid acceperim scio, RA. 58, I know what I have received. quam sum sollicitus quidnam futürum sit, Att. 8, 6, 3, how anxious I am to know what in the world is to come. (b.) in eum locum res déducta est ut salvi esse nequeëmus, Fam. 16, 12, 1, to such a pass has it come that we cannot be saved. an oblitus es quid initid dixerim? DN. 2, 2, have you possibly forgotten what I said at the start? quoniam in eam rationem vitae nos fortûna dédûxit, ut sempiternus sermo de nobls futûrus sit, caveëmus, QFr. 1, 1, 38, since fortune has set us in such a walk of life that we are to be eternally talked about, let us be on our guard. (c.) efficiem, ut intellegitis, Clu. 7, I will see that you understand. dicent quid statuerint, V. 2, 175, they will tell what they decided on. quae fuerit causa, mox videro, Fin. 1, 35, what the reason was I won't consider till by and by (1630). tê disertum putëbo, si ostenderis quo modo sis eos inter sicërios défensürus, Ph. 2, 8, I shall think you a most effective speaker, if you show how you are going to defend them on the charge of murder.

- 1747. (2.) The imperfect, or pluperfect subjunctive, or the future participle with a form of essem, is used in sentences subordinate to a secondary tense (1717): as,
- (a.) his rebus fiebat, ut minus läte vagärentur, 1, 2, 4, so it came to pass that they did not roam round much. docebat, ut tötius Galliae principātum Aedui tenuissent, 1, 43, 6, he showed how the Aeduans had had the mastery over all Gaul. Flaccus quid alii posteā factūri essent scire non poterat, Fl. 33, Flaccus could not tell what other people would do in the future. (b.) is civitāti persuāsit, ut dē finibus suīs cum omnibus copiis exīrent, 1, 2, 1, this man prevailed on his community to emigrate from their place of abode, bag and baggage. quās rēs in Hispāniā gessisset, disseruit, L. 28, 38, 2, he discoursed on his military career in Spain. an Lacedaemonii quaesīvērunt num sē esset mori prohibitūrus? TD. 5, 42, did the Spartuns ask whether he was going to prevent them from dying? (c.) Ariovistus tantos sibi spiritūs sūmpserat, ut ferendus non vidērētur, 1, 33, 5, Ariovistus had put on such high and mighty airs that he seemed intolerable. hīc pāgus, cum domo exisset patrum nostrorum memoriā, L. Cassium consulem interfēcerat, 1, 12, 5, this canton, sullying out from home in our fathers' recollection, had put Cassius, the consul, to death. illud quod mibī extrēmum proposueram, cum essem de bellī genere dictūrus, IP. 17, the point I had reserved till the end, when I was going to discourse on the character of the war.

1748. With any kind of a secondary main sentence, a subordinate general truth usually stands in the past, contrary to the English idiom: as,

hic cognosci licuit, quantum esset hominibus praesidii in animi firmitūdine, Caes. C. 3, 28, 4, here there was a chance to learn what a bulwark man has in courage. In the direct form est (1588).

- 1749. A subsequent relation is sometimes loosely suggested by a simple subjunctive; necessarily so with verbs which lack the future participle, or which are in the passive: as, sum sollicitus quidnam dē provinciis dēcernātur, Fam. 2, 11, 1, 1 am anxious to see what in the world may be decided on about the provinces.
 - 1750. In a single example, a future perfect of resulting state is represented in subordination as follows: nec dubito quin confecta iam res futura sit, Fam. 6, 12, 3, and I have no doubt the job will soon be completely finished up, directly, sine dubio confecta iam res erit.
 - 1751. (1.) An imperfect subjunctive expressing a particular past result, cause, reason, &c., is sometimes connected with a main general present tense (1744): 28,
 - clius praecepti tanta vis est, ut ea Delphico deo tribueretur, Leg. 1, 58, the power of this rule is so mighty that it was ascribed to the Delphic god. clius rei tanta est vis, ut Ithacam illam sapientissimus vir immortalitati anteponeret, DO. 1, 196, so irresistible is the power of this sentiment that the shrewdest of men loved his little Ithaca better than life eternal; of Ulixes. laudantur oratores veteres quod crimina diluere dilicide solerent, V. 2, 191, the orators of old are admired because they were always clear in explaining accusations away. The secondary sequence is also sometimes exceptionally used with ordinary presents.

- 1752. (2.) The present of vivid narration is commonly regarded as a secondary tense, especially when the subordinate sentence precedes, and regularly with narrative cum. Sometimes however as a primary tense: as,
- (a.) servis suis Rubrius, ut ianuam clauderent, imperat, V. 1, 66, Rubrius orders his slaves to shut the front door. Aedui, cum se defendere non possent, legatos ad Caesarem mittunt, 1, 11, 2, the Aeduans, finding they could not defend themselves, send some envoys to Caesar. (b.) hortatur, ut arma capiant, 7, 4, 4, he urges them to fly to arms. Sometimes the two sequences stand side by side, or a subjunctive of primary sequence has itself a second subordinate subjunctive of secondary sequence. Either sequence is used with the present of quotation also (1502).
- 1753. (3.) Subordinate sentences of past action conceivable, of action non-occurrent, or dubitative questions of the past, retain their past unchanged with a main primary tense: as,
- (a.) vērī simile non est, ut ille monumentīs māiorum pecūniam anteponeret, V. 4, 11, it is not conceivable that the man would have thought more of money than of his heirlooms, i.e. non anteponeret (1559). (b.) omnia sic erunt inlūstria, ut ad ea probanda totam Siciliam testem adhibēre possem, V. 5, 139, everything will be so self-evident, that I could use all Sicily as a witness to prove it (1560). taceo, no haec quidem conligo, quae fortasse valērent apud iūdicem, Lig. 30, I'll hold my tongue, I won't even guther together the following arguments, which might perhaps be telling with a juryman (1560). (c.) quaero ā tē cūr C. Cornēlium non dēfenderem, Vat. 5, I put the question to you, why I was not to defend Cornelius (1563).
- 1754. A final subjunctive subordinate to a perfect definite sometimes has the primary sequence, but more commonly the secondary: as.
- (a.) etiamne ad subsellia cum ferro vēnistis, ut hīc iugulētis Sex. Roscium? RA. 32, have you actually come to the court-room knife in hand, to cut Roscius's throat on the spot? (b.) ne ignorārētis esse aliquās pācis vobis condicionēs, ad vos vēnī, L. 21, 13, 2, I have come to you to let you know that you have some chances of peace. addūxī hominem in quo satis facere exteris nātionibus possētis, V. a. pr. 2, I have brought up a man in whose person you can give satisfaction to foreign nations.
- 1755. An independent present or perfect subjunctive is sometimes exceptionally put with a main secondary tense (1744):
 - 1756. (1.) In relative, causal, or concessive sentences: as,

cum in cēterīs coloniis duūmviri appellentur, hī sē praetorēs appellārī volēbant, Agr. 2, 93, though they are styled in all other colonies The Two these men wanted to be styled praetors. qui adulēscēns nihil umquam nisi sevērissimē et gravissimē fēcerit, is cā aetāte saltāvit? D. 27, did the man who in his growing years invariably behaved with austere propriety, dance and caper round in his old age? hoc toto proelio cum ab horā septimā ad vesperum pūgnātum sit, āversum hostem vidēre nēmo potuit, 1, 26, 2, during the whole of this engagement, though the fighting went on from an hour tast noon till evening, nobody could catch a glimpse of an enemy's back.

1757-1762.] Sentences: The Subordinate Sentence.

1757. (2.) In consecutive sentences: as,

(a.) in provincia Sicilia, quam iste per triennium ita vexavit, ut ea restitul in antiquum statum nullo modo possit, V. a. pr. 12, in the province of Sicily, which the defendant so effectually tormented three years running that it cannot be restored at all to its original estate. priores ita regnarunt, ut omnes conditores partium certe urbis numerentur, L. 2, 1, 2, such was the administration of the monarchs preceding, that they are all accounted founders of parts at least of Rome. (b.) The perfect subjunctive sometimes represents the time of the perfect definite: as, tantum in aerarium pecuniae invēxit, ut unīus imperatoris praeda finem attulerit tributorum, Off. 2, 76, he conveyed such quantities of money into the treasury, that the plunder turned in by a single commander has put an end to tribute for good and all. eo usque se praebebat patientem atque impigrum, ut eum nemo umquam in equo sedentem viderit, V. 5, 27, he showed himself so indefatigably active that no human being has ever seen him astride a horse. Sometimes the time of the historical perfect: as, temporis tanta fuit exiguitas, ut ad galeas induendas tempus defuerit, 2, 21, 5, so scant was the time that they had not time to put their helmets on. hic its quievit, ut eo tempore omni Neapoli fuerit, Sull. 17, this man held so quiet that he staid all that time at Neapolis. In Cicero a negative subordinate perfect is not uncommon; an affirmative one is very rare. This construction is more common in Nepos, Livy, and Tacitus, and is the prevalent one in Suetonius.

1758. The imperfect only is used in complementary sentences with past verbs of happening, such as accidit, contigit, &c. (1966).

1759. When two consecutive subjunctives are coordinated, they usually have the same tense. Sometimes however the first is perfect and the second imperfect, or the reverse.

1760. (3.) An indirect question in the present or perfect sometimes retains its original tense with a main secondary tense (1744): as,

hic quantum in bello fortuna possit, cognosci potuit, 6, 35, 2, here there was a chance to see how potent dame Fortune is in war. Here possit represents potest of a general truth (1588); but usually general truths have the regular sequence (1748). cūr abstinuerit spectāculo ipse, varie trahēbant, Ta. 1, 76, why the emperor did not go to the show, they accounted for in this way and that, representing cūr abstinuit? quo consilio redierim initio audīstis, post estis expertī, Ph. 10, 8, what my idea was in coming back, you learned first by hearsay, afterwards by personal observation, representing quo consilio redii?

1761. The subordinate subjunctive has sometimes the sequence of the nearest verb, instead of that of its proper verb: as, cūrāvit, quod semper in rē pūblicā tenendum est, nē pūrimum valeant plūrimi, RP. 2, 30, he arranged it so, a point which is always to be held fast in government, that the greatest number may not have the greatest power.

Tense subordinate to a Subjunctive.

1762. When the leading verb is a subjunctive, the present is regarded as primary, and the imperfect and pluperfect as secondary: as,

Tense of the Subordinate Sentence. [1763-1766.

- (a.) exspectō ēius modī litterās ex quibus non quid fīat, sed quid futūrum sit sciam, All. 5, 12, 2, I am expecting a letter of a kind to let me know not what is going on, but what will be going on. quid profēcerim faciās nē velim certiorem, Fam. 7, 10, 3, how far I have succeeded I wish you would let me know. (b.) quālis esset nātūra montis qui cognoscerent misit, 1, 21, 1, he sent some scouts to find out what the character of the mountain was. quid mē prohibēret Epicūrēum esse, sī probārem quae diceret, Fin. 1, 27, what would prevent me from being an Epicurean, if I accepted what he said? quae sī bis bīna quot essent didicisset Epicūrus, certē non diceret, DN. 2, 49, Epicurus would certainly not say this, if he had ever been taught how much twice two is (1748).
- 1763. An imperfect subjunctive of action non-occurrent at the present time has occasionally the present sequence: as, $m\bar{i}r\bar{a}r\bar{e}ris$, $s\bar{i}$ interesses, $qu\bar{a}$ patientia valetudinem toleret, Plin. Ep. 1, 22, 7, you would be amased to find, if you were with him, with what dogged endurance he bears up under his illness. But the secondary sequence is far more common.
- 1764. (1.) The perfect subjunctive in independent main sentences of prohibition (1551) or of action conceivable (1558) is regarded as a primary tense: as.
- ne dubiteris quin id mine futurum sit antiquius, Att. 7, 3, 2, don't entertain any doubt that this course will be preferable in my eyes. quid non sit citius quam quid sit dixerim, DN. 1, 60, I could sooner tell what is not, than what is.
- 1765. (2.) In subordinate sentences, the perfect subjunctive has the main sequence when it represents the indicative perfect definite, and the secondary when it represents the indicative historical perfect or the imperfect: as,
- (a.) nemo fere vestrum est, quin, quem ad modum captae sint Syracusae saepe audierit, V. 4, 115, there is hardly a man of your number but has heard over and over again how Syracuse was taken. (b.) qua re acciderit ut id suspicarere quod scribis nescio, Fam. 2, 16, 1, how it came to pass that you suspected what you write, I can't imagine.

Tense subordinate to a Noun of the Verb.

1766. (1.) A subjunctive subordinate to one of the nouns of the verb, except the perfect infinitive or the perfect participle, follows the sequence of the verb: as,

dēsino quaerere cūr ēmeris, V. 4, 10, I cease to ask why you bought. nēminem tam āmentem fore putāvērunt, ut emeret argentum, V. 4, 9, they did not dream anybody would be crazy enough to buy plate. secūri percussi, adeo torpentibus metū qui aderant, ut nē gemitus quidem exaudirētur, L. 28, 29, 11, they were beheaded, everybody there being so completely paralyzed with fear that not even a groan could be heard. Q. Fabius Pictor Delphos missus est scīscitātum, quibus precibus deos possent plācāre, L. 22, 57, 5, Fabius Pictor was sent to Delphi to find out by what sort of prayers they could get the ear of the gods. cupīdo incessit animos iuvenum scīscitandi ad quem eorum rēgnum esset ventūrum, L. 1, 56, 10, the youths were possessed with a desire to find out to which one of their number the throne was to fall.

1767-1772.] Sentences: The Subordinate Sentence.

1767. (2.) With a perfect infinitive or perfect participle, the subordinate subjunctive may be in the imperfect or pluperfect, even with a primary leading verb: 25,

satis mihī multa verba fēcisse videor, quā rē esset hōc bellum necessārium, IP. 27, I funcy I have said enough to show why this war is unavoidable. hunc isti āiunt, cum taurum immolāvisset, mortuum concidisse, Br. 43, your gentlemen say that this man, after sacrificing a bull, tumbled down dead. viātor bene vestītus causa grassātōrī fuisse dīcētur cūr ab eō spoliārētur, Fut. 34, a well-dressed traveller will be said to have been a temptation for a footpad to rob him. versābor in rē sacpe quaesītā, suffrāgia clam an palam ferre melius esset, Leg. 3, 33, I shall be working on a question that has often been put, whether it was better to vote secretly or openly.

1768. The sequence with a perfect infinitive is, however, often primary: as, hic si finem faciam dicendi, satis iddici fecisse videar cur secundum Roscium iddicari debeat, KC. 14, if I should stop speaking here, I should feel I had made it plain enough to the court why a judgement should be rendered for Roscius.

1769. The secondary sequence is used with memini, remember, even when it has the present infinitive (2220): 28, L. Metellum memini ita bonis esse viribus extrēmo tempore aetātis, ut adulēscentiam non requireret, CM. 30, I can remember Metellus's being so good and strong in the very last part of his life that he did not feel the want of youth.

1770. Sentences with a subjunctive due to another subjunctive or to an infinitive are put as follows:

1771. (1.) Sentences of relative time express contemporaneous, antecedent, and subsequent action like corresponding indicative sentences, with the appropriate sequence: as,

vereor, ne, dum minuere velim laborem, augeam, Leg. 1, 12, I am afraid that while I wish to make the work less, I may make it more. crocodilos dicunt, cum in terra partum ediderint, obruere ova, DN. 2, 129, they say that the crocodile, after laying on land, buries her eggs. dicebam quoad metueres, omnia te promissurum : simul ac timere desisses, similem te futurum tui, Ph. 2, 89, I said that as long as you were afraid, you would promise everything; the moment you ceased to fear, you would be just like yourself. constituerunt ea, quae ad proficiscendum pertinerent, comparare, 1, 3, 1, they resolved to get such things ready as were necessary for the march. erat scriptum: nisi domum reverterētur, sē capitis eum damnātūros, N. 4, 3, 4, it stood written that, if he did not come back home, they would condemn him to death (direct form nisi revertëris, damnabimus). legati venerunt, qui se ea, quae imperasset, facturos pollicerentur, 4, 22, I, some enways came, to engage to do what he ordered (direct form quae imperaris, Veneti confidebant Romanos neque ullam facultatem habēre nāvium, neque eōrum locorum ubi bellum gestūri essent portus novisse, 3, 19, 6, the Venetans felt assured that the Komans had not any proper supply of ships, and were not acquainted with the ports in the places where they were to fight.

1772. (2.) Sentences with independent time retain the independent time in the subjunctive in primary sequence (1744); in secondary sequence the present becomes imperfect, and the perfect becomes pluperfect: as,

(a.) quamquam opinio est, eum qui multis annis ante hos fuerit, (a.) quamiquam opinio est, eum qui muits annis ante nos tuent, Pisistratum, multum valuisse dicendo, Br. 27, though there is an impression that the man who lived years and years before these people, Pisistratus, was a very telling orator (direct form, qui fuit, 1738). dicitur, postea quam venerit, paucis diebus esse mortuus, Clu. 173, he is said to have died a few days after he came (1739). (b.) cognovit Suebos, postea quam pontem fieri comperissent, nûntios in omnes partes dimisisse, 4, 19, 2, he ascertained that after the Sueban had learned of the building of the bridge, they had sent out messengers in every direction.

THE INDIRECT QUESTION.

1773. The subjunctive is used in indirect questions or exclamations.

Thus, when the direct question, qui scis, how do you know? is subordinated to a main sentence, such as quaero, I ask, the scis becomes scias: quaero qui scias, RA. 59, I ask how you know. Questions or exclamations thus subordinated are called Indirect (1723). In English, indirect questions are usually characterized simply by the position of the words, the subject standing before the verb.

1774. The indirect question is one of the commonest of constructions. It depends on verbs or expressions meaning not only ask, but also tell, inform, ascertain, see, hear, know, consider, deliberate, doubt, wonder, fear, &c., &c.

YES OR NO QUESTIONS.

1775. Indirect Yes or No questions are introduced by the same interrogative particles that are used in direct questions (1503). But in indirect questions, num and -ne are used without any essential difference, in the sense of whether, if. none is used thus only by Cicero, and by him only with quaero: as,

quaeris num disertus sit? Planc. 62, do you ask whether he is a good speaker? quaesivi cognosceretne signum, C. 3, 10, I asked if he recognized the seal. quaero nonne tibl faciendum idem sit, Fin. 3, 13, I ask whether you ought not to do the same. videte num dubitandum vobis sit, IP. 19, consider whether you ought to have any hesitation.

1776. The combinations -ne . . . -ne, and an . . . an, introducing two separate questions, are rare; -ne . . . -ne is mostly confined to poetry. In a few instances such questions can hardly be distinguished from alternatives.

1777. A conditional protasis with 81, if, to see if, or 81 forte, if perchance, sometimes takes the place of an indirect question in expressions or implications of trial, hope, or expectation: as, 155, visam si domist, T. Hau. 170, I'll go and see if he? at home. Usually with the subjunctive: as, exspectabam, si quid scriberes, Att. 16, 2, 4, I was waiting to see whether you would write anything. Circumfunduntur hostes, si quem aditum reperire possent, 6, 37, 4, the enemy came streaming round, to see if they could find any way of getting in.

Digitized by Google

ALTERNATIVE QUESTIONS.

1778. Indirect alternative questions are introduced like direct questions (1519). But when the second member is negative, it has oftener necne than an non: as,

hoc quaeramus, vērum sit an falsum, Clu. 124, let us ask this question, whether it is true or false. quaesivi a Catilina in conventu fuisset, necne, C. 2, 13, I asked Catiline whether he had been at the meeting or not. permultum interest utrum perturbatione animi, an consulto fiat iniuria, Of. 1, 27, it makes a vast difference whether wrong be done in heat of passion, or with deliberate intent. quaero, cum Brutine similem malis an Antonii, Ph. 10, 5, I ask whether you would rather have him like Brutus or like Antony.

1779. An introductory utrum preceding an alternative question with -ne and an occurs a few times in Plautus and Cicero; utrumne . . . an occurs once in Cicero, and twice in Horace and Tacitus each; compare 1522. After utrum, a second alternative is sometimes suppressed, as in the direct question (1523).

1780. -ne in the second member only of an alternative question is rare, and not used by Caesar or Sallust: as, sine sciam captiva materne sim, L. 2, 40, 5, let me know whether I am a captive or a mother.

1781. (1.) A few times in Plautus and Terence, the second member only of an alternative question is expressed with qui scio an? or qui scis an? equivalent to perhaps: as, qui scis an quae iubeam faciat? T. Eu. 790, perhaps she'll do as I direct. Horace has once qui scis an, AP. 462, in the sense of perhaps, and once quis scit an, 4, 7, 17, in the sense of perhaps not.

1782. (2.) The second member only of an alternative question is often expressed after haud sciō an, *I don't know but, possibly, perhaps*, with non, nēmō, nūllus, &c., if the sentence is negative: as,

haud sciō an fieri possit, V. 3, 162, I don't know but it is possible. Similarly, though not often, with nesciō an, haud sciam an, dubitō an, dubitō an, dubitā man, dubitm an, incertum an, &c.: as, Eloquentiā nesciō an habuisset parem nēminem, Br. 126, in oratory I fancy he would have had no peer. This use, in which haud sciō an becomes adverbial, and the subjunctive approaches closely that of modest assertion, is principally confined to Cicero. In later Latin, haud sciō an, &c., sometimes has a negative sense, I don't know whether, with ullus, &c.

1783. From Curtius on, an is used quite like num or -ne, in a single indirect question, without implication of alternatives.

1784. Two alternatives are rarely used without any interrogative particles at all: as, velit nölit scīre difficile est, QFr. 3, 8, 4, will he nill he, it is hard to know, i. e. whether he will or not. Compare 1518.

Pronoun Questions.

1785. Indirect pronoun questions are introduced by the same pronominal words that are used in direct pronoun questions (1526): as,

cognoscit, quae gerantur, 5, 48, 2, he ascertains what is going on. videtis ut omnes despiciat, RA. 135, you can see how he looks down on everybody. quid agas et ut te oblectes scire cupio, QFr. 2, 3, 7, I am eager to know how you do and how you are amusing yourself.

ORIGINAL SUBJUNCTIVES.

1786. Questions already in the subjunctive may also become indirect.

Thus, quo me vertam? V. 5, 2, which way shall I turn? (1563) becomes indirect in quo me vertam nescio, Clu. 4, I don't know which way I am to turn. quid faciam? H. S. 2, 1, 24, what shall I do? (1563) becomes indirect in quid faciam, praescribe, H. S. 2, 1, 5, lay down the law, what I'm to do. neque satis constabat quid agerent, 3, 14, 3, and it was not at all clear what they had best do. dubitavi hosce homines emerem an non emerem, Pl. Cap. 455, I had my doubts, whether to buy these men or not to buy (1564).

INDICATIVE QUESTIONS APPARENTLY INDIRECT.

1787. In old Latin, the indicative occurs often in connections where the subjunctive would be used in classical Latin: as,

dic, quis est, Pl. B. 558, say, who is it? whereas dic quis sit would mean say who it is. In such cases the question is not subordinate, but coordinate, usually with an imperative (1697), or with some such expression as të rogo, volo scire, scin, or the like. Such coordination occurs exceptionally in the classical period: as, et vide, quam conversa res est, Att. 8, 13, 2, and observe, how everything is changed. adspice, ut ingreditur, V. 6, 856, see, how he marches off.

1788. The indicative is used with nescio followed by a pronominal interrogative, when this combination is equivalent to an indefinite pronoun or adverb: as,

prodit nescio quis, T. Ad. 635, there's some one coming out. This is a condensed form for prodit nescio quis sit, there's coming out I don't know who it is, the real question, sit, being suppressed, and nescio quis acquiring the meaning of aliquis, somebody. Similarly nescio with unde, ubi, quando, quot, &c., in writers of all ages. Plautus uses scio quid, scio ut, &c., somewhat in this way once or twice with the indicative: as, scio quid ago, B. 78, I'm doing I know what.

1789. This combination often expresses admiration, contempt, or regret: as, contendo tum illud nescio quid praeclarum solere existere, Arch. 16, I maintain that in such a combination the beau ideal of perfection always bursts into being. paulum nesciò quid. RA. 113, an unconsidered trifte. divisa est sententia, postulante nesciò quò, Mil. 14, the question was divided, on motion of what's his name. nesciò quò pactò, C. 31, unfortunately.

1790. The indicative is used in like manner with many expressions, originally exclamatory, which have become adverbs: such are immane quantum, prodigiously, mirum quantum, wonderfully, sane quam, immensely, &c., &c. See 712 and the dictionary.

1791. Relative constructions often have the appearance of indirect questions, and care must be taken not to confound the two. Thus, ut is a relative in hanc rem, ut factast, Eloquar, Pl. Am. 1129, I'll tell this thing as it occurred, i. e. not how it occurred. nosti quae sequuntur, TD. 4, 77, you know the things that follow, i. e. not what follows.

THE RELATIVE SENTENCE.

- 1792. Relative sentences are introduced by relative words, the most important of which is the pronoun qui, who, which, or that. The relative pronoun may be in any case required by the context, and may represent any of the three persons.
- 1793. The relative adverbs, ubl, quo, unde, often take the place of a relative pronoun with a preposition, chiefly in designations of place, and regularly with town and island names. Less frequently of persons, though unde is not uncommonly thus used.
- 1794. In a wider sense, sentences introduced by any relative conjunctive particle, such as ubl, when, are sometimes called relative sentences. Such sentences, however, are more conveniently treated separately, under the head of the several conjunctive particles.
- 1795. (1.) The relative pronoun, like the English relative who, which, was developed from the interrogative. Originally, the relative sentence precedes, and the main sentence follows, just as in question and answer.

Thus, quae mūtat, ea corrumpit, Fin. 1, 21, what he changes, that he spoils, is a modification of the older question and answer: quae mūtat? ea corrumpit, what does he change? that he spoils. With adjective relatives, the substantive is expressed in both members, in old or formal Latin: as, quae rēs apud nostros non erant, eārum rērum nomina non poterant esse ūsitāta, Cornif. 4, 10, what things did not exist among our countrymen, of those things the names could not have been in common use.

1796. (2.) The relative sentence may also come last. As early as Plautus, this had become the prevalent arrangement, and the substantive of the main sentence is called the *Antecedent*: as,

ülträ eum locum, quō in locō Germäni consederant, castris idoneum locum delegit, 1, 49, 1, beyond the place in which place the Germans had established themselves, he selected a suitable spot for his camp. The three words dies, locus, and res, are very commonly expressed thus both in the antecedent and the relative sentence. This repetition is rare in Livy, and disappears after his time.

- 1797. In old Latin, rarely in classical poetry, a sentence sometimes begins with an emphasized antecedent put before the relative, and in the case of the relative: as, urbem quam statuō vostra est, V. 1, 573, the city which I found is yours; for quam urbem statuō, ea vostra est. In the main sentence, is, hīc, iste, or ille, is often used; less frequently, as in this example, an appellative.
- 1798. The main sentence often has the determinative or demonstrative, or the substantive, or both omitted: as,
- (a.) ubl intellexit diem instare, quo die frümentum militibus metiri oporteret, 1, 16, 5, when he saw the day was drawing nigh, on which day the grain was to be measured out to his men. (b.) quos amisimus civis, eos Martis vis perculit, Marc. 17, what fellow-citizens we have lost, those the fury of the War-god smote down. (c.) Sabinus quos tribunos militum circum se habebat, se sequi iubet, 5, 37, 1, Sabinus ordered what tribunes of the soldiers he had about him, to follow him.

1799. The antecedent is often omitted when it is indefinite, or is obvious from the context: as,

sunt qui mirentur, V. 1, 6, there be who wonder. delegisti quos Romae relinqueres, C. 1, 9, you picked out people to leave in Rome. quod periit, periit, Pl. Cist. 703, gone is gone. Caesar cognovit Considium, quod non vidisset, pro viso sibi renuntiavisse, 1, 22, 4, Caesar ascertained that Considius had reported to him as seen what he had not seen.

1800. An ablative or nominative abstract in the relative sentence sometimes represents an ablative of manner or quality omitted from the main sentence: as, quā prūdentiā es, nihil tē fugiet, Fam. 11, 13, 1, with what sense you have, nothing will clude you, i. e. eā quā es prūdentiā, nihil tē fugiet. spērō, quae tua prūdentia est, tē valēre, Att. 6, 9, 1, I hope that, with your characteristic caution, you are well. at Āiāx, quō animō trāditur, mīlliēs oppetere mortem quam illa perpetī māluisset, Off. 1, 113, Ajax, on the contrary, with his traditional vehemence, would have chosen rather to die a thousand deaths than to submit to such indignities. This ellipsis begins with Cicero, and is found a few times only in later writers.

AGREEMENT OF THE RELATIVE.

1801. The agreement of the relative has already been spoken of in a general way (1032-1098). For convenience, however, it may be set forth here more explicitly.

1802. A relative pronoun agrees with its antecedent in gender and number, but its case depends on the construction of the sentence in which it stands: as,

Hippiās gloriātus est ānulum quem habēret, pallium quo amictus, soccos quibus indūtus esset, sē suā manū confēcisse, DO. 3, 127, Hippias prided himself that he had made with his own hand the ring that he wore, the cloak in which he was wrapped, and the slippers that he had on. This holds of all relatives with inflected form, such as quicumque, quālis, quantus, &c., &c.

1803. When the relative refers to two or more antecedents of different gender, its gender is determined like that of a predicate adjective (1087): as,

matres et liberi, quorum aetas misericordiam vestram requirebat, V. 5, 129, mothers and babies, whose years would appeal to your sympathy (1088). Otium atque divitiae, quae prima mortales putant, S. C. 36, 4, peace and prosperity, which the sons of men count chiefest of blessings (1089). förtüna, quam nēmo ab inconstantia et temeritate sēiunget, quae digna non sunt deo, DN. 3, 61. fortune, which nobody will distinguish from caprice and hazard, qualities which are not befitting god (1089). Sometimes the relative agrees with the nearest substantive: as, eas früges atque früctüs, quos terra gignit, DN. 2, 37, the crops, and the fruits of the trees that earth produces.

1804. The relative is sometimes regulated by the sense, and not by the form of the antecedent: as,

1805-1811] Sentences: The Subordinate Sentence.

equitātum praemittit quī videant, 1, 15, 1, he sends the cavalry ahead, for them to see (1095). ünus ex eð numerð, qui ad caedem parāti erant, S. I. 35, 6, one of the number that were ready to do murder (1095). duo prodigia, quōs improbitās tribūnō cōnstrictōs addīxerat, Sest. 38, a pair of monstrosities, whom their depravity had delivered over in irons to the tribune. scrība pōntificis, quōs nunc minōrēs pōntificēs appellant, L. 22, 57, 3, a clerk of the pontiff, which clerks they call nowadays lesser pontiffs, i. e. quōs scrībās. Vējēns bellum exortum, quibus Sabīnī arma cōniūnxerant, L. 2, 53, 1, a Vējan war broke out, with whom the Sabines had allied themselves, i. e. bellum cum Vējentibus.

- 1805. A relative referring to a proper name and explanatory appellative combined, may take the gender of either: as, filimine Rhēnō, qui agrum Helvētium ā Germānīs dividit, 1, 2, 3, by the river Rhine, which is the boundary between Helvetians and Germans. ad filimen Scaldem quod influit in Mosam, 6, 33, 3, to the river Scheldt, that empties itself into the Maas.
- 1806. With verbs of indeterminate meaning (1035), the relative pronoun sometimes agrees with the predicate substantive: as, Thebae ipsae, quod Boeotiae caput est, L. 42, 44, 3, Thebas itself, which is the capital of Boeotia. Often, however, with the antecedent: as, flümen quod appellatur Tamesis, 5, 11, 8, the river which is called the Thames.
- 1807. When the relative is subject, its verb agrees with the person of the antecedent: as,

haec omnia is fēcī, quī sodālis Dolābellae eram, Fam. 12, 14, 7, all this I did, I that was Dolabella's bosom friend. iniquos ēs, quī mē tacēre postulēs, T. Hau. 1011, thou art unfuir, expecting me to hold my tongue. So also when the antecedent is implied in a possessive: as, cum tū nostrā, quī remānsissēmus, caede tē contentum esse dicēbās, C. 1, 7, when you said you were satisfied with murdering us, who had staid behind.

- 1808. For an accusative of the relative with an ablative antecedent the ablative is rarely used: as, notante indice quo nosti populo, H. S. 1, 6, 15, the judge condenning—thou know's who—the world. This represents the older interrogative conception: notante indice—quo?—nosti, populo (1795).
- 1809. A new substantive added in explanation of an antecedent is put after the relative, and in the same case: as, ad Amānum contendī, quī mons erat hostium plēnus, Att. 5. 20, 3, I pushed on to Amanus, a mountain that was packed with the enemy. This use begins with Cicero; but from Livy on, the explanatory word is also put as an appositive, with the relative following: as, Decius Magius, vir cui nihil dēfuit, L. 23, 7, 4, Magius, a man that lacked nothing.
- 1810. An adjective, especially a comparative, superlative, or numeral, explanatory of a substantive in the main sentence, is often put in the relative sentence: as,

palüs quae perpetua intercēdēbat Romānos ad insequendum tardābat, 7, 26, 2, a morass, that lay unbroken between, hindered the Romans from pursuit.

1811. When reference is made to the substance of a sentence, the neuter quod is used, or more commonly id quod, either usually in parenthesis: as,

intellegitur, id quod iam ante dīxī, imprūdente L. Sūllā scelera haec fierī, RA. 25, it is plain, as I have said once before, that these crimes are committed without the cognisance of Sulla. In continuations, quae rēs: 25, 1, he ordered the vessels to be withdrawn, a course which proved very advantageous for our people.

MOODS IN THE RELATIVE SENTENCE.

1812. The relative is sometimes equivalent to a conditional protasis. When thus used, it may have either the indicative or the subjunctive, as the sense requires: as,

(a.) quod beatum est, nec habet nec exhibet cuiquam negotium, DN. 1, 85, whatsoever is blessed, has no trouble and makes none to anybody. quisquis hike venerit, pügnös edet, Pl. Am. 309, whoever comes this way, shall have a taste of fists (1796). omnia mala ingerebat quemquem adspexerat, Pl. Men. 717, she showered all possible bad names on every man she saw (1795). (b.) have qui videat, nonne cogatur confiteri deos esse, DN. 2, 12, whoso should see this would be forced, wouldn't he? to admit the existence of gods. qui videret, equum Troianum introductum diceret, V. 4, 52, whoever saw it would have sworn it was the Trojan horse brought in (1559).

THE INDICATIVE MOOD.

1813. The indicative is used in simple declarations or descriptions introduced by a relative: as,

quem di diligunt, adulēscēns moritur, Pl. B. 816, whom the gods love, dies young. rēliquī, quī domī mānsērunt, sē alunt, 4, 1, 5, the others, that stay at home, support themselves (1736). quōs laborantēs conspexerat, hīs subsidia submittēbat, 4, 26, 4, to such as he saw in stress, he kept sending reinforcements (1736). tū quod volēs faciēs, QFr. 3, 4, 5, do what you like (1735).

1814. The indicative is also used with indefinite relative pronouns and adverbs: as, quidquid volt, valde volt, Att. 14, 1, 2, whatever he wants, he wants mightily. quisquis est, TD. 4, 37, whoever he may be. quacumque iter fecit, V. 1, 44, wherever he made his way. In later writers the imperfect or pluperfect is often in the subjunctive: see 1730.

1815. An original indicative often becomes subjunctive, particularly in indirect discourse (1722); or by attraction (1728); or to indicate repeated action (1730). See also 1727 and 1731.

THE SUBJUNCTIVE MOOD.

1816. Relative pronoun sentences take the subjunctive to denote (1.) a purpose, (2.) a characteristic or result, (3.) a cause, reason, proof, or a concession.

SENTENCES OF PURPOSE.

1817. (1.) Relative sentences of purpose are equivalent to subjunctive sentences introduced by ut, in order that, to (1947): as,

ea qui conficeret, C. Trebonium relinquit, 7, 11, 3, he left Trebonius to manage this. qualis esset natura montis, qui cognoscerent, misit, 1, 21, 1, he sent some scouts to ascertain what the character of the mountain was. have habui de amicitia quae dicerem, L. 104, this was what I had to say of friendship. Sentences of purpose are an extension of the subjunctive of desire (1540).

SENTENCES OF CHARACTERISTIC OR RESULT.

1818. (2.) Relative sentences of characteristic or result are equivalent to subjunctive sentences introduced by ut, so as to, so that (1947).

The main sentence sometimes has a word denoting character, such as is, \(\tilde{\tilde{e}} \) ius modi, rarely t\(\tilde{\tilde{e}} \) iis: as, neque is sum, qui mortis pericul\(\tilde{e} \) terrear, 5, 30, 2, but I am not the man to be scared by danger of death, no not I. Often, however, character is intimated by the mood alone: as, sec\(\tilde{t} \) in easities quae nostr\(\tilde{o} \) in castris contin\(\tilde{e} \) entrearter, 4, 34, 4, there followed a succession of storms to keep our people in camp. quod miserandum sit lab\(\tilde{o} \) r\(\tilde{e} \) is, 3, 62, you struggle away to a pitiable degree. Sentences of result are an extension of the subjunctive of action conceivable (1554).

1819. The subjunctive with qui is often used with dignus, indignus, or idoneus, usually with a form of sum: as, Liviānae fābulae non satis dignae quae iterum legantur, Br. 71, Livis plays are not worth reading twice. non erit idoneus qui ad bellum mittātur, IP. 66, he will not be a fit person to be sent to the war. Twice thus, aptus, once in Cicero, once in Ovid. In poetry and late prose these adjectives sometimes have the infinitive. dignus and indignus have also ut in Plautus, Livy, and Quintilian.

1820. Relative subjunctive sentences are sometimes coordinated by et or sed, with a substantive, adjective, or participle: as, audāx et coetūs possit quae ferre virorum, J. 6, 399, a brazen minx, and one quite capable of facing crowds of men.

1821. Relative sentences after assertions or questions of existence or non-existence, take the subjunctive: as,

sunt qui putent, TD. 1, 18, there be people to think, there be who think, or some people think. nëmë est qui nesciat, Fam. 1, 4, 2, there is nobody that does n't know. sapientia est una quae maestitiam pellat ex animis, Fin. 1, 43, wisdom is the only thing to drive sadness from the soul.

1822. Such expressions are: est (exsistit, exortus est), quī; sunt (reperiuntur, non dēsunt), quī; nomo est, quī; quis est, quī; solus or ūnus est, quī; est, nihil est, quod; quid est, quod? habeo, non habeo, nihil habeo, quod, &c. Indefinite subjects are sometimes used with these verbs: as, multī, quīdam, nonnūllī, aliī, paucī; sometimes appellatives: as, hominēs, philosophī.

1823. The indicative, however, is not infrequently found in affirmative sentences, particularly in old Latin and in poetry: as, sunt quos scio esse amicos. Pl. Tri. 91, some men there are I know to be my friends. interdum volgus rectum videt, est ubi peccat, H. E. 2, 1, 63, sometimes the world sees right, there be times when it errs. sunt item, quae appellantur alces, 6, 27, 1, then again there are what they call elks.

SENTENCES OF CAUSE OR CONCESSION.

- 1824. (3.) Relative sentences of cause, reason, proof, or of concession, are equivalent to subjunctive sentences introduced by cum, since, though (1877): as,
- (a.) hospes, qui nihil suspicăretur, hominem retinere coepit, V. 1, 64, the friend, suspecting nothing, undertook to hold on to the man. Often justifying the use of a single word: as, ō fortunăte adulescens, qui tuae virtutis Homerum praeconem inveneris, Arch. 24, oh youth thrice-blest, with Homer trumpeter of thy provess. ad me venit Heraclius, homo nobilis, qui sacerdos lovis fuisset, V. 4, 137, I had a call from Heraclius, a man of high standing, as is proved by his having been a priest of Jupiter. (b.) Cicero, qui milites in castris continuisset, quinque cohortes frümentatum mittit, 6, 36, 1, though Cicero had kept his men in camp, he sends fove cohorts foraging.

1825. With qui tamen, however, the indicative is usual: as, alter, qui tamen se continuerat, non tenuit eum locum, Sest. 114, the other, though he had observed a quiet policy, did not hold the place.

1826. Oftentimes, where a causal relation might be expected, a simple declaratory indicative is used: as,

habed senectūtī māgnam grātiam, quae mihī sermonis aviditātem auxit, CM. 46, I feel greatly indebted to age, which has increased my eagerness for conversation. Particularly thus in old Latin: as, sed sumne ego stultus, quī rem cūro pūblicam? Pl. Per. 75, but am I not a fool, who bother with the common weal? Compared with: sed ego sum Insipientior, quī rēbus cūrem pūplicīs, Pl. Tri. 1057, but I'm a very fool, to bother with the common weal. Often of coincident action (1733): as, stultē fēcī, quī hunc āmīsī, Pl. MG. 1376, I've acted like a fool, in letting this man off.

1827. The causal relative is often introduced by quippe, less frequently by ut, or ut pote, naturally: as,

'convīvia cum patre non inībat;' quippe quī ne in oppidum quidem nisi perrārō venīret, RA. 52, 'he never went to dinner-parties with his father;' why, of course not, since he never went to a simple country town even, except very rarely. dictator tamen, ut quī magis animīs quam vīribus frētus ad certāmen dēscenderet, omnia circumspicere coepit, L. 7, 14, 6, but the dictator, naturally, since he went into the struggle trusting to mind rather than muscle, now began to be all on the alert. With quippe quī, the indicative only is used by Sallust, and is preferred by Plautus and Terence. Cicero has, with one exception, the subjunctive, Tacitus and Nepos have it always. Livy has either mood. Not in Caesar. ut quī has the subjunctive. It occurs a few times in Plautus, Cicero, once in Caesar, oftenest in Livy. With the indicative once in Cicero, and once in Tacitus. ut pote quī has the subjunctive. It is used by Plautus, by Cicero, once with the indicative, by Sallust, and Catullus.

1828. The indefinite ablative qui, somehow, surely, sometimes follows quippe or ut in old Latin, in which case it must not be confounded with the relative: as, quippe qui ex te audivi, Pl. Am. 745, why, sure I've heard from you; it cannot be the relative here, as the speaker is a woman.

1829. The subjunctive is used in parenthetical sentences of restriction: as,

10*

quod sciam, Pl. Men. 500; T. Ad. 641; RA. 17, to the best of my knowledge and belief. quod sine molestix tux fixt, Fam. 13, 23, 2, as far as may be without trouble to yourself. qui is often followed by quidem: as, omnium orxiorum, quos quidem ego cognoverim, acutissimum iudico Q. Sertorium, Br. 180, of all orators, at least of all that I have made the acquaintance of myself, I count Sertorius the sharpest.

1830. The indicative, however, is used in quod attinet ad, as to, and usually with quantum, and with forms of sum and possum: as, quod sine molestia tua facere poteris, Att. 1, 5, 7, as far as you can without troubling yourself.

CORRELATIVE SENTENCES.

1831. Sentences are said to be *correlative*, when a relative pronoun or adverb has a corresponding determinative or demonstrative pronoun or adverb in the main sentence.

Thus, the ordinary correlative of quI is is, less frequently hIc, ille, idem. Similarly tot . . . quot are used as correlatives; also quō . . . eō, quantō . . . tantō; quantum . . . tantum; tam . . . quam; totiēns . . . quotiēns; tālis . . . quālis; ubī . . . ibī; ut . . . ita, sīc, or item; cum . . . tum.

RELATIVE SENTENCES COMBINED.

(A.) Coordination of a Relative.

1832. (1.) When two coordinate relative sentences would have the second relative in the same case as the first, the second relative is usually omitted: as,

Dumnorigi qui principătum optinebat, ac māxime plebi acceptus erat, persuadet, 1, 3, 5, he prevails with Dumnorix, who held the headship, and was popular with the commons.

- 1833. (2.) When two coordinate relative sentences require two different cases of the relative, the relative is usually expressed with both, or else the second relative, which is usually nominative or accusative, is omitted, or is, hic, ille, or idem, is substituted for it: as,
- (a.) cūr loquimur dē eō hoste, quī iam fatētur sē esse hostem, et quem nōn timeō? C. 2, 17, why am I talking about an enemy who admits himself he is an enemy, and whom I do not fear? (b.) Bocchus cum peditibus, quōs Volux addūxerat, neque in priōre pūgnā adfuerant, S. I. 101, 5, Bocchus with the infantry whom Volux had brought up, and who had not been engaged in the first skirmish. (c.) Viriāthus, quem C. Laelius frēgit, ferōcitātemque ēius repressit, Off. 2, 40, Viriāthus, whom Laelius crushed, and curbed his fiery soul. This last use is chiefly limited to old Latin, Cicero, and Lucretius.

(B.) SUBORDINATION OF A RELATIVE.

1834. A sentence consisting of a main and a relative member, may be further modified by a more specific relative sentence: as,

proximi sunt Germanis qui trans Rhenum incolunt (general), quibuscum continenter bellum gerunt (specific), 1, 1, 3, they are nearest to the Germans that live beyond the Rhine, with whom they carry on uninterrupted hostilities. Idem artifex Cupidinem fecit illum qui est Thespiis (general), propter quem Thespiae visuntur (specific), V. 4, 4, the selfsame artist made the world-renowned Cupid at Thespiae, which is the attraction for tourists in Thespiae.

THE RELATIVE INTRODUCING A MAIN SENTENCE.

1835. Besides the ordinary use of the relative, to introduce a subordinate sentence, it is often used like hic, or is, or like et is, is autem, is enim, or is igitur, to append a fresh main sentence or period to the foregoing: as,

consilio convocato sententias exquirere coepit, quo in consilio nonnullae huius modi sententiae dicebantur, 3, 3, 1, calling a council of war, he proceeded to ask their opinion, and in this council some opinions of the following import were set forth. centuriones hostes vocare coeperunt; quorum progredi ausus est nemo, 5, 43, 6, the officers proceeded to call the enemy; but not a man of them ventured to step forward. perutiles Kenophonis libri sunt; quos legite studiose, CM. 59, Xenophon's works are extremely profitable reading; so do read them attentively. In Plautus this use is rare; but it becomes more and more prevalent, and in the time of Cicero the relative is one of the commonest counectives.

1836. From this use of the relative come many introductory formulas, such as quo facto, qua re cognita, quae cum ita sint, &c., &c.

1837. A connective quod is often used before sī, nisi, or etsī, less frequently before quia, quoniam, utinam, quī, &c.

This quod may be translated so, but, now, whereas, as to that, &c., or it is often best omitted in translation. See 2132.

THE CONJUNCTIVE PARTICLE SENTENCE.

quod.

1838. The conjunctive particle quod, originally the neuter of the relative pronoun, has both a declarative sense, that, and a causal sense, because. In both senses it regularly introduces the indicative (1721). For special reasons, however, the subjunctive is often used, and particularly in indirect discourse (1722).

1839. In some of its applications, particularly in old Latin, the conjunctive particle quod can hardly be distinguished from the pronoun quod, as follows:

Digitized by Google

1840. (1.) In old Latin, quod, why, for what, is sometimes used with veniod and mitto. Thus, as in id vēnimus, Pl. MG. 1158, that is why we've come, id is used to define the purpose of the motion (1144), so also quod, in quod vēnī, ēloquar, T. Hau. prol. 3, what I've come for, I'il set forth. Instead of quod, more explicitly quam ob rem: as, quam ob rem hūc sum missa, Pl. R. 430, what I am sent here for.

1841. (2.) quod, why, for what, is used in such expansions as quid est quod? quid habes quod? or nihil est quod: as,

quid est quod mē excīvistī? Pl. E. 570, why is it that you've called me out? (1144). Usually with the subjunctive (1563): as, quid est quod plūra dīcāmus? Clu. 59, what reason is there for saying more? For quod, sometimes quā rē, quam ob rem, cūr, &c. _ The question itself is also sometimes varied: as, quid fuit causae, cūr in Africam Caesarem non sequerore? Ph. 2, 71, what earthly reason was there, why you should not have followed Caesar to Africa?

1842. (3.) quod, as to what, or that, is used, especially at the beginning of a sentence, to introduce a fact on which something is to be said, often by way of protest or refutation: as,

vērum quod tū dīcis, non tē mī īrāscī decet, Pl. Am. 522, but as to what you say, it is n't right that you should get provoked with me. quod multitūdinem Germānorum in Galliam trādūcat, id sē suī mūniendī causā facere, 1, 44, 6, as to his moving a great many Germans over to Gaul, that he did for self-protection (1722). This construction is particularly common in Caesar, and in Cicero's letters.

1843. When quod, in case, suppose, although, introduces a mere conjecture or a concession, the subjunctive is used (1554): as, quod quispiam ignem quaerat, extingui volo, Pl. Aul., 01, in case a man may come for fire, I want the fire put out. This use is principally found in old Latin, but once or twice also in Cicero.

1844. quod, that, the fact that, is often used in subordinate sentences which serve to complete the sense of the main sentence.

1845. The sentence with quod may represent a subject, as with accēdit; an object, as with praetereo, &c.; or any case of a substantive; frequently it is in apposition with a demonstrative or an appellative: as,

(a.) accēdēbat, quod suōs ab sē līberōs abstrāctōs dolēbant, 3, 2, 5, there was added this fact, that they lamented that their own children were torn from them; or less clumsily, then too they lamented. praetereō, quod eam sibī domum sēdemque dēlēgit, in quā cōtīdiē virī mortis indicia vidēret, Clu. 188, I pass ower the fact that she picked out a house to live in, in which she would see, day in day out, things to remind her of her husband's death. illud minus cūrō, quod congessistī operāriōs omnēs, Br. 297, I am not particularly interested in the fact that you have lumped together all sorts of cobblers and tinkers. (b.) Caesar senātūs in eum beneficia commemorāvit, quod rēx appellātus esset ā senātū, 1, 43, 4, Caesar told off the kindnesses of the senate to the man, the fact that he had been styled king by the senate' (1722). quō factō duās rēs cōnsecūtus est, quod animōs centuriōnum

Conjunctional Sentences: quod. [1846-1852.

devinxit et militum voluntätes redemit, Cacs. C. 1, 39, 4, thus he killed two birds with one stone: he won the hearts of the officers, and he bought golden opinions of the rank and file. hoc und praestamus vel maxime feris, quod conloquimur inter nos, DO. 1, 32, in this one circumstance do we perhaps most of all surpass brutes, that we can talk with each other. labore et industrial et quod adhibebat gratiam, in principibus patronis fuit, Br. 233, thanks to his untiring industry, and to his bringing his winning manners to bear, he figured among the leaders of the bar.

1846. accēdit, as the passive of addo, often has the subjunctive with ut: see 1963. addo quod, especially in the imperative form adde quod, occurs in Accius, Terence, Lucretius, Horace, and Ovid. adicio quod begins with Livy.

1847. The sentence with quod is often introduced by a prepositional expression, such as eð with de, ex, in, pro, rarely with cum; or id with ad in Livy, super in Tacitus.

1848. nisi quod, or in Plautus and Terence nisi quia, but for the fact that, except, only that, and practer quam quod, besides the fact that, are used in limitations: as, nihil peccat, nisi quod nihil peccat, Plin. Ep. 9, 26, 1, he erreth naught, save that he naught doth err. Livy has also super quam quod. tantum quod in the sense of nisi quod is rare; more commonly of time, just, hardly.

1849. quid quod? for quid de eo dicam quod? what of the fact that, or nay more, marks an important transition: as, quid quod salus sociorum in periculum vocătur? IP. 12, nay more, the very existence of our allies is endangered.

1850. With verbs of doing or happening, accompanied by some word of manner, quod introduces a verb of coincident action (1733): as,

bene facis quod me adiuvas, Fin. 3, 16, you are very kind in helping me. videor mihl gratum fecisse Siculis, quod eorum iniurias sum persecutus, V. 2, 16, I flatter myself that I have won the gratitude of the Sicilians in acting as avenger of their wrongs. In this sense qui (1826) or cum (1874) is often used, or in Platus quia.

1851. quod, that, because, is used to denote cause with verbs of emotion.

Thus, as with id in id gaudeō, T. Andr. 362, I'm glad of that (1144), so with an object sentence, as gaudeō quod tē interpellāvī, Leg. 3, 1, I'm glad that I interrupted you. Such verbs are: gaudeō, laetor; mīror; doleō, maereō, angor, indīgnor, suscēnseō, īrāscor, molestē ferō, &c. In Plautus, these verbs have usually quia, sometimes quom (1875). For the accusative with the infinitive, see 2187.

1852. Verbs of praising, blaming, accusing, and condemning, often take quod: as,

quod bene cögitästi aliquandö, laudö, Ph. 2, 34, that you have ever had good intentions, I commend. laudat Āfricānum Panaetius, quod fuerit abstinēns, Off. 2, 76, Panaetius eulogizes Africanus, 'for being so abstinent' (1725). ut cum Söcratēs accūsātus est quod corrumperet iuventūtem, Quintil. 4, 4, 5, as when Socrates was charged with 'demoralizing the rising generation' (1725). grātulor, congratulate, and grātiās agö, thank, have regularly quod or cum (1875). Verbs of accusing sometimes have cūr.

1853. Causal quod, owing to the fact that, because, introduces an efficient cause, or a reason or motive: as,

(a.) in his locis, quod omnis Gallia ad septentriones vergit, maturae sunt hiemes, 4, 20, 1, in these parts the winter sets in early, owing to the fact that Gaul in general lies to the north. Helvetii reliquos Gallos virtute praecedunt, quod fere cotidianis proeliis cum Germanis contendunt, 1, 1, 4, the Helvetians outshine the rest of the Gauls in bravery, because they do battle with the Germans almost every day. horum fortissimi sunt Belgae, propeterea quod a cultu provinciae longissime absunt, 1, 1, 3, of these the stoutest fighting-men are the Belgians, for the reason that they live furthest away from the comforts of the province. (b.) T. Manlius Torquatus filium suum, quod is contra imperium in hostem pugnaverat, necari iussit, S. C. 52, 30, Torquatus ordered his own son to be put to death, because the young man had fought with the enemy contrary to orders. exoravit tyrannum ut abire liceret, quod iam beatus nollet esse, TD. 5, 62, he induced the monarch to let him go, 'because he didn't care to be Fortune's pet any longer' (1725). Bellovaci suum numerum non contulerunt, quod se suo arbitrio bellum esse gesturos dicerent, 7, 75, 5, the Bellovacians would not put in their proper quota, saying they meant to make war on their own responsibility (1727).

1854. quod often has a correlative in the main sentence, such as eō, ideō, ideircō, proptereā. In Sallust, eā grātiā. In Plautus, quia is commonly used in the sense of quod, because.

1855. An untenable reason is introduced by non quod, non quo, or in Plautus, by non eo quia, in Terence, by non eo quo. From Livy on, non quia. The valid reason follows, with sed quod, sed quia, or with sed and a fresh main sentence.

The mood is usually subjunctive (1725): as, pugiles ingemiscunt, non quod doleant, sed quia profundenda võce omne corpus intenditur, TD. 2, 56, boxers grunt and groan, not because they feel pain, but because by explosion of voice the whole system gets braced up. Sometimes the indicative. Correlatives, such as idcirco, ideo, &c., are not uncommon. Reversed constructions occur, with magis followed by quam, as: magis quod, quo, or quia, followed by quam quo, quod, or quia. The negative not that ... not, is expressed by non quod non, non quo non, or non quin.

quia.

1855. quia has the same general use as quod. It is, however, more prevalent in Plautus, less so from Terence on.

1857. For quia with verbs of doing or happening, see 1850; with verbs of emotion, 1851.

1858. With or without a correlative, such as ideo, eo, proptered, &c., quia is used in the sense of because, especially in old Latin.

quom or cum.

1859. quom or cum (112, 711), used as a relative conjunctive particle (1794), has a temporal meaning, when, which readily passes over to an explanatory or causal meaning, in that, since or although. In both meanings it introduces the indicative in old Latin. In classical Latin, temporal cum in certain connections, and causal cum regularly, introduces the subjunctive. The subjunctive is also used with oum for special reasons, as in the indefinite second person (1731), by attraction (1728), and commonly by late writers to express repeated past action (1730). cum, when, is often used as a synonym of sī, if, and may then introduce any form of a conditional protasis (2016, 2110).

TEMPORAL cum.

WITH THE INDICATIVE.

1860. cum, when, whenever, if, of indefinite time, may introduce any tense of the indicative required by the context: as,

facile omnēs, quom valēmus, rēcta consilia aegrotis damus. T. Andr. 309, we all, when well, give good advice to sick folk easily. Romac videor esse, cum tuās litterās lego, Att. 2, 15, 1, I always fancy myself in Rome, when I am reading a letter from you. cum posul librum, adsensio omnis elabitur, TD. 1, 24, when I drop the book, all assent melts away (1613). incenderis cupidităte libertătis, cum potestătem gustandi feceris, RP. 2, 50, you will inspire them with a passion for freedom, when you give them a chance to taste it (1627). his cum funes comprehensi adductique erant, praerumpēbantur, 3, 14, 6, every time the lines were caught by these and hauled taut, they would part (1618). The subjunctive is used, chiefly by late writers, rarely by Cicero and Caesar, to express repeated past action (1730): as, cum in convivium vēnisset, sī quicquam caelāti adspexerat, manūs abstinēre non poterat, V. 4, 48, when he went to a dinner party, if he ever caught sight of a bit of chased work, he never could keep his hands off (2050).

1861. cum, when, of definite time, regularly introduces the indicative in old Latin, even where the subjunctive is required in classical Latin (1872): as,

nam illa, quom të ad së vocābat, mēmet esse crēdidit, Pl. Men. 1145, for when that lady asked you in, she thought 'twas I. posticulum hoc recepit, quom aedis vendidit, Pl. Tri. 194, this back part he excepted, when he sold the house.

1862. cum, when, of definite time, regularly introduces the indicative of any action, not of past time: as,

sed de his etiam rebus, otiosi cum erimus, loquemur, Fam. 9, 4, but we will talk of this when we have time. cum ego P. Granium testem produxero, refellito, si poteris, V. 5, 154, when I put Granius on the witness stand, refute him if you can.

- 1863. With cum, when, the indicative is used of definite past time when the reality of the action is to be emphasized, as follows:
- 1864. (1.) The indicative imperfect is regularly used with cum, when, to denote a continued action parallel and coincident in duration with another continued action, also in the imperfect: as,

quom pügnābant māxumē, ego tum fugiēbam māxumē, l'l. Am. 199, while they were fighting hardest, then I was running hardest. tum cum rem habēbās, quaesticulus tē faciēbat attentiorem, Fan. 9, 16, 7, as long as you were a man of substance, the fun of making money made you a little close. The imperfect subjunctive is exceptional and lacks the implication of coincidence in duration: as, Zēnōnem, cum Athēnīs essem, audiēbam frequenter, DN. 1, 59, Zeno's lectures I often attended, when I was in Athens.

1865. (2.) The indicative imperfect is often used with cum, when, denoting a continued action, to date an apodosis in the perfect: as,

legiones quom pugnabant maxume, quid in tabernacio fecisti? Pl. Am. 427, what did'st thou in the tent what time the legions fought their mightiest? his libris adnumerandi sunt sex de re publica, quos tum scripsimus cum gubernacula rei publicae tenebamus, Div. 2, 3, to these books are to be added the six On the State, which I wrote at the time I was holding the helm of state. But when the object of the clause is not distinctly to date the apodosis, its verb is in the subjunctive (1872).

- 1866. (3.) The indicative perfect or present of vivid narration is used with cum, when, to date an apodosis in the perfect or present of vivid narration: as,
- 'per tuss statuss' vērd cum dīxit, vehementius rīsimus, DO. 2, 242, but when he uttered the words 'by your statues,' we burst into a louder laugh. cum occiditur Sex. Roscius, ibidem fuerunt, RA. 120, when Roscius was murdered, they were on the spot. cum dies vēnit, causs ipse pro sē dicts, damnātur, L. 4, 44, 10, when the day of the trial came, he spoke in his own defence and was condemned. The present is particularly common in old colloquial Latin: 28, vivom, quom abīmus, līquimus, Pl. Cap. 282, we lest him alīve when we came away. For cum prīmum in narration, see 1925; for cum extemplo, 1926.
- 1867. (4.) The indicative perfect or present of vivid narration is regularly used with cum, when, to denote a momentary action when the apodosis denotes continued action: as,

cum Caesar in Galliam vēnit, alterius factionis principes erant Aedui, alterius Sequani, 6, 12, 1, when Caesar came to Gaul, the leaders of one party were the Aeduans, of the other the Sequanians. eo cum venio, praetor quiescebat, V. 4, 32, when I got there, the praetor was taking a nap.

1868. An emphatic indicative clause with cum, while, often follows the main action.

The clause with cum is usually inconsistent with the main action, and cum is often attended by interea, interim, all the time, etiam tum, still, nondum, hauddum, not yet, no longer, quidem, by the way, or tamen, nihilominus, nevertheless: as,

Conjunctional Sentences: cum. [1869–1871.

caedēbātur virgīs in medio foro Messānae cīvis Romānus, cum intereā nūllus gemitus audiēbātur, V. 5, 162, there was flogged with rods in open market place at Messana a citizen of Rome, while all the time not a groan was to be heard. Evolārat iam ē conspectu quadrirēmis, cum etiam tum cēterae nāvēs ūno in loco moliēbantur, V. 5, 88, she had already sped out of sight, the four-banker, while the rest of the vessels were still struggling round in one and the same spot. This use is very rare in old Latin. Not in Caesar. With the infinitive of intimation, see 1539.

1869. An indicative clause with cum, usually expressing sudden or unexpected action, sometimes contains the main idea, and is put last.

In this case cum is often attended by subito or repente, suddenly, and the first clause contains iam, already, by this time, vix, aegre, hardly, vixdum, hardly yet, or nondum, not yet. The first verb is commonly in the imperfect or pluperfect, and the second in the perfect or present of vivid narration: as,

dixerat hoc ille, cum puer nuntiavit venire Laelium, RP. 1, 18, scarcely had he said this, when a slave announced that Laelius was coming. vix ea fatus eram, gemitu cum talia reddit, V. 2, 323, scarce had I spoke the words, when with a groun he answers thus. Hannibal iam subibat muros, cum repente in eum patéfacta porta erumpunt Romani, L. 29, 7, 8, Hannibal was already moving up to the walls, when all of a sudden the gate flies open and the Romans come pouring out upon him. iamque hoc facere apparabant, cum matres familiae repente procurrerunt, 7, 26, 3, they were already preparing to do it, when suddenly the married women rushed forward. This use is very rare in old Latin. From Sallust on, it is found occasionally with the infinitive of intimation (1539).

1870. A clause with cum is often used attributively with words denoting time, or with est, fuit, or erit.

The mood is the same as with a relative pronoun, sometimes the indicative, and regularly in old Latin, but usually the subjunctive: as, fuit quodam tempus cum in agris homines vagebantur, Inv. 1, 2, there was an age of the world when men roved round in the fields [1813, 1823]. fuit tempus cum rura colerent homines, Varro, RR. 3, 1, 1, there was a time when men dwelt in the fields (1818, 1821). est cum exornatio praetermitenda est, Cornic. 2, 30, sometimes ornamentation should be avoided. fuit antea tempus, cum Germānos Galli virtute superārent, 6, 24, 1, there was a time when the Gauls outdid the Germans in valour. The subjunctive is also used with audio cum (1722), but with memini cum the indicative: as, saepe ex socero meo audivi, cum is diceret, DO. 2, 22, I have often heard my father-in-law saying, memini cum mini desipere videbāre, Fam. 7, 28, 1, I remember when I thought you showed bad taste.

1871. The indicative present or perfect with cum is used in expressions equivalent to an emphasized accusative or ablative of time, the main verb being est or sunt: as, anni prope quadringenti sunt, cum hoc probatur, O. 171, it is nearly four hundred years that this has been liked. nondum centum et decem anni sunt, cum lata lex est, Off. 2, 75, it is not a hundred and ten years yet since the law was passed. In old Latin, the clause with cum is made the subject of est, and the substantive of time is put in the accusative: as, hanc domum iam multos annos est quom-possideo, Pl. Aul. 3, 't is many years now I have occupied this kouse.

WITH THE SUBJUNCTIVE.

1872. The imperfect or pluperfect subjunctive is used with temporal cum, when a subordinate event is mentioned merely as one in a more or less complex series of past events: as,

cum rēx Pyrrhus populō Rōmānō bellum intulisset cumque dē imperiō certāmen esset cum rēge potenti, perfuga ab eð vēnīt in castra Fabricii, Off. 3, 86, king Pyrrhus having made war on the Roman nation, and there being a struggle for sovereignty with a powerful king, a deserter from him came into Fabricius's camp. eōdem tempore Attalus rēx moritur alterō et septuāgēsimō annō, cum quattuor et quadrāgintā annōs rēgnāsset, L. 33, 21, 1, the same year Attalus the king dies, in his seventy-second year, having reigned forty-four years. hīc pāgus, cum domō exisset patrum nostrōrum memoriā, L. Cassium cōnsulem interfēcerat, I, 12, 5, this canton, sallying out from home in our futhers' recollection, had put Cassius, the cousul, to death. nam cum inambulārem in xystō, M. ad mē Brūtus vēnerat, Br. 10, for as I was pacing up and down my portico, Brutus had come to see me. Antigonus in proeliō, cum adversus Seleucum et Lysimachum dīmicāret, occīsus est, N. 21, 3, 2, Antigonus was killed in battle fighting against Seleucus and Lysimachus. haec cum Crassus dixisset, silentium est cōnsecūtum, DO. 1, 160, a deep silence ensued after Crassus had finished speaking. cum annōs iam complūrīs societās esset, moritur in Galliā Quīnctius, cum adesset Naevius, Quinct. 14, the partnership having lasted several years, Quinctius died in Gaul, Naevius being there at the time.

In this use, as the examples show, cum with the subjunctive is often equivalent to a participle or an ablative absolute. The use is not found in Plautus (1861). Ennius and Terence have possibly each an instance (disputed) of it, but it was certainly rare until the classical period, when it became one of the commonest of constructions. It must not be confounded with the special uses of the subjunctive mentioned in 1859.

1873. The difference in meaning between cum with the indicative and cum with the subjunctive may be illustrated by the following examples:

Gallo nārrāvī, cum proximē Romae fuī, quid audīssem, Att. 13, 49, 2. I told Gallus, when I was last in Rome, what I had heard (1866). a. d. III kal. Māiās cum essem in Cūmāno, accēpī tuās litterās, Fam. 4. 2, 1, I received your letter on the twenty-eighth of April, being in my villa at Cumae (1872). cum vāricēs secābantur C. Mario, dolēbat, TD. 2, 35, while Marius was having his varicose veins lanced, he was in fain (1864). C. Marius, cum secārētur, ut suprā dīxī, vetuit sē adligārī, TD. 2, 53, Marius being under the surgeon's knife, as above mentioned, refused to be bound (1872). num P. Decius, cum sē dēvoveret et in mediam aciem inruētat, aliquid dē voluptātibus suīs cōgitābat? Fin. 2, 61, did Decius, offering himself up, and while he was dashing straight into the host, have any thought of pleasures of his own? (1872, 1864).

(B.) Explanatory and Causal cum.

1874. The indicative is often used with explanatory oum when the action of the protasis is coincident with that of the apodosis (1733).

In this use cum passes from the meaning of when to that, in that, or in or by with a verbal in ing: as, how verbum quom illi quoidam dico, praemostro tibi, Pl. Tri. 342, in laying down this lesson for your unknown friend I'm warning you. cum quiescunt, probant, C. 1, 21, their inaction is approval. Denoting the means: as, tute tibi prodes plurumum, quom servitutem ita fers ut ferri decet, Pl. Cap. 371, you do yourself most good by bearing slavery as it should be borne. For similar uses of quod, quia, and qui, see 1850.

1875. Explanatory cum is also used with verbs of emotion; likewise with grātulor and grātiās agō: as, quom tu's liber, gaudeō, Pl. Men. 1148, that you are free, I'm glad. grātulor tibī, cum tantum valēs apud Dolābellam, Fam. 9, 14, 3, I give you joy that you stand so well with Dolabella. tibī māximās grātiās agō, cum tantum littere meae potuērunt, Fam. 13, 24, 2, I thank you most heartily in that my letter had such influence. For similar uses of quod and quia, see 1851, 1852.

1876. Explanatory cum is also used in the sense of *since, although*, or *even though*. In these meanings it introduces the indicative in old Latin (1878): as,

Denoting cause: isto tū pauper ēs, quom nimis sānctē piu's, Pl. R. 1234, that's why you are poor yourself, since you are over-scrupulously good. quom hoc non possum, illud minus possem, T. Ph. 208, since this I can't, that even less could I. Adversative cause: Insānīre mē āiunt, quom ipsī Insānīunt, Pl. Men. 831, they say I'm mad, whereas they are mad themselves. Concession: sat sic suspectus sum, quom careo noxiā, Pl. B. 1005, I am chough distrusted as it is, even though I'm void of wrong.

1877. cum, since, although, even though, usually introduces the subjunctive: as,

Denoting cause: cum in commūnibus suggestis consistere non audēret, contionāri ex turrī altā solēbat, TD. 5, 59, since he did not dare to stand up on an ordinary platform, he always did his speaking from a lofty tower, of Dionysius, tyrant of Syracuse. Aedui cum sē dēfendere non possent, lēgātos ad Caesarem mittunt, I, II, 2, since the Aeduans could not defend themselves, they sent ambassadors to Caesar. Adversative cause: fult perpetuo pauper, cum dīvitissimus esse posset, N. 19, I, 2, he was always poor, whereas he might have been very rich, of Phocion. Pyladēs cum sīs, dīcēs tē esse Orestēn? Fin. 2, 79, whereas you are Pyladēs, will you declare yourself Orestes? Concession: ipse Cicero, cum tenuissimā valētūdine esset, nē nocturnum quidem sibī tempus ad quiētem relinquēbat, 5, 40, 7, Cicero himself, though he was in extremely delicate health, did not allow himself even the night-time for rest. ille Catō, cum esset Tusculī nātus, in populi Romāni cīvitātem susceptus est, Leg. 2, 5, the great Cato, though born at Tusculum, was received into the citizenship of the Roman nation.

1878. This use of the subjunctive is not found in Plautus. It is thought to have begun in the time of Terence, who may have a couple of instances (disputed). Thereafter, it grew common and was the regular mood used with explanatory and causal cum in the classical period.

1879. Explanatory cum is sometimes introduced by quippe, rarely by ut pote, naturally: as,

tum vēro gravior cūra patribus incessit, quippe cum prodī causam ab suis cernerent, L. 4, 57, 10, then the senators were still more seriously concerned, and naturally enough, since they beheld their cause betrayed by their own people. valētūdo, ē quē iam ēmerseram, ut pote cum sine febrī laborāssem, Att., 8, 1, an illness from which I had already recovered, naturally, since it was unaccompanied by fever. quippe cum occurs in Cicero, Nepos, and Livy; ut pote cum is used twice in Cicero's letters, and in late writers. For quippe and ut pote with a causal relative, see 1827.

1880. The adversative idea is often emphasized by the use of tamen in the main clause: as, cum primi ordines hostium concidissent, tamen accerrime reliqui resistebant, 7, 62, 4, though the front ranks of the enemy had fallen, yet the rest made a most spirited resistance.

(C.) cum . . . tum.

1881. A protasis with cum is often followed by an emphatic apodosis introduced by tum.

The protasis denotes what is general or common or old; the apodosis what is special or strange or new. In classical Latin tum is often emphasized by maxime, in primis, vero, &c.

The mood with cum is regularly indicative in old Latin, and usually when the time of the two verbs is identical: as, quom mihi paveo, tum Antiphō mē excruciat animi, T. Ph. 187, whilst for myself I tremble, Antiphō puls me in a perfect agony of soul. cum collēgae levāvit infāmiam, tum sibī gloriam ingentem peperit, L. 6, 25, 6, he relieved his colleague. from disgrace, and what is more he won mighty glory for himself. Less frequently the subjunctive, and usually when the verbs refer to different periods of time: as, cum tē ā pueritiā tuā dilēxerim, tum hōc multō ācrius diligō, Fam. 15, 9, 1, I have always loved you from your boyhood, but for this I love you with a far intenser love. By abridgement of the sentence (1057), cum . . . tum come to be copulative conjunctions (1687): as, mōvit patrēs conscriptōs cum causa tum auctor, L. 9, 10, 1, both the cause and its supporter touched the conscript fathers.

quoniam.

1882. quoniam, compounded of quom and iam, when now, refers primarily to time, but is seldom so used and only by early writers. The temporal meaning passed early into an exclusively causal meaning, since. In both meanings it regularly introduces the indicative (1721). For special reasons, however, the subjunctive is used, as in indirect discourse (1725), or by attraction (1728).

1883. (1.) quoniam, when now, used of time in early Latin, has sometimes as a correlative continuo, subito, or extemplo; it usually introduces the present indicative (1590): as,

is quoniam moritur, numquam indicare id filio voluit suo, Pl. Aul. 9, when he was on his dying bed, he ne'er would point it out to his own son, of a hidden treasure. quoniam sentio quae res gereretur, navem extemplo statuimus, Pl. B. 290, when now I saw what was doing, we stopped the ship at once.

1884. (2.) quoniam, since, seeing that, now that, with the indicative, introduces a reason, usually one known to the person addressed, or one generally known: as,

vēra dīcō, sed nēquiquam, quoniam nōn vis crēdere, Pl. Am. 835, the truth I speak, but all in vaiu, since thou wilt not believe. võs, Quiritēs, quoniam iam nox est, in vestra tecta discēdite, C. 3, 20, do you, citizens, since it is now grown dark, depart and go to your own several homes. quoniam in eam ratiōnem vitae nōs fōrtūna dēdūxit, ut sempiternus sermō dē nōbīs futūrus sit, caveāmus, QFr. 1, 1, 38, since fortune has set us in such a walk of life that we are to be eternally talked about, let us be on our guard. Often in transition: as, quoniam dē genere bellī dīxī, nunc dē māgnitūdine pauca dīcam, IP. 20, since I have finished speaking about the character of the war, I will now speak briefly about its extent. With the subjunctive in indirect discourse (1725): as, crēbrīs Pompēī litterīs castīgābantur, quoniam prīmō venientem Caesarem nōn prohibuissent, Caes. C. 3, 25, 3, they were rebuked in numerous letters of Pompey, because they had not kept Caesar off as soon as he came.'

quotiens, quotienscumque.

1885. The relative particle quotiens (711), or quotiensoumque, every time that, whenever, introduces the indicative: as,

quotiens quaeque cohors procurrerat, magnus numerus hostium cadebat, 5, 34, 2, as the cohorts successively charged, a great number of the enemy fell every time. quoius quotiens sepulcrum vides, sacruficas, Pl. E. 175, every time you see her tomb, you offer sacrifice. nec quotiens-cumque me viderit, ingemiscet, Sest. 146, neither shall he fall a-groaning whenever he sees me (1736).

1886. quotiens has sometimes as a correlative totiens, or a combination with tot which is equivalent to totiens: as, quotiens dicimus, totiens de nobis iddicatur, DO. 1, 125, every time we make a speech, the world sits in independent on us. si tot consulibus meruisset, quotiens ipse consul fuit, Balb. 47, if he had been in the army as many years as he was consul.

1887. The subjunctive imperfect and pluperfect are common in the later writers to indicate repeated action (1730): as, quotiens super tall negotio consultaret, edita domus parte ac liberti unius conscientia utebatur, Ta. 6, 27, whenever he had recourse to astrologers, it was in the upper part of his house and with the cognizance of only a single freedman.

quam.

1888. quam, as or than, introduces an indicative protasis in periods of comparison. For special reasons, however, the subjunctive is used, as by attraction (1728), or of action conceivable (1731); see also 1896, 1897.

But usually periods of comparison are abridged (1057) by the omission of the verb or of other parts in the protasis (1325).

WITH THE INDICATIVE.

1889. (1.) quam, as, is used in the protasis of a comparative period of equality, generally with tam as correlative in the apodosis: as,

tam facile vincës quam pirum volpës comëst, Pl. Most. 559, you'll beat as easily as Reynard eats a pear. tam excoctam reddam atque ätram quam carbōst, T. Ad. 849, I'll have her stewed all out and black as is a coal. From Cicero on, the apodosis is in general negative or interrogative: as, quōrum neutrum tam facile quam tū arbitrāris concēditur, Div. 1, 10, neither of these points is as readily granted as you suppose. quid est ofatōrī tam necessārium quam vox? DO. 1, 251, what is so indispensable to the speaker as voice? Otherwise non minus . . quam, no less than, just as much, or non magis . . . quam: as, accēpī non minus interdum orātōrium esse tacēre quam dīcere, Plin. Ep. 7, 6, 7, I have observed that silence is sometimes quite as eloquent as speech. non magis mihī deerit inimīcus quam Verrī dētuit, V. 3, 162, I shall lack an enemy as little as Verres did. domus erat non domino magis ornāmento quam cīvitātī, V. 4, 5, the house was as much a pride to the state as to its owner.

1890. Instead of tam, another correlative is sometimes used in the apodosis. Thus, aequē... quam occurs in Plautus and in Livy and later writers, generally after a negative expression; perinde...quam in Tacitus and Suetonius; iūxtā...quam once in Livy. Sometimes the apodosis contains no correlative.

1891. tam . . . quam become by abridgement coordinating words: as, tam vēra quam falsa cernimus, Ac. 2, 111, we make out things both true and false.

1892. The highest possible degree is expressed by tam . . . quam qui and a superlative without a verb; or by quam and a superlative with or without a form of possum (1466); sometimes by quantus or ut: as,

(a.) tam sum misericors quam võs; tam mītis quam quī lēnissimus, Sull. 87, I am as lender-hearted as you; as mild as the gentlest man fiving. tam sum amīcus rēī pūblicae quam quī māximē, Fam. 5. 2, 6, I am as devoted a patriot as anybody can be. (b.) quam māximīs potest itineribus in Galliam contendit, 1, 7, 1, he pushes into Gaul by as rapid marches as he can. constituērunt iūmentorum quam māximum numerum coëmere, 1, 3, 1, they determined to buy up the greatest possible number of beasts of burden. (c.) tanta est inter eos, quanta māxima potest esse, morum dīstantia, L. 74, there is the greatest possible difference of character between them. Or without any superlative: fuge domum quantum potest, Pl. Men. 850, run home as quick as e'er you can. ut potuī accūrātissimē tē tūtātus sum, Fam. 5, 17, 2, I defended you as carefully as I could.

1893. quam . . . tam, with two comparatives or superlatives, is equivalent to the more common quo. . . eo with two comparatives (1973): as,

(a.) magis quam id reputo, tam magis tiror, Pl. B. 1091, the more I think it over, the sorer do I feet. This use is found in Plautus, Lucretius, and Vergil. (b.) quam quisque pessume fecit, tam maxume titus est, S. I. 31, 14, the worse a man has acted, the safer he always is. This use is found in Plautus, Terence, Cato, Varro, and Sallust.

1894. (2.) quam, than, is used in the protasis of a comparative period of inequality, with a comparative in the apodosis: as,

meliörem quam ego sum suppönö tib!, Pl. Cu. 256, I give you in my place a better man than I am. plūra dīxī quam volui, V. 5, 79, I kave said more than I intended. Antōniō quam est, volō pēius esse, Att. 15, 3. 2, I hope Antony may be worse off than he is. doctrina paulō dūrior quam nātūra patitur, Mur. 60, principles somewhat sterner than nature doth support. potius sērō quam numquam, L. 4, 2, 11, better late than never-corpus patiēns algōris suprā quam cuiquam crēdibile est, S. C. 5, 3, a constituti. n cafable of enduring cold beyond what anybody could believe. suprā quam is found in Cicero, Sallust, and often in late writers; Infrā and ūltrā quam in Cicero, Livy, and late writers (Infrā quam also in Varro); extrā quam in Ennius, Cato, and in legal and official language in Cicero and Livy.

1895. quam is also used with some virtual comparatives: thus, nihil aliud, non aliud quam, no other than, often as adverb, only; secus quam with a negative, not otherwise than; bis tanto quam, twice as much as; and prae quam in old Latin, in comparison with how; and similar phrases: . as,

(a.) per biduum nihil aliud quam stetērunt parātī ad pūgnandum, I. 34. 46, 7, for two days they merely stood in battle array. This use occurs first in Sallust, then in Nepos, Livy, and later writers. (b.) mihī erit cūrae nē quid fīat secus quam volumus, Att. 6, 2, 2, I will see to it that nothing he done save as we wish. This use occurs in Plautus, Terence, Sallust, Cicero, Livy, and later writers. With both aliud and secus the clause is rarely positive, with aliud not before Livy. For atque (ac) instead of quam when the first clause is negative, see 1654. (c.) bis tantō valeō quam waluī prius, Pl. Merc. 297, I am twice as capable as I was before. (d.) nīl hōc quidem est trīgintā minae, prae quam aliōs sūmptūs facit, Pl. Most. 981, oh, this is nothing, thirty minae, when you think what other sums he spends. prae quam is found only in Plautus rarely. Similar phrases are: contrā quam, in Cicero, Livy, and later writers; praeter quam, in Plautus, Naevius, and frequently in other writers when followed by quod (1848); super quam quod (1848) and insuper quam in Livy; prō quam in Lucretius; advorsum quam, once in Plautus. prae quam is sometimes followed by a relative clause: as, prae quam quod molestumst, Pl. Am. 634, compared with what is painful. For ante (or prius) and post quam, see 1911, 1923.

WITH THE SUBJUNCTIVE.

1896. The subjunctive is used with quam or quam ut after comparatives denoting disproportion (1461): as,

quicquid erat oneris Segestānīs impōnēbat, aliquantō amplius quam ferre possent, V. 4, 76, he would impose every possible burden on the Segestans, fur too much for them to bear. quis nōn intellegit Canachī sīgna rigidiōra esse, quam ut imitentur vēritātem? Br. 70, who does not feel that the statues of Canachus are too stiff to be true to nature? clārior rēs erat quam ut dissimulārī posset, L. 26, 51, 11, the thing was too notorious to be hushed up. Instead of ut, quī is also used by Livy and later writers: as, māior sum quam cui possit Fōrtūna nocēre, O. 6, 195, too strong am I for Fortune to brak down, says infatuated Niobe. All these sentences are extensions of the subjunctive of action conceivable (1554, 1818).

1897. The subjunctive is used in clauses introduced by potius quam, rather than, to denote action merely assumed. citius, ante, or prius, sooner, is sometimes used in the sense of potius: as,

potius quam të inimicum habeam, faciam ut iusseris, T. Eu. 174, rather than make you my enemy, I will do as you tell me. dëpugnë potius quam serviës, Att. 7, 7, 7, fight it out rather than be a slave. potius vituperëtionem inconstantiae suscipiam, quam in të sim crudëlis, V. 5, 105, I will submit to the charge of inconsistency rather than be cruel towards you. animam omittunt prius quam loco dëmigrent, Pl. Am. 240, they lose their lives sooner than yield their ground. Livy has also potius quam ut. All these sentences are extensions of the subjunctive of desire (1540, 1817).

WITH THE INFINITIVE.

1898. When the main clause is an infinitive, quam is often followed by an infinitive: as,

malim moriri meos quam mendīcarier, Pl. Vid. 96, better my bairns be dead than begging bread. võces audiebantur prius se cortice ex arboribus victūros, quam Pompēium e manibus dimissūros, Caes. C. 3, 49, 1, shouts were heard that they would live on the bark of trees sooner than let Pompey slip through their fingers.

quamquam.

1899. (1) quamquam is used in old Latin as an indefinite adverb, ever so much, however much: as,

quamquam negōtiumst, sī quid veis, Dēmiphō, nōn sum occupātus umquam amīcō operam dare, Pl. Mer. 287, however busy I may be (1814), if anything you wish, dear Demipho, I'm not too busy ever to a friend mine aid to lend. id quoque possum ferre, quamquam iniūriumst, T. Ad. 205, that also I can bear, however so unfair. From an adverb, quamquam became a conjunction, although.

1900. (2.) quamquam, although, introduces the indicative in the concession of a definite fact. In the later writers it is also sometimes used with the subjunctive, sometimes with a participle or an adjective: as,

(a.) quamquam premuntur aere alieno, dominationem tamen exspectant, C. 2, 19, though they are staggering under debt, they yet look forward to being lords and masters. quamquam non venit ad sinem tam audāx inceptum, tamen haud omnino vānum suit, L. 10, 32, 5, though the bold attempt did not attain its purpose, yet it was not altogether fruitless. This is the classical use; but see 1901. (b.) nam et tribūnis plēbis senātūs habendī iūs erat, quamquam senātōrēs non essent, Varro in Gell. 14, 8, 2, for even the tribunes of the people, though they were not senators, had the right to hold a meeting of the senate. haud cunctātus est Germānicus, quamquam fingī ea intellegeret, Ta. 2, 26, Germanicus did not delay, though he was aware this was all made up. This use is sound first in Varro, often in the Augustan poets, sometimes in Livy, always in Juvenal. It does not become common before Tacitus and the younger Pliny. (c.) sequente, quamquam non probante, Amynandrō, L. 31, 41, 7, Anynander accompanying though not approving (1374). nē Aquitānia quidem, quamquam in verba Othōnis obstricta, diū mānsit, Ta. H. 1, 76, Aquitania, though bound by the oath of allegiance to Otho, did not hold out long either. This use is found once each in Cicero and Sallust, half a dozen times in Livy, oftener in Tacitus.

1901. The subjunctive is also used often with quamquam for special reasons, as by attraction (1728), in indirect discourse (1725), and of action conceivable (1731).

1902. For quamquam appending a fresh main sentence, see 2153; for its use with the infinitive, 2317.

quam vis or quamvis.

1903. quam vis or quamvis is used as an indefinite adverb (712), as much as you please, and is often joined with an adjective or other adverb to take the place of a superlative: as,

quam vis ridiculus est, ubi uxor non adest, Pl. Men. 318, he's as droll as you please when his wife is n't by. quamveis insipiens poterat persentiscere, Pl. Merc. 687, the veriest dullard could detect. quamvis pauci adire detect, 2, 5, the merest handful dares attack. quamvis callide, V. 2, 134, ever so craftily. quamvis is also sometimes used to strengthen a superlative (1466).

1904. (1.) The indefinite adverb quam vis, as much as you please, is often used in subjunctive clauses of concession or permission; such subjunctives are sometimes coordinated with licet: as,

quod turpe est, id quam vīs occultētur, tamen honestum fierī nūllō modō potest, Off. 3, 78, if a thing is base, let it be hidden as much as you will, yet it cannot be made respectable (1553). locus hīc apud nōs, quam vīs subitō veniās, semper liber est, Pl. B. 82, our house is always open, come as sudden as you may (1553). praeter eōs quam vis ēnumerēs multōs licet, nōnnūllōs reperiēs perniciōsōs tribūnōs, Leg. 3, 24, besides these you may tell off as many as you please, you will still find some dangerous tribunes (1710). The combination with licet occurs first in Cicero.

1905-1908.] Sentences: The Subordinate Sentence.

Instead of vis, other forms are sometimes used: as, volumus, volent, velit, &c.: thus, quam volent facēti sint, Cael. 67, they may be as witty as they please (1735). quam volet Epicürus iocētur et dicat sē non posse intellegere, numquam mē movēbit, DN. 2, 46, Epicurus may joke and say he can't understand it as much as he likes, he will never shake me. From an adverb, quam vis became a conjunction, however much, even if.

- 1905. (2.) The subjunctive with the conjunction quamvis, however much, even if, though, denotes action merely assumed; when the action is to be denoted as real, ut or sicut or the like, with the indicative, usually follows in the best prose (1943): as,
- (a.) quamvis sint hominės qui Cn. Carbonem oderint, tamen hi debent quid metuendum sit cogitare, V. 1, 39, though there may be men who hate Carbo, still these men ought to consider what they have to fear. non enim possis, quamvis excellas, L. 73, you may not have the power, however eminent you may be. This use begins with Cicero and Varro, and gets common in late writers. Not in Livy. (b.) illa quamvis ridicula essent, sicut erant, mihi tamen risum non moverunt, Fam. 7, 32, 3, droll as this really was, it nevertheless did not make me laugh. quamvis enim multis locis dicat Epicūrus, sīcutī dīcit, satis fortiter dē dolore, tamen non id spectandum est quid dīcat, Off. 3, 117, even though Epicurus really does speak in many places pretty heroically about pain, still we must not have an eye to what he says. In the Augustan poets rarely, and often in Tacitus, the younger Pliny, and late writers, the subjunctive, without a parenthetical phrase introduced by ut or the like, is used of an action denoted as real: as, expalluit notābiliter, quamvis palleat semper, Plin. Ep. 1, 5, 13, he grew pale perceptibly, though he is alvays a pale man. maestus erat, quamvīs laetitiam simulāret, Ta. 15, 54, sad he was, though he pretended to be gay.
- 1906. quamvis, even if, though, is also sometimes used with the indicative (1900): as,
- erat dignitate regia, quamvis carebat nomine, N. 1, 2, 3, he had the authority of a king, though not the title. quamvis tacet Hermogenes, cantor est, H. S. 1, 3, 129, though he open not his mouth, Hermogenes remains a singer still. This use occurs twice in Lucretius, once in Cicero, Nepos, and Livy each, in Varro, in the Augustan poets, and sometimes in late writers. Not in Tacitus, Pliny the younger, Juvenal, Martial, or Suetonius.
- 1907. It may be mentioned here that the indefinite adverb quamlibet, however you please, is used in subjunctive clauses of concession or permission (1904) once or twice by Lucretius and Quintilian. Ovid uses it with the participle, a construction sometimes found with quamvis in late writers.

tamquam.

1908. tamquam, just as, introduces an indicative protasis in periods of comparison.

The tam properly belongs to the apodosis and is attracted to the protasis. tamquam has sometimes as correlative sic or ita.

të hortor ut tamquam poëtae boni solent, sic tü in extrēmā parte müneris tui diligentissimus sīs, QFr. 1, 1, 46, I urge you to be very particular at the end of your task, just as good poets aiways are. tamquam philosophorum habent disciplinae ex ipsīs vocābula, parasītī ita ut Gnathōnicī vocentur, T. Eu. 263, that so parasites may be called Gnathonites even as schools of philosophy are named from the masters. Usually, however, ut (1944) or quemadmodum is used in this sense; and tamquam occurs oftenest in abridged sentences (1057), particularly to show that an illustration is untrue or figurative: as, Odyssia Latīna est sīc tamquam opus aliquod Daedali, Br. 71, the Odyssey in Latīn is, you may say, a regular work of Daedalus. oculī tamquam speculātorēs altissimum locum obtinent, DN. 2, 140, the eyes occupy the highest part, as a sort of watchmen.

1909. In late writers, especially in Tacitus, tamquam is often used

like quod (1853) to introduce a reason or motive: as,

invisus tamquam plūs quam cīvīlia agitāret, Ta. 1, 12, hated on the ground that his designs were too lofty for a private citizen (1725). lēgātōs increpuit, tamquam non omnēs reos perēgissent, Plin. Ep. 3, 9, 36, he reproved the embassy 'for not having completed the prosecution of all the defendants' (1852, 1725).

1910. For tamquam instead of tamquam si, see 2118; with a participle,

2121.

antequam, priusquam.

1911. antequam and priusquam accompany both the indicative and the subjunctive.

ante and prius properly belong to the apodosis, and regularly stand with it is negative; but otherwise they are usually attracted to the protasis.

antequam is very seldom found in old Latin, and it is in general much rarer than priusquam, except in Tacitus.

IN GENERAL STATEMENTS.

1912. In general present statements, antequam and priusquam regularly introduce the perfect indicative or the present subjunctive: as,

membrīs ūtimur priusquam didicimus cūius ea causā ūtilitātis habeāmus, Fin. 3, 66, we always use our limbs before we learn for what purposes of utility we have them (1613). priusquam lūcet, adsunt, Pl. MG. 709, before 'tis light they're always here; here lūcet is equivalent to inlūxit. ante vidēmus fulgōrem quam sonum audiāmus, Sen. QN. 2, 12, 6, we always see the flash before we hear the sound. priusquam sēmen mātūrum siet, secātō, Cato, RR. 53, always cut before the seed is ripe (1575). With the perfect subjunctive in the indefinite second person (1030): as, hōc malum opprimit antequam prōspicere potueris, V. 1, 39, this calamity always overwhelms you before you can anticipate it (1731, 1558). For prius quam, sooner than, see 1897.

1913-1917.] Sentences: The Subordinate Sentence.

1913. The future indicative is used a few times in general statements by old and late writers, and the perfect subjunctive after a negative clause rarely by Tactius: as, boves priusquam in viam ages, pice cornua infima unguitō, Cato, RR. 72, always smear the hoofs of your oxen with pitch before you drive them on the road (1625, 1577). deum honor principi non ante habetur quam agere inter homines desierit, Ta. 15, 74, divine honours are not paid to an emperor before he has ceased to live among men. Cicero has the perfect subjunctive in a definition: thus, providentia, per quam futurum aliquid videtur antequam factum sit, Inv. 2, 160, foresight is the faculty through which a future event is seen before it has taken place.

1914. In general past statements antequam and priusquam introduce the subjunctive imperfect or pluperfect; but this use is very rare: as, dormire priusquam somni cupido esset, S. C. 13, 3, a-sleeping always before they felt sleepy. its saepe māgna indoles virtūtis, priusquam rei pūblicae prodesse potuisset, extincta est, Ph. 5, 47, thus character of unusual promise was oftentimes cut off, before it could do the government any good.

IN PARTICULAR STATEMENTS.

1915. In particular present or future statements, antequam and priusquam introduce a present, either indicative or subjunctive; in future statements the future perfect is also used, and regularly when the main verb is future perfect: as,

antequam ad sententiam redeō, dē mē pauca dīcam, C. 4, 20, before I come back to the motion, I will say a little about myself (1593). est etiam prius quam abīs quod volo loquī, Pl. As. 232, there's something else I want to say before you go. antequam veniat in Pontum, litterās ad Cn. Pompēium mittet, Agr. 2, 53, before he reaches Pontus, he will send a letter to Pompey. prius quam ad portam veniās, est pistrīlla, T. Ad. 583, there's a little bakery just before you get to the gate. nihil contrā disputābō priusquam dīxerit, Fl. 51, I will not argue to the contrary before he has spoken (1626). neque prius, quam dēbellāverō, absistam, L. 49, 39, 9, and I will not leave off before I have brought the war to an end. sī quid mihī acciderit priusquam hōc tantum malī viderō, Mil. 99, if anything shall befall me before I see this great calamity. neque prōmittō quicquam neque respondeō prius quam gnātum viderō, T. Ph. 1044, I'm not promising anything nor making any answer before I see my son (1593). Tacitus uses neither the present indicative nor the future perfect.

1916. In old Latin the future and the perfect subjunctive also occur: as, prius quam quoiquam convivae dabis, gustātō tūte prius, Pl. Ps. 885, before you help a single guest, taste first yourself; but Terence does not use the future, and it is found only once or twice later. nūllō pactō potest prius haec in aedis recipi, quam illam āmiserim, Pl. MG. 1095, on no terms can I take my new love to the house, before I've let the old love drop; but usually the perfect subjunctive is due to indirect discourse.

1917. In particular past statements antequam and priusquam introduce the perfect indicative, especially when the apodosis is negative; or, less frequently, an imperfect subjunctive: as,

omnia ista ante facta sunt quam iste Italiam attigit, V. 2, 161, all these incidents occurred before the defendant set foot in Italy. neque prius fugere dëstitërunt quam ad Rhënum pervenërunt, 1, 53, 1, and they did not stay their flight before they fairly arrived at the Rhine. prius quam hinc abiit quindecim miles minas dederat, Pl. Ps. 53, the captain had paid down fifteen minae before he left here. antequam consules in Etruriam pervenirent, Galli venërunt, L. 10, 26, 7, before the consuls arrived in Etruria, the Gauls came. This use of the imperfect subjunctive, not to be confounded with that mentioned in 1919, is not found in old Latin, Cicero, or Caesar. It is not uncommon in Livy.

1918. The present indicative also occurs in particular past statements in old Latin: as, is priusquam moritur mihi dedit, Pl. Cu. 637, before he died he gave it me. The indicative imperfect occurs four times in Livy and once in late Latin, the pluperfect once in old Latin and once in Cicero.

1919. When the action did not occur, or when purpose is expressed, priusquam regularly introduces the imperfect subjunctive in particular past statements: as,

(a.) plērīque interfectī sunt, priusquam occultum hostem vidērent, L. 35, 29, 3, most of them were slain before they could see the hidden enemy. This use is not found in old Latin. It occurs chiefly in Livy, but also in later writers. (b.) pervēnit priusquam Pompēius sentīre posset, Caes. C. 3, 67, 4, he arrived before Pompey should be able to learn of his coming (1725). The present and perfect subjunctive occur rarely, generally when the main clause contains a present of vivid narration (1590). The imperfect is not found in old Latin.

1920. The perfect indicative or imperfect subjunctive with antequam is often used attributively with nouns denoting time: as,

fābulam docuit, anno ipso ante quam nātus est Ennius, Br. 72, he exhibited a play just a year before Ennius was born. ducentīs annās ante quam Rōmam caperent, in Italiam Gallī trānscendērunt, L. 5, 33, 5, two hundred years before they took Rome, the Gauls crossed over to Italy. The pluperfect also occurs, when the main verb is pluperfect: as, Stāiēnus bienniō antequam causam recēpisset, sēscentīs millibus nummūm sē itdicium conruptūrum dīxerat, Clu. 68, Stajenus had said two years before he undertook the case, that he would bribe the court for six hundred thousand sesterces.

1921. The pluperfect subjunctive is rarely introduced by antequam or priusquam except in indirect discourse: as,

antequam de meo adventu audire potuissent, in Macedoniam perrezi, Pl. 98, before they should be able to hear of my arrival, I proceeded to Macedonia (1725). Evertit equos in castra priusquam pabula gustassent Troiae Xanthumque bibissent, V. 1, 472, he drave the horses off to camp, or ever they should taste of Troja's grass and Xanthus drink (1725).

1922. It may be mentioned here that postrīdiē quam and prīdiē quam occur a few times in Plautus and Cicero with the indicative; postrīdiē quam with the indicative in Suetonius; and prīdiē quam with the subjunctive in Livy, Valerius Maximus, and Suetonius.

posteā quam or postquam.

ubi, ut, cum primum, simul atque.

1923. With posted quam, postquam (posquam), after, the following words may conveniently be treated: ubl, ut, when; ubl primum, ut primum, cum primum, when first, and in Plautus cum extemplo; simul atque (or ac, less frequently et or ut, or simul alone), at the same time with, as soon as.

postquam, ubl, ut, cum primum, simul atque, accompany the indicative.

For examples of the use of tenses, see 1924-1934.

1924. In clauses introduced by posteā quam or postquam, the imperfect or pluperfect subjunctive is rarely used, chiefly by Cicero, not in old Latin: as, qui posteā quam māximās aedificāsset classēs et sē Bosporānīs bellum inferre simulāret, lēgātōs mīsit, IP. 9, after building enormous fiests, pretending he was going to make war on the Bosporani, he sent envoys. So once or twice in clauses introduced by ubl. The subjunctive is also used for special reasons, as with the indefinite second person (1731), by attraction (1728), and in indirect discourse (1725). For the subjunctive of repeated past action with ubl and ut, see 1932. The infinitive of intimation occurs in Tacitus (1539): as, postquam exuī aequālitās, prōvēnēre dominātionēs, Ta. 3, 26, after equality between man and man was dropped, there came a crop of tyrants.

1925. In narration the perfect indicative is regularly used in clauses introduced by postquam, ubl, ut, cum primum, simul atque (1739): as,

postquam tuās litterās lēgī, Postumia tua mē convēnit, Fam. 4, 2, 1, after I read your letter, your Postumia called ou me. postquam aurum abstulimus, in nāvem conscendimus, Pl. B. 277, after we got away the money, we took ship. ubī ad ipsum vēnī dēvorticulum, constitī, T. Eu. 635, when I came exactly to the side street, I pulled up. ubī sē diūtius dūcī intellēxit, graviter eos accūsat, 1, 16, 5, when he came to see that he was put off a good while, he takes them roundly to task. quī ut perorāvit surrēxit Clōdius, OFr. 2, 3, 2, when he had finished speaking, up jumped Clodius. ut abīī abs tē, fit forte obviam mihi Phormio, T. Ph. 617, when I left you, Phormio happened to fall in my way. crimen ēius modī est, ut, cum prīmum ad mē dēlātum est, ūsūrum mē illo non putārem, V. 5, 158, the charge is of such a sort that, when first it was reported to me, I thought I should not use it. cum prīmum Crētae litus attigit, nūntios mīsit, L. 37, 60, 4. as soon as he touched the shore of Crete, he sent messengers. ut prīmum loquī posse coepī, inquam, RP. 6, 15, as soon as I began to be able to speak, I said. quem simul atque oppidānī conspexērunt, mūrum complēre coepērunt, 7, 12, 5, as soon as the garrison espied him, they began to man the wall. at hostēs, ubī prīmum nostros equitēs conspexērunt, impetū factō celeriter nostros perturbāvērunt, 4, 12, 1, but as soon as the enemy caught sight of our cavalry, they attacked and threw our men into disorder. The conjunction simul atque is very rarely found in old Latin.

1926. The present indicative of vivid narration (1590) sometimes occurs: as,

postquam iam pueri septuennēs sunt, pater onerāvit nāvim māgnam, Pl. Men. prol. 24, after the boys were seven year olds, their father freighted a big ship. quid ait, ubi mē nōminās, T. Hau. 303, what seveth she when you name me! ubi neutri trānseundi initium faciunt, Caesar suōs in castra redūxit, 2, 9, 2, neither party taking the initiative in crossing, Caesar marched his men back to camp. Verbs of perceiving, especially videō, occur oftenest in this use, which is common in Plautus and Terence: as, postquam videt nūptiās adparārī, missast ancilla Ilicō, T. Andr. 513, after she sees a marriage on foot, her maid is sent forthwith. abeð ab illīs, postquam videō mē lūdificārier, Pl. Cap. 487, seeing myself made game of, I leave them, quem posteā quam videt nōn adesse, ārdēre atque furere coepit, V. 2, 92, seeing that the man does not appear, he began to rage and fume. ubī hōc videt, init cōnsilium importūnī tyrannī, V. 5, 103, seeing this, he adopted the policy of a savage tyrant. Plautus uses also cum extemplō. Such protases often take on a causal sense (see also 1930).

1927. The present or perfect with postquam or ut is sometimes used in expressions equivalent to an emphasized accusative or ablative of time, the main verbeing est or sunt: as, septingenti sunt anni postquam inclita condita Roma est, E. in Varro, RR. 3, 1, 2, 'it's seven hundred years since glorious Rome was founded. domo ut abierunt hic tertius annus, Pl. St. 29, this is the third year since they left home. annus est octavus ut imperium obtines, Ta. 14, 53, it is the eighth year since you acquired empire. For a similar use of cum, see 1871.

1928. The pluperfect with postquam, denoting resulting state (1615), occurs less frequently: 28,

tum cum P. Āfricānus, posteā quam bis consul fuerat, L. Cottam in iūdicium vocābat, Caecil. 69, at the time when Africanus, after he had twice been consul, was bringing Cotta to judgement. postquam omnium oculos occupāverat certāmen, tum āversam adoriuntur Romānam aciem, L. 22, 48, 4, when every eye was fairly riveted on the engagement, that instant they fell upon the Romans in the rear. Not in Plautus, once in Terence, and rare in classical writers.

1929. The pluperfect, less frequently the perfect, with postquam is used attributively with nouns denoting time.

In this use post is often separated from quam, and two constructions are possible: (a) Ablative: anno post quam vota erat aedos Monotae dedicatur, I. 7, 28, 6, the temple of Moneta is dedicated a year after it was vowed. Without post: quadringentesimo anno quam urbs Romana condita erat, patricii consules magistratum inière, L. 7, 18, 1, four hundred years after Rome town was founded, patrician consuls entered into office. (b.) Accusative, with an ordinal, and post as a preposition, or, sometimes, intra: post diem tertium gesta res est quam dixerat, Mil. 44, the deed was done the next day but one after he said it. Sec 2419.

1930. The imperfect with postquam expresses action continuing into the time of the main action. Such a protasis, especially when negative, usually denotes the cause of the main action: as,

Appius, postquam nēmo adībat, domum sē recēpit, L. 3, 46, 9, Appius finding that nobody presented himself, went back home. posteā quam ē scaenā explodēbātur, confūgit in hūius domum, RC. 30, after being repeatedly hissed off the stage, he took refuge in my client's house.

In old Latin this use is found only once, in Plautus; it is most common in Livy, but occurs frequently in Tacitus. So occasionally the present, generally when the main action is present (see also 1926): as, postquam nec ab Romānīs vobis ūlla est spēs, nec vos moenia defendunt, pācem adferō ad vos, L. 21, 13, 4, now that it has become plain that you have no hope from the Romans, and that your walls are no protection to you, I bring peace unto you. postquam liberast, ubi habitet dicere admodum incertē sciō, Pl. E. 505, now that she's free, I'm quite too ill informed to say where she lives. quae omnia intellegit nihil prodesse, posteā quam testibus convincitur, V. 5, 103, he knows that all this is fruitless, now that he is being refuted by witnesses. The perfect with postquam or ut occurs occasionally in this use with the present in the main clause: as, animus in tūtō locost, postquam iste hinc abiit, Pl. Ps. 1052, my mind is easy, now that fellow's gone. nam ut in nāvī vēcta's, crēdō timida's, Pl. B. 106, for after your voyage, of course you're nervous.

1931. postquam and ut have sometimes the meaning of ever since or as long as: as,

postquam nātus sum, satur numquam fuī, Pl. St. 156, since I was born I've never had enough to eat. tibī umquam quicquam, postquam tuos sum, verborum dedī? Pl. Most. 925, have I once ever cheated you as long as I have been your slave \(\text{P} \) neque meum pedem intulī in aedīs, ut cum exercitū hinc profectus sum, Pl. Am. 733, I have n't set foot in the house ever since I marched out with the army. ut illos dē rē pūblicā libros ēdidistī, nihilā tē posteā accēpimus, Br. 19, we have had nothing from you since you published the work On the State.

ubī, ut, simul atque.

1932. ubl, ut, or simul atque often introduces a clause denoting indefinite or repeated action: as,

adeō obcaecat animōs fōrtūna, ubī vim suam refringi nōn vult, L. 5, 37, 1, so completely does fortune blind the mind when she will not have her power thwarted. ubī salūtātiō dēflūxit, litterīs mē involvō, Fam. 9, 20, 3, when my callers go, I always plunge into my book (1613). omnēs profectō mulierēs tē amant, ut quaeque aspexit, Pl. MG. 1264, all the ladies love you, every time one spics you. simul atque sē inflēxit hīc rēx in dominātum iniūstiōrem, fit continuō tyrannus, RP. 2, 48, for the moment our king turns to a severer kind of mastery, he becomes a tyrant on the spot. Messānam ut quisque nostrūm vēnerat, haec vīsere solēbat, V. 4, 5, any Roman, who visited Messana, invariably went to see these statues (1618). hostēs, ubī aliquōs singulārēs cōnspexerant, adoriebantur, 4, 26, 2, every time the enemy saw some detached parties, they would charge. The imperfect in this use is not common in classical writers, and occurs but once, with ubī, in old Latin; the pluperfect is rare before the silver age. Clauses with ut generally contain some form of quisque (2396). Plautus uses cum extemplō with the present and perfect. The subjunctive is found with ubī and ut quisque in cases of repeated past action (1730).

1933. ubi, ut, or simul atque rarely introduces an imperfect or pluperfect of definite time: as,

quid ubi reddēbās aurum, dixisti patrī, Pl. B. 685, what did you tell your father when you were returning the money? ubi lūx adventābat, tubicinēs signa canere, S. I. 99, 1, when daylight was drawing on, the trumpters sounded the call. ubi nēmō obvius ibat, plēnō gradū ad hostum castra tendunt, L. 9, 45, 14, finding nobody came to meet them, they advanced double quick upon the enemy's camp (1930). The use of these tenses referring to definite time is very rare in old Latin, and found only with ut in Cicero.

1934. ubl or simul atque, referring to definite time, introduces the future or future perfect, when the apodosis is also future: as,

simul et quid erit certi, scribam ad të, Att. 2, 20, 2, as soon as there is anything positive, I will write to you. ego ad të statim habëbō quod scribam, simul ut viderō Cūriōnem, Att. 10, 4, 12, I shall have something to write you, as soon as ever I see Curio. nam ubi më aspiciet, ad carnuficem rapiet continuō senex, Pl. B. 688, when the old man sees me, he'll hurry me off to Jack Ketch without any ado. ubi primum poterit, së illinc subdücet, T. Eu. 628, she'll steal away as soon as she can. Plautus has also cum extemplō in this use.

uti or ut.

1935. The relative adverb uti or ut (711) is found in the oldest Latin in the form utei, but ut was the prevalent form even in the time of Plautus. As a conjunctive particle, it accompanies both the indicative and the subjunctive.

WITH THE INDICATIVE.

(A.) ut, where.

1936. uti or ut in the rare signification of where, accompanies the indicative: as, atque in edopse adstās lapide, ut praecō praedicat, Pl. B. 815, and there you stand right on the auction block, just where the crier always cries. Sive in extremos penetrābit Indos, litus ut longē resonante Eoā tunditur undā, Cat. 11, 2, or shall he pierce to farthest Ind, where by the long-resounding eastern wave the strand is lashed. In classical Latin, ut in this sense is used only by the poets, as here and there in Lucilius, Catullus, Cicero's Aratēa, Vergil, and Ovid. ubl is the word regularly used. For ut, when, see 1923.

(B.) ut, as.

1937. The indicative is used in the protasis of a comparative period introduced by uti or ut, as.

ut often has as a correlative ita, item, itidem, sīc, perinde, or similiter, and sometimes in old Latin and poetry.aequē, adaequē, pariter, nōn secus, īdem. sīc is sometimes drawn to the protasis, making sīcutī, sīcut; utī is sometimes strengthened by vel, making velutī, velut, even as, just as. quemadmodum often, and quōmodo sometimes, stands for ut. In old Latin, the correlative is omitted only in sentences which have the appearance of an indirect question (1791). For coordinated comparative sentences without ut, see 1704.

Digitized by Google

perge ut înstituisti, RP. 2, 22, go on as you have begun. ut volēs mēd esse, ita erō, Pl. Ps. 240, as you will have me be, so will I be (1625). ut sēmentem fēceris, ita metēs, DO. 2, 261, as you sow, y'are like to reap (1626). ut non omnem frügem in omni agro reperire possis, sic non omne facinus in omnī vitā nāscitur, RA. 75, every crime does not start into being in every life, any more than you can find every fruit in every field (1731). Also in asseverations: ita mē dī amābunt, ut ego hunc auscultō lubēns, Pl. Aul. 496, so help me heaven, as I am glad to hear this man (1622).

1938. ut . . . ita or sīc, as . . . so, often stand where concessive and adversative conjunctions might be used; while . . . nevertheless, although . . . yet, certainly . . . but : as,

ut nihil boni est in morte, sic certe nihil mali, L. 14, while there is nothing good after death, yet certainly there is nothing bad. quo facto sicut gloriam auxit, ita gratiam minuit, Suet. Oth. 1, by this action he increased his reputation, but lessened his popularity. nec ut iniustus in pace rex, ita dux belli pravus fuit, L. 1, 53, 1, but while he was an unjust king in peace, he was not a bad leader in war. This adversative correlation is found sometimes in Cicero, but is far more common in late writers.

1939. ut quisque, commonly with a superlative expression, is used in the protasis of a comparative period of equality, with ita or sīc and commonly another superlative expression in the apodosis: as,

ut quaeque res est turpissima, sic maxime vindicanda est, Caec. 7, the more disgraceful a thing is, the more emphatically does it call for punishment ut quisque optime Graece sciret, ita esse nequissimum, DO. 2, 265, that the better Greek scholar a man was, the greater rascal he always was (1722). This construction is often abridged: as, sapientissimus quisque aequissimo animo moritur, CM. 83, the sage always dies with perfect resignation. optimus quisque praeceptor frequentia gaudet, Quint. 1, 2, 9, the best teachers always revel in large classes. See 2397.

1940. ut often introduces a parenthetical idea, particularly a general truth or a habit which accounts for the special fact expressed in the main sentence: as,

nēmō, ut opīnor, in culpā est, Clu. 143, nobody, as I fancy, is to blame. excitābat filictūs in simpulō, ut dicitur, Grātidius, Leg. 3, 36, Gratidius was raising a tempest in a teapot, as the saying is. paulisper, dum sē uxor, ut fit, comparat, commorātus est, Mil. 28, he had to wait a bit, as is always the case, while his wife was putting on her things. hōrum auctōritāte adductī, ut sunt Gallōrum subita cōnsilia, Trebium retinent, 3, 8, 3. influenced by these people they detain Trebius, as might have been expected, sudden resolutions being always characteristic of the Gauls. sēditiōne nūntiātā, ut erat laenā amictus, ita vēnit in cōntiōnem, Br. 56, an outbreak was reported, and he came to the meeting all accoutred as he was, with his sacrificial robe on. Often elliptically: as, acūtī hominis, ut Siculī, TD. 1, 15, a bright man, of course, being a Sicilian. Aequōrum exercitus, ut qui permultōs annōs imbellēs ēgissent, trepidāre, L. 9, 45, 10, the army of the Aequians alarmed and irresolute, and naturally, since they had passed a great many years without fighting (1824, 1827).

1941. ut, as for example, is used in illustrations, particularly in abridged sentences (1057): as,

genus est quod plūrēs partēs amplectitur, ut 'animal.' pars est, quae subest generī, ut 'equus,' Inv. 1, 32, a class is what embraces a number of parts, as 'living thing'; a part is what is included in a class, as 'horse.' sunt bēstiae in quibus inest aliquid simile virtūtis, ut in leonibus, ut in canibus, Fin. 5, 38, there are brutes in which there is a something like the moral quality of man, as for instance the lion and the dog.

1942. The parenthetical clause with ut or prout sometimes makes an allowance for the meaning of a word, usually an adjective, in the main sentence: as,

civitäs ampla atque florens, ut est captus Germānorum, 4, 3, 3, a grand and prosperous community, that is according to German conceptions. ut captus est servorum, non malus, T. Ad. 480, not a bad fellow, as slaves go. Sthenius ab adulēscentiā haec comparārat, supellēctilem ex aere ēlegantiorum, tabulās pictās, etiam argentī bene factī prout Thermītāni hominis facultātēs ferēbant, satis, V. 2, 83, Sthenius had been a collector from early years of such things as artistic bronzs, pictures; also of curiously wrought silver a goodly amount, that is as the means of a Thermae man went. Often in abridged sentences: as, scriptor fuit, ut temporibus illīs, līculentus, Br. 102, he was a brilliant historian for the times. multae etiam, ut in homine Romāno, litterae, CM. 12, furthermore, extensive reading, that is for a Roman. ut illīs temporibus, praedives, L. 4, 13, 1, a millionaire, for those times.

1943. ut, as indeed, as in fact, with the indicative, is used to represent that an action supposed, conceded, or commanded, really occurs: as,

sit Ennius sane, ut est certe, perfectior, Br. 76, grant, for aught I care, that Ennius is a more finished poet, as indeed he is. utl erat res, Metellum esse rati, S. I. 69, 1, supposing that it was Metellus, as in fact it was. This use begins in the classical period. It is found particularly with quamvis, 1905; with si, see 2017.

1944. ut, as, like, sometimes shows that a noun used predicatively is not literally applicable, but expresses an imputed quality or character: as,

Cicero ea quae nunc usu veniunt cecinit ut vates, N. 25, 16, 4, Cicero foretold what is now actually occurring, like a bard inspired. canem et faclem ut deos colunt, Leg. 1, 32, they bow the knee to dog and cat as gods. quod me sicut alterum parentem diligit, Fam. 5, 8, 4, because he loves me like a second father. regiae virgines, ut tonstriculae, tondebant barbam patris, TD. 5, 58, the princesses used to shave their father, just like common barber-girls. In an untrue or a merely figurative comparison tamquam (1908) or quasi is used.

r945. In old Latin, prae is combined with ut: praeut, compared with how: as, parum etiam, praeut futurumst, praedicas, Pl. Am. 374, you say too little still compared with how 'twill be. praeut is sometimes followed by a relative clause: as, lūdum iocumque dicet fuisse illum alterum, praeut hūius rabies quae dabit, T. Eu. 300, he'll say the other was but sport and play, compared with what this youth will in his frensy do.

1946. In Plantus sicut, with the indicative, has once or twice the meaning of since: as, quin tũ illam iubē abs tē abire quo lubet: sicut soror ēius hūc gemina vēnit Ephesum, MG. 974, why, bid her go away from you wherever she may choose, since her twin sister here to Ephesus is come.

WITH THE SUBJUNCTIVE.

uti or ut.

NEGATIVE ut ne, ne, or ut non.

1947. The subjunctive with ut is: (A.) That of action desired (1540), in clauses of purpose; in these the negative is ne, or sometimes ut ne, and and that not, neve or neu, rarely neque or nec. ut ne, though used at all periods (not by Caesar, Sallust, or Livy), is chiefly found in older Latin; afterwards ne alone took its place (1706). ut non is used when the negative belongs to a single word. (B.) That of action conceivable (1554), in clauses of result; in these the negative is ut non, ut nemo, ut nullus, &c.; or with emphasis on the negative, nemo ut, nullus ut, nihil ut; also vix ut, paene ut, prope ut.

1948. Final and consecutive clauses with ut are of two classes: I. Complementary clauses, that is, such as are an essential complement of certain specific verbs or expressions; such clauses have the value of a substantive, and may represent a subject, an object, or any oblique case. II. Pure final or consecutive clauses, in which the purpose or result of any action may be expressed, and which are not essential to complete the sense of a verb.

(A.) Purpose.

I. COMPLEMENTARY FINAL CLAUSES.

1949. (1.) The subjunctive with ut or nē is used in clauses which serve to complete the sense of verbs of will or aim.

1950. (a.) Verbs of will include those of desire, request, advice, resolution, stipulation, command, or permission.

Will may be suggested by a general verb or expression: as, dīcō, respondeō, nūntiō, &c.; or denoted by specific ones, of which some of the commonest are: desire: volō (mālō), concupīscō, optō. request: petō, postulō, flāgitō, ōrō, rogō, precor, obsecrō, implōrō, instō, urga, invitō. advice: suādeō, persuādeō, persuade, moneō, bid, admoneō, hortor, cēnseō, propose, vote. resolution, stipulation: dēcernō, statuō, decree, cōnstituō, placet, sanciō, pacīscor, pepigī. command: imperō, praecipiō, praescrībō, mandō, negōtium dō, ēdīcō, ferō, caveō, interdīcō. permission: concēdō, allow, permittō, committō, potestātem faciō, veniam dō, sinō, nōn patior.

1951. (b.) Verbs of aim include those of striving, accomplishing, or inducing; such are:

striving: agō or id agō, animum indūcō, temptō, operam dō, labōrō, nītor, ēnītor, mōlior, videō, prōspiciō, cūrō, nihil antiquius habeō quam, contendō, studeō, pūgnō. accomplishing: faciō (efficiō, perficiō), praestō; mereō; impetrō, adsequor, cōnsequor, adipīscor. inducing: moveō, excitō, incitō, impellō, perpellō, cōgō.

- (a.) optāvit ut in currum patris tollerētur, Off. 3, 94, he asked to be listed into his futher's chariot. optō nē sē illa gēns moveat, Fam. 12, 19, 2, I hope and pray that that nation may not stir. Ubil ōrābant, ut sibī auxilium ferret, 4, 16, 5, the Ubians begged that he would help them. Pausaniās ōrāre coepit nē ēnūntiāret, N. 4, 4, 6, Pausanias began to beg that he would not tell. hortātus est utī in officiō manēret, 5, 4, 2, he urged him to remain steadsast in duty. hortātur eðs nē animō dēficiant, Caes. C. 1, 19, 1, he urges them not to get disheartened (1752). suīs, ut idem faciant, imperat, 5, 37, 1, he orders his men to do the same. suīs imperāvit nē quod omninō tēlum rēicerent, 1, 46, 2, he ordered his men not to throw any weapon at all back. huic permīsit, utī in hīs locīs legiōnem conlocāret, 3, 1, 3, he allowed this man to quarter his legion in these parts. neque suam neque populī Rōmānī cōnsuētūdinem patī, utī sociōs dēsereret, 1, 45, 1, that his practice and that of the Roman nation would not allow him to desert his allies.
- (b.) neque id agere ut exercitum teneat ipse, sed në illi habeant quo contră së uti possint, Caes. C. 1, 85, 11, and that his object was not to hold the army himself, but to prevent the other side from having an army which they could use against him. XII năvibus āmissis, reliquis ut năvigări commode posset effecit, 4, 31, 3, a dosen vessels were lost, but he managed to sail comfortably with the rest. Eius belli făma effecit në së pûgnae committerent Sappinătes, L. 5, 32, 4, the story of this war prevented the Sappinatians from hazarding an engagement. si a Chrysogono non impetrămus ut pecunia nostră contentus sit, vitam në petat, RA. 150, if we do not succeed in making Chrysogonus satisfied with our money without his aiming at our life. Aulum spē pactionis perpulit, uti in abdităs regionēs sesse însequeretur, S. I. 38, 2, Aulus he induced by the hope of a pecuniary settlement to follow him to distant regions. Antônium pactione provinciae perpulerat, në contră rem püblicam sentiret, S. C. 26, 4, by agreeing to let Antony have a province, he had induced him not to be disaffected toward the government.
- 1952. Many of these verbs often have a coordinated subjunctive (1705-1713), or, according to the meaning, admit other constructions, which must in general be learned by reading, or from the dictionary. The following points may be noticed:
- 1953. (a.) The verbs of resolving, statuō, cōnstituō, and dēcernō, and of striving, nitor, and temptō, have usually the complementary infinitive (2169), unless a new subject is introduced. For volō (mālō), and cupiō, see also 2189; for iubeō, vetō, sinō, and patior, 2198. postulō, expect, often has the same construction as volō, especially in old Latin (2194). For imperō, see 2202.
- 1954. (b.) Some of the above verbs, with the meaning think or say, have the accusative with the infinitive (2175, 2195): as, volū, contendō, maintain, concedō, admit, statuō, assume, dēcernō, judge, moneō, remind, persuādeō, convinces.
- 1955. (c.) Verbs of accomplishing sometimes express result rather than purpose, and when the result is negative, are completed by a clause with ut non (1965). For the infinitive with such verbs, see 2196.
- 1956. est with a predicate noun is sometimes equivalent to a verb of will or aim, and has the same construction.

So with words like its, lex, munus, &c.: as, its esse belli ut qui vicissent his quos vicissent imperarent, 1, 36, 1, that rules of war entitled conquerors to lord it over conquered. quis nescit primam esse historial legem, ne quid falsi dicere audeat? DO. 2, 62, who does not know that the first rule of history is that it shall not venture to say anything false? iustitiae primum munus est ut ne cui quis noceat, Off. 1, 20, the first duty of justice is that a man harm nobody. nam id arbitror adprime in vita esse utile, 'ut ne quid nimis,' T. Andr. 60, for this I hold to be a rule in life that's passing useful, 'naught in overplus.'

1957. (2.) The subjunctive with ut or ne is used in clauses which complete expressions of fear, anxiety, or danger.

ut, that not, may not, and nē, lest, may, were originally signs of a wish (1540): thus, vereor, ut fiat, I am afraid; may it come to pass, acquires the meaning of I am afraid it may not come to pass (1706); and vereor, nē fiat, I am afraid; may it not come to pass, of I am afraid it may come to pass. metuo ut is common in old Latin, and is used by Horace, but not by Caesar or Sallust, once by Cicero in the orations. timeo ut is rare, and first used by Cicero. vereor ut is not uncommon.

at vereor ut plācārī possit, T. Ph. 965, but I'm afraid she can't be reconciled.

nē uxor rescīscat metuit, Pl. As. 743, he is afraid his wife may find it out. ō puer, ut sīs vītālis metuō, et māiōrum nē quis amīcus frīgore tē feriat, H. S. 2, I, 60, my boy, you'll not see length of days I fear, and that some grander friend may with his coldness cut you dead. nēquid summā dēperdat metuēns aut ampliet ut rem, H. S. 1, 4, 31, in dread lest from his store he something lose or may not add to his setate. metuō nē nōs nōsmet perdiderīmus uspiam, Pl. MG. 428, I'm afraid we've lost ourselves somewhere. sollicitus nē turba perēgerit orbem, J. 5, 20, apprehensive that the throng may have finished its round. nē nōn is often, though rarely in old Latin, used for ut, and regularly when the expression of fear is negative: as, nōn vereor nē hōc officium meum P. Serviliō nōn probem, V. 4, 82, I have no fear but I may make my services acceptable in the eyes of Servilius. For nōn metuō quīn, see 1986.

1958. vereor ne is often equivalent to I rather think, and vereor ut to hardly. vide (videamus, videndum est) ne, and similar expressions, are sometimes used for vereor ne, to introduce something conjectured rather than proved: as,

vereor në barbarorum rëx fuerit, RP. 1, 58, I rather think he was king over savages. vidë në mea coniectura multo sit verior. Clu. 97, I rather think my conjecture is in better keeping with the facts.

1959. Other constructions with expressions of fear are: (a.) Indirect question. (b.) Accusative with infinitive. (c.) Complementary infinitive: as,

(a.) erī semper lēnitās verēbar quorsum ēvāderet, T. Andr. 175, I was afraid how master's always gentleness would end. timeō quid sir I. Hau. 620, I have my fears what it may be. timeō quid rērum gesserim, Pl. MG. 397, I am concerned to think what capers I have cut. metuō quid agam, T. Hau. 720, I'm scared and know not what to do (1731). (b.) ego mē cupiditātis rēgnī crīmen subitūrum timērem? L. 2, 7, 9, was I to fear being charged with aspiring to a throne? (c.) vereor cōram in ōs tē laudāre, T. Ad. 269, I am afraid to disgrace you with praise to the face (2168).

1960. (3.) The subjunctive with nē is used in clauses which serve to complete the sense of verbs of avoiding, hindering, and resisting.

Such are: avoiding: caveō, mē ēripiō, vītō. hindering: intercēdō, interdīcō, recūsō, repūgnō, temperō; also the following which often have quōminus (1977): dēterreō, impediō, obsistō, obstō, officiō, prohibeō, teneō. resisting: resistō, repūgnō, recūsō; with these last often quōminus. Some of the above verbs when preceded by a negative also take quīn (1986); prohibeō and impediō have also the accusative with the infinitive (2203). For the subjunctive coordinated with cavē, see 1711.

në quid eis noceātur neu quis invitus sacrāmentum dicere cogātur a Caesare cavētur, Caes. C. I, 86, 4, all precaution is taken by Caesar that no harm be done them, and that nobody be compelled to take the oath against his will. per eos, në causam diceret, së ëripuit, I, 4, 2, thanks to this display of retainers he succeeded in avoiding trial. plura në scribam, dolore impedior, Att. II, I3, 5, grief prevents me from writing more. në qua sibi statua ponerëtur restitit, N. 25, 3, 2, he objected to having a statue erected in his honour.

II. PURE FINAL CLAUSES.

1961. The subjunctive with ut or nē is used to denote the purpose of the main action.

The purpose is often indicated in the main sentence by an expression like ideo, idcirco, propterez, ez mente, &c.

vigilās dē nocte, ut tuīs consultoribus respondeās, Mur. 22, you have to get up early in the morning to give advice to your clients. maiores nostri ab aratro adduxerunt Cincinnatum, ut dictator esset, Fin. 2, 12, our fathers brought Cincinnatus from his plough, to be dictator. dicam auctionis causam, ut damno gaudeant, Pl. St. 207, I'll tell the reason for the sale, that o'er my losses they may gloat. quin etiam në tonsori collum committeret, tondëre filiës suës docuit, TD. 5, 58, why, he actually taught his own daughters to shave, so as not to trust his throat to a barber. Caesar, në graviori bello occurreret, ad exercitum proficiscitur, 4, 6, 1, to avoid facing war on a more formidable scale, Caesar goes to the army. te ulciscar, ut ne inpune in nos inluseris, T. Eu. 941, I'll be revenged on you, so that you shan't play tricks on me for nothing (1947). në ignorarëtis esse aliquas pacis vobis condicionës, ad vos veni, L. 21, 13, 2, I have come to you to let you know that you have some chances of peace (1754). ita më gessi në tibi pudori essem, L. 40, 15, 6, I comported myself in such a way that I might not be a mortification to you. Marionem ad the ed misi, ut theum ad me veni-ret, Fam. 16, 1, 1, I sent Mario to you with the intention of having him come with you to me. idcirco nemo superiorum attigit, ut hic tolleret? ideo C. Claudius rettulit, ut C. Verres posset auferre? V. 4, 7, was that the reason why no former officials laid a finger on it, that this man might swoop it away? was that why Claudius returned it, that a Verres might carry it off? danda opera est, ut etiam singulis consulatur, sed ita, ut ca res aut prosit aut certe ne obsit rei publicae, Off. 2, 72, we must be particular in regarding the interests of individuals as well, but with this restriction, that our action may benefit, or at any rate may not damage the country.

1962. The subjunctive with ut or ne is often used not to express the purpose of the main action, but to explain, parenthetically, why it is mentioned: as,

ut in pauca conferam, testamento facto mulier moritur, Caec. 17, to cut a long story short, the woman makes her will and dies. Vere ut dicam, V. 5, 177, sooth to say. ut plura non dicam, IP. 44, to skip a great deal. sed ut hic në ignoret, quae rës agatur: dë natura agebamus deorum, DN. 1, 17, but that our friend here may know what is up: we were just on the nature of the gods. acuta si quando conquiruntur a privatis in bello, tamen hominës inviti dant; në quem putëtis sine maximo dolore argentum domo protulisse, V. 4, 52, why, if shields are ever exacted of private citizens in war-time, still peofle hand them in with reluctance; which I mention that you may not imagine that anybody brought his silver ware out of his house without great distress of mind. The tense is present. The use of the perfect in late writers, as ut sic dixerim, Quint. 1, 6, 1, seems to be founded on dixerim of action conceivable (1558).

1963. The subjunctive is used in an assumption or concession with ut or nē, or if the negation belongs to a single word, with ut non, nēmo, &c.: as.

ut taceam, quoivis facile scitl est quam fuerim miser, T. Hec. 296, even supposing I say nothing, anybody can understand how unhappy I was. sed ut have concedantur, reliqua qui concedi possunt? DN. 3, 41, but even supposing this be admitted, how can the rest be admitted? ne sit summum malum dolor, malum certe est, TD. 2, 14, grant that suffering is not the chiefest evil, an evil it assuredly is (1553). Verum ut hoc non sit, tamen praeclarum spectaculum mihl propono, Att. 2, 15, 2, but suppose this be not the case, still I anticipate a gorgeous show. ac iam ut omnia contra opinionem acciderent, tamen se plurimum navibus posse perspiciebant, 3, 9, 6, and even supposing everything turned out contrary to expectation, still they saw clearly that they had the advantage by sea. ut enim neminem alium nisi T. Patinam rogesset, scire potuit prodi flaminem necesse esse, Mil. 46, for even supposing he had asked nobody but Patina, he might have known that a priest must be appointed. This use is common in Cicero; not found in Plautus or Sallust.

1964. The subjunctive with ut or ne, generally with ita as a correlative, sometimes has the force of a proviso: as,

ita probanda est clēmentia, ut adhibeātur sevēritās. Off. 1, 88, mercy is to be commended, provided that strictness is employed. satis memoriae meae tribuent, ut māiōribus meīs dīgnum crēdant, Ta. 4, 38, they will pay respect enough to my memory, provided they consider me worthy of my ancestors.

(B.) RESULT.

I. COMPLEMENTARY CONSECUTIVE CLAUSES.

1965. The subjunctive with ut or ut non is used in clauses which serve to complete the sense of certain verbs and expressions, chiefly of bringing to pass, happening, and following.

Such are: (a.) facio, efficio (unless they imply purpose, 1951); fit, accidit, contingit, evenit, est, it is the case; similarly mos est, consuctudo est, &c. (b.) proximum est, reliquum est, extremum est, reliquitur, restat, accedit. Or, of logical sequence, sequitur, efficitur.

- (a.) fecerunt ut consimilis fugae profectio videretur, 2, 11, 1, they made their march look exactly like a stampede. splendor vester facit ut peccare sine summo periculo non possitis, V. 1, 22, your conspicuous position makes it impossible for you to do wrong without great peril. his rebus fiebat, ut minus lete vagarentur, 1, 2, 4, so it came to pass that they did not rove round much. fit ut natura ipsa ad ornatius dicendi genus excitemur, DO. 2, 338, it is sometimes the case that we are roused to a loftier style in oratory by sheer circumstance. potest fieri ut fallar, Fam. 13, 73, 2, it is possible that I am mistaken. fieri non potest ut eum tu non cognoveris, V. 2, 190, it must be the case that you have made his acquaintance yourself. eadem nocte accidit, ut esset luna plena, 4, 29, 1, it came to pass on the same night that there was a full moon (1758). negavit moris esse Graecorum ut in convivio virorum accumberent mulieres, V. 1, 66, he said it was not etiquette among the Greeks for women to go to men's dinner parties. est hoc commune vitum in liberis civitatibus, ut invidia gloriae comes sit, N. 12, 3, this is a common trouble in free communities, that envy is the attendant of a great name.
- (b.) proximum est, ut doceam, DN. 2, 73, my next task is to prove. relinquebātur ut neque longius abāgmine legiōnum discēdī Caesar paterētur, 5, 19, 3, the consequence was that Caesar could not allow any very distant excursion from the main line of march. restat ut doceam omnia hominum causā facta esse, DN. 2, 154, lastly, I must prove that everything is made for man. accēdēbat ut tempestātem ferrent, 3, 13, 9, then, too, they could stand the gale. accēdīt ut is not found in old Latin; for accēdīt quod, see 1845. ita efficitur ut omne corpus mortāle sit, DN. 3, 30, thus it follows that every bodily substance is mortal. sequitur and efficitur, it follows, often have the accusative with the infinitive (2207). For the subjunctive with quam ut after a comparative of disproportion, see 1896. For fore and futurum esse ut as the periphrasis for the future infinitive, see 2233.
- rg66. Verbs of happening may often be rendered best by compacter expressions: thus, his rebus flebat ut, consequently; fit ut, once in a while, sometimes, often; fieri potest ut, possibly; accidit ut, accidentally, unfortunately.
- 1967. fació ut, or with a negative, commonly committo ut, is used in circumlocutions for emphasis: as,

faciundum mihî putāvī, ut tuīs litterīs brevī respondērem, Fam. 3, 8, 1, I thought I ought to take hold and write a few lines in answer to your letter. ego vērō nōn committam, ut tibī causam recūsandī dem, DO. 2, 233, no, no, sir, I will not be guilty, not I, of giving you an excuse to back out. So particularly with invītus. libenter, prope: as, invītus fēcī ut L. Flāminīnum ē senātū ēicerem, CM. 42, it was with great reluctance that I expelled Flamininus from the senate.

1968. A subjunctive clause with ut is often used to define a preceding idea indicated in a general way by a neuter pronoun: as,

Digitized by Google

1969-1970.] Sentences: The Subordinate Sentence.

post ēius mortem nihilō minus Helvētii id, quod constituerant, facere conantur, ut ē finibus suis exeant, I, 5, I, after his death the Helvetians attempted just the same to carry out their resolution of moving out of their abodes (1752). omnibus Gallis idem esse faciendum, quod Helvētii Tēcerint, ut domō ēmigrent, I, 31, 14, that all the Gauls must do just as the Helvetians had done and move away from home. Helvētii, cum id, quod ipsi diēbus xx aegerrimē confēcerant, ut flümen trānsīrent, illum ûno diē fēcisse intellegerent, lēgātōs mittunt, I, 13, 2, when the Helvetians learned that the Roman commander had done in a single day what they had found it hard themselves to do in twenty, namely cross the river, they sent deputies (1752). id aliquot dē causīs acciderat, ut subitō Galli bellī renovandī consilium caperent, 3, 2, 2i was due to a variety of reasons that the Gauls suddenly conceived the idea of making war again (1758). Caesar idem quod superioribus diēbus acciderat, fore vidēbat, ut sī essent hostēs pulsī, celeritāte periculum effugerent, 4, 35, I, Caesar saw that if the enemy were routed the experience would be as on former days: they would escape danger by rapidity of movement.

1969. tantum abest, so far from, is sometimes followed by a double ut, the first introducing an unreal, and the second a real action: as,

tantum abest ut haec bēstiārum causā parāta sint, ut ipsās bēstiās hominum grātiā generātās esse videāmus, DN. 2, 158, so far from these things being made for brutes, we see that brutes themselves were created for man. This use, very rarely personal, begins with Cicero, and is common in his writings and in Livy. Not in Caesar, Sallust, or Tacitus. Sometimes instead of ut the second sentence is coordinated (1700): tantum abfuit ut inflammārēs nostrōs animōs, somnum vix tenēbāmus, Br. 278, so far from your firing our heart, we could hardly keep awake. Or, the idea is expressed by ita nōn . . ut: as, erat ita nōn timidus ad mortem, ut in aciē sit ob rem pūblicam interfectus, Fin. 2, 63, so far from being afraid of death, he fell in battle for his country.

II. PURE CONSECUTIVE CLAUSES.

1970. The subjunctive is used with ut or ut non to denote result.

The result may be the result of an action or of a thing named in the main sentence. The main sentence often has a correlative to ut, expressing (a.) degree: as, tantus, so great, tam, so (with adjectives or adverbs). adeo, tantopere. (b.) quality: as, is (hic, ille, iste), such, talis, ita, sic.

mons altissimus impendēbat, ut facile perpaucī prohibēre possent, 1, 6, 1, an exceeding high mountain hung over, so that a very few could block the way. dictitābant sē domo expulsos, omnibus necessāriis egēre rēbus, ut honestā praescrīptione rem turpissimam tegerent, Caes. C. 3, 32, 4, they stoutly declared that they were driven out of house and home, and lacked the necessaries of life, thus veiling dishonour under the name of respectability.

(a.) Ariovistus tantos sibl spīritūs sūmpserat, ut ferendus non vidērētur, 1, 33, 5, Ariovistus had put on such high and mighty airs as to seem intolerable. adeo angusto mari conflixit, ut ēius multitūdo nāvium explicārī non potuerit, N. 2, 4, 5, he went into action in such cramped sea-room,

that his armada could not deploy, of Xerxes (1757).

Conjunctional Sentences: quo. [1971-1973.

(b.) eos deduxi testes ut de istius facto dubium esse nemini possit, V. 4, 91, I have brought such witnesses that nobody can entertain a doubt of the defendant's guilt. ita se recipiebat ut nihil nisi de pernicie populi Români cogitaret, Ph. 4, 4, he retreated, it is true, but retreated with his mind running on nothing but how to ruin the country. illa, ex turibulis quae evellerat, ita scite in aureis poculis inligabat, ut ea ad illam rem nata esse diceres, V. 4, 54, what he had torn from the censers he attached to golden cups so cunningly that you would have said it was just made for that very purpose (1731, 1559).

For the imperfect subjunctive connected with a main general present, see 1751; for the independent present or perfect subjunctive with a main secondary tense, see 1757.

ubī.

1971. ubl, in the sense of where (709), has the ordinary construction of a relative (1812-1831). For ubl, when, see 1923-1926 and 1932-1934; as a synonym of si, if, see 2110.

quō or qui.

1972. quō, whereby, wherewith, or in old Latin sometimes qui (689), is the instrumental ablative from the relative and interrogative stem qui-. Combined with minus, the less, not, quō gives quōminus.

WITH THE INDICATIVE.

1973. The indicative is used with quo and a comparative in the protasis of a comparative period, with eo or hoc and a comparative as correlative (1393): as,

quō dēlīctum māius est, eō poena est tardior, Cacc. 7, the greater the sin is, the slower is the punishment. The eō or hōc is sometimes omitted: as, quō plūrēs sumus, plūrībus rēbus egēbimus, L. 34, 34, 6, the more numerous we are, the more things we shall need. In late writers, the comparative is sometimes omitted in the main clause, very rarely in the subordinate clause. quantō... tantō are also used like quō... eō: as, quantō diūtius cōnsiderō, tantō mihī rēs vidētur obscūrior, DN. 1, 60, the longer I puzzle over it, the more incomprehensible the question seems to me. quantō magis extergeō, tenuius fit, Pl. R. 1301, the more I polish, the slimmer it gets. This form is sometimes used with quisque or quis of indefinite persons, instead of the commoner ut... ita or sīc (1930): as, quō quisque est sollertior. hōc docet labōriōsius, RC. 31, the brighter a man is, the more wearisome he finds teaching. quō quisque est māior, magis est plācābilis īrae, O. Tr. 3, 5, 31, the greater be the man, the easier 'tis his anger to appease.

WITH THE SUBJUNCTIVE.

1974. The subjunctive is used with quo to express purpose.

quō differs but little in meaning from ut of purpose. It is used (a.) particularly in clauses containing a comparative expression, or (b.) in solemn law language.

(a.) equites omnibus in locis pügnant, quo se legionariis militibus practerrent, 2, 27, 2, the troopers fought on every kind of ground, hoping to outshine the regular infantry thereby. medico puto aliquid dandum esse, quo sit studiosior, Fam. 16, 4, 2, I think it would be well to fee your medical man, to make him more attentive. id amābo adiūtā mē quo id fiat facilius, T. Eu. 150, help me in that, I pray, that it may be the easier done. sublata erat celebritas virorum ac mulierum, quo lamentatio minueretur, Leg. 2, 65, the large attendance of both sexes was done away with, to make the weeping and wailing less harrowing. (b.) homini mortuo ne ossa legito, quo pos funus faciat, Twelve Tables in Leg. 2, 60, he shall not gather up the bones of a dead man, with intent to celebrate the funcral a second time (1586). qui edrum coift, coierit, quo quis iudicio publico condemnaretur, law in Clu. 148, whosoever of that number conspired or shall have conspired to have anybody condemned in a criminal court. Otherwise rarely used without a comparative expression, yet occasionally found thus in Plautus, Terence, Sallust, and Ovid: as, hanc simulant parere quo Chremetem absterreant, T. Andr. 472, they're pretending that she's lying in, to frighten Chremes off.

1975. quo ne, in a negative clause of purpose, is found in a disputed passage in Horace, but not again until late Latin. For non quo, non eo quo, introducing an untenable reason, see 1855.

1976. In old Latin quī, whereby, wherewith, withal, is partly felt as a live relative pronoun in the ablative, and partly as a mere conjunction of purpose; as a pronoun it may even take a preposition; as a conjunction, it may refer to a plural antecedent (689): as, quasi patricits pueris aut monērulae aut anitēs aut coturnicēs dantur, quīcum lūsitent: itidem mī haec upupa, quī mē dēlectem datast, Pl. Cap. 1002, as to the sons of gentlemen or daws or ducks or quaits are given, wherewith to play; just so to me this crow is given, to entertain myself withal. enim mihi quidem aequomst dari vehicla quī vehar, Pl. Aul. 500, in sooth 't were fair that carriages be given me, to ride withal. The indicative occurs where the subjunctive would be used in classical Latin: as, multa concurrunt simul, quī coniectūram hanc faciō, T. Andr. 511, a thousand things combine whereby I come to this conjecture.

quōminus.

1977. The subjunctive with quōminus (1972) is used to complete the sense of verbs of hindering or resisting.

Such verbs are: impedio, teneo, hinder, intercludo, deterreo, obsto, obsisto, resisto, repugno, non recuso; these verbs often have a subjunctive with ne (1960). Cicero rarely and Caesar never uses quominus with impedio or prohibeo. For the accusative and infinitive with these verbs, see 2203. quominus is also used with moveor, am influenced, fit, it is owing to, stat per aliquem, somebody is responsible, or indeed any expression implying hindrance. When the verb of hindering has a negative with it, quin is often used; see 1986.

non deterret sapientem mors, quominus rei publicae suisque consulat, TD. 1, 91, death does not hinder the wise man from working for country and friends. quid obstat, quominus sit beatus? DN. 1, 95, what is to hinder this being happy? neque recüsavit quominus legis poenam subiret, N. 15, 8, 2, and he did not decline to submit to the penalty of the law. Caesar, ubi cognovit per Afranium stare quominus proelio dimicaretur, castra facere constituit, Caes. C. 1, 41, 3, when Caesar learned that owing to Afranius there was no battle, he resolved to build a camp. si te dolor corporis tenuit, quominus ad lüdos venires, fortunae magis tribuo quam sapientiae tuae, Fam. 7, 1, 1, if it was bodily suffering that kept you from coming to the performances, I think more highly of your luck than of your sense. Terence first uses quominus thus, but only rarely. He also sometimes uses the parts separately so that the true relative and negative forces appear: as, si sensero quicquam in his te nüptiis fallaciae conari, quo fiant minus, T. Andr. 196, if I catch you trying on any trick in the matter of this marriage through which it may not come off (1451).

1978. In Tacitus, quominus is sometimes found where quin would be used in classical Latin (1986): as, nec dubitatum quominus pacem concederent, Ta. H. 2, 45, there was no hesitation in granting peace.

1979. It may be mentioned here that quo setius with the subjunctive, instead of quominus, is found twice in Cicero's earliest extant prose, and a few times in older Latin.

quin.

1980. quin is composed of qui, the ablative or locative of the interrogative and relative stem qui- (689), and ne, not. It is used in simple sentences and as a conjunctive particle.

1981. For the use of quin, why not, in questions with the indicative, see 1526. Such questions have the sense of an affirmative command or exhortation (1531): as, quin abis, Pl. MG. 1037, why won't you begone? or get you gone. quin conscendimus equos, L. 1, 57, 7, why not mount, or to horse, to horse. For the use of quin without interrogative force with the imperative or the indicative, see 1527.

1982. quin is found once with the subjunctive in a direct question: thus, quin ego hoc rogem? Pl. MG. 426, why should n't I ask this? (1563).

1983. The subjunctive with the conjunctive particle quin is used, particularly in old Latin, in connection with the common formula nulla causa est or its equivalents.

Such a subjunctive may be regarded as original (1786) or as due to the indirect form of question (1773).

nülla causast quin mē condonēs cruci, Pl. R. 1070, there's no reason why you should n't deliver me up to execution. quin dēcēdam, nülla causa est, Fam. 2, 17, 1, there is no reason why I should not retire. quid causaest quin in pistrinum rēctā proficiscar viā? T. Andr. 600, what's the reason I don't march straight into the mill? haud causificor quin eam habeam, Pl. Aul. 755, I don't quibble against keeping her.

1984. mirum quin with the subjunctive is used by Plautus in sarcastic expressions where mirum is ironical: 22, mirum quin tū illö tēcum divitiās ferās, Pl. Tri. 495, drange enough, how you can't lake your money there with you, that is to Hades.

1985. The subjunctive with quin (or ut non) is used after non possum, or non possum with an infinitive, usually facere, and with fieri non potest: as.

non enim possum quin exclamem, euge, euge, Lysiteles, wdlir, Pl. Tri. 705, upon my word I must cry bravo, bravo, Lysiteles; encore! facere non potui quin tibl sententiam declararem, Fam. 6, 13, I could not help giving you my views. fieri nüllö modo poterat, quin Cleomeni parceretur, V. 5, 104, it was impossible not to spare Cleomenes. Eheu, nequed quin fleam, quom abs te abeam, Pl. MG. 1342, O well-a-day, I needs must weep, for that from thee I part. non potuisti üllö modo facere, ut mihi illam epistulam non mitteres, Att. 11, 21, 1, you could not get along at all without writing me that letter (1965).

1986. The subjunctive with quin is used in clauses which complete the sense of verbs of restraining, abstaining, delaying, or doubting, when such verbs have a negative, expressed or implied.

Such verbs are (a.) restraining: temperō mihī, teneō, restrain, retineō, contineō, dēterreō, reprimō. abstaining: praetermittō, intermittō. delaying: cunctor, differō, exspectō, recūsō; nōn multum, nihil, paulum abest. (b.) doubting: dubitō, dubium est; a doubt may also be implied in other words, or forms of words: as, nōn metuō, nōn abest suspīciō, &c.

- (a.) neque sibi hominës barbards temperätürds existimābat, quin in provinciam exirent, 1, 33, 4, and he thought, as they were sawages, they would not restrain themselves, but would sally out into the province. Vix më contined quin involem monstro in capillum, T. Eu. 859, I scarce can keep from flying at the caitiff's hair. nihil praetermisi, quin Pompēium ā Caesaris confunctione āvocārem, Ph. 2, 23, I left no stone unturned to prevent Pompey from joining Caesar. abstinēre quin attingās non queās, Pl. 8. 915, you can't keep from touching it. (b.) non dubitat, quin tē ductūrum negēs, T. Andr. 405, he does n't doubt that you'll refuse to marry. quis dubitet, quin in virtūte dīvitiae sint? Par. 48, who can doubt that there is money in virtue? neque abest suspīcio quin ipse sibi mortem consciverit, 1, 4, 4, and ground is not wanting for the belief that he made away with himself.
- 1987. non dubito has other constructions: (a.) Indirect question. (b.) Accusative with the infinitive (in some authors: chiefly Nepos and Livy and later writers). (c.) Meaning not hesitate, the infinitive alone (2169). quin seldom follows this meaning.
- (a.) non dubito, quid nobis agendum putes, Att. 10, 1, 2, I have no doubt about what you think is our duty to do. (b.) neque enim dubitabant hostem venturum, L. 22, 55, 2, for they firmly believed the enemy would come. (c.) quid dubitamus pultare? Pl. B. 1117, why do we hesitate to knock? nobite dubitare quin huic credatis omnia, IP. 68, do not hesitate to trust all to him.
- 1988. The subjunctive with quin is often used after general negative assertions, or questions implying a negative: as,

nemo fuit omnīno mīlitum quīn vulnerārētur, Caes. C. 3, 53, 3, there was absolutely not a single soldier but was wounded. nūliust Ephesi quīn seiat, Pl. B. 336, there's not a soul at Ephesus but knows. quis in circum vēnit, quīn is ūnōquōque gradū dē avāritiā tuā commonērētur? V. 1, 154, who came to the circus without being reminded of your avarice at each and every step? nūlla fuit cīvitās quīn partem senātūs Cordubam mitteret, non cīvis Rōmānus quīn convenīret, Caes. C. 2, 19, 2, there was not a community but sent a part of its local senate to Corduba, not a Roman citizen, but went to the meeting. For quī non after such expressions, see 1821. The main sentence often has tam, ita, sīc, or tantus: as, nēmo est tam fortis, quīn rēī novitāte perturbētur, 6, 39, 3, there was nobody so brave but was demoralized by the strangeness of the situation. nīl tam difficilest quīn quaerendō investīgārī possiet, T. Hau. 675, there's naught so hard but may by searching be tracked out. Instead of quīn, ut non or quī non is often used in such combinations (1821).

1989. The subjunctive in an untenable reason, negatively put, is sometimes introduced by non quin instead of non quod non or non quo non (1855): as, non quin pari virtute alii fuerint, Ph. 7, 6, not that others may not have been his peers in virtue.

1990. quin is used very rarely instead of quominus to introduce clauses completing the sense of verbs which have no negative expressed or implied: as, once each in the Bellum Alexandrinum, in Tacitus, and in Seneca's prose.

dum, donec, quoad, quamdiū.

1991. With the temporal particles dum, while, until, and donec, until (in old Latin donicum and in Lucretius donique), may be conveniently treated the relative quoad (that is quo combined with ad), while, until, and the comparative quamdin, as long as.

1992. dum, while, means originally a while (1151): as, circumspice dum, Pl. Tri. 146, look round you a while, a minute, just look round (1573). dum servi meī perplacet mihi consilium, dum haud placet, Pl. Merc. 348, one while my slave's plan suits me completely, another while it does n't suit. dum...dum, Accius in DN. 2, 89, one while ... another.

1993. As a pure conjunctive particle, dum, while, means either (A.) in the time while, or (B.) all the time while; in the latter sense quoad and quamdid are also used. From all the time while, dum comes to mean (C.) as long as, provided; and (D.) until; in this sense quoad and donec are also used.

1994. The indicative is used in a protasis introduced by dum, quoad, or quamdiū, while; and the subjunctive in a protasis introduced by dum, provided, or until.

The subjunctive is also used for special reasons, as in indirect discourse (1725), by attraction (1728), of action conceivable (1731), or by late writers to express repeated past action (1730).

Digitized by Google

(A.) dum, in the time while.

1995. The present indicative is regularly used with dum, in the time while (1739).

dum sometimes has as correlative subito, repente; iam, interea, &c.

The main verb may be present, future, or past; as, dum haec dicit, abilt hora, T. Eu. 341, while he thus prated, sped an hour away. Infici debet is artibus quas si, dum est tener, combiberit, ad māiora veniet parātior, Fin. 3, 9, he should be imbued with such arts as will, if absorbed while he is young, render him the better equipped to deal with weightier business. nunc rem spsam, ut gesta sit, dum breviter vobis demonstro, attendite, Tul. 13, now give your attention to the case itself, while I set forth to you briefly how it occurred. dum in his locis Caesar moratur, ad eum legati venērunt, 4, 22, 1, while Caesar tarried in these regions, some envoys came to him. dum haec aguntur, voce clara exclamat, Pl. Am. 1120, while this was going on, with clarion voice he cries aloud. haec dum aguntur, interea Cleomenes iam ad Helori litus pervenerat, V. 5, 91, while this was going on, Cleomenes meantime had already arrived at the shore of Helorum. The phrase dum haec geruntur, meanwhile, is often used by the historians to shift the scene: as, dum haec in Venetis geruntur, Q. Titurius Sabinus in finēs Venellorum pervēnit, 3, 17, 1, while this was going on among the Veneti, Sabinus arrived in the territory of the Venelli. The present indicative is sometimes retained in indirect discourse, chiefly in poetry or late prose: as, dic, hospes, Spartae nos të hic vidisse iacentis, dum sanctis patriae lēgibus obsequimur, TD. 1, 101, tell it at Sparta, friend, that thou hast seen us lying here, obedient to our country's holy laws, dicit sesse illi anulum, dum lûctat, dêtrāxisse, T. Hec. 829, he says that, in the struggle, he pulled off her ring.

1996. The future is rare and chiefly confined to old Latin: as.

animum advortite, dum hüius argümentum Eloquar comoediae, Pl. prol. Am. 95, attention lend, while I set forth the subject of this comedy. dum pauca dicam, breviter attendite, V. 3, 163, while I speak briefly, give me your attention a few moments.

1997. The imperfect indicative is rare; the imperfect subjunctive is sometimes used, chiefly by the historians: as,

(a.) dum haec Vēis agēbantur, interim capitolium in ingentī perīculo fuit, L. 5, 47, I, while this was going on at Vei, the capitol meanwhile was in terrible peril. The pluperfect of resulting state is rarer: as, dum in unam partem oculos hostium certamen averterat, pluribus locis capitur murus, L. 32, 24, 5, while the eyes of the enemy were turned away in one direction toward the fight, the wall is carried in several places (1615). (b.) dum se rex averteret, alter ēlātam securim in caput dēlēcit, L. I, 40, 7, while the king was looking another way, the second man raised his axe and brought it down on his head.

1998. The clause with dum often denotes the cause of the main action, particularly when the subjects of both verbs are the same and the action of the protasis is coincident with that of the apodosis (1733).

dum docent, discunt, Sen. E. 7, 8, while they are teaching, they are learning, or, by teaching they learn. Inimirum didici etiam, dum in istum inquiro, artificum nomina, V. 4, 4, preposterous as it may seem, in hunting up evidence against the defendant, I have actually learned artist' names. The main action is often one not anticipated or desired: as, ita dum pauca mancipia retinere volt, fortūnās omnis libertātemque suam perdidit, Caecil. 56, so in her attempt to keep a few human chattels, she sacrificed all her possessions and her own liberty. dum vitant stulti vitia, in contrāria currunt, H. S. 1, 2, 24, while fools essay a vice to shun, into its opposite they run. Sometimes with the perfect: as, dum Alexandrī similis esse voluit, L. Crassī inventus est dissimilimus, Br. 282, from his desire to be like Alexander, he came out just the opposite of Crassus.

(B.) dum, quoad, quamdiū (donec), all the time while.

r999. dum, quoad, or quamdiü, all the time while, often has as correlative tamdiü, tantum, tantummodo, tantisper, üsque, or ita. When tamdiü is used, quam often stands for quamdiü.

2000. (1.) When the main verb is present or future, the protasis with dum, quoad, or quamdit, all the time while, is usually in the same tense as the main verb: as,

mane dum scribit. Pl. B. 737, wait while he writes. aegrötö dum anima est, spēs esse dicitur, Att. 9, 10, 3, as long as a sick man has breath he is said to have hope. vidua vivitō vel fisque dum rēgnum optinēbit Iuppiter, Pl. Men. 727, may'st widowed live e'en long as Jupiter shall reign. ego tē meum esse dicī tantisper volō, dum quod tē dignumst faciēs, T. Hau. 106, I'll have thee called my son but just so long as thou shalt act as doth become thee. dum Latinae loquentur litterae, quercus huic locō nōn deerit, Leg. 1, 2, as long as Latin literature has the gift of speech, this spot will not lack its oak (1733). quamdifi quisquam erit qui tē dēfendere audeat, vivēs, C. 1, 6, as long as there shall be a soul who will venture to defend you, you shall live on. discēs quamdifi volēs, tamdifi autem velle dēbēbis quoad tē quantum proficiās nōn paenitēbit, Off. 1, 2, you shall study as long as you want to, and it will be proper for you to want to, as long as you are satisfied with your progress. quoâd vixit, crēdidit ingēls pauperiem vitium, H. S. 2, 3, 91, all his life long he fancied narrow means were monstrous sin. quoad, as long as, is not found in Terence.

- 2001. (2.) With quamdit the perfect is used when the main verb is perfect; with dum or quoad the perfect or imperfect is used when the main verb is perfect or pluperfect, and the imperfect usually when the main verb is imperfect: as,
- (a.) quorum quamdiu mansit imitatio, tamdiu genus illud dicendi vixit, DO. 2, 94, as long as the imitation of these men lasted, so long was that style in vogue. tenuit locum tamdiu quam ferre potuit laborem, Br. 236, he held the position as long as he could stand the work. In this use quamdiu is found first in Cicero.
- (b.) vixit, dum vixit, bene, T. Hec. 461, he lived well all the time he lived (1733). avus noster quoad vixit, restitit M. Grātidio, Leg. 3, 36, our grandfather as long as he lived, opposed Gratidius.

(c.) Massiliënsës quoad licëbat, circumvenire noströs contendëbant, Caes. C. 1, 58, 1, as long as the Massilia people had a chance, they kept trying to surround our men. dum necesse erat, rësque ipsa cögëbat, ûnus omia poterat, RA. 139, as long as it had to be, and circumstances demanded, one man controlled the world (1733). From Sallust on, the present of vivid narration (1590) is occasionally found with dum in this sense.

2002. In poetry and in late prose writers, beginning with Lucretius and Livy, donce is used in the sense of all the time while, usually with the indicative, but sometimes with the subjunctive of repeated past action: as, donec gratus eram tibi, Persarum vigui rege beatior, H. 3, 9, 1, as long as I was loved of thee, I four-ished happier than the Persians' king. donec armati confertique abibant, peditum labor in persequendo fuit, L. 6, 13, 4, as long as they were moving off under arms and in close array, the task of pursuit fell to the infantry. vulgus trucidatum est donec ira et dies permansit, Ta. 1, 68, the rank and file were butchered as long as wrath and daylight held out. nihil trepidabant, donec continenti velut ponte agerentur, L. 21, 28, 10, the elephants were not a bit skittish as long as they were driven along what seemed a continuous bridge (1730). The future is rare: as, natus enim debet quicumque est velle manere in vita, donec retinebit blanda voluptas, Lucr. 5, 177, whoe'er is born must wish in life to abide, so long as him fond pleasure shall detain. donec eris felix, multos numerabis amicos, O. Tr. 1, 9, 5, as long as fortune smiles, thou troops shalt count of friends.

(C.) dum, as long as, provided, so.

2003. The present and imperfect subjunctive are used in provisos introduced by dum, as long as, provided, so.

dum is sometimes accompanied by modo, only, or quidem, that is; or (from Terence on) modo is used without dum. The negative is ne (in late Latin non); ne sometimes has as correlative ita.

öderint dum metuant, Poet. in Suet. Cal. 30, let them hate, so they fear. absit, dum modo laude partă domum recipiat se, Pl. Am. 644, let him go, so only he come home with glory won. postulăbant pro homine miserrimo, qui vel ipse sese în cruciatum dari cuperet, dum de patris morte quaereretur, KA. 119, they made the request in behalf of a pitiable wretch, who would be only too glad to be put to the rack himself, so his father's death might be investigated. itaque dum locus comminus pügnandi daretur, aequo animo singulas binis nāvibus obiciebant, Caes. C. 1, 58, 4, therefore, so a chance was given to fight hand to hand, they did not mind pitting one of their vessels against two of the enemy's. si ei permissum esset, ita id sacrum faceret, dum ne plüs quinque sacrificio interessent, L. 39, 18, 9, if he were allowed, he might perform the sacrifice far better, provided that not more than five people should have a part in the ceremonial. dum quidem nequid perconteris quod non lubeat proloqui, Pl. Anl. 211, provided at least you ask nothing that I may not like to disclose. volet, civis modo haec sit, T. Eu. 889, he'll consent, only let her be a free born maid. māgno mē metū liberābis, dum modo inter mē atque tē mūrus intersit, C. 1, 10, you will relucve me of great fear, provided only there be a wall interposed between you and myself.

(D.) dum, quoad, donec, until.

2004. dum, quoad or donec, until, often has as correlative üsque, üsque eo, üsque ad eum finem or tamdiü.

dum, until.

2005. The subjunctive present is used in a protasis introduced by dum, *until*, when the main verb denotes either indefinite or present time, and the subjunctive imperfect when the main verb is past.

The subjunctive is an extension of the subjunctive of desire (1540); the clause denotes something expected or proposed.

is dum veniat sēdēns ibi opperībere, Pl. B. 48, you shall sit there waiting till he comes. Orandi sunt, ut si quam habent ulcīscendī vim, differant in tempus aliud, dum dēfervēscat īra, TD. 4, 78, we must always ask such people, if they have any chance to take vengance, to put it off to some other time, till their rage cool down. cēnseō latendum tantisper ibidem, dum effervēscit haec grātulātiō et simul dum audiāmus, quemadmodum negōtium cōnfectum sit, Fam. 9, 2, 4, I advise lying low where you are, while the present congratulation excitement is cooling off, and at the same time till we may hear how the job was done. dum rēliquae nāvēs eō convenīrent, in ancoris exspectāvit, 4, 23, 4, he waited at anchor till the rest of the vessels should gather there (1725). Verginius dum collēgam cōnsuleret morātus, dictātōrem dīxit, L. 4, 21, 10, Verginius, after waiting till he should consult his colleague, appointed a dictator. observēvit dum dormitāret canēs, Pl. Tri. 170, he watched till the dog should be napping.

2006. The present indicative with dum, while, is sometimes used where the subjunctive might be expected with dum, until (1593). Other indicative tenses are rarely thus used: as,

(a.) expectābō, dum venit, T. Eu. 206, I will wait while he comes. ego hic tantisper, dum exis, tē opperiar, Pl. Most. 683, I'll wait for you here a while till you come out. ego in Arcānō opperior, dum ista cōgnōscō, Att. 10, 3, for myself I am vasiting at the Arcae place, till I ascertain this. (b.) mihī quidem ūsque cūrae erit, quid agās, dum quid ēgerīs, scierō, Fam. 12, 19, 3, for me I shall be anxious all the time to know what you are doing, till I know what you have done. mānsit in condicione ūsque ad eum finem dum iūdicēs rēiectī sunt, V. a. pr. 16, he stuck to his bargain till the jurors were challenged.

quoad, donec, until.

2007. quoad or donec, until, introduces a protasis in the present subjunctive when the main verb is present or future; and in the perfect indicative when the main verb is past.

quoad is found once in Plautus with the imperfect subjunctive (2008); in other authors here and there with both moods; not in Tacitus. With donec the present subjunctive is found once in Plautus, rarely in late Latin and in poetry; the perfect indicative is found at all periods; the present indicative (1500), found once in Plautus, is poetic and late. But donec is rarely used by Cicero, and never by Caesar or Sallust. donicum is found in old Latin (not in Terence) with the indicative (2009), and once in Nepos with the subjunctive of indirect discourse. donique is found four times in Lucretius with the indicative, always before vowels (2009). doneque and doneque cum seem to occur a few times in Vitruvius.

- (a) ego hic cōgitō commorārī, quoad mē reficiam, Fam. 7, 26, 2, I am thinking of staying here till I feel better. ea continēbis, quoad ipse tē videam, Att. 13, 21, 4, you will keep this back till I see you myself. expergēfactique secuntur inānia saepe cervōrum simulācra, dōnec discussis redeant errōribus ad sē, Lucr. 4, 995, and when awakened, often they still keep hunting the shadowy forms of stags, until the delusion is shaken off and they come to themselves. māgnus mīrandusque cliēns sedet ad praetōria rēgis, dōnec Bīthỳnō libeat vigilāre tyrannō, J. 10, 160, a vassal great and strange he sits in the king's gate, till it may suit his oriental majesty to wake. inter eadem pecora dēgunt, dōnec aetās sēparet ingenuōs, Ta. G. 20, they always live among the same flocks and herds, till maturity puts the free-born by themselves.
- (b) nostri reppulērunt neque finem sequendi fēcērunt, quoad equitēs praecipitēs hostēs ēgērunt, 5, 17, 3, our people routed them and did not give up the pursuit till the cavalry drove the enemy headlong. Milō cum in senātū fuisset eō diē quoad senātus est dīmissus, domum vēnit, Milɔ 28, after staying in the senate that day till the senate adjourned, Milo went kome. numquam dēstiti ōrāre ūsque adeō dōnec perpulit, T. Andr. 660, he never ceased to tease until he gained his point. ūsque eō timuī, dōnec ad rēiciundōs iūdicēs vēnimus, V. 1, 17, I was afraid all the time till we came to challenging jurors. The present indicative of vivid narration (1590) is found in Vergil and Livy: as, socii cōnsurgere tōnsīs, dōnec rōstra tenent siccum et sēdēre carīnae omnēs innocuae, V. 10, 299, with one accord the shipmates rose to oars, until the beaks dry land attain, and keels all sat unscathed.
- 2008. An imperfect subjunctive is rarely found with quoad, until (1725): as. haec dies praestitūtast, quoad referret, Pl. Ps. 623, this day was set by which he was to pay. exercebatur currendo et lūctando ad eum finem, quoad stans complecti posset, N. 15, 2, 5, he used to practise running and wrestling, till he could give a grip standing.
- 2009. Other constructions occur, chiefly in old Latin or poetry, with donec, or donicum, until. (a.) The future perfect: as, haud desiinam, donec perfects hoc, T. Ph. 419, I shall not stop till I have finished this. delicta maiorum lues, donec templa refeceris, H. 3, 6, 1, for sins of sires thou shalt atone, till thou hast shrines repaired. (b.) The future: coquito lisque donec commadebit bene, Cato, RK. 156, 5, boil until it is very soft. ter centum regnabitur annos, donec geminam partu dabit llia prolem, V. 1, 272, for thrice a hundred years there will be kings, till llia gives birth to twins. (c.) The perfect indicative, less frequently the present, introductory to a general present: impedit piscis usque adeo, donicum eduxit foras, Pl. Tru. 38, he always draws his net about the fish, until he's brought them out (1613). Usque mantant neque id faciunt, donicum parietes ruont, Pl. Most. 116, they keep waiting and don't do it until the walls are falling. (d.) The pluperfect indicative: horriferis accibant vocibus Orcum, donique eos vita privarant vermina saeva, Lucr. 5, 996, with horrid cries on Death they'd call till gripings sore had set them free from life. The imperfect indicative is found once in Tacitus, who also has the infinitive of intimation (1539) once or twice. An imperfect or pluperfect subjunctive sometimes occurs where purpose is intimated, and in Livy and late Latin to express repeated past action: as, donec egregius properaret exsul, H. 3, 5, 45, till he could hasten forth a peerless exile. trepidationis aliquantum edebant, donec quietem ispectimor fecisset, L. 21, 28, 11, the elephants always displayed some nervousness, till terror itself restored quiet (1730).

quandō.

2010. quando, originally a temporal particle, has the meaning when, which readily passes over to a causal meaning, since, because. In both meanings it introduces the indicative. For special reasons, however, the subjunctive is used, as in indirect discourse (1725) or of action conceivable (1731). quando is also used to introduce a conditional protasis (2110).

In simple sentences, temporal quando is used in pronoun questions (1526). As an indefinite adverb it has the meaning ever.

(A.) TEMPORAL quando.

2011. quando, when, introduces a temporal clause with the indicative.

The time is often indefinite or iterative; so usually in old Latin. quando often has turn as correlative.

fio Iuppiter quando lubet, Pl. Am. 864, I turn into Jupiter at my sweet will. laudāto quando illud quod cupis effecero, Pl. Cu. 364, cry your bravo when I've done what you desire. quando occāsio illaec periit, post sēro cupit, Pl. Aul. 249, when that chance is lost, he wants it all too atte (1613). quando omnēs creātī sunt, tum ad eos deus fātur, Tim. 40, when all were created, then to them spake the god. quando pars māior in eandem sententiam ībat, bellum erat consēnsum, L. 1, 32, 12, when the majority voted for the same motion, war was always agreed upon. Temporal quando is found sporadically at all periods; not in Terence or Caesar.

2012. quandoque, whenever, is found once in the Twelve Tables, a few times in Cicero (chiefly in legal formulae), three times in Horace, and here and there in later authors. Not in Caesar.

(B.) CAUSAL quando.

2013. quando, since, seeing that, introduces a causal clause with the indicative.

The reason is usually one known to the person addressed or one generally known (1884). quando is often strengthened by quidem.

quando hic servio, haec patriast mea, Pl. Per. 641, now that I am a slave here, this is my country. quin ergo abeis, quando responsamst? Pl. MG. 1085, why don't you go then, since you've had your answer? melius est, quandoquidem hoc numquam mi ipse voluit dicere, T. Ad. 639, better so, since he would n't ever tell me about it of his own accord. quando me in hunc locum dedüxit oratio, docebo, DN. 3, 43, seeing that my discourse has brought me to this point, I will show. haec detur cura censoribus, quandoquidem eos in re publices semper volumus esse, Leg. 3, 47, let this be the charge of the censors, seeing that we want such officers always in our state. pro urbe ac penätibus dimicandum esse, quando Italiam tueri nequisent, L. 22, 8, 7, that they must fight for home and country, now that they had failed to preserve Italy (1724). Causal quando is found at all periods, though not in Caesar, and in Cicero's orations only with quidem.

2014. quandoque, inasmuch as, is used a few times in a formal or legal sense in Cicero and Livy: as, quandoque hisce homines iniussu populi Romani Quiritium foedus ictum iri spoponderunt, L. 9, 10, 9, inasmuch as these persons have promised that a covenant should be made, without the order of the Roman nation of Quiritis.

sī.

2015. sī, in early Latin sei, is originally a locative, meaning under those circumstances, so. With the enclitic -oe, it forms sice or sic, so. The two are sometimes found as correlatives in colloquial style: as, sic scribēs aliquid, sī vacābis, Att. 12, 38, 2, so you shall have time, so you will write something.

CONDITIONAL PERIODS.

2016. A protasis introduced by si, so, if, or nisi, unless, if not, states a condition; the apodosis states action occurring under that condition. The conditional protasis and apodosis combined make a Conditional Period.

Thus, sī dies est, if it is day, is a conditional protasis; combined with an apodosis, lucet, it is light, it makes a conditional period: sī dies est, lucet, Inv. 1, 86, if it is day, it is light.

2017. A parenthesis with ut (1943) is added when the speaker asserts that the action of the protasis is not only assumed, but actually occurs: 23, 51 virtūs dīgna est gloriātione, ut est, beātus esse poterit virtūte ūnā praeditus, Fin. 4, 51, if virtus is entitled to glorification, as it really is, he will find it possible to be happy in the possession of virtue alone. SI nox opportūna est ēruptionī, sīcut est, haec profecto noctis aptissima hora est, L. 7, 35, 10, if night is always the very best time.

2018. The apodosis is usually declarative. Often, however, it is interrogative, exclamatory, or imperative, or it may take any other form which the thought or the context may require. The apodosis has rarely a correlative to sī: as, igitur, it follows that, idcirco, for all that, tum, then, ita, sīc, only, ea condicione, on condition; at, but, tamen, nevertheless, certe, saltem, at any rate, tum dēnique, tum dēmum, then and not till then.

2019. sī is sometimes followed by quidem or, from Cicero on, by modo: sī quidem, that is if, since, even if, sī modo, if only. sī tamen, at least if, is found in the Augustan poets and in late writers. sīve . . . sīve (seu . . . seu) or, in old Latin, sī . . sīve, whether . . . or, with the indicative of the subjunctive of the indefinite second person (1556), leaves a choice between two cases possible. By abbreviation of the protasis sīve becomes a coordinating particle: see 1672.

2020. The negative of sī is sī non, if not (sī nomo, sī nullus, &c.), or nisi, unless, if not, used especially of an exception or after a negative. nisi sī, chiefly in old, colloquial, or late Latin, or, particularly in solemn language or poetry, nī is sometimes used for nisi. A restriction, usually an ironical afterthought, may be introduced by nisi forte (rare before Cicero) or nisi vēro (only in Cicero) with the indicative.

nisi is sometimes found in an adversative sense in old and colloquial Latin, especially after nesciō; from Cicero on, it may be strengthened by tamen. For nisi quod, see 1848.

2021. When a second conditional period is opposed to a first, it is sometimes introduced by si (or si autem), but usually by sin (or sin autem). If the second period is negative, and its verb is not expressed, minus or aliter is preferred to non.

CLASSES OF CONDITIONAL PROTASES.

- 2022. Conditional protases may be divided into two classes:
- 2023. I. Indeterminate protases, that is such as merely suppose an action, without implying either its occurrence or its non-occurrence; these may take:
- (A.) Any tense of the indicative required by the sense; or (B.) the present subjunctive, less frequently the perfect subjunctive, to express a condition in the future.
- 2024. II. Protases of ACTION NON-OCCURRENT, that is such as suppose action not taking place. These take the imperfect or pluperfect subjunctive.

Thus, in the period sī dies est, lucet, Inv. 1, 86, if it is day, it is light, the protasis if it is day is indeterminate, neither implying that it is, or is not day. But in sī vīveret, verba ēius audīrētis, if he were alive, you would hear his evidence, RC. 42, the protasis denotes action non-occurrent, if he were alive, implying but he is not. The whole period, like the protasis, is either an Indeterminate Period or a Period of Action non-occurrent.

I. INDETERMINATE PROTASES.

(A.) INDICATIVE USE.

2025. The indicative in a conditional protasis may state present, past, or future time.

The mood and tense of the apodosis are determined by the sense. The following combinations occur:

343

(1.) PROTASIS IN THE PRESENT.

2026.

(a.) Apodosis in the Present.

sī sunt dī, beneficī in homines sunt, Div. 2, 104, if there are gods, they are kind to men. si nescis, tibi ignosco, Fam. 10, 26, 3, if you do not know, I pardon you. deus sum, si hoc itast, T. Hec. 843, I am a god, if this is so. erus si tuos domist, quin provocas? Pl. Ps. 638, in case your master is at home, why don't you call him out? hoc mortuo, aut si qui ex reliquis excellit dignitate, succedit, aut, si sunt plures pares, de principatu contendunt, 6, 13, 9, when this man dies, if there is any one of the rest superior in position, he always takes his place; or if there are several with equal claims, they have a contest about the supremacy. si vis, potes, H. S. 2, 6, 39, you can, if you will. in corpore si quid eius modi est quod reliquo corpori noceat, id uri secarique patimur, Ph. 8, 15, in the human body if there is anything likely to damage the rest of the body, we always allow it to be cauterized and cut. sī cui vēnae sīc moventur, is habet febrim, Fat. 15, if a man's pulse beats thus and so, he always has fever. The present is sometimes loosely used of future time (1593): as, sī illum relinguo, eius vitae timeo, T. Andr. 210, if I desert him, I tremble for his life. assequor omnia, si propero; si cunctor, amitto, Att. 10, 8, 5, I shall compass all my ends, if I hurry; if I delay, I shall lose everything. castra nunc vobis hostium praedae do, sī mihl pollicemini vos fortiter operam navatūros, L. 7, 16, 4, I give you the camp of the enemy as booty now, if you promise me you will quit you like men.

2027. (b.) Apodosis in the Perfect.

sī hominēs rationem ā dīs datam in fraudem convertunt, non darī illam quam darī hūmāno generī melius fuit, DN. 3, 78, if men apply reason, the gift of the gods, to purposes of mischief, it would have been better it should not be given to the human race than given (1495). The perfect of the apodosis is ordinarily used of future time (1612): as, occidī, sī tū vēra memorās, Pl. Most. 369, I'm a dead man, if what you say is true. nunc sī indicium facio, interii; sī taceo, interii tamen, Pl. MG. 306, now if I tell, I'm dead and gone; if I keep dark, I'm dead and gone the same. nī illos hominēs expello, ego occidī plānissumē, Pl. St. 401, if I don't drive those people off, all's up with me. nam sī argentum prius adiert, continuo nos ambō exclūsī sumus, Pl. As. 360, for if he brings the money first, then we're at once left out in the cold.

2028. (c.) Apodosis in the Imperfect.

sed sī domīst, Dēmaenetum volēbam, Pl. As. 452, but if he is at home, Demaenetus I wanted. iam tum erat senex, senectūs sī verēcundos facit, T. Ph. 1023, he was already old, if age is what makes shamefastness. sī sīngula vos forte non movent, ūniversa certē tamen movēre dēbēbant, DN. 2, 163, if these points taken severally do not affect you, yet collectively they surely should have done so (1495).

2029.

(d.) Apodosis in the Pluperfect.

cesseram, sī aliēnam ā mē plēbem fuisse voltis, quae non fuit, invidiae, Sest. 64, I had yielded, if you will have it that the commons were opposed to me, though they were not, to hatred. hoc mī dīnum relicuom fuerat malum, sī puerum ut tollam cogit, T. Hec. 570, this was the only evil left in store for me, if he compels me to adopt the child.

2030.

(e.) Apodosis in the Future.

sī interpellās, ego tacēbō, Pl. Men. 1121, if you persist in breaking in, I'll hold my tongue. hīc tū sī laesum tē esse dīcis, patiar et concēdam; sī iniūriam tibī factam quereris, dēfendam et negābō, Caecil. 58, if you assert that you are hurt in this matter, I am perfectly willing to admit it; but if you complain that it is a violation of your rights, I shall stoutly maintain the contrary. Often in this combination the present is loosely used of future time (1593): as, nunc sī ille hūc salvos revenit, reddam suom sibī; sī quid eō fuerit, habeō dōtem unde dem, Pl. Tri. 156, now if our absent friend comes safely back, I'll give him back his own again; if anything befalls him, I've wherewith a dower to give. nisi id cōnfestim facis, ego tē trādam magistrātuī, N. 15, 4, 3, if you do not do it at once, I will hand you over to a magistrate. sī pāce fruī volumus, bellum gerendum est; sī bellum omittimus, pāce numquam fruēmur, Ph. 7, 19, if we wish to enjoy peace, we shall have to make war; if we give up war, we never shall enjoy peace. convincam, sī negās, C. 1, 8, I will bring it home to you, if you deny it. tibī dīvitās dabō, sī impetrās, Pl. MG. 1213, I'll make you rich, if you succeed.

2031. (f.) Apodosis in the Future Perfect.

si nequed facere ut abeas, egomet abiero, Pl. Poen. 442, if I can't make you go, I'll instantly begone myself (1629). si id non facis, ego quod me in te sit facere dignum invenero, T. Hau. 107, if you don't do it, I will have a proper course devised to use with you.

2032. (g.) Apodosis in the Imperative.

dā mihī hōc, mel meum, sī mē amās, Pl. Tri. 244, give me this, honey mine, an thou lovist me. redargue mē, sī mentior. Clu. 62, refute me, if I am not speaking the truth. dēsilīte, mīlitēs, nisi vultis aquilam hostibus prōdere, 4, 25, 3, jump overboard, men, unless you choose to abandon your eagle to the enemy, nī iūdicātum facit, sēcum dūcitō, vincitō compedibus, Twelve Tables in Gell. 20, 1, 45, unless he satisfies the judgement, the complainant shall take him with him, and put him in gyves (1593, 1575). quā rē, sī hacc ita sunt, sīc mē colitōte ut deum, CM. 81, therefore, if this is so, you are to honour me as a god.

2033. (k.) Apodosis in the Present Subjunctive.

sī quid habēs certius, velim scīre, Att. 4, 10, 1, if you have anything more definite, I should like to know (1554). sīn aliter animātus ēs, bene, quod agās, ēveniat tibī, Pl. Tri. 715, but if you're minded otherwise, may all you do betide you well (1540). quod sī non possumus facere, moriāmur, Ph. 7, 14, if we cannot do it, let us die (1547). sī mihī filius genitur, isque prius moritur, et cētera, tum mihī ille sit hērēs, DO. 2, 141, if a son is born to me, and the boy dies before &c., &c., then so and so is to be my heir (1593, 1548). sī est spēs nostrī reditūs, eam confirmēs, Fam. 14, 4, 3, if there is a hope of my coming back, strengthen that hope (1550). eum sī reddis mihi, praetereā ūnum nummum nē duīs, Pl. Cap. 331, if you restore my boy to me, you need n't give one penny more (1551). sī hīc pernoctō, causae quid dīcam? T. Ad. 531, if I sleep here, what reason can I give (1563)?

(2.) PROTASIS IN THE PERFECT.

(a.) Apodosis in the Present.

2034.

sī quid vēnāle habuit Hēius, sī id quantī aestimābat, tantī vēndidit, dēsinō quaerere cūr ēmeris, V. 4, 10, if Hejus had anything for sale, if he sold it at his own valuation, I stop enquiring why you bought. sī vērē est ā nōbīs philosophia laudāta, ēius trāctātiō optimō quōque dignissima est, Ac. 2, 6, if philosophy has been extolled by me with justice, its study is eminently worthy of the good. sī honōris causā statuam dedērunt, inimīcī nōn sunt, V. 2, 150, if they contributed a statue as a compliment, they are not enemies. postēs quōiusmodī? . . . etiam nunc satis bonī sunt, sī sunt inductī pice, Pl. Most. 818, what think you of the posts? . . . they're pretty good even now, if they are only smeared with pitch. This combination is common in general conditional periods (1613): as, hominēs aegrī sī aquam gelidam bibērunt, prīmō relevārī videntur, C. 1, 31, if sick people drink cold water, at first they always seem refreshed. sī quod est admissum facinus, idem dēcernunt, 6, 13, 5, if a crime has been committed, they also act as judges. abiūrant, sī quid crēditumst, Pl. Cur. 496, they always swear they haven't it, if anything is trusted them. sī puer parvus occidit, aequō animō ferendum putant, TD. 1, 93, if a baby dies, they always think the affliction should be borne with resignation.

2035. (b.) Apodosis in the Perfect.

sī peccāvī, Insciēns fēcī, T. Hau. 631, if I've done wrong, it was in ignorance. haec bona in tabulās pūblicās sī rediērunt, tabulae pūblicae conruptae sunt, RA. 128, if this property has been entered on the state books, then the state books have been tampered with. quo in bello sī fuit error, commūnis ēi fuit cum senātū, Ph. 11, 34, if there was a mistake in this war, it was common to him and the senate. interiī, sī abūt, Pl. Ps. 910, I'm lost, if he has gone (1668). Also in general periods (1613): as, anīmī sī quandō vēra vidērunt, ūsī sunt fortūnā atque cāsū, Div. 2, 108, if the mind has ever seen the truth, it has used in every case luck and chance. studiosē equidem ūtor nostrīs poētīs, sed sīcubi illī dēfēcērunt, vertī multa dē Graecīs, TD. 2, 26, I use our own poets carefully, it is true; but whenever they have failed me, I have always translated a great deal from Greek.

2036. (c.) Apodosis in the Pluperfect.

si illud iure rogătum dicere ausi sunt, oblitine erant? PC. 45, if they ventured to say that that measure was brought forward in due form, had not they forgotten?

2037. (d.) Apodosis in the Future.

sī quis oriente canīculā nātus est, is in marī non moriētur, if anybody is born when the dogstar is rising, he will never die at sea (general): sī Fabius oriente canīculā nātus est, Fabius in marī non moriētur, Fat. 12, if Fabius was born when the dogstar was rising, Fabius will not die at sea (particular). sī parum intellēxtī, dicam dēnuo, Pl. R. 1102, if you don't understand, I'll say again. non ūtar eā consuētūdine, sī quid est factum clēmenter, ut dissolūtē factum crīminer, V. 5, 19, I will not avail myself of the common practice, and if a thing has been done in a spirit of mercy, charge that it was done in a lax way. nisi iam factum aliquid est per Flaccum, fiet ā mē, Fam. 3, 11, 3, unless something or other has been done already through Flaccus, it will be done by me.

2038. (c.) Apodosis in the Imperative.

sī plūs minusve secuērunt, sē fraude estō, Twelve Tables in Gell. 20, 1, 49, if they cut too much or too little, it shall be without penalty (1613). sī vīdistis, dicite, Pl. R. 323, if ye have seen, declare. sī quid est peccātum ā nōbīs, profer, T. Hec. 253, declare it, if we've erred at all. sī numquam avārē pretium statuī artī meae, exemplum statuīte in mē, T. Hau. 48, if never like a miser I have set a price upon my art, a faltern set in me. sī quōs propīnquus sanguīs patronōs dedit, iuvāte perīclitantem, Ta. 31, 12, if relationship has made any of you his advocates, help him in his straits.

2039. (f.) Apodosis in the Present Subjunctive.

sī nūlla coloris principiis est reddita nātūra, extemplo rationem reddere possīs, Lucr. 2, 757. if atoms have no colour, you might explain at once (1556). merito maledicās mī, sī non id ita factumst, Pl. Am. 572, you might with perfect right abuse me, if it is not so (1556).

2040. (g.) Apodosis in the Imperfect Subjunctive.

sī nēmō hāc praeteriīt, postquam intrō abiī, cistella hīc iacēret, Pl. Cist. 683, if nobody has passed along this way, since I went in, a casket should be lying here (1560). nam cūr tam variae rēs possent esse requirō, ex ūnō sī sunt īgnī pūrōque creātae? Lucr. 1, 645, for how could things so motley be, I ask, if they are made of pure and simple fire (1565)?

2041. (h.) Apodosis in the Pluperfect Subjunctive.

si Antônio Crassus cloquens visus non est, tibl numquam Cotta visus esset, O. 106, if Antony did not hold Crassus eloquent, you would never have held Cotta so (1561).

(3.) PROTASIS IN THE IMPERFECT.

2042. (a.) Apodosis in the Present.

sī tum non pertimēscēbās, nē nunc quidem perhorrēscis? V. 4, 78, if you were not getting afraid then, are you not getting scared even now si qui senēs āc dēformēs erant, eos in hostium numero dūcit, V. 5, 64, if any were old and homely, he considers them in the light of enemies (1590). sī ad illum hērēditās veniēbat, vērī simile est ab illo necātum, Inv. 1, 89, if the inheritance was coming to so and so, it is likely that the murder was committed by that man. adulēscentī nihil est quod suscēnseam, sī illum minus norat, T. Ph. 361, I have no cause for anger with the youth, if he was not acquainted with the man.

2043. (b.) Apodosis in the Perfect.

sed si properäbäs magis, pridië nos të hūc dūxisse oportuit, Pl. Poen. 525, but if you were in greater haste, you should have brought us here the day before.

2044. (c.) Apodosis in the Imperfect.

This combination is used chiefly of contemporaneous action (1732), in general conditional periods: as, sī quod erat grande vās, laetī adferēbant, V. 4, 47, if any good-sized vase was ever found, they would always bring it to him in high glee. atque ea sī erant, māgnam habēbās dīs grātiam, Pl. As. 143, and if them you ever had, you were monstrous grateful to the gods. sī quae rēs erat māior, populus commovēbātur, Sest. 105, if a thing of more than ordinary importance occurred, the populace was always aroused. hī, sī quid erat dūrius, concurrēbant, 1, 48, 6, whenever there was any pretty sharp work, these men would always fall to. For the subjunctive in such protases, see 2071.

2045. (d.) Apodosis in the Future.

flebunt Germänicum etiam Ignoti: vindicābitis vos, sī mē potius quam fortunam meam fovēbātis, Ta. 2, 71, as for weeping for Germanicus, that will be done by strangers too; vengeance will be yours, if you honoured in me more the man than the position.

2046. (c.) Apodosis in the Present Subjunctive.

fac animo magno sis, et si turbidissima sapienter ferebas, tranquilliora laete feras, Fam. 6, 14, 3, be of great heart, and if you bore anarchy like a stoic, bear a more orderly condition of things with good cheer (1550).

2047. (f.) Apodosis in the Imperfect Subjunctive.

sī amābās, invenīrēs mūtuom, Pl. Ps. 286, you should have borrowed, if you were in love (1559). quod sī meīs incommodīs laetābantur, urbis tamen perīculo commovērentur, Sest. 54, if they did exult over my mishaps, still they ought to have been touched by the danger to Rome (1559).

(4.) PROTASIS IN THE PLUPERFECT.

2048.

(a.) Apodosis in the Present.

si hoc ita fato datum erat, ut ad pacem petendam venirem, laetor të mihi sorte potissimum datum, a quo peterem, L. 30, 30, 3, if it was so ordained by fate that I should come to sue for peace, I am glad that you are allotted me, of all men in the world, to sue from.

2049.

(b.) Apodosis in the Perfect.

tum id, sī falsum fuerat, filius quor non refellit? T. Ph. 400, if that had been untrue, why did not at the time your son disprove it? vel officio, sī quid dēbuerat, vel errorī, sī quid nescierat, satis factum esse dūxit, D. 13, he thought he had done enough for duty, if he had been under any obligation, enough for delusion, if he had been acting under mistaken ignorance.

2050.

(c.) Apodosis in the Imperfect.

sed in aedibus quid tibi meis nam erat negōtī mē absente, nisi ego iūsseram? Pl. Aul. 427, but what business had you in my house in my absence, unless I had ordered? sī nihili in istā pūgnā Rōscii fēcerant, quam ob causam tantīs praemiīs dōnābantur? RA. 108, if the Rosciuses had not done service in that fight, why were they presented with such rewards? Often of antecedent action, in general conditional periods: as, sī quicquam caelātī adspexerat, manūs abstinēre, iūdicēs, nōn poterat, V. 4, 48, if he ever caught sight of a bit of chased work, why, gentlemen, he never could keep his hands off. stomachābātur senex, sī quid asperius dūxeram, DN. 1, 93, the old gentleman was always nettled, if I said anything harsh. ac seu longum post tempus vēnerat hospes, sīve convīva per imbrem vīcīnus, bene erat nōn piscibus urbe petītīs, H.S. 2, 2, 118, and if a friend dropped in, after an absence long, or neighbour, come to take pot-luck upon a rainy day, we feasted not on fish brought out from town. For the subjunctive in such protases, see 2071.

2051. (d.) Apodosis in the Imperfect Subjunctive.

ante sõlem exorientem nisi in palaestram vēnerās, haud mediocris poenās penderēs, Pl. B. 426, ere sunrise so you came not to the wrest-ling school, amercement strong you had to pay (1552).

(5.) PROTASIS IN THE FUTURE.

2052.

(a.) Apodosis in the Present.

eam sei cūrābeis, perbonast, Pl. Merc. 526, if you'll take care of her, she is first-rate. quod sī perferre non potero, opprimī mē mālo, RA. 10, if I cannot succeed in bearing it, I would rather be crushed.

2053. (b.) Apodosis in the Perfect.

quam nisi defendes, Romulus non bene vidit aves, Prop. 4 (5), 6, 43, unless thou savest ker, 'twas ill that Romulus espied his birds. Ectumst, si quidem tū me hic lūdificābere, T. Eu. 717, all's up, that is in case you fool me here (1612). cui sī esse in urbe licēbit, vicimus, Att. 14, 20, 3, if he shall be allowed to stay in town, the day is ours (1612).

2054. (c.) Apodosis in the Future.

sī erum Insimulābis malitiae, male audiēs, T. Ph. 359, you'll hear what you won't like, if you insinuate anything wrong against master. vicinis bonus esto: sī tē libenter vīcīnitās vidēbit, facilius tua vēndēs; sī aedificābis, operis, iumentis, materie adiuvabunt, Cato, RR. 4, be obliging to your neighbours: if the neighbourhood looks on you with favour, you will find a readier sale for your produce; if you fall to building, they will help you with labour, draught animals, and building material. si id audēbis dicere, causam inimici tui sublevabis, Caecil. 12, if you venture to say that, you will promote the cause of your enemy. si fortuna volet, sies de rhetore consul; si volet haec eadem, fies de consule rhetor, J. 7, 197, if fortune shall ordain, a magnate from a teacher thou shalt be; again shall she ordain, a teacher from a magnate shalt thou be. non modo non laedetur causa nobilitatis, sī istīs hominibus resistētis, vērum etiam ornābitur, RA. 138, the interests of the nobility will not be damaged, if you resist those creatures; oh no, on the contrary, they will be promoted. The clause with si is apt to take the future perfect (2061). The future in the apodosis often denotes action holding good at all times: as, defensor primum, si poterit, debebit vitam eius, qui insimuläbitur, quam honestissimam demonstrare, Inv. 2, 35, the advocate ought in the first place, if he can, to prove that the life of the accused is eminently respectable. quod adsequemur, si cavebimus ne in perturbationes incidamus, Off. 1, 131, we shall attain this end if we take care not to be subject to fits of passion. Sometimes in exemplifications: sI patriam prodere consistiur pater, silebitne filius? Off. 3, 90, if a father shall try to betray his country, will the son keep silent? But see 2090.

2055. (d.) Apodosis in the Future Perfect.

oculum ego ecíodiam tibī:: dīcam tamen; nam sī sīc non licēbit, luscus dīxero, Pl. Tri. 463, I'll dig your eye out:: but I'll speak, nathless; for if I may not as I am, I'll say my say as one-eyed man. sed sī tē aequo animo ferre accipiet, neclegentem fēceris, T. Andr. 397, but if he sees you take it placidly, you'll have him off his guard. The more usual combination is as in 2062.

2056. (c.) Apodosis in the Imperative.

vir tuos sī veniet, iube domī opperīrier, Pl. Cist. 592, in case your husband comes, tell him to wait at home. Almost always the second imperative is used (1577): as, sī volet, suō vivitō, Twelve Tables in Gell. 20, 1, 45, if the prisoner wish, he may subsist on his own food. sī veniet nüise, facitō ut sciam, Pl. St. 148, if a messenger shall come, be sure you let me know. sī dē mē ipsō plūra dicere vidēbor, ignōscitōte, Sest. 31, if I seem to harp too much on myself, you must excuse me.

2057. (f.) Apodosis in the Present Subjunctive.

sī quid erit, quod scrībendum putēs, velim faciās, Att. II, 13, 5, if there shall be anything which you think worth writing, I wish you would write (1555). nam sī altera illaec magis instābit, forsitan nos reiciat, T. Ph. 717, for if the other lady presses more, perhaps he'll throw us out (1554). peream, si tē ferre poterunt, Brut. in Fam. II, 23, 2, may I die, if they shall find it possible to endure you (1541). sī quando illa dīcet 'Phaedriam intro mittāmus,' Pamphilam cantātum provocēmus, T. Eu. 441, if ever she shall say 'let us have Phaedria in,' then let us call out Pamphila to sing (1548). habeat, sī argentum dabit, Pl. R. 727, she's welcome to them, if she pays the cash (1548).

. 2058. (g.) Apodosis in the Perfect Subjunctive.

sī mē audiētis, adulēscentēs, sõlem alterum nē metuerītis, RP 1, 32, if you will hearken to me, my young friends, never fear a double sun (1551). sīn erit ille gemitus ēlāmentābilis, vix eum virum dīxerim, TD. 2, 57, but if his groan be a long-drawn wail, I could scarcely call him a man (1558).

(6.) PROTASIS IN THE FUTURE PERFECT.

2059.

(a.) Apodosis in the Present.

salvae sunt, sī istos fluctūs dēvītāverint, Pl. R. 168, they are saved, if they escape those waves (1593). rēx sum, sī ego illum hominem adlexerō, Pl. Poen. 671, I'm a millionaire, if I allure the man (1593). crīmen probāre tē cēnsēs posse, sī nē causam quidem maleficii protuleris? RA. 72, do you think you can prove your charge, if you do not even bring forward a motive for the crime? quod sī meam spem vis improborum fefellerit, commendo vobis meum parvum filium, C. 4, 23, but if the might of the wicked disappoints my hope, unto your keeping do I commend the little son of mine.

2060. (b.) Apodosis in the Perfect.

victus sum, sī dīxeris, Pl. Am. 428, I am beaten if you tell (1612). sī sēnserit, peril, T. Andr. 213, if he scents it, I'm done for (1612). sī cōnservātus erit, vicimus, Fam. 12, 6, 2, if he is saved, our success is assured (1612). tum, hercule, illō diē quō ego cōnsul sum creātus, male gesta rēs pūblica est, sī tuleritis, L. 3, 19, 11, in that case it was indeed a bad day for the country when I was made consul, if you make the proposition (1608).

2061. (c.) Apodosis in the Future.

peribō, sī nōn fēcerō, sī faxō vāpulābō, Pl. in Gell. 3, 3, 8, I shall be done for if I don't do it, if I do, I shall be done up too (1626). oculum ego ecfodiam tibī, sī verbum addideris, Pl. Tri. 463, I'll gouge your eye out for you, if you say another word. sī tē interficī iūsserō, residēbit in rē pūblicā rēliqua coniūrātōrum manus, C. 1, 12, if I order you to be dispatched, the rest of the gang of conspirators will be left in the state.

2062. (d.) Apodosis in the Future Perfect.

sī dīxerō mendācium, solēns meo more fēcerō, Pl. Am. 198, if fiction I relate, I shall have done but in my usual way. sī tū argentum attuleris, cum ilio perdiderō fidem, Pl. Ps. 376, if you, sir, bring the cash, I'll break my word to him. respīrārō, sī tē vīderō, Att. 2, 24, 5, I shall be myself again, if I see you. pergrātum mihī fēceris, sī dē amīcitlā disputāris, L. 16, you will do me a very great favour, if you will discourse on friendship.

2063. (c.) Apodosis in the Imperative.

Generally the longer forms of the imperative are used (1577): patronus si clienti fraudem fecerit, sacer esto, Twelve Tables in Serv. to V. 6, 609, if a patron shall chat his client, let him be doomed. servitum tibi me abducito, ni fecero, Pl. Ps. 520, if I don't do it, take me off to be your slave. hocief, eight you please of me. si me adsequi potueris, ut tibi videbitur, sepelito, TD. 1, 103, if you can ever find me, then bury me as you think best. Rarely the shorter forms: inpinge pugnum, si muttiverit, Pl. B. 800, drive your fist into him if he says book. si tumidos accedere fastus senseris, incepto parce referque pedem, O. AA. 1, 715, if thou shall see disdain come swelling high, give o'er and beat retreat.

2064. (f.) Apodosis in the Present Subjunctive.

sibl habeat, si non extemplo ab eo abduxero, Pl. Per. 164, he may keep her, if I don't carry her off that minute (1548). caecum me ferri confitear, si të potuisse superëri dixero, Planc. 6, if I say that you can be surpassed, I should own myself swept along like a blind man (1556). tum magis adsentiëre, si ad mëiora pervenero, RP. 1, 62, you would agree all the more if I come at once to weightier points (1556).

SOME SPECIAL USES.

2065. An indicative protasis with si is often used to assume a general truth as a proof either for another general truth, or for a particular fact.

(a.) sī voluptātis sēnsum capit, dolōrēs etiam capit, DN. 3, 32. if it is susceptible of pleasure, it is also susceptible of pain. sī omnēs, quī rēī pūblicae cōnsulunt, cārī nōbīs esse dēbent, certē in prīmīs imperāfērēs. sī ferae partūs suōs dīligunt, quā nōs in liberōs nostrōs indulgentiā esse dēbēmus, DO. 2, 168, if all people who are devoted to the public service are dear to us, then assuredly our military men ought always to be particularly dear. If wild beasts always love their young, hew kind ought we always to be to our own children. (b.) sī pietātī summa tribuenda laus est, dēbētis movērī, cum Q. Metellum tam piē lūgēre videātis, DO. 2, 167, if filial affection is always to be held in high honour, you ought to be touched in this instance, seeing such affectionate grief in Metellus. sī nox opportūna est ēruptiōnī, sīcut est, haec profectō noctis aptissima hōra est, L. 7, 35, 10, if night is always favourable for a sortie, and it always is, this particular hour of the night is the very best time.

2066. An indicative protasis with sI often assumes a fact, past or present, as an argument for another fact, or for a general truth.

In this case the apodosis, which is usually a question, often takes the subjunctive (1565).

sī Sūlla potuit efficere, ut dictātor dicerētur, cūr hīc non possit? Att. 9, 15, 2, if Sulla could succeed in being appointed dictator, why cannot this man? sī Zēnonī licuit inaudītum rēī nomen imponere, cūr non liceat Catonī? Fin. 3, 15, if Zeno was allowed to give a new name to a thing, why should not Cato be allowed? quod sī Graecī leguntur ā Graecīs, quid est cūr nostrī ā nostrīs non legantur? Fin. 1, 6, but if Greeks are read by Greeks, why should not Romans be read by Romans?

2067. An indicative protasis with sI often assumes a fact which is declared in the apodosis to be no reason for another fact.

In this case the negative usually begins the period. sī, for which quia or etsī is sometimes substituted, sometimes has idcircō, Ilicō, or continuō, rarely proptereā or ideō, as correlative in the apodosis.

non, si tibl anteā profuit, semper proderit, Ph. 8, 12, even if it has done you good in the past, that is no reason why it always will in the future. non si Opimium defendisti, idcirco të isti bonum civem putābunt, DO. 2, 170, suppose you did defend Opimius, that is no reason why your friends will think you a patriot. nec si omne ënuntiātum aut vērum aut falsum est, sequitur ilico, esse causās immūtābilis, quae prohibeant secus cadere atque cāsūrum sit, Fat. 28, and even if every acclaration is either true or false, it does not follow without any further ado that there are unchangeble causes to prevent a thing falling out different from the way it promises to fall out. non continuo, si mē in gregem sicāriorum contuli, sum sicārius, RA. 94, it does not forthwith follow that if I have joined a band of bravoes, I am a bravo.

miror, mirum si.

2068. miror or mirum est (mira sunt) may introduce a conditional protasis, instead of a clause with quod (1851) or the accusative with the infinitive (2190).

Generally the main clause is actually or virtually negatived: as, minus mirandumst, illaec aetās sī quid illōrum facit, Pl. B. 409, 'tis not to be wondered al, if youth does things like that. idne tū mīrāre, sī patrissat filius? Pl. Ps. 442, can you, sir, wonder at it if the son plays the father? nec mīrum sī ūtēbātur cōnsiliō, Quinct. 18, and it is no wonder if he followed the advice. mīrer, sī vāna vestra auctōritās est? L. 3, 21, 4, can I think it strange if your influence is of no account (1565)? Rarely the main clause is positive: as, mīrābar hōc sī sīc abīret, T. Andr. 175, I wondered if it was going to end so (1773). mīror sī quemquam amīcum habēre potuit, L. 54, I wonder if he could have had a friend in the world. In old colloquial style mīrum nī is found: as, mīrum nī hīc mē exossāre cōgitat, Pl. Am. 319, strange that he does n't think of boning me. ubi nunc ipsus?:: mīrum nī domīst, T. Andr. 598, where is he now?:: at home of course. So once in Livy: mīrum esse nī castra hostium oppūgnentur, L. 3, 28, 5, that he should n't be surprised if the enemy's camp were being stormed (1724). gaudēo sī is found once in Cicero, and terreō, metus est sī, or the like occurs a few times in Tacitus. For sī in expressions of trial, hope, expectation, &c., see 1777.

THE SUBJUNCTIVE FOR THE INDICATIVE.

- 2069. The indicative in the protasis is occasionally replaced by the subjunctive, as follows:
- 2070. (1.) The present or perfect subjunctive is sometimes used in general present suppositions, regularly in the indefinite second person singular, rarely with other persons (1730): as,
- (a.) nam dolf non dolf sunt nisi astū colās, sed malum māxumum, sī id palam provenit, Pl. Cap. 221, for tricks are never tricks, unless you handle them with craft, but damage dire, in case the thing gets out; here the indicative provenit shows that colas is due to the person. nec calidae citius decedunt corpore febres, textilibus si in picturis ostroque rubenti iacteris, quam si in plebeia veste cubandum est, Lucr. 2, 34, nor sooner will hot fevers leave the limbs, if on gay tapestries and blushing purple you should toss, than if perforce your bed you make on pallet rude. quod est difficile, nisi speciem prae të boni viri feras, Off. 2, 39, and this is a hard thing, unless you have the exterior of a good man. nec habere virtutem satis est nisi ütäre, RP. 1, 2, and to have virtue is not enough, unless one use it. siquoi mutuom quid dederis, fit pro proprio perditum, Pl. Tri. 1051, if aught you've lent to anyone, 't is not your own, but lost. nam nullae magis res duae plūs negoti habent, si occeperis exornāre, Pl. Poen. 212, for no two things give more trouble if you once begin to fit them out. nulla est excusatio peccăti, si amici causă peccăveris, L. 37, it is no excuse for a sın if you have sinned from friendship.
- (b.) suos quisque opprimi non patitur, neque, aliter si faciat, üllam inter suos habet auctoritatem, 6, 11, 4, nobody suffers his vassals to be put down, and if he ever act otherwise, he has no influence among his people. laeduntur arteriae, si acri clamore compleantur, Cornif. 3, 21, it always hurts the windpipe, if it be filled out with a sharp scram. turpis excusatio est, si quis contra rem publicam se amici causa fécisse fateatur, L. 40, it is always a discreditable apology, if a man confess that he has been unpatriotic from motives of friendship. Britanni iniuncta imperii munera impigre obeunt, si iniuriae absint, Ta. Agr. 13, the Britons are always perfectly ready to perform the duties enjoined on them by the Roman government, if they be not mallreated.
- 2071. (2.) The imperfect or pluperfect subjunctive is sometimes used in general past suppositions (1730).

This use begins with Catullus and Caesar, the indicative being the regular classical construction (2044, 2050).

chommoda dicēbat, sī quandō commoda vellet dīcere Arrius, Cat. 84, 1, hadvantages said Arrius, if advantages he ever meant to say. sī quis prehenderētur, cōnsēnsū mīlitum ēripiēbātur, Caes. C. 3, 110, 4, every time a man was taken uḥ, he was rescued by the joint action of the rank and file. sīn autem locum tenēre vellent, nec virtūtī locus relinquēbātur, neque coniecta tēla vītāre poterant, 5, 35, 4, but if on the other hand they undertook to hold their position, there was never any opening for bravery, nor could they ever dodge the shower of missiles. sīn Numidae propius accessissent, ibī virtūtem ostendere, S. 1. 58, 3, they showed forth their valour every time the Numidians drew near (1535).

(B.) SUBJUNCTIVE USE.

- 2072. The present or perfect subjunctive may be used in a conditional protasis of future time.
- 2073. The apodosis is usually in the present subjunctive, less frequently in the perfect subjunctive. The imperfect and pluperfect subjunctive are rare (2089).
- 2074. The indicative is sometimes used in the apodosis, especially in expressions of ability, duty, &c. (1495); non possum is regularly in the indicative when the protasis is also negative. For the future indicative the periphrastic form is sometimes used.
- 2075. An action not occurring, or from the nature of things actually impossible, may of course be represented as of possible occurrence. In old Latin, in particular, the present subjunctive is very commonly used of action not expected to occur, in preference to the blunter imperfect (2091): thus, si hercle haberem, pollicerer, Pl. E. 116, in sooth, I'd offer if I had, is afterwards put by the same man, si hercle habeam, pollicear, 331, in sooth I'm fain to offer, if I have.

(12) PROTASIS IN THE PRESENT SUBJUNCTIVE.

2076. (a.) Apodosis in the Present Subjunctive.

at pigeat posteā nostrum erum, sī võs eximat vinculis, Pl. Cap. 203. but it may rue our master by and by, if he should take you out of bonds. quid si eveniat desubito prandium, ubi ego tum accumbam? Pl. B. 79, suppose a lunch should suddenly come off, where is your humble servant then to lie (1563)? hanc viam si asperam esse negem, mentiar, Sest. 100, if I say that this path is not rough, I should not tell the truth. si deus te interroget, quid respondeas? Ac. 2, 80, if a god ask you, what would you answer? haec si tēcum patria loquātur, nonne impetrare dēbeat? C. 1, 19, if thy country plead with thee thus, ought she not to carry her point? si existat hodie ab inferis Lycurgus, se Spartam antiquam agnoscere dicat, L. 39, 37, 3, if Lycurgus rise this day from the dead, he would say that he recognized the Sparta of yore. vocem të ad cënam, nisi egomet cënem foris, Pl. St. 190, I fain would ask you home to dine, unless perchance I should dine out myself. pol si mihi sit, non pollicear: scio, dares, Pl. B. 635, depend upon it, if I have the vokerewithal, I shall not offer merely: yes, I know, you'd give. si honestë cënseam të facere posse, suadeam; vërum non potest; cave faxis, Pl. MG. 1371, if I should think that you could do the thing with credit to yourself, I should advise you to: but 'tis impossible; so don't you do it. eds non cūrāre opinor, quid agat hūmānum genus; nam sī cūrent, bene bonīs sit, male malīs, quod nunc abest, E. in Div. 2, 104, DN. 3, 79, but little care the gods, I trow, how fares the race of man; for should they care, the good were blest, the wicked curst; a thing that really cometh not to pass.

2077. (b.) Apodosis in the Perfect Subjunctive.

si acquom siet mē plūs sapere quam võs, dederim võbis cõnsilium catum, Pl. E. 257, if it becoming be for me to have more wit than ye, sage counsel might I give (1558). aufügerim potius quam redeam, si eõ mih redeundum sciam, T. Hec. 424, I'd run away sooner than go back, if I should hear I had to (1558). nec satis sciö, nec si sciam, dicere ausim, L. praef. 1, in the first place I do not know very well, and secondly if I should know, I should not venture to say (1555). initissü tuö extră ördinem numquam pügnäverim, nön si certam victòriam videam, L. 7, 10, 2, without orders from you I never should fight out of ranks, no, not if I saw victory was certain (1558). tum vērō nēquiquam hāc dextrā capitōlium servāverim, si cīvem commilitōnemque meum in vincula dūcī videam, L. 6, 14, 4, upon ny word, in that case I should prove to have saved the capitol in vain, if I saw a townsman and brother-in-arms of mine haled to jail. multōs circā linam rem ambitūs fēcerim, sī quae variant auctōrēs omnia exequī velim, L. 27, 27, 12, I should make a long story about one subject, if I should undertake to go through all the different versions of the authorities.

2078. (c.) Apodosis in the Present Indicative.

qui si decem habeās linguās, mūtum esse addecet, Pl. B. 128, if you should have a dozen tongues, 'tis fit you should be dumb (2074). Sī prō peccātis centum dūcat uxōrēs, parumst, Pl. Tri. 1186, if he should wed a hundred wives in payment for his sins,' tis not enough. intrāre, sī possim, castra hostium volō, L. 2, 12, 5, I propose to enter the camp of the enemy, if I be able. tē neque dēbent adiuvāre, sī possint, neque possunt, sī velinā V. 4, 20, they ought not to help you, if they could, and cannot, if they would. Sī vōcem rērum nātūra repente mittat, quid respondēmus? Lucr. 3, 931, if Nature of a sudden lift her voice, what answer shall we make? Sī quaerātur, idemne sīt pertinācia et persevērantia, dēfinītionībus iddicandum est, T. 87, if it be asked whether obstinacy and perseverance are the same, it must be settled by definitions (2074).

2079. (d.) Apodosis in the Future.

quadrīgās sī Inscendās Iovis atque hinc fugiās, ita vix poteris effugere infortūnium, Pl. Am. 450, fowe's four-in-hand if you should mount, and try to flee from here, even so you'll scarce escape a dreadful doom. sīqui-dem summum Iovem tē dīcās dētinuisse, malam rem effugiēs numquam, Pl. As. 414, e'en shouldst thou say imperial fove detained thee, chastisement thou'lt ne'er avoid. sī frāctus inlābātur orbis, inpavidum ferient ruīnae, H. 3, 3, 7, should heaven's vault crumbling fall, him all undaunted will its ruin strike. neque tū hōc dīcere audēbis, nec sī cupiās, licēbit, V. 2, 167, you will not dare to say this, sir, nor if you wish, will you be allowed.

2080. (c.) Apodosis in the Future Perfect.

non tantum, si proelio vincas, gloriae adieceris, quantum ademeria, si quid adversi eveniat, L. 30, 30, 21, you will not acquire as much glory, if you succeed in battle, as you will lose, if any reverse occur.

2081. (f.) Apodosis in the Periphrastic Future.

non laturus sum, si iubeas maxume, Pl. B. 1004, I don't intend to be the bearer, should you urge me e'er so much. quid, si hostes ad urbem veniant, facturi estis? L. 3, 52, 7, suppose the enemy march on the town, what do you intend to do ?

2082. (g.) Apodosis in the Imperfect Subjunctive.

compellarem ego illum, ni metuam në dësinat memorare morës mulierum, Pl. Aul. 523, I would address him, suppose I fear not he'd cease to tell of women's ways (1560). në si navigare quidem velim, ita gubernarem, ut somniaverim; praesëns enim poena sit, Div. 2, 122, again, suppose I undertake to go sailing, I should not lay my course as I may have dreamed; for the penalty would be swift (1560). Si hodië bella sint, quale Etrüscum fuit, quale Gallicum; possëtisne ferre Sextium consulem esse? L. 6, 40, 17, suppose there be wars to-day like the Etruscan and the Gallic wars; could you bear to see Sextius consul (1565)?

2083. (h.) Apodosis in the Pluperfect Subjunctive.

carmina ni sint, ex umero Pelopis non nituisset ebur, Tib. 1, 4, 63, suppose there be no verse; from Pelops' shoulder ne'er had ivory gleamed (1561).

(2.) PROTASIS IN THE PERFECT SUBJUNCTIVE

2084. (a.) Apodosis in the Present Subjunctive.

debeam, credo, isti quicquam furcifero, si id fecerim, T. Eu. 861, I should be, forsooth, responsible to the roque, if I should do it (1556). si de caelo villa tacta siet, de ea re verba uti fiant, Cato, RR. 14, 3, if the villa be struck by lightning, let there be utterances about the case (1547). si ë coronë relictus sim, non queam dicere, Br. 192, if I should ever be abandoned by my audience, I should not be able to speak. id si acciderit, simus armāti, TD. 1, 78, if this have happened, let us be on our guard (1548). cūr ego simulem mē, si quid in his studiis operae posuerim, perdidisse? Par. 33, why should I have the affectation to say that if I have spent any time in these pursuits, I have thrown it away (1563)? See also 2090.

2085. (b.) Apodosis in the Perfect Subjunctive.

si paululum modo quid të fügerit, ego perierim, T. Hau. 316, should you have missed the smallest point, a dead man I should be. See also 2090.

2086. (c.) Apodosis in the Future Indicative.

sī forte līber fierī occēperim, mittam nūntium ad tē, Pl. MG. 1362, if haply I should be by way of getting free, I'll send you word. sī forte morbus amplior factus siet, servom intro iisse dicent Sostratae, T. Hec. 330, if her illness should get worse, they'll say a slave of Sostrata's went in there.

2087. (d.) Apodosis in the Periphrastic Future.

si Veis incendium ortum sit, Fldenas inde quaesituri sumus? L. 5, 54, 1, if a fire break out at Vei, are we going to move from there to Fidenae?

2088. (e.) Apodosis in the Imperfect Subjunctive.

siquis hoc gnāto tuo tuos servos faxit, qualem habērēs grātiam? Pl. Cap. 711, suppose a slave of yours has done this for a son of yours, how grateful should you be?

Conversion to Past Time.

2089. An indeterminate subjunctive protasis is rarely thrown into the past, the present and perfect becoming respectively imperfect and pluperfect. In this case the form is the same as that of a protasis of action non-occurrent (2091), and the conversion occurs only when it is evident from the context that past action is supposed, which may or may not have occurred: as,

cur igitur et Camillus dolēret, sī haec post trecentos et quinquāgintā ferē annos ēventura putāret, et ego doleam, sī ad decem milia annorum gentem aliquam urbe nostrā potitūram putem? TD. 1, 90 why then would Camillus have fretled, if he thought this would occur after a lapse of some three hundred and fifty years, and why should I fret, if I think that some nation may seize Rome some ten thousand years hence? erat sola illa nāvis constrāta; quae sī in praedōnum pūgnā versārētur, urbis Instar habēre inter illos pīrāticos myoparōnēs vidērētur, V. 5, 89, this was the only vessel with a deck; and supposing she figured in the engagement with the corsairs, she would have loomed up like a town, surrounded by those pirate cockboats. Sardus habēbat ille Tigellius hōc; Caesar sī peteret non quicquam proficeret, H. S. 1, 3, 4, Tigellius the Sardian had this way; supposing Caesar asked him, naught had he availed.

PERIODS OF EXEMPLIFICATION.

2000. The present subjunctive is particularly common in exemplification. The perfect is sometimes used in the protasis, rarely in the apodosis: as,

sī pater fāna expīlet, indicetne id magistrātībus fīlius? Off. 3, 90, if a father should plunder temples, would the son report it to the magistrates? sī quis pater familiās supplicium non sūmpserit, utrum is clēmēns an crūdēlissimus esse videātur? C. 4, 12, assume for the sake of argument that a householder have not inflicted punishment, would he seem merciful, or a monster of cruelty? sī scierīs aspidem occultē latēre uspiam, et velle aliquem imprūdentem super eam adsidere, improbē fēcerīs, nisi monuerīs nē adsīdat, Fin. 2, 59, suppose a man should know, e.g. that there was a snake hiding somewhere, and that somebody was going to sit down on the snake unawares; he would do wrong, if he did not tell him he must not sit down there. In such periods the future is also used, but less frequently: see 2054.

II. PROTASES OF ACTION NON-OCCURRENT.

2091. A conditional period in which the non-occurrence of the action is implied takes the imperfect or pluperfect subjunctive both in the protasis and in the apodosis. The imperfect usually denotes present or indefinite time, and the pluperfect denotes past time.

2092. The imperfect sometimes denotes past time. When future time is referred to, the protasis is usually in the imperfect of the periphrastic future, commonly the subjunctive, but sometimes the indicative (2108).

2003. The apodosis is very rarely in the present subjunctive (2006). The periphrastic future is sometimes used, commonly in the indicative (2007, 2100).

(1.) PROTASIS IN THE IMPERFECT SUBJUNCTIVE.

2094. (a.) Apodosis in the Imperfect Subjunctive.

- (a.) Protasis and apodosis both denoting present action; this is the usual application: sī intus esset, ēvocārem, Pl. Ps. 640, I should call him out, if he were in. is iam prīdem est mortuus. sī viveret, verba ēius att iēt is evidence. adnuere tē videō; proferrem librōs, sī negārēs, DN. I. 113, I see you nod assent; I should bring out the books, if you maintained the opposite. sī L. Mummius aliquem istorum vidēret Corinthium cupidissimē trāctantem, utrum illum civem excellentem, an ātriēnsem dīligentem putāret? Par. 38, if Mummius should see one of your connoisseurs nursing a piece of Corinthian, and going into perfect eestasies over it, what would he think? that the man was a model citizen or a thoroughly competent indoor-man? quod sī semper optima tenēre possēmus, haud sānē consilio multum egērēmus, O.P. 89, now if we could always be in possession of what is best, we should not ever stand in any special need of reasoning.
- (b.) Protasis and apodosis both denoting past action: haec sī neque ego neque tū fēcimus, non siit egestās facere nos; nam sī esset unde id fieret, facerēmus; et tū illum tuom, sī essēs homo, sinerēs nunc facere, T. Ad. 103, if neither you nor I have acted thus, 'twas poverty that stinted us; for if we'd had the means, we should have done so too; and you would let that boy of yours, if you were human, do it now. Here esset refers to past time, essēs to present. num igitur eum, sī tum essēs, temerārium cīvem putārēs? Ph. 8, 14, would you therefore have thought him, if you had lived then, a hotheaded citizen? sī ūniversa provincia loquī posset, hāc voce ūterētur; quoniam id non poterat, hārum rērum āctorem ipsa dēlēgit, Caecil. 19, if the collective province could have spoken, she would have need these words; but since she could not, she chose a manager for the case herself.

2095. (b.) Apodosis in the Pluperfect Subjunctive.

invēnissēmus iam diū, sei viveret, Pl. Men. 241, were he alive, we should have found him long ago. sī mihi secundae rēs dē amore meo essent, iam dūdum scio vēnissent, T. Hau. 230, if everything were well about my love, I know they would have been here long ago. quae niseestent in senibus, non summum consilium māiorēs nostri appellāssent senātum, CM. 19, unless the elderly were in general characterized by these qualities, our ancestors would not have called the highest deliberative body the body of elders.

2096. (c.) Apodosis in the Present Subjunctive.*

vocem ego të ad më ad cënam, frater tuos nisi dixisset mihi të apud së cënaturum esse hodië, Pl. St. 510, I should like to invite you home to dinner, if my brother had n't told me that you were to dine with him to-day.

2097. (d.) Periphrastic Apodosis.

quibus, si Rômae esset, facile contentus futurus erat, Att. 12, 32, 2, with which, if he were in Rome, he would readily be satisfied (2093). quôs ego, si tribuni me triumphare prohiberent, testes citaturus fui rerum a me gestarum, L. 38, 47, 4, the very men whom I was to call to bear witness to my deeds, if the tribunes had refused me a triumph.

(2.) PROTASIS IN THE PLUPERFECT SUBJUNCTIVE.

2098. (a.) Apodosis in the Imperfect Subjunctive.

- (a.) Protasis denoting past, apodosis present action: sī ante voluissēs, essēs; nunc sērō cupis, Pl. Tri. 568, if you had wished it before, you might be; as it is, you long too late. sī non mēcum aetātem ēgisset, hodiē stulta viveret, Pl. MG. 1320, if she had n't spent her life with me, she'd be a fool today. sī tum illī respondēre voluissem, nunc rēī pūblicae consulere non possem, Ph. 3, 33, if I had chosen to answer the man then, I should not be able to promote the public interest now. quo quidem tempore sī meum consilium valuisset, tū hodiē egērēs, nos līberī essēmus, Ph. 2, 37, if by the way at that time my counsel had been regarded, you, sir, would be a beggar to-day and we should be free.
- (b.) Protasis and apodosis both referring to past: ölim sī advēnissem, magis tū tum istūc dicerēs, Pl. Cap. 871, if I had come before, you'd have said so then all the more. num igitur, sī ad centēsimum annum viziset, senectūtis eum suae paenitēret? CM. 19, suppose therefore he had lived to be a hundred, would he have regretted his years? Indös aliāsque sī adiūnxisset gentēs, impedimentum māius quam auxilium traheret, L. 9, 19, 5, if he had added the Indians and other nations, he would have found them a hindrance rather than a help in his train.
- * This section should follow 2099, since the protasis is in the pluperfect. The error is mine. M. H. M.

2099. (b.) Apodosis in the Pluperfect Subjunctive.

sī appellāssēs, respondisset nominī, Pl. Tri. 927, if you had called him, he'd have answered to his name. nisi fūgissem, medium praemorsisset, Pl. in Gell. 6, 9, 7, if I had n't run away, he'd have bitten me in two. sī vēnissēs ad exercitum, ā tribūnīs vīsus essēs; non es autem ab hīs vīsus; non es igitur ad exercitum profectus, Inv. 1, 87, if you had come to the army, you would have been seen by the tribunes; but you have not been seen by them; therefore you have not been to the army. sī beātus umquam fuisset, beātam vītam ūsque ad rogum pertulisset, Fin. 3, 76, if he had ever been a child of fortune, he would have continued the life of bliss to the funeral pyre. nisi mīlitēs essent dēfessī, omnēs hostium copiae dēlētī potuissent, 7, 88, 6, unless the soldiers had been utterly exhausted, the entire force of the enemy might have been exterminated (2101). quod sī Catilina in urbe remānsisset, dīmicandum nobīs cum illo fuisset, C. 3, 17, but if Catiline had staid in town, we should have had to fight with the villain (2101).

(c.) Periphrastic Apodosis.

(a.) sī tacuisset, ego eram dictūrus, Pl. Cist. 152, if she had held ker peace, I was going to tell (2093). sī P. Sēstius occīsus esset, fuistisne ad arma itūr? Sest. 81, if Sestius had been slain, were you disposed to rush to arms? conclāve illud, ubī erat mānsūrus, sī īre perrēxisset. conruit, Div. 1, 26, the suite of rooms where he was going to spend the night, if he had pushed on, tumbled down. Teucrās fuerat mersūra carinās, nī prius in scopulum trānsformāta foret, O. 14, 72, she had gone on to sink the Trojanbarks unless she had been changed into a rock. (b.) quem sī vīcisset, habitūrus esset impūnitātem sempiternam, Mil. 84, and if he overcame him, he would he likely to have exemption from punishment forever and ever (2093). aut non fāto interiit exercitus, aut sī fāto, etiam sī obtemperāsset auspicis, idem ēventūrum fuisset, Div. 2, 21, the destruction of his army was either not due to fate, or if to fate, it would have happened all the same, even if he had conformed to the auspices.

INDICATIVE APODOSIS.

2101. (1.) The apodosis of verbs of ability, duty, &c. (1495-1497), including the gerundive with sum, usually takes the indicative, the imperfect taking the place of the imperfect or pluperfect subjunctive, and the perfect that of the pluperfect subjunctive. But the subjunctive is also found (2099).

2102. (a.) Apodosis in the Imperfect Indicative.

(a.) Of present action: quod si Romae Cn. Pompeius privatus esset, tamen ad tantum bellum is erat mittendus, IP. 50, now if Pompey were at Rome, in private station, still he would be the man to send to this important war. quem patris loco, si filla in te pietas esset, colere debedas, Ph. 2, 99, whom you ought to honour as a father, if you had any such thing as affection in you.

12*

2100.

(b.) Of past action: quid enim poterat Hēius respondēre, sī esset improbus? V. 4, 16, for what answer could Hejus have given, if he were an unprincipled man? sī sordidam vestem habuissent, lūgentium Persei cāsum praebēre speciem poterant, L. 45, 20, 5, if they had worn dark clothing, they might have presented the mien of mourners for the fall of Perseus.

2103. (b.) Apodosis in the Perfect Indicative.

non potuit reperire, si ipsi soli quaerendas dares, lepidiores duas, Pl. MG. 803, if you assigned the search to Sol himself, he couldn't have found two jollier girls. quo modo pultare potui si non tangerem? Pl. Most. 462, how could I have knocked, if I hadn't touched the door? licitumst, si velles, Pl. Tri. 566, you might have been, if you d wished. si meum imperium exsequi voluisses, interemptam oportuit, T. Hau. 634, if you had been willing to follow my commands, she should have been dispatched. consul esse qui potui, nisi eum vitae cursum tenuissem a pueritia? RP. 1, 10, how could I have been consul unless from boyhood I had taken that line in life? si eum captivitäs in urbem pertraxisset, Caesarem ipsum audire potuit, Ta. D. 17, if captivity had carried him to the city, he could have heard Caesar himself. Antôni gladios potuit contemnere, si sic omnia dixisset, J. 10, 123, Antonius' swords he might have scorned, if all things he had worded so. si finum diem morati essetis, moriendum omnibus fuit, L. 2, 38, 5, if you had staid one day, you must all have died.

2104. (2.) Other verbs also sometimes have a past indicative apodosis, usually an imperfect or pluperfect, to denote an action very near to actual performance, which is interrupted by the action of the protasis.

Naturally such a protasis generally contains an actual or a virtual negative; but positive protases are found here and there, chiefly in late writers.

2105. (a.) Apodosis in the Perfect Indicative.

paene in foveam dēcidī, nī hīc adessēs, Pl. Per. 594, I had almost fallen into a snare, unless you were here. nec vēnī, nisi fāta locum sēdemque dedissent, V. II, II2, nor had I come, unless the fates a place and seat had given. pons sublicius iter paene hostibus dedit, nī līnus vir fuisset Horātius Cocles, L. 2, 10, 2, the pile-bridge all but gave a path to the enemy, had it not been for one heroic soul, Horatius Cocles.

2106. (b.) Apodosis in the Imperfect Indicative.

quin läbebar longius, nisi me retinuissem, Leg. 1, 52, why, I was going to drift on still further, if I had not checked myself. si per L. Metellum licitum esset, matres illorum veniebant, V. 5, 129, if Metellus had not prevented, the mothers of those people were just coming; here the protasis may be held to contain a virtual negative; so in the last example on this page. castra excindere parabant, ni Mücianus sextam legionem opposuisset, Ta. H. 3, 46, they were preparing to destroy the camp, had not Mucianus checked them with the sixth legion. si destinata provenissent, regno imminebat, Ta. H. 4, 18, had his schemes succeeded, he was close upon the throne.

2107. (c.) Apodosis in the Pluperfect Indicative.

quingentos simul, ni hebes machaera foret, uno ictu occideras, Pl. MG. 52, five hundred, had your glaive not blunted been, at one fell swoop you'd slain. praeclare viceramus, nisi Lepidus recepisset Antonium, Fam. 12, 10, 3, we had gained a splendid victory, if Lepidus had not taken Antony under his protection. quod ipsum fortuna eripuerat, nisi unius amici opes subvenissent, RabP. 48, even this boon fortune had wrenched from him, unless he had been assisted by a single friend. si gladium non strinxissem, tamen triumphum merueram, L. 38, 49, 12, if I had not drawn my sword, I had still earned my triumph. perierat imperium, si Fabius tantum aussus esset quantum ira suädebat, Sen. de Ira, 1, 11, 5, the empire had been lost, if Fabius had ventured as far as passion urged.

2108. (3.) PERIPHRASTIC PROTASIS.

(a.) ac sī tibī nēmō respōnsūrus esset, tamen causam dēmōnstrāre nōn possēs, Caccil. 43, and even supposing that nobody were going to answer you, still you would not be able to make the case good (2092). plūribus vōs, militēs, hortārer, sī cum armātīs dīmicātiō futūra esset, L. 24, 38, 9, I should exhort you at greater length, my men, if there was to be a tug with armed men (2092). (b.) sī domum tuam expūgnātūrus eram, nōn temperāssem vinō in ūnum diem? L. 40, 14, 4, if I intended to capture your house, should I not have abstained from wine for a day (2092)?

VARIATION OF THE PROTASIS.

2109. Instead of a conditional protasis with sI or nisi, equivalents are often used.

2110. Thus, the protasis may be coordinated (1701), or be introduced by a relative pronoun (1812), by quod (1843), cum (1859, 1860), ubl (1932), ut or ne (1963), dum, dum modo, modo (2003), or quando (2011). Or the protasis may be intimated by sine, without, cum, with, by a participle or ablative absolute, by a wish, or otherwise: as,

(a.) nēmō umquam sine māgnā spē immortālitātis sē prō patriā offerret ad mortem, TD. 1, 32, nobody would ever expose himself to death for his country without a well-grounded conviction of immortality. cum hāc dōte poteris vel mendīcō nūbere. Pl. Per. 396, with such a dowry you can e'en a beggar wed. Sūlla, crēdō, hunc petentem repudiāsset, Arch. 25, Sulla, I suppose, would have turned my client away, if he petitioned him. quae legentem fefellissent, trānsferentem fugere nōn possunt. Plin. Ep. 7, 9, 2, what would have escaped a reader can't escape a translator. vīvere ego Britannicō potiente rērum poteram? Ta. 13, 21, as for me, could I live. if Britannicus were on the throne (2102)? nisi tē salvō salvī esse nōn possumus, Marc. 32, without you safe, safe we cannot be. aspicerēs utinam, Sāturnia: mītior essēs, O. 2, 435, would thou couldst see, Saturnia: thou wouldst gentler be.

2111-2113.] Sentences: The Subordinate Sentence.

(b.) habet örätiönem tälem cönsul, quälem numquam Catilina victor habuisset, Sest. 28, he makes a speech — yes, and he a consul — such as a Catiline would never have made, if flushed with success. revereäris occursum, nön reformidës, Plin. Ep. 1, 10, 7, you might well be abasked in his presence, but you would not be afraid. di immortäles mentem illi perditö ac furiösö dedërunt ut huic faceret insidiäs; aliter perire pestis illa nön potuit, Mil. 88, the immortal gods inspired that mad miscreant to waylay my client; otherwise, that monster could not have been destroyed. For the use of abaque in a coordinate protasis in Plautus and Terence, see 1701, 1421.

2111. The verb of the protasis is sometimes omitted: as in abridged sentences (1057), or when it may be easily supplied (1036).

aut enim nēmē, aut sī quisquam, ille sapiēns fuit, L. 9, for eitker nebody or, if anybody, that was a wise man. sī ēveniet, gaudēbimus: sīn secus, patiēmur, Pl. Cas. 377, if it shall come to pass, glad shall we be; if else, we shall endure. mē voluisses, sī hace cīvitās est, cīvem esse mē; sī nēn, exsulem esse, Fām. 7, 3, 5, that I wished, if this is a commonwealth, to be a citizen of it; if it is not, to be an exile. sūmeret alicunde . . . sī nūllē aliō pactē, faenore, T. Ph. 299, he could have got it from somebody or other . . . if in no other way, on usury (2113).

VARIATION OF THE APODOSIS.

2112. The apodosis is sometimes represented by the accusative of exclamation (1149), or the vocative: as,

mortalem graphicum, si servat fidem, Pl. Ps. 519, O what a pattern creature, if he keeps his word. O miserum te, si intellegis, miseriorem, si non intellegis, hoc litteris mandari, Ph. 2, 54, wretched man if you are aware, more wretched if you are not aware, that all this is put down in black and white. inimice lamnae, Crispe Sallusti, nisi temperato splendeat fish, H. 2, 2, 2, thou foe to bullion, Crispus Sallustius, so it shine not with tempered use.

2113. The verb of the apodosis, or the entire apodosis, is often omitted. In the latter case an appended verb might easily be mistaken for the apodosis.

quid sī caelum ruat? T. Hau. 719, what if the sky should fall? quo mihi fortūnam, sī non concēditur ūti? H. E. 1, 5, 12, why wealth for me, if wealth I may not use? nisi restituissent statuās, vehementer minātur, V. 2, 162, he threatens vengeance dire, if they did not put the statues back in their place. quae supplicātio sī cum cēterīs conferātur, hoc interest, C. 3, 15, if this thanksgiving be compared with all others, there would be found the following difference. non edepol ubi terrārum sim scio, sī quis roget, Pl. Am. 336, upon my word I don't know where on earth I am, if anyone should ask sī Valerio qui crēdat, quadrāgintā milia hostium sunt caesa, L. 33, 10, 8, if anybody believe such a man as Valerius, there were forty thousand of the enemy slain. A clause with sī or nisi is often used parenthetically: as, sī placet, sī vidētur, sīs, sultis, if you please, sī quaerīs, if you must know, in fact, sī dīs placet, please heaven, nisi mē fallit, if I am not mistaken, &c. &c. For wishes introduced by ō sī, without an apodosis, see 1546.

2114. The apodosis is sometimes expanded by inserted expressions. So particularly by vereor ne, equivalent to fortasse (1958), non dubito quin, to profecto (1986), or a form of sum with a relative pronoun: as,

quae conëtur si velim commemorare, vereor në quis existimet më causam nobilitatis voluisse laedere, RA. 135, if I should undertake to set forth his high and mighty schemes, possibly it might be thought that I wished to damage the cause of the conservatives. Si tum P. Sëstius animam Edidisset, non dubito quin gliquando etatua huic statueretur, Sest. 83, if Sestius kad given up the ghost then, a statue would doubtless at some day have been set up in his honour. quod ille si repudiasset, dubitatis quin ei vis esset adlata? Sest. 62, if he had rejected this, have you any doubt that violent hands would have been laid on him? sescenta sunt quae memorem, si sit otium, Pl. Aul. 320, there are a thousand things that I could tell, if I had time.

2115. For expressions of trial, hope, or expectation, followed by a conditional protests with Si, see 1777.

CONCESSIVE PROTASES.

etsi, tametsi (tamenetsi), etiamsi.

2116. etsi, tametsi, though, etiamsi, even if, or sometimes simple si, if, is used to introduce a concessive protasis. The verb of the protasis is either indicative or subjunctive; but the indicative is the prevailing construction, especially with etsi. The apodosis often has tamen as an adversative correlative, even with tametsi.

etsI is rare in poetry; not in Sallust. Sometimes it is used like quamquam to append a fresh main sentence (2153). tametsI belongs chiefly to colloquial style, though Sallust often uses it; not in the Augustan poets or Tacitus.

(a.) non vidi eam, etsi vidi. Pl. MG. 407, I saw her not, although I saw her. quo me habeam pacto, tametsi non quaeris, docebo, Lucilius in Gell. 18. 8, 2, I'll tell you how I am, though you do not inquire. etiamsi multi mecum contendent. tamen omnis superado, Fam. 5, 8, 4, though I shall have many rivals, yet I will outdo them all. tametsi causa postulat, tamen praeterido, Quinct. 13, though the case calls for it, still I will let it pass. Caesar, etsi in his locis maturae sunt hiemes, tamen in Britanniam proficisci contendit, 4, 20, 1, though the winter always sets in early in these parts, nevertheless Caesar made haste to proceed to Britain. Caesar, etsi intellegedat, qua de causa ea dicerentur, Indutiomarum ad se venire illissit, 5, 4, 1, though Caesar was aware of his motives in saying so, he directed Indutomarus to come to him.

(b.) etsī taceās, palam id quidem est. Pl. Aul. 418, though you should hold your tongue, still that at least is plain. etsī nihil aliud Sūllae nisi cōnsulātum abstulissētis, tamen eō contentōs vōs esse oportēbat, Sull. 90. even though you had robbed Sulla of nothing but the consulship, still you ought to be satisfied with that. equidem, etiamsī oppetenda mors esset, in patriā māllem quam in externis locis, Fam. 4, 7, 4, for my part, even though death were to be faced, I should prefer it in my native land rather than abroad.

CONDITIONAL COMPARISONS.

quasi (quam si), tamquam si, ut or velut si.

2117. si following a word meaning than or as is used with the subjunctive in conditional comparisons.

In this use, quasi (quam si twice in Tacitus) and tamquam si are found at all periods. ut si is found in Terence once, in Cicero (not in the orations), once in Livy, sometimes in later writers. velut si begins with Caesar; not in Cicero.

2118. si is often omitted after tamquam, and (from Livy on) sometimes after velut. After quasi it is sometimes inserted in Plautus, Lucretius, and late Latin. ceu is sometimes used, chiefly in poetry, for tamquam si. The main clause often has as correlative ita, sic, perinde, proinde, similiter, or non secus.

2119. The tense of the subjunctive is usually regulated by the sequence of tenses: as,

quid mē sīc salūtās quasi dūdum non videris? Pl. Am. 682, why dost thou greet me thus as if but now thou hadst not looked on me? quid ego his testibus ūtor, quasi rēs dubia sit? Caecil. 14, why do I employ these witnesses, as if it were a case involving doubt? tamquam si claudus sim, cum fūstīst ambulandum, Pl. As. 427, I have to take my walks with a stick, as if I were a lame man. tamquam extrūderētur, ita cucurrit, Ph. 10, 10, he rushed away as if he had been kicked out. quod absentis Ariovistī crūdēlitātem, velut sī coram adesset, horrērent, 1, 32, 4, becaus they trembled at Ariovistus's barbarity, absent as he was, just as if he stood before their eyes. mē quoque iuvat, velut ipse in parte laboris ac periculi fuerim, ad finem bellī Pūnicī pervēnisse, L. 31, 1, 1, I feel glad myself at having finally reached the end of the Punic war, as if I had had a direct hand in the work and the danger.

2120. The imperfect or pluperfect subjunctive is sometimes used, even when the leading verb is in a primary tense, to mark action more distinctly as non-occurrent (2091): as,

Eius negotium sic velim suscipiās, ut sī esset rēs mea, Fam. 2, 14, I wish you would undertake his business, just as if it were my own affair. mē audiās, precor, tamquam sī mihī quirītanti intervēnissēs, L. 40, 9, 7, listen to me, I pray you, as if you had come at a cry from me for help. iūs iūrandum perinde aestimandum quam sī Iovem fefellisset, Ta. 1, 73, as for the oath, it must be counted exactly as if he had broken one sworn on the name of Jupiter.

2121. quasi, tamquam, ut, or velut, as if, is sometimes used with participle constructions, nouns, and abridged expressions: as,

quasi temere de re pública locutus in carcerem coniectus est, DN. 2, 6, on the ground that he had been speaking without good authority about a state matter, he was clapped in jail. restitere Romani tamquam caelesti võce iüssi, L. 1, 12, 7, the Romans halted as if bidden by a voice from heaven. laeti, ut explorata victoria, ad castra pergunt, 3, 18, 8, in high spirits, as if victory were assured, they proceeded to the camp.

2122. In old Latin, quasi is found a few times for the original quam sī after a comparative: as, mē nēmō magis respiciet, quasi abhinc ducentōs annōs fuerim mortuos, Pl. Tru. 340, nobody will pay any more altention to me than if I had been dead two centuries. It is also used (but not in classical Latin) in periods of actual comparison, like tamquam (1908), with the indicative: as, spūmat quasi in aequore salsō fervēscunt undae, Lucret. 3, 493, he foams just as the waters boil in the salt sea. For its use in figurative comparisons, see 1908, 1944. For tamquam introducing a reason, see 1909.

CONNECTION OF SEPARATE SENTENCES OR PERIODS.

2123. Separate sentences or periods have a connective more commonly in Latin than in English. Sometimes, however, like the members of single periods, they are for special reasons put asyndetically (1637).

(A.) WITHOUT A CONNECTIVE.

2124. Asyndeton is common with two or more separate sentences or periods:

2125. (a.) To represent a series of actions as occurring at the same moment: as,

hic diffisus sume salūtī ex tabernāculo prodit; videt imminēre hostēs; capit arma atque in portā consistit; consequentur hunc centurionēs; relinquit animus Sextium gravibus acceptīs vulneribus, 6, 38, 2, despairing of his life, he comes out of the tent; sees the enemy close at hand; seizes arms and takes his stand at the gate; the centurions rally round him; Sextius becomes unconscious, receiving severe wounds.

2126. (b.) When an occurrence is represented as consisting of many successive actions: the *Enumerative Asyndeton*: as,

peroravit aliquando, adaēdit. surrēxī ego. respīrāre visus est, quod non alius potius diceret. coepi dicere. ūsque eo animadvertī, iūdicēs, eum aliās rēs agere, antequam Chrysogonum nomināvi; quem simul atque attigī, statim homo sē ērēxit, mīrārī visus est. intellēxī quid eum pupugisset, RA. 60, after a while he wound up, took his seat; up rose your humble servant. He seemed to take courage from the fact it was nobody else. I began to speak. I noticed, gentlemen, that he was inattentive all along till I named Chrysogonus; but the moment I touched on him, the creature perked up at once, seemed to be surprised. I knew what the rub was.

2127. (c.) When the last sentence sums up the result of the preceding with emphasis: the Asyndeton of Summary: as,

2128-2130.] Sentences: Connection of Sentences.

hi de sua salute desperantes, aut suam mortem miserabantur, aut parentes suos commendabant. plena erant omnia timoris et luctus, Caes. C. 2, 41, 8, despairing of their lives, they either bewailed their own death, or strove to interest people in their parents. In short, it was one scene of terror and lamentation.

(B.) WITH A CONNECTIVE.

2128. Separate sentences or periods may be connected: (1.) by pronominal words: (a.) demonstrative or determinative; (b.) relative; (2.) by conjunctions and adverbs.

(I.) PRONOMINAL WORDS.

(a.) DEMONSTRATIVE AND DETERMINATIVE WORDS AS CONNECTIVES.

2129. hio and is serve as connectives at the beginning of a new period. In English the equivalent word is usually placed not at the beginning as a connective, but after some words.

Gallia est divisa in partes tres, quarum unam incolunt Belgae, aliam Aquitani, tertiam Celtae. hi omnes lingua, institutis, legibus inter se differunt, 1, 1, Gaul is divided into three parts, one of which is occupied by Belgians, another by Aquitanians, and the third by Kells. In language, customs, and laws these are all different from each other. apud Helvētiös nobilissimus fuit Orgetorix. is M. Messalla et M. Pisone consulibus coniurationem nobilitatis fecit, 1, 2, 1, among the Helvetians the man of highest rank was Orgetorix. In the consulship of Messala and Piso he got up a conspiracy among the nobles. angustos se finis habere arbitrabantur. his rebus adducti constituerunt ea quae ad proficiscendum pertinerent comparare. ad eas res conficiendas biennium sibi satis esse duxerunt. ad eas res conficiendas Orgetorix deligitur. is sibi legationem suscepit, 1, 2, 5, they thought they had a narrow territory; so they resolved in consequence to make such preparations as were necessary for a move. They considered two years ample to do this. Orgetorix is chosen to do this. He took upon himself the office of envoy.

2130. Particularly common are demonstrative words at the beginning of a new period, to show that the first action necessarily took place or was natural.

Dionysius tyrannus Syrācūsis expulsus Corinthi pueros docēbat; ūsque eð imperio carēre non poterat, TD. 3, 27, after his expulsion from Syracuse, the tyrant Dionysius kept school at Corinth; so incapable was he of getting along without governing.

Digitized by Google

Copulative and Disjunctive. [2131-2135.

(b.) RELATIVES AS CONNECTIVES.

2131. qui serves to connect a new period when it may be translated by a demonstrative, or when it is equivalent to et is, is autem, is enim, is igitur: as,

perpetraret Anicetus promissa. qui nihil cunctatus poscit summam sceleris, Ta. 14, 7, Anicetus must carry out his agreement. Without any ado he asks to have the entire management of the crime. For other examples, see 1835.

2132. The neuter accusative quod, as to that, as to which, whereas, now, so, is used to connect a new period, especially before as, nisi, etsi, utinam (1837): as,

quod si tū valērēs, iam mihī quaedam explorāta essent, Att. 7, 2, 6, whereas if you were well yourself, some points would have been clear to me before this. quod si diūtius alātur controversia, fore uti pars cum parte civitātis confligat, 7, 32, 5, now if the dispute be kept up any longer, one half of the community would quarrel with the other. quod nisi militēs essent dēfessī, omnēs hostium copiae dēlērī potuissent, 7, 88, 6, so if the soldiers had not been utterly spent, all the forces of the enemy might have been exterminated.

(2.) CONJUNCTIONS AND ADVERBS.

2133. The conjunctions and adverbs used to coordinate sentences are: (a.) copulative and disjunctive; (b.) concessive and adversative; (c.) causal and illative.

(a.) COPULATIVE AND DISJUNCTIVE.

et, neque or nec, -que, atque or ac, aut.

et.

2134. et, and, simply adds, as in English (1645). But it is often used in such a connection that a modification of the translation is required to bring out the sense.

2135. et may continue the discourse with a concessive sentence, which is to be followed by an adversative. In such cases quidem often stands in the concessive sentence: as,

primores civitatis eadem orant. et ceteri quidem movebant minus; postquam Sp. Lucretius agere coepit, consul abdicavit se consulatu, L. 2, 2, 8, the head mm of the state make the same request. Now the others did not influence him much. But when Lucretius began to take steps the consul resigned his consulship.

2136-2142.] Sentences: Connection of Sentences.

2136. et, and strange to say, and if you'd believe it, introduces something unexpected: as,

iamque tres laurestae in urbe statuae, et adhuc raptsbat Āfricam Tacfarinas, Ta. 4, 23, there were already three triumphal statues in Rome, and, strange to say, Tacfarinas was still harrying Africa.

2137. et, and really, and in fact, and to be sure; in this sense it is usually followed immediately by the verb: as,

multa quae non volt videt. et multa fortasse quae volt! CM. 25, one sees much that one would not. Aye, and much perhaps that one would!

2138. et introducing a sentence explaining in detail a general idea before given may be translated namely: as,

consules religio tenebat, quod prodigiis aliquot nuntiatis, non facile litabant. et ex Campania nuntiata erant Capuae sepulchra aliquot de caelo tacta, L. 27, 23, 1, the consuls were detained by scruple, because several prodigies were reported, and they could not readily obtain good omens; namely from Campania it was reported that at Capua several tombs were struck by lightning.

2139. et, and also, and besides: as,

Pünicae quoque victoriae signum octo ducti elephanti. et non minimum suere spectaculum praecedentes Sosis et Moericus, L. 26, 21, 9, as an emblem of the Punic victory also, elephants to the number of eight marched in parade. And surthermore not the least attractive part of the pageant were Sosis and Moericus, moving at the head of the line.

2140. et, and yet, introduces a contrast or opposition: as,

canorum illud in voce splendescit etiam in senectūte, quod equidem adhūc non āmīsī; et vidētis annos, CM. 28, the musical element in the voice actually improves in old age, and this I have not yet lost. And yet you see my years.

neque or nec.

2141. nec, and really . . . not, and in fact . . . not: 25,

magno cum persculo suo, qui sorte patrum in soro erant, in eam turbam inciderunt. nec temperatum manibus soret, ni propere consules intervenissent, L. 2, 23, 9, it was with great personal risk to such of the such eras a happened to be in the market place, that they got into the crowd. And in fact acts of violence would have occurred, unless the consuls had made haste to interfere.

2142. nec, and to be sure . . . not : as,

centum viginti lictores cum fascibus secures inligatas praeserebant. nec attinuisse demi securem, cum sine provocatione creati essent, interpretabantur, L. 3, 36, 4, a hundred and twenty lictors with rods displayed axes bound in them. And to be sure they explained the matter thus, that there would have been no propriety in having the axe taken out, since the officers were appointed without any appeal.

2143. neo, not . . . either, nor either, neither: as,

eo anno vis morbi levata. neque a penuria frumenti periculum fuit, L. 4, 25, 6, that year the violence of the plague grew less. Nor was there any danger from lack of grain either.

2144. nec, but . . . not : as,

missI tamen fētiālēs. nec eorum verba sunt audīta, L. 4, 30, 14, however the setials were sent. But they were not listened to.

-que.

2145. -que, and likewise: as,

huic duos flamines adiecit. virginesque Vestae legit, L. 1, 20, 2, to this god he assigned two special priests. And he likewise chose maids for Vesta.

2146. -que, and in fact, and so, and in general: as,

tum quoque male pugnatum est. obsessaque urbs foret, ni Horatius esset revocatus, L. 2, 51, 2, then also there was an unsuccessful engagement. And in fact Rome would have been besieged, unless Horatius had been recalled.

atque or ac.

2147. atque, and besides, and more than that, and actually: as,

ex quo efficitur animantem esse mundum. atque ex hoc quoque intellegi poterit in eo inesse intellegentiam, quod certe est mundus melior quam ülla natūra, DN 2, 32, from which it follows that the universe is alive. And more than that, we can see that it has sense from the following circumstance, that the universe is certainly superior to any element of the universe.

2148. atque, and so, and consequently: as,

impedior religione quominus exponam quam multa P. Sestius senserit. atque nihil dico praeter finum, Sest. 8, I am prevented by scruples from setting forth how much Sestius was aware of. And so I will only say one thing.

aut

2149. aut is used to add a new sentence in the sense of alioqui, or else, otherwise, or as if nisi, unless, preceded: as,

omnia bene sunt ei dicenda, aut eloquentiae nomen retinquendum est, DO. 2, 5, he must be able to speak well on all subjects, or else he must waive the name of an eloquent man.

(b.) Concessive and Adversative.

2150. A new concessive period is introduced by sane, quidem, omnino, to be sure, or fortasse, perhaps: as,

371

Plinius et Cluvius nihil dubitătum de fide praefecti referunt. săne Fabius inclinat ad laudes Senecae, Ta. 13, 20, Pliny and Cluvius say that there was no doubt about the loyalty of the prefect. Fabius, it must be admitted, is always inclined to eulogize Seneca. id fortasse non perfecimus; conatt quidem saepissime sumus, O. 210, perhaps we have not attained to it; still we have very often made the attempt.

2151. A new adversative sentence is introduced by autem. again, sed, vērum, but, vērō, but, indeed, at, but, or tamen, nihilō minus, nevertheless.

These words when used to connect sentences have the same meaning as when used to connect the parts of a sentence (1676).

2152. atqui, rarely atquin, and yet, but, is used chiefly in dialogue. It introduces a strong objection, sometimes in the form of a conditional protasis. From Cicero on, it is sometimes found after a question, to introduce an earnest denial.

non sum apud mē:: atqui opus est nunc quom māxumē ut sīs, T. Ph. 204, I'm all abroad:: but that's just exactly where you must n't be now. non vereor condiscipulorum nē quis exaudiat:: atqui cavendum est, Leg. 1, I'm not afraid of being overheard by any of my fellow-students:: and yet you must be on your guard. sine veniat. atqui sī illam digito attigerit uno, oculī ilico ecfodientur, T. Eu. 739. let him come on. But if he lays a finger on the maid, voe 'll-scratch his eyes out on the spot. quid vero? modum statuārum habērī nūllum placet? atqui habeātur necesse est, V. 2, 144, what? is there, think you, to be no end to your status? Yet there must be.

2153. quamquam, etsi, tametsi, though, and nisi, but, are sometimes used to coordinate a new period, correcting the preceding: as,

carère sentientis est, nec sensus in mortuo, ne carère quidem igitur in mortuo est. quamquam quid opus est in hoc philosophari? TD. 1, 88, foregoing requires a sentient being, and there is no sensation in a dead man; therefore there is no foregoing either in a dead man. And yet what is the use of philosophizing over this? utram malis vide; etsi consilium quod cepi rectum esse scio, T. Hau. 326, of these two states choose which you will; though I am sure my plan's the right one. cur ego non adsum? tametsi hoc minime tibi deest, Fam. 2, 7, 2, why am I not with you? though this is the very last thing you need. sperabam defervisse adulescentiam: ecce autem de integro! nisi quidquid est, volo hominem convenire, T. Ad. 152, I hoped his youthful passion had cooled down; yet here it is afresh! But be it what it may, I want to see the fellow.

(c.) CAUSAL AND ILLATIVE.

2154. nam, enim, for, or namque, etenim, for you see, introduces a new period which gives the reason of the foregoing: as,

qua quidem ex re hominum multitudo cognosci potuit: nam minus horis tribus munitionem perfecerunt, 5, 42, 4, and from this by the way their numbers could be gauged; for they made a breastwork in less than three hours. quem meminisse potestis: anno enim undevicesimo post eius mortem hi consules facti sunt, CM. 14, you can remember him: for the present consuls were created only nineteen years after his death.

2155. The originally asseverative meaning of nam appears, even in the classical period, in colloquial language: as, tibl \$\begin{array}{l} \begin{array}{l} \be

2156. For quippe, why, often used as a coordinating word, see 1690.

2157. proinde or proin, therefore, so, introduces a command or direction based upon the foregoing: as,

örātiönem spērat invēnisse sē, quī differat tē: proin tū fac apud tē ut siēs, T. Andr. 407, he trusts he's found some phrase wherewilk he may confound you: so see you have your wits about you. frūstrā meae vitae subvenire cōnāminī. proinde abīte, dum est facultās, 7, 50, 6, in vain ye try to save my life. So away, while ye have the power. iam undique silvae et sōlitūdō māgna cōgitātiōnis incitāmenta sunt. proinde cum vēnābere, licēbit pugillārēs ferās, Plin. Ep. 1, 6, 2, then again the surrounding woods and the loneliness are powerful stimulants to meditation. So when you go hunting, you can take a note book with you.

2158. A conclusion is denoted by ergō, itaque or igitur, therefore, so, introducing a new period: as,

nihil est praestantius deō; ab eō igitur mundum necesse est regī. nūlli igitur est nātūrae subiectus deus. omnem ergō regit ipse nātūram, D.N. 2, 77, nothing is more excellent than god. Therefore the universe must be governed by him. Therefore god is in no respect subject to nature. Consequently he rules all nature himself. For the position of these words in their clauses, see 1688; for ergō igitur and itaque ergō, 1689. For hinc, inde, eō, ideō, idcircō, proptereā, as coordinating words, see 1691.

Affirmative Coordination.

2159. A new sentence affirmative of a foregoing is often introduced by an emphatic sio or ita.

These words often introduce a general truth which is deduced from the first statement.

visne igitur të inspiciāmus ā puerō? sīc opinor; ā principiō ōrdiāmur, Ph. 2, 44, would you like to have us look into your record from boyhood? Yes, I think it would be well; let us begin at the beginning. qui diligēbant hunc, illi favēbant. sīc est volgus: ex vēritāte pauca, ex opiniōne multa aestimat, RC. 29, everybody who loved him, smiled on the other man. Yes, that is always the way of the world: it seldom judges by truth, often by hearsay.

NOUNS OF THE VERB.

THE INFINITIVE.

2160. The infinitive is in its origin a verbal substantive.

- 2161. The present infinitive active is an ancient dative, closely resembling in meaning and use the English infinitive with to. It originally marked action merely in a general way, without indication of voice or tense. In virtue of this original timeless character, the present often represents action which is really past or future; in such cases the time must be inferred from the context.
- 2162. The present infinitive active gradually approached the character of a verb, and the original substantive nature being forgotten, it was supplemented by a passive, and by forms for completed and for future action, active and passive.
- 2163. The infinitive has furthermore two other properties of the verb: (a.) it is modified by an adverb, not by an adjective; and (b.) it is followed by the construction of its verb.

OLD AND POETICAL USE OF THE INFINITIVE.

THE INFINITIVE OF PURPOSE.

- 2164. The infinitive denotes purpose: (a.) when loosely added to a substantive in old Latin, (b.) with verbs of motion, eō, veniō, currō, mittō, in old or poetical Latin, and (c.) in the combination dō bibere, give to drink, in old, colloquial, or poetical Latin: as,
- (a.) occāsiō benefacta cumulāre, Pl. Cap. 423, a chance to pile up kindnesses. Parallel with a gerund: summa ēlūdendī occāsiōst mihi nunc senēs et Phaedriae cūram adimere argentāriam, T. Ph. 885, I've now a splendid chance the greybeards of eluding and Phaedria to rescue from his money cares. (b.) recurre petere rē recentī, Pl. Tri. 1015, run back to get it ere it is too late. voltisne eāmus visere? T. Ph. 102, do you think we'd better go to call? parasītum mīsī nudiusquārtus Cāriam petere argentum, Pl. Cur. 206, my parasīte I sent four days ago to Caria, to fetch the cash. nec dulcēs occurrent ōscula nātī praeripere, Lucr. 3, 895, nor shall thy children dear come running kiss on kiss to snatch. non nos ferrō Libycōs populāre penātīs vēnīmus, V. 1, 527, we are not come with steel to harry Libya's hearths. (c.) bibere dā ūsque plēnīs cantharīs, Pl. Per. 821, kep giving on to drink with brimming bowls. bibere is thus used by Plautus, Terence, Cato, and Livy, and by Cicero once with ministrō. In classical prose, purpose is expressed by the subjunctive with ut or a relative pronoun, or by a gerund or gerundive with ad or causā.
- 2165. In poetry, the infinitive of purpose is used with synonymes of do also, and with verbs of leaving, taking away, taking up, &c.

huic loricam donat habere, V. 5, 259, on him a corselet he bestows to wear. tristitiam et metüs tredam protervis in mare Creticum portere ventis, H. 1, 26, 1, sadness and fears I'll to the wanton winds consign, to sweep into the Cretic sea. quis sibi res gestes Augusti scribere sümit? H. E. 1, 3, 7, who takes it on himself Augustus' deeds to pen? quem virum aut heroa lyre vel ecri tibië sümis celebrere? H. 1, 12, 1, what hero or what demigod dost thou take up, to ring his praises on the rebec or the piercing pipe?

THE INFINITIVE WITH ADJECTIVES.

2166. The infinitive is sometimes used with adjectives, chiefly by poets of the Augustan age, and late prose writers, often in imitation of a Greek idiom: as.

indoctum iuga ferre nostra, H. 2, 6, 2, not taught our yoke to bear. avidī committere pūgnam, O. 5, 75, hot to engage in fight. sõli cantāre perītī Arcades, V. E. 10, 32, Arcadians alone in minstrelsy are skilled. vitulus niveus vidērī, H. 4, 2, 59, a bullock snow-white to behold, i. e. visū (2274). These infinitives are of different kinds, some of them resembling a complementary infinitive, others a gerund or gerundive construction, the supine in -tū (-sū), &c., &c.

THE ORDINARY USE OF THE INFINITIVE.

2167. The infinitive is ordinarily used either as object or as subject of a verb.

(A.) THE INFINITIVE AS OBJECT. THE COMPLEMENTARY INFINITIVE.

2168. The present infinitive is often used to complete the meaning of certain kinds of verbs which imply another action of the same subject: as,

pro Pompēio ēmorī possum, Fam. 2, 15, 3, I could die the death for Pompey (1495). quid habēs dicere? Balb. 33, what have you to say? scire volēbat, V. I, 131, he wanted to know. hoc facere dēbēs, RabP. 7, you ought to do this. Caesar Rhēnum trānsīre dēcrēverat, 4, 17, 1, Caesar had resolved to cross the Rhine. fugā salūtem petere contendērunt, 3, 15, 2, they tried to save themselves by flight. num negāre audēs? C. I, 8, do you dare deny it? vereor dicere, T. Andr. 323, I am afraid to tell. num dubitās id facere? C. I, 13, do you hesitate to do that? mātūrat ab urbe proficiscī, I, 7, I, he makes haste to leave Rome. Diviciācus Caesarem obsecrāre coepit, I, 20, I, Diviciacus began to entreat Caesar. Dolābella iniūriam facere persevērat, Quint. 31, Dolabella persists in doing wrong. illī pecūniam policērī non dēsistunt, 6, 2, I, these people did not stop offering money. diem ēdictī obire neglēxit, Ph. 3, 20, he failed to keep the day named in the edict. īrāscī amīcīs non temere soleo, Ph. 8, 16, I am not apt to get provoked with friends without just cause. illī rēgībus pārēre didicerant. Ph. 3, 9, the men of old were trained to bow the knee to kings (1615). dextram cohibēre memento, J. 5, 71, remember that you keep hands off.

2169-2174.] Sentences: Nouns of the Verb.

2169. The verbs or verbal expressions which are supplemented by an infinitive are chiefly such as mean can, will or wish, ought, resolve, endeavour, dare, fear, hesitate, hasten, begin, continue, cease, neglect, am wont, learn, know how, remember, forget, seem. The infinitive in this combination contains the leading idea. For the occasional use of the perfect infinitive with some of these verbs, see 2223.

Some of the commonest of these verbs are possum, queō, nequeō; volō, nōlō, mālō, cupiō, studeō; dēbeō; cōgitō, meditor, statuō. cōnstituō, dēcernō, parō; cōnor, nitor, contendō; audeō; vereor; cunctor, dubitō, festinō, mātūrō, instituō, coepi, incipiō, pergō, persevērō, dēsinō, dēsistō, omittō, supersedeō, neglegō, nōn cūrō; soleō, adsuēscō, cōnsuēscō; discō, sciō, nesciō, recordor, memini, obliviscor; videor.

2170. The infinitive is also used with many verbal expressions equivalent to the above verbs, such as habeō in animō, cōnsilium est, certum est, parātus sum, &c., &c., or with parātus alone, adsuēfactus, &c., &c. Furthermore, in poetry and late prose, the place of many of the above verbs is often taken by livelier or fresher synonymes, such as valeō for possum, from Lucretius on, ārdeō, burn, for volō, cupiō, or absiste, fuge, parce, &c., for nōlī (1584), &c., &c.

2171. A predicate noun used in the construction of the complementary infinitive, is put in the nominative: as,

Aelius Stōicus esse voluit, Br. 206, Aelius wanted to be a Stoic. esse quam vidērī bonus mālēbat, S. C. 54, 6, he chose to be good rather than seems good.

THE ACCUSATIVE WITH THE INFINITIVE.

2172. A very common form of a dependent sentence is that known as the Accusative with the Infinitive.

Thus, of the two coordinate sentences scio: iocaris tu nunc, Pl. Mast. 1081, I know: you are jesting now, the second may be put in a dependent form, the two sentences blending into one: scio iocari te nunc, I know you to be jesting now.

2173. The subject of an infinitive is put in the accusative.

Thus, in eum vident, they see him, eum is the object of vident (1134). If sedēre is added, eum vident sedēre, V. 5. 107, they see him sit, or they see that he is sitting, eum is at the same time the object of vident and the subject of sedēre. But the accusative by degrees becoming detached from the main verb, and closely interlocked with the infinitive, the combination is extended to cases where the main verb is intransitive or passive.

2174. A predicate noun referring to a subject accusative is itself put in the accusative: as,

të esse arbitror puerum probum, Pl. Most. 949. I think you are a good boy. nëminem vivum capi patiuntur, 8, 35, 5, they do not allow anybody to be made prisoner alive (2198).

VERBS OF PERCEIVING, KNOWING, THINKING, AND SAYING.

2175. The accusative with the infinitive is used with active verbs or verbal expressions of perceiving, knowing, thinking, and saying: as,

patère tua consilia non sentis? C. 1, 1, you don't feel that your plots are all out? huic filium scis esse? T. Hau. 181, you are aware that this man has a son? Pompēios consēdisse terrae motu audivimus, Sen. NQ. 6, 1, 1, we have heard that Pompei has been swallowed up by an earthquake, OQ. A. D., 17 years before its utter destruction. saepe audivi inter os atque offam multa intervenire posse, Cato in Gell. 13, 18 (17), 1, I have often heard "twirt cup and lip there's many a slip." dicit montem ab hostibus tenērī, 1, 22, 2, he says the hill is held by the enemy. dixtin dūdum illam dixisse, are expectare filium? T. Hec. 451, did n't you say a while ago the woman said that she was looking for her son?

Some of the commonest of these verbs are: (a.) audiō, animadvertō, sentiō, videō. (b.) accipiō, intellegō, sciō, nesciō. (c.) arbitror, cēnseō, cōgitō, crēdō, existimō, memini, opinor, putō, recorder, suspicor. (d.) adfirmō, āiō, dēmonstrō, dicō, disputō, doceō, fateor, nārrō, negō, nūntiō, ostendō, prōmittō, scribō, significō, spērō, trādō. (c.) rūmor est, nōn mē fugit, certus sum, nōn nescius sum, &c., &c. Also occasionally verbs used in the sense of think or say, as mittō, send word, and substantives or pronouns expressing a thought or judgement.

2176. The accusative with the infinitive is sometimes introduced by a neuter pronoun, or by sic or ita: as, illud negābis, tē dē rē iūdicātā iūdicātisse? V. 2, 81, will you deny this, that you sale in judgement on a matter that was already decided? sīc accēpimus, nūllum bellum fuisse, V. 5, 5, we have been told this, that there was not any war. Sometimes by an ablative with dē: as, dē hoc Verrī dicitur, habēre eum perbona toreumata, V. 4, 38, about this man report is made to Verres that he had some choice bits of embossed work.

2177. (1.) Passive verbs of this class are commonly used personally in the third person of the present system, with the subject, and the predicate noun, if used, in the nominative: as,

hi centum pagos habere dicuntur, 4, 1, 4, these people are said to have a hundred cantons. nulla iam existimantur esse iudicia, V. a. pr. 43, there are thought to be no courts of law any longer. pons prope effectus nuntiabatur, Caes. C. 1, 62, 3, the bridge was reported to be well-nigh done.

2178. Such personal passives are much more common in the writers of Cicero's day than in old Latin. Particularly so arguō, audiō. cōgnōscō, comperiō, concēdō, dēfendō, dēmōnstrō, dicō, doceō, excūsō, existimō, inveniō, indicō, liberō, memorō, negō, nūntiō, ostendō, postulō, putō, reperiō, trādō.

2179. (2.) With the first or second person the personal construction is rare: as, quod nos bene ēmisse iūdicātī sumus, Att. 1, 13, 6, that we are thought to have made a good bargain. cum inveniāre improbissimā ratione esse praedātus, V. 4, 3, when you prove to have been robbing most abominably. But with videor, seem, the personal construction is the rule in all three persons, and in the perfect system as well as the present.

2180-2186.] Sentences: Nouns of the Verb.

2180. (3.) In the perfect system, and also usually in the gerundive construction (2246), verbs of this class are commonly impersonal: as,

traditum est Homerum caecum fuisse, TD. 5, 114, the tradition is that Homer was blind. ubl tyrannus est, ibl dicendum est nullam esse rem publicam, RP. 3, 43, wherever there is an absolute ruler, there we must maintain there is no commonwealth.

2181. (4.) With some verbs of this class, the impersonal construction is preferred even in the present system. Thus, commonly intellegitur, it is understood, as impersonal; regularly in classical Latin creditur; with a dative in Cicero and Caesar dicitur, nuntitatur. The impersonals cernitur, fertur, memoratur, proditur, videtur, are rare.

2182. The personal construction is sometimes extended to other verbs or verbal expressions, especially in poetry: as, colligor, O. A. 2, 6, 61, I am inferred, for colligitur. nonntillis magistratus veniebant in suspicionem nos demorati esse, Lentulus in Fam. 12, 15, 5, the magistrates were suspected by some of having delayed us (1491).

2183. With verbs of thinking and saying the subject accusative is sometimes omitted.

(a.) Oftenest thus mē nos, tē vos, or sē: as, stultē fēcisse fateor, i. e. mē, Pl. B. 1013, I own I've acted like a fool. confitēre vēnisse, i. e. tē, RA. 61, confess you came. quae imperārentur facere dixērunt, i. e. sē, 2, 32, 3, they said they would do as ordered (2221). Often the future without esse: as, refrāctūros carcerem minābantur, i. e. sē, L. 6, 17, 6, they threatend to break the jail open. (b.) Less frequently an accusative of is: as, oblitum crēdidī, i. e. eum, Fam. 9, 2, 1, I imagined he had forgotten. Such omissions are common in old Latin, Cicero, Caesar, Livy, and in poetry.

2184. When the accusative is not expressed, a predicate noun is sometimes put in the nominative, chiefly in poetry, in imitation of a Greek idiom: as,

phasēlus ille quem vidētis, hospitēs, ait fuisse nāvium celerrimus, Cat. 4, 1, the clipper you see yonder, friends, says she was once the fleetest of the fleet. uxor invīctī Iovis esse nescīs, H. 3, 27, 73. thou knowest not thou art the bride of the unconquerable Jove. Similarly with verbs of enotion (2187): as, gaudent esse rogātae, O. A.A. 1, 345, they are glad to have been asked. gaudent perfūsī sanguine frātrum, V. G. 2, 510, they're glad to have been imbued with brothers' blood.

VERBS OF ACCUSING.

2185. The verbs of accusing, arguo and insimulo, take the accusative with the infinitive like verbs of saying: as,

civis Romanos necatos esse arguo, V. 5, 149, my accusation is that Romans have been slain. occidisse patrem Sex. Roscius arguitur, RA. 37, Roscius is charged with the murder of his father. Insimulare coeperunt Epicratem litteras publicas corrupisse, V. 2, 60, they began to accuse Epicrates of having falsified records of state.

VERBS OF HOPING, PROMISING, AND THREATENING.

2186. The accusative with the infinitive is used with verbs of hoping, promising, and threatening: as,

Digitized by Google

id sēsē effectūrōs spērābant, 7, 26, 2, they koped to carry it out. pollicentur sēsē ēi dēditūrōs, 5, 20, 2, they volunteer to surrender to him. But sometimes the present infinitive alone: see 2236.

VERBS OF EMOTION.

2187. The accusative with the infinitive is sometimes used with verbs of joy, grief, surprise, or wonder: as,

venire tü më gaudës, Pl. B. 184, thou art glad I'm come. doluî pācem repudiāri, Marc. 14, I felt sorry peace was rejected. These verbs often have the construction with quod, or in old Latin with quia (1851).

2188. Some of the commonest of these verbs are doleo, gaudeo, laetor, miror, &c., &c.; and from Cicero on, angor, indignor, lügeo, sollicito.

VERBS OF DESIRE.

2189. (1.) The accusative with the infinitive is commonly used with volo (mālo, nolo), and oupio, when the subject of the infinitive is not the same as that of the verb: as,

Catilinam perire volui, Ph. 8, 15, I wished Catiline to die. māluit hominēs peccāre quam deos, V. 2, 22, he wanted men to sin rather than gods. tē tuā frui virtūte cupimus, Br. 331, we wish you to reap the benefit of your high character.

2190. (2.) Even when the subjects denote the same person, the accusative is sometimes used with the infinitive: as,

ēmorī mē mālim, Pl. As. 810, morī mē mālim, T. Eu. 66, I'd rather die. māgnuficē volō mē virōs summōs accipere, Pl. Ps. 167, I'm going to entertain some highborn gentlemen in style. Oftenest when the infinitive is esse, vidērī, putārī, or dīcī: as, cupiō mē esse clēmentem, cupiō mē non dissolūtum vidērī, C. 1, 4, I wish to play the man of mercy, and yet I do not wish to seem over lax. Rarely thus with dēsiderō, nōlō, optō, and studeō, and in Sallust with properō.

2191. For the perfect active with these verbs, see 2228; for the perfect passive, 2220.

2192. volo, malo, and cupio are often coordinated with the subjunctive of desire (1707). volo and malo often have the subjunctive with ut, particularly in old Latin (1950).

2193. Verbs of resolving sometimes take the accusative with the infinitive: as, certum offirmare est viam me, T. Hec. 454, I am resolved to hold the way. So, from Cicero on, sometimes censed, decerno, and sentio, in the exceptional sense of volo or iubeo, think it best: as, velle et censere eos ab armis discedere, S. I. 21, 4, that they wished and thought it best for those people to give up fighting.

2194. The accusative with the infinitive is sometimes used with verbs of demanding: as, hau postulo equidem med in lecto accumbere, Pl. St. 488, I can't expect, not I, to sprawl upon a couch. hic postulat se absolvi? V. 3, 138, does this man ask to be acquitted? Similarly with ord and praccipio in late writers.

2195-2201.] Sentences: Nouns of the Verb.

2195. The accusative with the infinitive is sometimes found with suadeo and persuadeo in Terence, Lucretius, and Vergil, and with precor in Ovid and late prose.

VERBS OF ACCOMPLISHING.

2196. Verbs of accomplishing rarely have the accusative with the infinitive: as, talls oratores videri facit, qualis ipsi se videri volunt, Br. 142, of delivery, it makes orators appear just as they wish to appear themselves. Oftenest in poetry. In prose usually the subjunctive with ut (1951).

VERBS OF TEACHING AND TRAINING.

2197. The verbs of teaching and training, doceo and adsucfacio, may take an accusative of a substantive and an infinitive expressing the thing taught: as,

quin etiam tondēre filiās suās docuit, TD. 5, 58, why more than that, he actually taught his own daughters to shave, of Dionysius, tyrant of Syracuse. equõs eödem remanēre vestīgiö adsuēfēcērunt, 4, 2, 3, they have their horses trained to stand stock-still (1608). Compare 1169.

VERBS OF BIDDING AND FORBIDDING AND OF ALLOWING.

2198. The accusative with the infinitive is used with inbeð and vetō, sinō and patior: as,

milites ex oppido exire iussit, 2, 33, 1, he ordered the soldiers to go out of the town. Pontem iubet rescindi, 1, 7, 2, he orders the bridge torn up. lex peregrinum vetat in murum ascendere, DO. 2, 100, it is against the law for a foreigner to get up on the wall. castra vallo muniti vetuit, Caes. C. 1, 41, 4, he gave orders that the camp should not be fortified with a palisade. Vinum ad se inportari non sinunt, 4, 2, 6, wine they will not allow to be brought into their country. Cicero is the first to use veto thus. Other constructions also occur with these words: see 1708, 1950, 1953, &c.

2199. The person ordered or forbidden is often omitted, when stress is laid on the action merely, or when the person is obvious from the context: as, castra munifie iubet, i. e. milites, 2. 5, 6, he gives orders to construct a camp. iusserunt pronuntiare, i. e. tribunds et centuriones, 5, 33, 3, they gave orders to proclaim. Idemque iusserunt simularum Iovis facere maius, i. e. consules, C. 3, 20, and they furthermore gave directions to make a statue of Jupiter, a bigger one.

2200. iubeo is sometimes coordinated with the subjunctive, especially in old Latin (1708). Sometimes it has the subjunctive with ut, especially in resolves of the people.

2201. In the passive, iubeō, vetō, and sinō are used personally, the accusative of the person ordered or forbidden becoming nominative: as, iubentur scribere exercitum, L. 3, 30, 3, they are ordered to raise an army. Nōlānī mūrōs adīre vetitī, L. 21, 16, 9, the men of Nola were not allowed to go to the walls. hīc accūsāre eum nōn est situs, Sest. 95, this man was not allowed to accuse him.

Digitized by Google

2202. impero often has the accusative with a passive or deponent infinitive, or with fieri: as, praesentem pecuniam solvi imperavi, Att. 2, 4, 1, 1 have given orders for ready money to be paid. Rarely with an active infinitive parallel with a passive: as, eo partem navium convenire commeaturingue comportari imperat, Caes. C. 3, 42, 2, he orders part of the vessels to rendesvous there, and grain to be brought. In the passive, a personal imperor occurs, like iubeor (2201): as, in lautumias deduci imperantur, V. 5, 68, orders are given for them to be taken to the quarries. See also 1950. permitto has sometimes the accusative with the infinitive from Tacitus on, usually the subjunctive with ut (1950).

2203. The verbs of hindering, prohibeo and impedio, sometimes have the accusative with the infinitive: as, barbari nostros navibus Egredi prohibebant, 4, 24, 1, the savages undertook to prevent our people from disembarking. The infinitive used with prohibeo is usually passive or deponent. quid est igitur quod me impediat ea quae probabilia mihi videantur sequi? Of. 2, 8, what is there then to hinder me from following what seems to me to be probable? See also 1960 and 1977.

THE INFINITIVE AS A SUBSTANTIVE ACCUSATIVE.

- 2204. The accusative with the infinitive, or the infinitive alone, regarded as a neuter substantive, may be used as the object of a verb, or in apposition with the object: as,
- (a.) leporem gustāre fās non putant, 5, 12, 6, tasting hare they count a sin. errāre malum dūcimus, Off. 1, 18, going astray we hold a bad thing. (b.) ad id quod Instituistī, orātorum genera distinguere aetātibus, istam diligentiam esse accommodātam puto, Br. 74, I think your accurate scholarship is just the thing for your projected task classifying public speakers chronologically.
- 2205. The infinitive as a substantive is rarely preceded by the preposition inter in prose: as, multum interest inter dare et accipere, Sen. Ben. 5, 10, 2, there is a vast difference between 'give' and 'take.' In poetry also by praeter.
- 2206. In poetry, the infinitive is used as a substantive object with such verbs as do, reddo, adimo, perdo: as, hic vereri perdidit, Pl. B. 158, this youth has lost his sense of shame.

(B.) THE INFINITIVE AS SUBJECT.

- 2207. The accusative with the infinitive, or the infinitive alone, present or perfect, may be used as the subject of a verb, in apposition with the subject, or as a predicate nominative: as,
- (a.) mendacem memorem esse oportère, Quintil. 4, 2, 91, that a liar should have a good memory. (b.) sequitur illud, caedem senatum iddicasse contra rem publicam esse factam, Mil. 12, next comes this point, that the senate adjudged the homicide an offence against the state. (c.) exitus fuit orationis, sibi nullam cum his amicitiam esse posse, 4, 8, 1, the end of the speech was that he could not have any friendship with these people.

2208-2214.] Sentences: Nouns of the Verb.

- **2208.** The infinitive is used as the subject (a.) with impersonal verbs, (b.) with **est**, **putātur**, **habētur**, &c., and an abstract substantive, a genitive, or a neuter adjective in the predicate.
- 2209. (a.) Some of the commonest impersonal verbs are apparet, decet, expedit, licet, lubet, oportet, praestat, pudet, refert. Also in classical Latin, attinet, conducit, constat, dedecet, exsistit, fallit, interest, iuvat, liquet, obest, paenitet, patet, pertinet, placet, displicet, prodest, which are used as live verbs by Lucretius and Sallust also. Similarly in Plautus and Terence fortease.
- 2210. The infinitive is occasionally used as a subject with verbs other than the above (2209): as, non cadit invidere in sapientem, TD. 3, 21, enry does not square with our ideas of a sage. Carere hoc significat, egere eo quod habere velis, TD. 1, 88, careo means not having what you would like to have.
- 2211. (b.) Some of the commonest abstracts used thus with est are fama, fas and nefas, fides, ius, laus, opus, mos, tempus. From Cicero on, opinio and proverbium. In Plautus, audācia, confidentia, miseria, negotium, scelus, &c. For genitives, see 1237. Neuter adjectives are such as aequum, iniquum, consentaneum, crēdibile, incredibile, manifestum, necesse, par, rēctum, &c., &c.
- 2212. The accusative is not expressed when it is indefinite, you, a man, a person, anybody, frequently also when it is implied in some other case in the sentence: as,

non tam praeclārum est scire Latinā quam turpe nescire, Br. 140. it is not so creditable to be a Latin scholar as it is disreputable not to be. mihī inter virtūtās grammatich habēbitur aliqua nescire, Quintil, 8, 21, in my eyes it will be one merit in a classical scholar not to be omniscient. temporī cēdere semper sapientis est habitum, Fam. 4, 9, 2, bowing to the inevitable has always passed as a mark of wisdom. peccāre licet nēminī, Par. 20, no man is at liberty to sin. An indefinite hominem, aliquem, or tē, is rare: 28, illa laus est, liberōs hominem ēducāre, Pl. MG. 703, it is a crown of glory for a man a family to rear.

2213. (1.) A predicate noun referring to the unexpressed indefinite subject of the infinitive is put in the accusative: as,

non esse cupidum pecunia est, non esse emacem vectigal est, contentum vero suis rebus esse maximae sunt divitiae, Par. 51, for a man not to have desires, is money down, not to be eager to buy is an income; but to be satisfied with what you have is the greatest possible wealth. A plural predicate is rare: as, esset egregium domesticis esse contentos, O. 22, it would be a grand thing for people to be satisfied with home examples.

2214. (2.) When the subject of the infinitive is implied in a dative, a predicate noun may also be in the dative. as,

min neglegenti esse non licet, Att. 1, 17, 6, it will not do for me to be careless. With a dative and licet, however, the predicate is sometimes in the accusative: as, quod si civi Romano licet esse Gāditānum, Balb. 29, now if a Roman is allowed to be a Gaditanian. Regularly so, when the subject is indefinite and not expressed (2212): as, have praescripta servantem licet māgnificē vivere, Off. 1, 92, a man who holds to these rules may live a noble life.

2215. The infinitive, used as a substantive in the nominative or accusative sometimes has a neuter attribute.

Chiefly thus ipsum, hoc ipsum, totum hoc: as, ipsum Latine loqui est in magna laude ponendum, Br. 140, just the mere ability of talking good Latin is to be accounted highly creditable. Rarely a possessive, meum, tuum: as, ita tuom conferto amare ne tibi sit probro, Pl. Cur. 28, so shape thy wooing that it be to thee no shame.

THE INFINITIVE OF EXCLAMATION.

2216. The infinitive alone, or the accusative with the infinitive, is sometimes used in exclamations of surprise, incredulity, disapproval, or lamentation: as,

non pudere, T. Ph. 233, not be ashamed. sedere totos dies in villa, Att. 12, 44, 2, sitting round whole days and days at the country place. at te Romae non fore, Att. 5, 20, 7, only to think you won't be in Rome. hoe posteris memoriae traditum iri, L. 3, 67, 1, to think this will be passed down to generations yet unborn. Often with a -ne, transferred from the unexpressed verb on which the infinitive depends (1503): as, tene hoe, Acci, dicere, tall prüdentiä praeditum, Clu. 84, what? you to say this, Accius, with your sound sense. The exclamatory infinitive is chiefly confined to Plautus, Terence, and Cicero.

THE INFINITIVE OF INTIMATION.

2217. This infinitive has already been spoken of; see 1535-1539.

THE TENSES OF THE INFINITIVE.

2218. The present infinitive represents action as going on, the perfect as completed, and the future as not yet begun, at the time of the action of the verb to which the infinitive is attached.

The forms of the infinitive are commonly and conveniently called tenses, though this designation is not strictly applicable.

THE PRESENT TENSE.

2219. In itself, the present infinitive denotes action merely as going on, without any reference to time. With some verbs, however, which look to the future, the present relates to action in the immediate future. With verbs of perceiving, knowing, thinking, and saying, it denotes action as going on at the time of the verb: as,

Digitized by Google

2220-2223.] Sentences: Nouns of the Verb.

(a.) facinus est vincīre cīvem Rōmānum, V. 5, 170, it is a crime to put a Roman in irons. (b.) audīre cupiō, Caec. 33, I am enger to hear. Antium mē recipere cōgitō a. d. v Nōn. Māi., Att. 2, 9, 4, I am meditating going back to Antium the third of May. (c.) errāre eōs dīcunt, 5, 41, 5, they say those people are mistaken. tempus dīxī esse, T. Hec. 687, I said it was time. dīcēs tibī Siculōs esse amīcōs? V. 2, 155, will you say the Sicilians are friends of yours?

2220. The present infinitive is sometimes used with memini, recordor, memoria teneo, and with some analogous expressions, such as accepimus, fertur, &c., to represent merely the occurrence of action really completed, without indicating its completion: 25,

memini ad më të scribere, D. 38, I remember your writing to me. meministis fieri senatūs consultum, Mur. 51, you remember a decree of the senate being fassed. sed ego idem recordor longë omnibus anteierre Dëmosthenem, O. 23, and yet I remember putting Demosthenes far above everybody else. hanc accēpimus agrös et nemora peragrāre, HR. 24, we have heard of this goddess's scouring fields and groves. Q. Māximum accēpimus facile cēlāre, tacēre, Off. 1, 108, we have heard of Fabius's ready eleverness in keeping dark and holding his tongue. But the perfect is used when the action is to be distinctly marked as completed: as, meministis më ita distribuisse causam, RA. 122, you remember that I arranged the case thus. Sometimes present and perfect are united: as, Helenë capere arma fertur, nec frätrēs ērubuisse deos, Prop. 3, 14, 19 (4, 13, 19), Helen is said to fly to arms, and not to have blushed in presence of her brother gods. Here capere relates to the same completed action as the more exact ērubuisse.

2221. With verbs of saying, used in the narrower sense of promising, the present infinitive sometimes stands for the future (2236): as,

crās māne argentum mihī mīles dare sē dīxit, T. Ph. 531, the soldier spoke of paying me the money early in the morning. mē aibat accersere, Pl. Ps. 1118, he said he'd fetch me (2186). quae imperārentur facere dixērunt, 2, 32, 3, they agreed to do what was commanded.

2222. The present infinitive dependent on a past tense of debeo, oportet, possum, often requires the English perfect infinitive in translation: as, quid enim facere poteramus? Pis. 13, for what else could we have done? See, however, 1495. For the infinitive perfect, see 2230.

THE PERFECT TENSE.

2223. (1.) The perfect active infinitive sometimes serveş as a complement of debeo, volo, possum, &c. (2168): as,

tametsi statim vicisse debed, tamen de med iure decedam, RA. 73, though I am entitled to come off victorious at once, yet I will waive my right; compare vici, I am victorious, 1608. nil vetitum fecisse volet, I. 14, 185, nothing forbidden will he wish to have done; compare feci, I am guilty. unde illa potuit didicisse? Div. 2, 51, from what source could he have all that information acquired? bellum quod possumus ante hiemem perfecisse, L. 37, 19, 5, the war which we can have ended up before winter.

2224. (2.) In prohibitions, the perfect active infinitive often serves as a complement of nölö or volö (2168).

Thus, in old Latin, nollito devellisse, Pl. Poen. 872, do not have had it plucked. Particularly so when dependent on ne velit or ne vellet, in legal style: as, ne quis convenisse sacrorum cause velit, L. 39, 14, 8, that no-body may presume to have banded with others for the observance of the mysteries. BACAS · VIR · NEQVIS · ADIESE · VELET, CIL. I, 196, 7, inscription of 186 B.C., that no male should presume to have had resort to the Backanis (765; 48). ne quid emisse velit insciente domino, Cato, RR. 5, 4, he must not venture to have bought anything without his master's knowledge, of a head farm-steward.

2225. In poetry of the Augustan age, the complementary perfect infinitive active is sometimes dependent on a verb of will or effort, such as curō, labōrō, tendō: as, tendentēs opācō Pēlion inposuisse Olympō, H. 3, 4, 51, on shadowy Olympus striving Pelion to have filed.

2226. Any past tense of the indicative, when made dependent on a verb of perceiving, knowing, thinking, or saying, is represented by the perfect infinitive.

Thus, in Theophrastus scribit Cimonem hospitalem fuisse: ita enim vilicis imperavisse, ut omnia praeberentur, Off. 2, 64, Theophrastus says in his book that Cimon was the soul of hospitality: he had directed his stewards to furnish everything required; the fuisse represents erat or fuit, and the imperavisse may represent imperavit, or perhaps imperaverat, of direct discourse. praeco dixisse pronuntiat, V. 2, 75, the crier proclaims 'speaking finished' (1605).

2227. The perfect infinitive passive with fuisse denotes a past resulting state: as,

dīcō Mithridātī cōpiās omnibus rēbus ōrnātās atque instrūctās fuisse, urbemque obsessam esse, IP. 20, I must tell you that Mithridates's troops were completely armed and equipped, and that the town was under siege. Here ōrnātās fuisse represents ōrnātae erant (1615), and obsessam esse represents obsidēbātur (1595).

2228. (1.) The perfect active infinitive is sometimes used with nölö or volö, especially in poetry, when the subject of the infinitive is not the same as that of the verb (2189): as,

hanc te ad ceteres virtutes adiecisse velim, L. 30, 14, 6, I only wish you had this good quality added to the rest.

2229. (2.) volo often has an emphatic perfect passive infinitive, usually without esse (2230); less frequently cupio and rarely nolo: as,

factum volo, Pl. B. 495, As. 685, I want it done, i. e. I will. illos monitos etiam atque etiam volo, C. 2, 27, I want those people cautioned over and over. Particularly common in Cicero, not in Caesar or Sallust. Also with impersonal infinitives (1479): as, obliviscere illum adversario tuo voluisse consultum, Att. 16, 16c, 10, you must forget that the man wanted your enemy provided for.

13

2230. The perfect infinitive passive or deponent, commonly without esse, is often used in Plautus, Terence, and Cicero, by assimilation with past tenses of verbs of propriety, such as aequum est, convenit, decet, and oportet: as, non oportuit relictas, T. Hau. 247, they should n't have been left. te Iovi comprecatam oportuit, Pl. Am. 739, you should have said your prayers to Yove. The perfect active is less common: as, Cavisses oportuit, Pl. Am. 944, you should have been upon your guard. For volo, cupio, nolo, see 2229.

2231. The perfect infinitive of completed action is very common with such expressions as satis est, satis habed, iuvat, melius est, paenitet, &c., also with verbs of emotion, such as gauded, &c.: as, me quoque iuvat ad finem belli Punici pervenisse, L. 31, 1, 1, I am delighted myself to have reached the end of the Punic war. Oftentimes, however, in verse, the use of the perfect is often partly due to the metre.

THE FUTURE TENSE.

- 2232. The future infinitive is only used as a representative of the indicative, and not as a substantive.
- 2233. For the future infinitive active or passive, a circumlocution with fore or futurum esse with ut and the subjunctive present or imperfect is often used. This construction is necessary when the verb has no future participle or supine: as,
- spērō fore ut contingat id nōbīs, TD. 1, 82, I hope we may be so fortunate. clāmābant fore ut ipsī sē dī ulcīscerentur, V. 4, 87, they cried out that the gods would avenge themselves.
- 2234. fore with the perfect participle of a passive or deponent, represents the future perfect of direct discourse: as, debellatum mox fore rebantur, L. 23, 13, 6, they thought the war would soon be over.
- 2235. (1.) The future infinitive is commonly used with iūrō, minor, polliceor, prōmittō, and spērō, especially when the leading verb and the infinitive have the same subject: as,
- iürāvit sē nisi vīctorem in castra non reversūrum, Caes. C. 3, 87, 5. he swore he would not come back to camp except as a victor. quod sē factūros minābantur, Caes. C. 2, 13, 4, which they threatened they would do. obsidēs datūros pollicitī sunt, 4, 27, 1, they volunteered to give hostages.
- 2236. (2.) A looser present infinitive is sometimes used with the above verbs, especially in old Latin, generally without a subject accusative. Thus with itiro by Cato and Plautus, and with minor, proclaim with threats, by Lucretius. Similarly dare pollicentur, 6, 9, 7, they offer to give. reliquos deterreri sperans, Caes. C. 3, 8, 3, hoping that the rest were scared. spero nostram amicitiam non egere testibus, Fam. 2, 2, I trust our friendship needs no witnesses. As possum has no future infinitive, the present of this verb is necessarily used: as, totius Galliae sese potifi posse sperant, 1, 3, 8, they hope to be able to get the control of the whole of Gaul.

THE GERUNDIVE AND GERUND.

- 2237. The gerundive is a verbal adjective (899). The gerund is a neuter verbal substantive, used only in the oblique cases of the singular. Both gerundives and gerunds express, in a noun form, the uncompleted action of the verb.
- 2238. Gerundives and gerunds, like the English verbal in -ing, were originally neither active nor passive (288), but might stand for either an active or a passive. In time a prevailing passive meaning grew up in the gerundive, and a prevailing active meaning in the gerund.

A gerund may be followed by the same case as its verb; but for the gerund of verbs of transitive use, see 2242, 2255, 2259, 2265.

2239. Both gerundives and gerunds are modified like verbs, by adverbs, not by adjectives.

(I.) THE GERUNDIVE CONSTRUCTION.

2240. The gerundive expresses, in an adjective form, the uncompleted action of a verb of transitive use exerted on a substantive object, the substantive standing in the case required by the context, and the gerundive agreeing with it.

In this construction, which is called the *gerundive construction*, the substantive and gerundive blend together in sense like the parts of a compound.

male gerendo negotio in aere alieno vacillant, C. 2, 21, owing to bad business-managing they are staggering under debts. studium agrī colendī, CM. 59, the occupation of land-tilling. vir regendae reī pūblicae scientissimus, DO. 1, 214, a man of great experience in state-managing.

(2.) THE GERUND.

2241. The gerund expresses, in a substantive form, the uncompleted action of a verb which has no direct object.

ars vivendi, Fin. 1, 42, the art of living. non est locus ad tergiversandum, Att. 7, 1, 4, 'tis no time for shill-I-shall-I-ing. sum defessus quaeritando, Pl. Am. 1014, I'm all worn out with hunting. se experiendo didicisse, Ta. 1, 11, he had learned by experience.

2242-2244.] Sentences: Nouns of the Verb.

2242. Gerunds of verbs of transitive use are exceptionally found with a substantive object (2255, 2259, 2265), and regularly with neuter pronouns and neuter plural adjectives to avoid ambiguity (1106).

agendi aliquid discendique causa, Fin. 5, 54, for the sake of doing or learning something. faciendi aliquid vel non faciendi vera ratio, Plin. Ep. 6, 27, 4, the true ground for doing or not doing a thing. artem se tradere vera ac falsa diiddicandi, DO. 2, 157, that he passed along the art of distinguishing between the true and the false. regendi cuncta onus, Ta. 1, 11, the burden of governing the world.

Cases of Gerunds and Gerundives.

NOMINATIVE.

2243. The nominative of the gerundive construction, as the subject of sum, denotes action which is to be done.

The combination acquires the meaning of obligation or propriety, and this meaning also passes over to the accusative with esse. The person who has the action to do is put in the dative of the possessor (1215). Instead of the dative, the ablative with ab is sometimes used, particularly where the dative would be ambiguous.

tibl haec cura suscipienda est, V. 4, 69, the undertaking of this care exists for you, i.e. you must undertake this charge. Caesari omnia find tempore erant agenda: vēxillum proponendum, signum tubā dandum, ab opere revocandi militēs, aciēs instruenda, mīlitēs cohortandi, signum dandum, 2, 20, 1, for Caesar there was everything to be done at the same moment: the standard to be raised, bugle call given, soldiers summoned in from their work, line of battle to be formed, soldiers harangued, signal given for engagement. quaerenda peclinia primum est; virtūs post nummos, H. E. 1, I, 53, there is money-making to be the first aim: character second to dollars. adeundus mihī illic est homo, Pl. R. 1298, I must draw near this fellow. Caesar statuit sibl Rhēnum esse trānseundum, 4, 16, 1, Caesar made up his mind that he must cross the Rhine. ego istum iuvenem domī tenendum cēnseo, L. 21, 3, 6, for my part, I think that young man ought to be kept at home. Ēi ego ā mē referendam grātiam non putem? Planc. 78, should I not think that I ought to show my gratitude to him? quid ā mē amplius dicendum putātis? V. 3, 60, what more do you think that I need say?

2244. fruendus, fungendus, potiundus, ütendus, vēscendus, are also used in this construction, chiefly in the oblique cases; in the nominative the impersonal construction (2246) is usual. These verbs sometimes have a transitive use in old Latin (1380).

non paranda nobis solum ca, sed fruenda etiam est, Fin. 1, 3, that is a thing which we must not only obtain, but enjoy as well, of wisdom. nec tamen est potiunda tibi, O. 9, 754, she is not to be won by thee. Examples of the oblique cases in this use are cited below.

The Gerundive and Gerund. [2245-2249.

2245. habed with the gerundive, as an equivalent of est mihi, est tibi, &c. (2243), is sometimes found, chiefly in late writers and particularly in Tacitus: as,

multi habent in praediis, quibus frümentum aut vinum aliudve quid dēsit, inportandum, Varro, RR. 1, 16, 2, many on whose estates corn or wine or something else is lacking, have to bring it in. multum interest utrumne dē fürtö dicendum habeās an dē civibus trucidātis, T2. D. 37, it makes a great difference whether you have to speak about a theft or about the murder of Romans. sī nunc primum statuendum habērēmus, T2. 14, 44, if we had to decide the point to-day for the first time.

2246. The neuter of verbs of intransitive use takes the impersonal construction with est. Verbs ordinarily transitive also take the impersonal construction when used without an object.

nunc est bibendum, H. I, 37, 1, now drinking exists, i.e. now we must drink inambulandumst, Pl. As. 682, I must be moving on. ego amplius deliberandum censes, T. Ph. 457, I opine there must be more pondering. linguae moderandumst mihl, Pl. Cu. 486, I must check my tongue. omne animal confitendum est esse mortale, DN. 3, 32, it must be admitted that every living thing is destined to die. nemo umquam sapiens proditori credendum putavit, V. 1, 38, no wise man ever held that a traitor was to be trusted.

2247. The impersonal construction with an object in the accusative, is old-fashioned and rare.

canes paucos habendum, Varro, RR. 1, 21, one should keep but few dogs. aeternas quoniam poenas in morte timendumst, Lucr. 1, 111, since punishment eterne they have in death to fear. This construction occurs oftenest in Lucretius and Varro; once in Plautus, a few times in Cicero for special reasons, and here and there in later writers. Not in Caesar or Horace.

2248. The gerundive sometimes acquires, in itself, the meaning of obligation or propriety, which it properly has only when combined with sum, and becomes a mere adjective, used in any case.

forma expetenda liberalem virginem, Pl. Per. 521, a freeborn maid of shape delectable. L. Brütö, principe hüius maxime conservandi generis et nominis, Ph. 3, II, Brutus, the first of this most highly cherished house and name. huic timendo hosti obvius ful, L. 21, 41, 4, I met this dreadful foe. Athenas, multa visenda habentis, L. 45, 27, II, Athens, which contains many sights worth a visit.

2249. The attributive gerundive (2248), particularly with a negative, in- privative, or vix, may denote possibility, like the verbal in -bilis: as,

labores non fugiendos, Fin. 2, 118, inevitable labours. Polybius, haudquaquam spernendus auctor, L. 30, 45, 5, Polybius, an authority by no means despicable. infandum, regina, iudes renovare dolorem. V. 2, 3, them bidst me, queen, rehearse that woe unspeakable. vix erat credendum, 5, 28, 1, it was hardly credible. praedicabile aliquid et gloriandum ac prae se ferendum, TD. 5, 49, something laudable and vauntable and displayable as well.

Digitized by Google

ACCUSATIVE.

2250. (1.) The accusative of the gerundive construction is used with loco and conduco, with suscipio, habeo, and curo, and with verbs of giving or assigning.

With the verbs of giving or assigning (such as do, trado, committo, attribuo, divido, relinquo, permitto, denoto), the emphasis often gravitates towards the substantive, and the gerundive, as an explanatory appendage, acquires the meaning of purpose. So in Plautus with the verbs of asking (rogo and peto).

- (a.) caedundum condūxī ego illum:: tum optumumst locēs efferendum, Pl. Aul. 567, I engaged him for killing:: then you'd better contract for his funeral (1709). signum conlocandum consules locāvērunt, Cat. 3, 20, the consuls let out the erecting of the statue. redēmptor quī columnam illam condūxerat faciendam, Div. 2, 47, the contractor who had undertaken the making of that pillar. vellem suscēpissēs iuvenem regendum, Att. 10, 6, 2, I wish you had undertaken training the young man. aedem habuit uendam, V. 1, 130, he had the looking after the temple. agrum dē nostrō patre colendum habēbat, T. Ph. 364, he had the tilling of a farm from my father.
- (b.) COIRAVIT · BASILICAM · CALECANDAM, CIL. I, 1166, he superintended the town hall plastering. pontem faciendum cūrat, 1, 13, 1, he attends to a bridge's being made, i. e. has it made. consulibus senātus rem pūblicam dēfendendam dedit, Ph. 8, 15, the senate entrusted the defence of the state to the consuls. agros plēbī colendos dedit, RP. 3, 16, he gave lands to the common people to till. Antigonus Eumenem propinquis sepeliendum trādidit, N. 18, 13, 4, Antigonus delivered Eumenes to his kinsfolk to be buried. attribuit nos trucidandos, C. 4, 13, us he handed over to be slaughtered. saucios militēs cūrandos dividit patribus, L. 2, 47, 12, he apportioned the wounded soldiers among the senators to cure. haec porcis comedenda relinquēs, H. E. 1, 7, 19, you'll leave them to the pigs to eat. cīvīs Romānos trucidandos dēnotāvit, IP. 7, he specified Romans for slaughter.
- (c.) quae titenda väsa semper vicini rogant, Pl. Aul. 96, traps that the neighbours are always asking the use of. artoptam ex proxumo titendam peto, Pl. Aul. 400, I'm going for the use of a breadpan from next door.
- 2251. When such a verb is passive, the accusative becomes nominative. simulācrum Dīānae tollendum locātur, V. 4, 76, the moving of the statue of Diana is let out. dīlaceranda feris dabor ālitibusque praeda, Cat. 64, 152, I shall be given a prey for beasts and birds to tear. trāditīque fētiālibus Caudium dūcendī, L. 9, 10, 2, and they were delivered to the fetials to be taken to Caudium.
- 2252. (2.) The accusative of the gerundive construction or gerund is used with a preposition, usually ad. If the verb is of transitive use, the gerundive is proper, not the gerund (2240).

This construction is used with verbs (including verbs of hindering), with substantives generally to denote purpose, and with adjectives which have the meaning of capable, fit, easy, useful, &c.. &c.

The Gerundive and Gerund. [2253-2255.

(a.) hīc in noxiāst, ille ad dicendam causam adest, T. Ph. 266, when A's in trouble, B turns up to make excuses for him. ad pācem petendam ad Hannibalem vēnit, L. 21, 13, 1, he is come to Hannibal to sue for peace. ad eās rēs cōnficiendās Orgetorix dēligitur, 1, 3, 3, Orgetorix is chosen to do this. dant sē ad lūdendum, Fin. 5, 42, they devote themselves to playing, palūs Rōmānōs ad insequendum tardābat, 7, 26, 2, a morass hindered the Romans from pursuit. ut peditēs ad trānseundum impedirentur, Caes. C. 1, 62, 2, so that the infantry were hampered in crossing. (b.) causa ad obiūrgandum, T. Andr. 150, a reason for finding fault. spatium sūmāmus ad cōgitandum, Fin. 4, 1, let us take time for thought. alter occāsiōnem sibī ad occupandam Asiam oblātam esse arbitrātur, IP. 4, the other thinks a chance is given him for seizing all Asia. (c.) homo nōn aptissimus ad iocandum, DN. 2, 46, a man not very well fitted to be a joker. nimis doctus illest ad male faciendum, Fl. E. 378, too well the fellow's trained at playing tricks. ūtēbātur eō cibō quī esset facillimus ad concoquendum, F.n. 2, 64, he made use of the sort of food which was easiest to digest.

2253. Other prepositions are sometimes used: as, inter, in old Latin, Livy, and later writers: ob, once in Ennius, rarely in Cicero and Sallust; in and ante, very rarely, but even in the classical period; circa, propter, and super, late and very rare.

mores se inter ludendum detegunt, Quintil. I, 3, 12, character discovers itself during play. ob rem iudicandam pecuniam accipere, V. 2, 78, to take money for passing judgement on a case.

DATIVE.

2254. The dative of the gerundive construction is used with adjectives, verbs, and phrases of ability, attention, and adaptation, with titles of office, and with comitia, election.

This construction is not very common in classical Latin, where few verbs and substantives take it instead of the usual ad and the accusative (2252). In old Latin, it is also joined to adjectives and participles; in Cicero it is thus used only with accommodatus, in Caesar only with par. From Livy on, the construction becomes a very favourite one.

tālīs iactandīs tuae sunt consuētae manūs, Pl. Vid. 33, your hands are used to throwing dice. optumum operī faciundo, Pl. R. 757, most suitable for carrying on his trade. pracesse agrō colendo, RA. 50, to superintend farm managing. cum dies vēnisset rogātionī ferendae, Att. 1, 14, 5, when the day came for proposing the bill. hībernīs oppūgnandīs hunc esse dictum diem, 5, 27, 5, that this was the day set for attacking the winter quarters. consul plācandīs dis habendoque dilēctū dat operam, L. 22, 2, 1, the consul devotes himself to propititating the gods and raising troops. Dēmosthenēs cūrātor mūrīs reficiendīs fuit, OG. 19, Demosthenes was commissioner for repairing the walls. Ilivīrī rēī pūblicae constituendae, L. Epit. 120, a commission of three for reorganizing the state. comitia collēgae subrogando habuit, L. 2, 8, 3, he held an election for appointing a colleague.

2255. In the dative, a transitive gerund with an object in the accusative is found two or three times in Plautus.

2256-2259.] Sentences: Nouns of the Verb.

2256. Late writers sometimes use the dative of the gerundive construction instead of a final clause (1961): 2s,

subducit ex acië legionem faciendis castris, Ta. 2, 21, he withdraws a legion from the field to build a camp. nidum mollibus plumis consternunt tepëfaciendis ovis, simul në durus sit infantibus pullis, Plin. NH. 10, 92, they line the nest with soft feathers to warm the eggs, and also to prevent it from being uncomfortable to their young brood.

2257. The dative of the gerund is used chiefly by old and late writers, and is confined in the best prose to a few special phrases.

ösculandö meliust pausam fleri, Pl. R. 1205, 'tis better that a stop be put to kissing. tü nec solvendö eräs, Ph. 2, 4, you were neither solvent. SC-ARF, i. e. scribendö arfuërunt, CIL. I, 196, 2, there were present when the document was put in writing. quod scribendö adfuisti, Fam. 15, 6, 2, because you were present at the writing.

GENITIVE.

- 2258. (1.) The genitive of the gerundive construction or gerund is used with substantives or adjectives.
- (a.) tacendī tempus est, Pl. Poen. 741, it's time to be still. spēs potiundī oppidī, 2, 7, 2, the hope of overpowering the town (2244). summa difficultās nāvigandī, 3, 12, 5, the greatest difficulty in sailing. proeliī committendī sīgnum dedit, 2, 21, 3, he gave the signal for beginning the battle. exemplō eōrum clādēs fuit ut Mārsī mitterent ōrātōrēs pācis petendae, L. 9, 45, 18, their downfall was a warning to the Marsians to send envoys to sue for peace. sīve nāvēs dēiciendī operis essent missae, 4, 17, 10, or if vessels for breaking down the works had been sent. Particularly with causā, grātiā, or rarely ergō (1257), to denote purpose: as, frūmentandī causā, 4, 12, 1, for foraging. vītandae suspīcionis causā, C. 1, 19, to avoid suspīcion. mūneris fungendī grātiā, RP. 1, 27, for the sake of doing one's duty. illiusce sacrī coercendī ergō, Cato, RR. 139, because of thinning out you hallowed grove.
- (b.) quam cupida eram hūc redeundi, T. Hec. 91, how eager I was to return here. homine peritō dēfiniendi, Off. 3, 60, a man accomplished in drawing distinctions. perpessus est omnia potius quam cōnsciōs dēlendae tyrannidis indicāret, TD. 2, 52, he stood out against the worst sooner than betray his confederates in the overthrow of the tyranny. Insuētus nāvigandī, 5, 6, 3, unused to sailing. studiōsus audiendī, N. 15, 3, 2, an eager listener. nescia tolerandī, Ta. 3, 1, ignorant what patience was. nandī pavidus, Ta. H. 5, 14, afraid to swim. With adjectives, the gerundive construction is not found in Plautus and Terence, and the gerund not in Plautus. Terence has the gerund with cupidus, Cato with studiōsus. The construction is of slow growth before Tacitus, who greatly developed it.

2259. In the genitive, a transitive gerund with an object in the accusative is rare; ordinarily the gerundive is used (2240).

The Gerundive and Gerund. [2260-2264.

të dëfrüdandi causă, Pl. Men. 687, for the purpose of cheating you. cupidus të audiendi, 190. 2, 16, eager to hear you. summa ëlüdendi occăsiost mihi nunc senës, T. Ph. 885, I've now a splendid chance the graybeards of eluding. në sul liberandi (2260) atque ulciscendi Romanos occăsionem dimittant, 5, 38, 2, that they should not let slip the chance of freeing themselves and taking vengeance on the Romans. signum colligendi văsa dedit, L. 24, 16, 14, he gave the signal to pack their things.

2260. nostrī, vostrī (or vestrī), and suī, being singular in form (649) have often a singular gerundive.

non tam sui conservandi quam tuorum consiliorum reprimendorum causa profugerunt, C. 1, 7, they fled, not so much to protect themselves as to crush your plans. vēnisse tempus ulciscendi sui, Sest. 28, that the time was come for them to revenge themselves. vestrī adhortandi causa, L. 21, 41, 1, for the purpose of encouraging you.

2261. This gerundive, being mistaken for a gerund, is occasionally used with a real plural, rarely with a singular. This use is found in old Latin, Lucretius, Varro, and here and there in Cicero, as well as in late Latin.

nōminandī istōrum tibī erit cōpia, Pl. Cap. 852, you will have a chance to name them. poenārum solvendī tempus, Lucr. 5, 1225, the time of paying penalties. exemplōrum ēligendī potestās, Inv. 2, 5, a chance of picking out examples. lūcis tuendī cōpiam, Pl. Cap. 1008, a chance to look upon the light.

2262. (2.) The genitive of the gerundive construction is used predicatively with sum.

regium imperium, quod initio conservandae libertatis fuerat, S. C. 6, 7, the authority of the king, which had originally served to uphold freedom. cetera in XII minuendi sumptus sunt lamentationisque functoris, Leg. 2, 59, the rest of the contents of the Twelve Tables are conducive to the abating of extravagance and keening at funerals. concordiam ordinum, quam dissolvendae tribuniciae potestatis rentur esse, L. 5, 3, 5, the union of the classes, which they believe serves to break down the power of the tribunes. This use is not common. It is found rarely in Sallust and Cicero; chiefly in Livy.

2263. The genitive of the gerundive construction, without a substantive or adjective (2258) or the verb sum (2262), is occasionally used to denote purpose: as,

quae ille cēpit lēgum ac libertātis subvortundae, S. Fr. Phil. 10, which he began in order to overthrow freedom and the laws, of civil war. unum vinciri iubet, magis usurpandi iuris quam quia unius culpa foret, Ta. H. 4, 25, he ordered one into irons, more to vindicate his authority than because an individual was to blame. This use occurs very rarely in Sallust, chiefly in Tacitus and late Latin. Once in Terence with the gerund.

2264. Tacitus has the genitive of the gerundive construction two or three times with a judicial verb (1280) to denote the charge: as, occupandae rel publicae argui non poterant, Ta. 6, 10, they could not be charged with an attempt on the throne.

13*

ABLATIVE.

2265. In the ablative a transitive gerund with a substantive object is not uncommon.

fratrem laudando, Leg. 1, 1, in quoting your brother. | large partiendo praedam, L. 21, 5, 5, by a lavish distribution of the spoil. | This use is particularly common in Livy.

2266. (1.) The ablative of the gerundive construction or gerund denotes means, less often cause, rarely manner and circumstances, or time, or respect.

Means: Caesar dandō sublevandō ignōscundō, Catō nihil largiundō glōriam adeptus est, S. C. 54, 3, Caesar gained reputation by giving, helping, and pardoning, Cato by lavishing no gifts. opprimi sustentandō ac prolātandō nūliō pactō potest, C. 4, 6, it cannot be crushed by patience and procrastination. Livy has this ablative with the adjective contentus (1377): nec iam possidendīs pūblicīs agrīs contentōs esse, 6, 14, 11, that they were no longer satisfied with the occupation of the public lands. Cause: aggerundā curvom aquā, Pl. Cas. 124, bowed with water carrying. flendō turgidulī rubent ocellī, Cat. 3, 18, with weeping red and swollen are her cyne. Manner and circumstances: rare in old Latin: not in Caesar or Cicero: bellum ambulandō cōnfēcērunt, Caelius in Fam. 8, 15, 1, they strolled through the war. senex vincendō factus, L. 30, 28, 5, maturing in victories. Time: cum plausum meō nōmine recitandō dedissent, Att. 4, 1, 6, when they had applauded on the reading of my name. partibus dividendīs ipsī regiō ēvēnit. L. 25, 30, 6, at the distribution, the district fell to him. Respect: Latīnē loquendō cuivīs erat pār, Br. 128, in his use of Latin he was a match for anybody.

2267. (2.) The ablative of the gerundive construction or gerund is also accompanied by a preposition, ab, dē, in, or ex; rarely by prō.

nüllum tempus illi umquam vacābat aut ā scrībendō aut ā cōgitandō, Br. 272, he never had any time free from writing or from thinking. quod verbum ductum est ā nimis intuendō fōrtūnam alterīus, TD. 3, 20, a word which is derived from 'looking too closely at' another's prosperity, of the word invidia. cōnsilium illud dē occlūdendīs aedībus, T. Eu. 784, that idea about barring up the house. nihil dē causā discendā praecipiunt, DO. 2, 100, they give no instruction about studying up a case. vostra ōrātiō in rē incipiundā, T. Ph. 224, your remarks when we started in with this affair. Āfricānī in rē gerundā celeritātem, V. 5, 25, Africanus's swiftness in execution. vix ex grātulandō ēminēbam, Pl. Cap. 504, I barely got my head above their congratulations. quae virtūs ex prōvidendō est appellāta prūdentia, Leg. 1, 60, a virtue which from 'foreseeing' is called foresight. prō līberandā amīcā, Pl. Per. 426, for setting free a leman. prō ope ferendā, L. 23, 28, 11, instead of going to the rescue. In this use ab is not found in Plautus or Terence, nor dē in Plautus, nor prō in Terence. cum is found in Quintilian, super once in Horace, then in Tacitus, sine once in Varro.

2268. With a comparative expression, the ablative of the gerundive is found once: nüllum officium referendă grătiă magis necessărium est. Off. 1, 47, no obligation is more binding than the returning of a favour. The gerundive construction in the ablative of separation (1302) is tound rarely in Livy and Pliny the younger; Livy has also the gerund: as, Verminam absistere sequendo coegit, L. 29, 33, 8, he forced Vermina to abandon his pursuit.

THE SUPINE.

2269. The supine is a verbal substantive. The form in -um is an accusative. The form in -ū is used sometimes as a dative, sometimes as an ablative.

THE SUPINE IN -um.

2270. The supine in -um denotes purpose with verbs of motion (1166): as,

abilt piscatum, Pl. R. 898, he's gone a fishing. neu noctū irem obambulatum, Pl. Tri. 315, not to go a prowling by night. legione ūnā frūmentātum missā, 4, 32, 1, one legion being sent a foraging. sessum it praetor, DN. 3, 74, the praetor is going to take his seat. spectātum veniunt, veniunt spectentur ut ipsae, O. AA. 1, 99, they come to see and eke for to be seen. This use is very common in Plautus and Terence, less common in Cicero and Caesar. It is found not infrequently in Sallust and particularly in Livy; sporadically in the Augustan poets. In late prose it is almost confined to archaistic writing. In classical Latin, purpose is more commonly expressed by the subjunctive with ut or a relative pronoun, or by a gerundive or gerund with ad or causā. See also 2164.

2271. The most common supines in -um are cubitum, dormītum, ēreptum, frümentātum, grātulātum, nūntiātum, oppūgnātum, ōrātum, pāstum, perditum, petitum, salūtātum, sessum, supplicātum. They are found chiefly with eð and venið. nūptum is also common with dō, collocō, &c.

2272. The supine in -um may be followed by the same construction as its verb: as,

(a.) Accusative: deos salūtātum atque uxorem modo intro dēvortor domum, Pl. St. 534, I'll just turn in home to greet my gods and my wife. lēgātos ad Caesarem mittunt rogātum auxilium, I, II, 2, they send envoys to Caesar to beg aid. oppūgnātum patriam nostram veniunt, L. 21, 41, 13, they come to assail our country. Classical writers generally avoid this use of the accusative. (b.) Dative: servītum tibi mē abdūcitō, Pl. Ps. 520, take me away to slave for you. non ego Grāīs servītum mātribus ībō, V. 2, 786, not I shall go to be the serf of Grecian dames. (c.) Subordinate clause: lēgātī veniēbant: Aeduī questum quod Harūdēs finēs eorum populārentur, 1, 37, 1, envoys came: the Aeduans to complain 'because the Harudians were laying their country waste' (1853). lēgātōs ad Caesarem mīsērunt ōrātum nē sē in hostium numerō dūceret, 6, 32, 1, they sent envoys to Caesar to beg that he would not regard them in the light of enemies.

2273. The supine in -um followed by IrI forms the future passive infinitive: as,

eum exceptum īrī putō, Att. 7, 22, 1, I think that there is a going to capture kim, i. e. that he is going to be captured. Here īrī is used impersonally and eum is the object of exceptum. This infinitive is found half a dozen times in old Latin, oftenest in Cicero, rarely in other writers; not in the Augustan poets. For the common periphrasis, see 2233.

THE SUPINE IN -ū.

2274. The supine in -ū is used with fās, nefās, and adjectives, chiefly of such meaning as easy, good, pleasant, strange, or their opposites.

Only a few supines in -ū are found; the commonest are audītū, cōgnitū, dictū, factū, inventū, memorātū, nātū, visū.

sī hōc fās est dictū, TD. 5, 38, if heaven allows us to say so. difficile dictū est dē singulīs, Fam. 1, 7, 2, it is hard to say in the case of individuals. quaerunt quod optimum factū sit, V. 1, 68, they ask what the best thing is to do. quid est tam iocundum cōgnitū atque audītū? DO. 1, 31, what pleasure is greater to mind and ear? palpebrae mollissimae tāctū, DN. 2, 142, the eyelids are very soft to the touch. With such adjectives the dative is commonly used (1200); or, particularly with facilis or difficilis, the gerundive construction with ad (2252); for the infinitive, see 2166. The supine in -ū is found chiefly in Cicero and Livy. Very rare in old Latin, Sallust, Caesar (who has only factū and nātū), and the poets. From the elder Pliny and Tacitus on, it gets commoner.

2275. The supine in -\textbf{1} sometimes introduces a subordinate sentence, but it is never used with an object in the accusative.

quoivis facile scitü est quam fuerim miser, T. Hec. 296, anybody can easily understand how unhappy I was. incrēdibile memorātū est quam facile coaluerint, S. C. 6, 2, it is an incredible tale how readily they grew into one. vidētis nefās esse dictū miseram fuisse tālem senectūtem, CM. 13, you see that it were a sin to say that an old age like his was unhappy.

2276. The supine in -ū is found rarely with opus est (1379), dīgnus and indīgnus (1392): as,

ita dictū opus est, T. Hau. 941, thus thou must needs say. nihil dignum dictū āctum hīs consulibus, L. 4, 30, 4, nothing worth mentioning was done this year. For dignus with qui and the subjunctive, see 1819; for opus est with the infinitive, 2211.

2277. In Plautus and Cato, the supine in -ū is very rarely used like an ablative of separation (1302): 22, nunc opsonātū redeō, Pl. Men. 288, I'm only just back from the caterer's. primus cubitū surgat, postrēmus cubitum eat, Cato, RR. 5, 5, let him be first to get up from bed and last to go to bod.

THE PARTICIPLE.

2278. The participle is a verbal adjective. Like the adjective, it is inflected to agree with its substantive. Like the verb, it may be modified by an adverb, it is active or passive, and it expresses action as continuing, completed, or future. It may also be followed by the same case as its verb.

TIME OF THE PARTICIPLE.

2279. (1.) The time to which the participle refers is indicated by the verb of the sentence.

āēr effluēns hūc et illūc ventōs efficit, DN. 2, 101, the air by streaming to and fro produces winds. convēni hodiē adveniēns quendam, T. Eu. 234, I met a man as I was coming to-day. manūs tendentēs vitam ōrābant, L. 44, 42, 4, with hands outstretched they begged their lives. Croesus Halyn penetrāns māgnam pervertet opum vim, oracle in Div. 2, 115, Croesus, when Halys he shall cross, will overthrow a mighty realm. benignitātem tūam mihī expertō praedicās, Pl. Merc. 289, thou vauntest to me who've proved thy courtesy. cōnsecūtus id quod animō prōposuerat, receptui canī iūssit, 7, 47, 1, kaving accomplished what he had designed, he gave orders to sound the retreat. Dionysius Syrācūsis expulsus Corinthī puerōs docēbat, TD. 3, 27, after his expulsion from Syracuse, Dionysius kept school at Corinth. lēgātī dixērunt sē rē dēlīberātā ad Caesarem reversūrōs, 4, 9, 1, the envoys said that they would come back to Caesar after they had thought the matter over.

2280. (2.) The perfect participle of deponents is sometimes used with past tenses or their equivalents to denote incomplete contemporaneous action. So occasionally a perfect passive.

(a.) Metellum esse rati portās clausēre, S. I. 69, I, supposing that it was Metellus, they closed their gates. gāvisus illos retinēri iūssit, 4, 13, 6, with pleasure he gave orders for their detention. persuādent Rauracīs uti eodem ūsī consilio proficiscantur, I, 5, 4, they coaxed the Rauracī to adopt the same plan and go. solātus iūssit sapientem pāscere barbam, H. S. 2, 3, 35, consoling me he bade me grow a philosophic beard. This use is not found in old Latin, very rarely in Cicero. Sallust and Caesar use a few verbs thus. It is not uncommon in the Augustan poets and Livy. In late writers, especially Tacitus, it is frequent. (b.) servum sub furcā caesum medioēgerat circo, L. 2, 36, I, he had driven a slave round, floged under the fork, right in the circus. With this compare servus per circum, cum virgīs caedēretur, furcam ferēns ductus est, Div. 1, 55, a slave with the fork on his neck was driven through the circus, flogged with rods the while (1872). But the perfect passive has its ordinary force (2279) in verberibus caesum tē in pistrinum dēdam, T. Andr. 199, I'll give you a flogging and then put you in the mill.

2281. For the perfect participle with forms of sum and ful, see 1608, 1609; for the conative present participle, 2301; reflexive, 1482.

THE ATTRIBUTIVE PARTICIPLE.

2282. The present or perfect participle is often used as an adjective to express a permanent condition: as,

acrem oratorem, incensum et agentem et canorum fori strepitus desiderat, Br. 317, the noisy forum requires an impetuous speaker, inspired and dramatic and sonorous. L. Abuccius, homo adprime doctus, Varro, RR. 3, 2, 17, Abuccius, an eminently learned man. alii faceti, sornetes etiam et ornati, O. 20, others are brilliant, even bright and elegant. id tibl renuntio stuffum ut sis sciens, T. Andr. 508, I give you notice this will happen, that you may be prepared.

2283. The future participle is found as an adjective in the Augustan poets and in late writers. Cicero, however, has futurus in this use with res and a few other words.

dā mānsūram urbem, V. 3, 85, grant a city that shall abide. firmus pariēs et dūrātūrus, Ta. D. 22, a strong and durable wall. sīgna ostenduntur ā dīs rērum futūrārum, DN. 2, 12, signs of future events are disclosed by the gods. For the future participle with forms of sum, see 1633.

- 2284. Many participles have become complete adjectives, and as such are capable of composition or comparison, or take the case required by an adjective.
- (a.) nomen invicti imperātoris, V. 4, 82, the invincible general's name. pūrus et īnsons sī vivo, H. S. 1, 6, 69, pure and guiltless if I live (749). (b.) solūtus venēficae scientioris carmine, H. Epod. 5, 71, freed by some craftier witch's charm. homo ērudītissimus, Verrēs, V. 4, 126, Verres, most accomplished of men. (c.) tibi sum oboediēns, Pl. MG. 806, I'm your obedient (1200). tē confido ea factūrum quae mihī intellegēs māximē esse accommodāta, Fam. 3, 3, 2, I feel confident that you will do what you shall feel most appropriate to my interests (1201). For the genitive with such participles, see 1266.
- 2285. A perfect participle in agreement with a substantive often contains the leading idea, and may be translated like an abstract substantive with a genitive dependent. The nominative is rarely thus used.

This construction expresses the completed action of the verb in precisely the same way that the gerundive construction (2240) expresses uncompleted action.

- (a.) Joined with substantives: initiriae retentorum equitum Romanorum, 3, 10, 2, the outrages of Roman knights detained, i. e. in the detention of Roman knights. servati consulis decus, L. 21, 46, 10, the credit of saving the consul. male administrate provinciae urgebatur, Ta. 6, 29, he was charged with maladministration of his province. of quid solutis est beatius curis? Cat. 31,7, oh what is sweeter than the putting off of care?
- (b.) Joined with prepositions: ab condită urbe ad liberatam, L. 1, 60, 3, from the foundation of the city to the liberation thereof. post natos homines improbissimus, Br. 224, the greatest reprodute since the creation of man. ante civitatem datam, Arch. 9, before the gift of the citizenship.

(c.) In the nominative: very rare before Livy: depressa hostium classis, Arch. 21, the sinking of the enemy's fleet. angebant ingentis spiritus virum Sicilia Sardiniaque āmissae, L. 21, 1, 5, what tortured the high-souled hero was the loss of Sicily and Sardinia. cuius turbāvit nitidos exstinctus passer occilos, J. 6, 7, whose sparkling eyne the sparrow's death bedimmed.

2286. This use of the participle, though old, is not common before Livy, who, like Tacitus, has it frequently, both with substantives and with prepositions. Very rare in Caesar, rare in Cicero, who, however, uses it both with substantives and with a few prepositions. In old Latin (not in Terence), it is found with the substantives opus and fisus, in Cato with post, in Varro with propter: as, mi homine conventost opus, Pl. Cur. 302, I needs must see the man. propter mare congelatum, Varro, RR. 1, 2, 4, by reason of the freezing of the sea water. For the participle alone with fisus est and opus est, see 1382.

THE SUBSTANTIVE PARTICIPLE.

2287. Participles sometimes become substantives, especially the perfect participle: as,

vivit gnāta, T. Ph. 749, your daughter's alive. dē dēmēnsō suō, T. Ph. 43, out of his allowance. Institūtum tenēbimus, TD. 4, 7, we will hold to our fundamental idea. Adverbs, not adjectives, are commonly used to qualify perfect participles used as substantives; for examples, see 1440. The masculine singular is rarely used as a substantive; the neuter, both singular and plural, is common, particularly with prepositions.

2288. The masculine plural of the perfect participle, when used as a substantive, generally denotes a definite class of persons: as,

ut damnātī in integrum restituantur, vinctī solvantur, V. 5, 12, that the condemned go scot-free, the imprisoned are set at liberty. Catilina cum expeditis in prīmā aciē vorsārī, S. C. 60, 4, Catiline bustling round in the van with the light infantry. Evocātis equõs sūmit, 7, 65, 5, he took away the veterans' horses. Rarely not denoting a definite class: as, missī intercipiuntur, 5, 40, 1, the men who had been sent (i.e. on a particular occasion) are cut off.

2289. The perfect participle alone sometimes serves as the subject of a sentence instead of an abstract substantive (2285): as,

notum furens quid femina possit, V. 5, 6, the knowledge of what a woman in her wrath can do. pronuntiatum repente ne quis violaretur, multitudinem exuit armis, L. 4, 59, 7, the sudden proclamation that nobody was to be harmed, deprived the people of their weapons. This use is found chiefly in Livy, once or twice in Cicero; not in Caesar or Sallust.

2290. The present participle is rarely a substantive in the nominative and ablative singular, but often in the other cases.

in constituentibus rem publicam, Br. 45, among the founders of a state. multae insectantes depellunt, DN. 2, 127, many drive off their pursuers. nec praeterita nec praesentia abs te, sed futura exspecto, Fam. 2, 8, 1, I do not expect from you the past or the present, but the future.

2291-2295.] Sentences: Nouns of the Verb.

2291. The genitive plural of the present participle is often best translated by an English abstract: as,

cachinnos inridentium commovēbat, Br. 216, he provoked guffaws of derision. mixtos terrentium paventiumque clāmorēs, L. 22, 5, 4, mingled cries of exultation and terror. primo gaudentium impetū, Ta. H. 1, 4, in the first outburst of joy.

2292. The future participle is very rarely used as a substantive.

auditūrum dictūri cūra dēlectat, Quintil. 11, 3, 157, deliberation on the part of one who is on the point of speaking attracts his prospective hearer. havē, imperētor, moritūri tē salūtant, Suet. Claud. 21, emperor, all hail! the doomed give thee greeting. This use is found in late writers, as in Tacitus and Curtius once each, and half a dozen times in Pliny the younger. Cicero and Sallust have futūrus thus (2283): as, abs tē futūra exspectō, Fam. 2, 8, 1, from you I expect the future. supplicia in post futūrōs composuit, S. Fr. Lep. 6, he invented penalties for men unborn.

THE APPOSITIVE PARTICIPLE.

2293. The appositive participle is a loose substitute for a subordinate sentence introduced by a relative or by a conjunctive particle.

2294. (1.) The appositive participle may represent a relative sentence: as,

novi ego Epicureos omnia sigilla venerantes, DN. 1, 85, why, I know Epicureans who bow the knee to all sorts of graven images. Conon muros dirutos a Lysandro reficiendos curat, N. 9, 4, 5, Conon superintended the rebuilding of the walls which had been destroyed by Lysander. The future participle is poetic and late (2283): as, serves iturum Caesarem in Britannos, H. 1, 35, 29, guard Caesar who against the Britons is to march.

2295. (2.) The appositive participle, representing other sentences, may express various relations: as, (a.) time, (b.) cause or means, (c.) purpose, (d.) concession, (e.) hypothesis, (f.) description or the manner of an action, like an adverb.

For the ablative absolute in such relations, see 1362-1374, particularly 1367.

(a.) Time: vehemēns sum exoriēns, quom occido vehementior, Pl. R. 71, furious am I at my rising, when I set more furious still. occīsus est ā cēnā rediēns, RA. 97, he was murdered on his way home from a dinnerparty. Unam noctem solam praedonēs commorāti, accēder incipiunt Syrācūsās. V. 5, 95, the freebooters, after tarrying but one night, began to draw man Syracuse. The future is late (2283): as, primum omnium virorum fortium itūrī in proelia canunt, Ta. G. 3, as the chief of all brave heroes, they sing of him when they are on the point of going to battle, of Hercules.

- (b.) Cause or means: motum exspectans dilectum habere instituit, 6, 1, 1, since he anticipated a rising, he determined on recruiting troops. moveor tall amico orbatus, L. 10, I am certainly affected at being bereaved of such a friend. dextra data fidem futurae amicitiae sanxisse, L. 1, 1, 8, by giving his right hand he gave a pledge of future friendship. quae contuens animus accedit ad cognitionem deorum, DN. 2, 153, through the contemplation of these, the mind arrives at a knowledge of the gods. The future participle is late: as, neque illis iddicium aut veritas, quippe eodem die diversa pari certamine postulaturis, Ta. H. 1, 32, they had neither sound judgement nor sincerity, since on the same day they were to make conflicting demands with equal vehemence.
- (c.) Purpose: the future participle, commonly with a verb of motion: ad Clūsium vēnērunt, legionem Romānam castraque oppūgnātūrī, L. 10, 26, 7, they came to the neighbourhood of Clusium, to assail the Roman legion and camp. ascendit ipse, lātūrus auxilium, l'lin. Ep. 6, 16, 9, he went aboard in person to go to the rescue. laeto complērant litora coetū visūrī Aeneadas, V. 5, 107, in happy company they'd filled the strand to see Aeneas' men. rediēre omnēs Bonōniam, rursus consiliātūrī, Ta. H. 2, 53, they all went back to Bologna for a second consultation. This use appears first in C. Gracchus as cited by Gellius, then once in Cicero and Sallust each, and a few times in the poets. From Livy on, it grows commoner. In the poets, Livy, and Tacitus, it is sometimes joined with a conditional idea or protasis: as, ēgreditur castrīs Romānus, vāllum invāsūrus nī copia pūgnae fieret, L. 3, 60, 8, the Roman marches out of camp, proposing to assault the stockade unless battle were offered.
- (d.) Concession: qui mortălis nătus condicionem postules immortălium, TD. 3, 36, thou who, though born to die, layest claim to the state of the deathless. bestiis, quibus ipsa terra fundit păstus abundantis nihil laborantibus, Fin. 2, 111, the beasts, on which, though they toil not, earth lavishes sustenance in profusion. Often with tamen or the like accompanying the verb: as, ibl vehementissime perturbătus Lentulus tamen et signum et manum suam cognovit, C. 3, 12, thereupon Lentulus, though thrown into the most extreme confusion, did yet recognise his own hand and seal. For quamquam and quamvis, see 1900, 1907. Ovid and Propertius sometimes have licet: as, isque, licet caeli regione remotos, mente deos adiit, O. 15, 62, he in the spirit to the gods drew nigh, though they are far away in heaven's domain. The future participle is rare and late.
- (e.) Hypothesis: quid igitur mihi ferārum laniātus oberit nihil sentienti? TD. 1, 104, what hurt will the clawing of wild beasts do me if I have no feeling? appārēbat non admissos protinus Carthāginem itūros, L. 21, 9, 4, it grew obvious that, if not given audience, they would go to Carthage forthwith. For other examples, see 2110. For the participle with quasi or ut, and in late writers with tamquam or velut, see 2121. The future participle is rare and late.
- (f.) Description or manner: haec properantes scripsimus, Att. 4, 4, 4, I have written this hastily, i. e. in haste yours truly. dictator et magister equitum triumphantes in urbem rediere, L. 2, 20, 13, the dictator and his master of the horse returned to the city in triumph. incendebat hace fletu et pectus verberans, Ta. 1, 23, he lent passion to his words with tears and beating of his breast. vinctos aspicium catenis liberos suos, V. 5, 108, they behold their own children held in bondage.

2296. The participle with a negative may be translated by without: as, id illa universum abripiet haud existumans quanto labore partum, Ph. 45, my lady'll grab it all without a thought of all the toil it cost to get.

T. Ph. 45, my lady'll grab it all without a thought of all the toil it cost to get. non rogatos ültro offerre auxilium, L. 34, 23, 3, that without being asked, they offer assistance of their own accord.

THE PREDICATIVE PARTICIPLE.

- 2297. habeō is sometimes used with certain perfect participles to express an action continuing in its consequences. faciō, dō, and in old Latin reddō and cūrō, with a perfect participle, are emphatic substitutes for the verb to which the participle belongs.
- (a.) quae nos nostramque adulescentiam habent despicatam et quae nos semper omnibus cruciant modis, T. Eu. 383, who hold us and our youth in scorn and torment us in every way. in ea provincia pecunias magnas collocatas habent, IP. 18, they have invested large funds in that province. Clodii animum perspectum habeo, cognitum, iudicatum, ad Br. 1, 1, 1, Clodius's mind I have looked into thoroughly, probed, formed a judgement on. clausum lacu ac montibus et circumfusum suis copiis habuit hostem, L. 22, 4, 5, his enemy he had shut in by lake and mountains and surrounded by his troops. See also 1606.
- (b.) missa haec face, T. Ad. 906, let this pass. vērum haec missa faciō, RA. 76, but I let this pass. Mānlium missum fēcit, Off. 3, 112, he let Manlius go. factum et cūrātum dabō, Pl. Cas. 439, I'll have it done and seen to. strātās legiōnēs Latinōrum dabō, L. 8, 6, 6, I will lay the Latin legions low. ego iam tē commōtum reddam, T. Andr. 864, I'll soon have you worked up. inventum tibi cūrābō tuom Pamphilum, T. Andr. 684, I'll have your Pamphilus looked up for you. In classical writers, faciō only is found in this use and only with the participle of mittō; dō occurs in late writers; reddō and cūrō only in old Latin. All these verbs are usually in the future tense or its equivalent. For volō, cupiō, and nōlō with the infinitive passive without esse, see 2220.
- **2298.** The present participle is used predicatively with verbs signifying *represent*, and with verbs denoting the exercise of the senses or mind: as,

facit Socratem disputantem, DN. 1, 31, he represents Socrates discussing. quasi ipsos induxi loquentes, L. 3, I have brought on the menthemselves as speaking. non illum miserum, ignārum cāsūs suī, redeum a cēnā vidētis? RA. 98, do you not see the poor man. little dreaming of his fate, returning from the dinner? non audīvit draconem loquentem, Div. 2, 141, he did not hear the serpent speaking. This use is found in Cicero, Sallust, Horace, Nepos, Vitruvius, and Livy. Once in Piso (consul 133 B.C.), as cited by Gellius, 7, 9, 6. Verbs denoting the exercise of the senses or mind take the accusative with the infinitive to denote the fact or action; see 2175. For audio with cum, see 1870. For the infinitive without esse with verbs of emotion, see 2184.

2299. A passive with a verb meaning represent is expressed, for lack of a present passive participle, by the infinitive (2175). The infinitive active is rare.

(a.) construi à deo atque aedificări mundum facit, DN. 1, 19, he represents the world being put together and built by the gods. (b.) poëtae impendere saxum Tantalo faciunt, TD. 4, 35, the poets represent a rock hanging over Tantalus. Rarely the participle (2298) and the infinitive are united: as, Polyphēmum Homērus cum ariete conloquentem facit ēiusque laudāre fortūnās, TD. 5, 115, Homer represents Polyphemus chatting with the ram and his envy of the ram's estate. But the perfect infinitive active must be used when the action is to be distinctly marked as completed, for lack of a perfect active participle: as, fēcit Dolābella Verrem accēpisse, V. 1, 100, Dolabella represented Verres as having received.

APPENDIX.

(A.) SOME OCCASIONAL PECULIARITIES OF VERBS.

2300. In many cases where in English a verb like wish or try to have a thing done, can, must, or am allowed to, is used, the equivalent Latin verb is omitted. As this use generally extends through the entire system of the verb, examples of the nouns of the verb and of subordinate sentences thus used, are conveniently included here.

THE CONATIVE USE.

2301. A verb is sometimes used to denote action proposed, attempted, or begun, but not necessarily carried out. This is called the *Conative Use* of the verb: as,

ancillas dedo, T. Hec. 773, I try to give, or I offer up the servant girls. sine üllä dubitätione condemnant, Clu. 75, without a moment's hesitation they vote to condemn. dum id inpetrant, Pl. Cap. 233, as long as they're trying to get it. si places inlacrimabiliem Plütona, H. 2, 14, 5, shouldst thou the stonyhearted Pluto strive to melt. si discedas, J. 7, 50, should you attempt to leave. in curiam abiecit, quam vivus everterat, Mil. 90, he shoved the corpse into the senate house, which the man in his lifetime had done his best to overthrow. adsurgentem regem umbone resupinat, L. 4, 19, 5, with the boss of his shield he put the king flat on his back, when he tried to get up.

2302. This use is particularly common in the imperfect indicative: as,

nostros ingredi prohibebant, 5, 9, 6, they tried to stop our people from getting in. Apelles faciebat, Plin. NH. pracf. 26, Apelles undertook to do this, or an attempt of Apelles's. sedabant tumultus. sedando interdum movebant, L. 3, 15, 7, they tried to quell the riotings, but by trying they started them once in a while afresh. num dubitas id me imperante facere, quod iam tua sponte faciebas? C. 1, 13, do you possibly hesitate to do at my command what you wanted to do, as it was, yourself? The conative use is not very common in old Latin, but more frequent from Cicero and Caesar on.

2303. When the conative use is to be expressed more distinctly, a form of volo or conor is used, or a frequentative, like vendito, try to sell, advento, strive to come.

THE CAUSATIVE USE.

2304. A verb is sometimes used to denote not what the subject actually does himself, but what he has another do. This is called the Causative Use of the verb: as,

animi causā mihi nāvem faciam, Pl. R. 932, just for diversion I'll build me a yacht. cum vellet sibi ānulum facere, aurificem iūssit vocārī, V. 4, 56, wanting to make him a ring, he ordered a goldsmith to be called. complūrēs pauperēs mortuos suo sūmptū extulit, N. 5, 4, 3, he buried a good many poor dead țeople at his own expense, i. e. had them buried. Also in the passive: as, tondēmur, Quintil. 1, 6, 44, we get shaved. When greater exactness is required, having a thing done may be expressed more distinctly by facio (1965), by cūrō (2250), or by iubeo.

THE POTENTIAL USE.

2305. A verb is sometimes used to indicate action that can be done, and especially action that can be done at any time. This is called the *Potential Use* of the verb: as,

clārē oculis videō, Pl. MG. 630, I can see distinctly. proptereā quod inter fīnēs Helvētiōrum et Allobrogum Rhodanus fiuit isque nōnnūliis locis vadō trānsītur, 1, 6, 2, because the Rhone runs between the district of the Helvetians and Allobrogans, and the river in some places can be forded, or is fordable. Particularly with a negative: as, apertē adūlantem nēmō nōn videt, L. 99, an open flatterer anybody can see through. nōn facile diūdicātur amor vērus et fictus, Fam. 9, 16, 2, real love and pretended love cannot easily be told apart. ubī Crassus animadvertit, suās cēpiās nōn facile diūdīcī, nōn cunctandum exīstimāvit, 3, 23, 7, when Crassus saw that his forces could not easily be divided, he thought he ought to lose no time. quoniam propositum nōn tenuerat. Caes. C. 3, 65, 4, seeing that he had not succeeded in carrying out his plan. Sometimes this idea is expressed by the subjunctive (1554).

THE OBLIGATORY USE.

2306. A verb is sometimes used to denote obligatory action. This is called the Obligatory Use of the verb: as,

paulisper commorātus est, Mil. 28, he had to wait. aegra trahēbant corpora, V. 3, 140, they had to drag their sickly frames along. caruī patrīā. Sest. 145, I had to keep away from the country of my birth. senātor populī Rōmānī pernoctāvi in pūblicō, V. 4, 25, a senator of Rome was fain to sleep in the streets. serēmus aliquid in dērelīctō solō, Br. 16, we shall have to sow something in an abandoned field. erat summa inopia pābulī, adeō ut foliīs equōs alerent. Caes. C. 3, 58, 3, there was an utter lack of fodder, so that they were fain to feed their horses on leaves.

THE PERMISSIVE USE.

2307. A verb is sometimes used to denote permitted action. This is called the *Permissive Use* of the verb: as,

Verrësne habëbit domî suae candēlābrum Iovis? V. 4,71, shall Verres be allowed to have at his house a candelabra of Jupiter? petit ut ipse dē eō statuat, 1, 19, 5, he asks to be allowed to sit in judgement himself on the man. Pīsō ōrāvit ut manēret, Ta. 2, 81, Piso asked to be allowed to stay.

(B.) INDIRECT DISCOURSE.

(Örātiō Obliqua.)

2308. The speech or thought of another, quoted in his own words, is called *Direct Discourse* (1723).

2309. The speech or thought of another, dependent on a verb of saying or thinking, is called *Indirect Discourse* (1723).

One may, of course, quote his own words or thoughts indirectly, as well as those of another (1726).

2310. The verb of thinking or saying is often not distinctly expressed, but only implied in the context (1725).

2311. The principles which govern the change of direct discourse into indirect discourse have been already set forth in the foregoing pages; but, for the convenience of the learner, they are here put together.

MOOD.

(A.) MAIN SENTENCES.

- 2312. Declarative sentences of direct discourse are put in the accusative with the infinitive, and interrogative and imperative sentences of direct discourse are put in the subjunctive, in indirect discourse.
 - (a.) For examples of declarative sentences, see 2175-2184.

- (b.) Interrogative (1773): quid vellet? cūr in suās possessionēs venīret? I, 44, 7, what did he mean? why this movement into his property? from Ariovistus's reply to Caesar. dictātor litterās ad senātum mīsit: deum benīgnitāte Vēios iam fore in potestāte populī Romānī; quid dē praedā faciendum cēnsērent? L. 5, 20, I, the dictator sent this letter to the senate: through the bounty of the gods Vei would soon belong to the Roman nation; what did they think should be done about the booty?
- (c.) Imperative (1547): Cicero respondit: sī ab armīs discēdere velint, sē adiūtore ūtantur lēgātosque ad Caesarem mittant, 5, 41, 7, Cicero replied: if they wished to lay down their arms, let them take his advice and send envoys to Caesar. nūntius ēī domo vēnit: bellum Athēniēnsēs et Boeotos indixisse Lacedaemoniis; quārē venīre nē dubitāret, N. 17, 4, 1, a message reached him from home: the Athenians and Boeotians had declared war on the Lacedaemonians; so he was to come without delay. See also 1707, 1708.
- 2313. Rhetorical questions (that is, declarations made for effect in the form of questions) in the first or third person in the direct discourse are put in the accusative with the infinitive in indirect discourse: as,

si veteris contumeliae oblivisci vellet, num etiam recentium iniūriārum memoriam deponere posse? 1, 14, 3, if he were inclined to disregard the old affront, could he also forget their fresh insults? from Caesar's reply to the Helvetians. haud mīrum esse Superbo ei inditum Romae cognomen: an quicquam superbius esse quam lūdificāri sīc omne nomen Latīnum? cui non appārere adfectāre eum imperium in Latīnos? L. 1, 50, 3, no wonder Rome dubbed him 'the Proud': could there be a greater sign of pride than this mockery of the whole Latin nation? who did not see that he aspired to dominion over the Latins? This use is not found in old Latin. It occurs once or twice in Cicero's letters and a few times in Caesar. In Livy and late writers, it is not uncommon. Such questions in the second person require the subjunctive (2312).

2314. Questions which are in the subjunctive in direct discourse retain the subjunctive in indirect discourse: as,

quod vēro ad amicitiam populi Romāni attulissent, id iis ēripi quis pati posset? 1, 43, 8, who could allow them to be stripped of what they had possessed when they became the friends of the Roman nation? (1565).

(B.) SUBORDINATE SENTENCES.

2315. The verb of a subordinate sentence, introduced by a relative word or a conjunctive particle, stands in the subjunctive in indirect discourse (1722).

For the indicative with dum, in the time while, retained in indirect discourse, see 1995.

sapientissimum esse dicunt eum, cui quod opus sit ipsi veniat in mentem; proxime accedere illum qui alterius bene inventis obtemperet, Clu. 84, they say he is the wisest man who thinks out of himself what is expedient; and that the man who avails himself of the wise devices of another comes next. ad haec Ariovistus respondit: iüs esse belli, ut qui vicissent iis quos vicissent, quemadmodum vellent imperarent, 1, 36, 1, to this Ariovistus answered: that it was the right of war for the conquerors to dictate to the conquered such terms as they pleased.

2316. Relative sentences equivalent to main sentences (1835) may be put in the accusative with the infinitive: as,

unum medium diem fuisse, quem totum Galbam in consideranda causa componendaque posuisse, Br. 87, that a single day intervened and that this whole day Galba employed in studying up and arranging the case. This use is found in Cicero, Caesar, Livy, and a few times in other authors. Not in old Latin.

2317. So also sentences introduced by certain conjunctive particles are occasionally put in the accusative with the infinitive: as,

id quod saepe dictum est: ut mare ventōrum vī agitārī atque turbārī, sīc populum Rōmānum hominum sēditiōsōrum vōcibus concitārī, Clu. 138, the oft-repeated saying: as the sea is ruffled and tossed by the mighty winds, so the people of Rome are stirred up by the talk of agitators. honōrificum id mīlitibus fore, quōrum favōrem ut largitiōne et ambitū male adquīrī, ita per bonās artēs haud spernendum, Ta. H. 1, 17, that would be a mark of respect to the troops, and their good will, though usually won by bribery and corruption, was certainly no small gain if honourably come by. fugere senātum testēs tabulās pūblicās cēnsūs cūiusque, cum interim obaerātam plēbem obiectārī aliīs atque aliīs hostibus, L. 6, 27, 6, that the senate sought to avoid evidence of each man's property through making public returns, while at the same time the commons lay bankrupt and at the mercy of one enemy after another. ut and quemadmodum are found with this infinite in Cicero, Livy, and Tacitus; cum interim and sī nōn in Livy; quia in Livy and Seneca; quamquam in Livy and Tacitus; nisi fōrte in Tacitus. For quam with the infinitive, see 1898.

2318. Relative sentences which are not a part of the quotation, but an addition of the writer's, or which are a circumlocution equivalent to a substantive, are marked by the indicative (1729): as,

Condrūsos, Eburones, Caeroesos, Paemanos, qui uno nomine Germani appellantur, arbitrāri ad XL milia, 2, 4, 10, that they reckoned the Condrusians, Eburonians, Caeroesians and Paemanians (who are all called by one name Germans) at forty thousand. For other examples of such sentences, see 1729.

2319. Sentences containing the thought of another, introduced by a relative pronoun or by causal, temporal, or other conjunctive particles, take the subjunctive, though not appended to the accusative with the infinitive (1725): as,

numquis, quod bonus vir esset, grātiās dis ēgit umquam? DN. 3, 87, did anybody ever thank the gods 'because he was a good man'? (1853). mihî loquitur nec rēctē quia tibī aurum reddidī et quia non tē dēfraudāverim, Pl. B. 735, he's always pitching into me because I returned you the money and 'because I did n't do you out of it' (1856, 1853). aedem Diovi vōvit, sī eō diē hostēs fūdisset, L. 31, 21, 12, he vowed a temple to infernal Jove, 'if he should rout the enemy on that day.' For other examples, see 1725, 1852, 1853, 1884, &c.

2320. Sometimes a verb of saying or thinking is added, and is itself irrationally put in the subjunctive. For examples, see 1727.

(2.) TENSE.

(A.) OF THE INFINITIVE.

2321. The tenses of the infinitive follow their usual law (2218), representing the action as present, past, or future, from the speaker's point of view.

nuntiatum est Ariovistum ad occupandum Vesontionem contendere triduique viam a suis finibus profécisse, 1, 38, 1, it was reported that Ariovistus was pressing on (2219) to seize Vesontio, and that he had done a three days journey from his own borders (2226). fama est aram esse in vestibulo templi, L. 24, 3, 7, rumour has it that there is an altar in the vestibule of the temple (2219). legati hace se ad suos relaturos dixerunt, 4, 9, 1, the envoys said they would report this to their countrymen (2232). For other examples, see 2175-2203; for the infinitive equivalent of the indicative imperfect and pluperfect, see 2226, 2227.

(B.) OF THE SUBJUNCTIVE.

2322. The tenses of the subjunctive follow the law of the sequence of tenses; see 1745.

The tenses are usually imperfect or pluperfect, as the verb introducing a quotation is usually past.

Socrates dicere solebat, omnes in ed quod scirent, satis esse Eloquentes, DO. 1, 63, Socrates used to maintain that all men were eloquent enough in a matter which they understood (1766). dicedam quoad metueres, omnia te promissurum, Ph. 2, 89, I said that as long as you were afraid, you would promise everything (1771). cognovit Suedos posted quam pontem fieri comperissent, nuntios in omnes partes dimisisse, 4, 19, 2, he ascertained that after the Suedans had learned of the building of the bridge, they had sent out messengers in every direction (1772). For other examples, see 1746-1772.

2323. But the present and perfect subjunctive are often used, especially when the main verb is present.

Alexandrum Philippus accūsat quod largitione benevolentiam Macedonum consectētur, Off. 2, 53, Philip accuses Alexander of courting the favour of the Macedonians by the use of money (1746, 1853). initium quod huic cum matre fuerit simultatis audistis, Clu. 17, you have heard the origin of the enmity which was between the defendant and his mother (1746). Ariovistus respondit: stipendium capere iure belli quod victores victis imponere consuerint, 1, 44, 1, Ariovistus answered that it was by the laws of war that he took the tribute which victors were wont to lay upon the vanquished (1755). For other examples, see 1746-1772.

2324. The future of direct discourse is represented in indirect discourse by the imperfect, and the future perfect by the pluperfect subjunctive.

se quod e re publica esset facturum, L. 28, 45, 3, that he would do what should be for the interests of the state (1766). se non ante coepturum quam ignem in regiis castris conspexisset, L. 30, 5, 5, that he would not begin before he saw fire in the royal camp (1766, 1921). The present or perfect subjunctive also is found when the main verb requires. For other examples, see 1746-1772.

(3.) Pronoun.

2325. ego and nos, of direct discourse, are represented by sē in indirect discourse, and meus and noster by suus. tū and vos, of direct discourse, are represented in indirect discourse by ille, or, when less emphatic, by is.

For the use of the reflexive pronoun, see 2338-2342.

sē prius in Galliam vēnisse quam populum Rōmānum, I, 44, 7, that he came into Gaul before the Roman nation, said Ariovistus of himself. sē ā patribus māiōribusque suis didicisse, I, 13, 6, that they had learned from their fathers and ancestors, said the Helvetians of themselves. trānsīsse Rhēnum sēsē nōn suā sponte, I, 44, I, that he had crossed the Rhine not of his own accord, was the assertion of Ariovistus. qui nisi dēcēdat, sēsē illum nōn prō amīcō sed hoste habitūrum. quod sī eum interfēcerit, multīs sēsē prīncipibus populī Rōmānī grātum esse factūrum, I, 44, II, that unless he withdrew, he should consider him not a friend but a foe. Why, if he killed him, he should do a favour to numerous leading men in the Roman nation. Here Ariovistus is reported as speaking to Caesar.

CONDITIONAL PERIODS IN INDIRECT DISCOURSE.

(A.) PROTASIS.

2326. The protasis of every kind (2023, 2024) has the verb in the subjunctive in indirect discourse (2315).

2327. The tense of the protasis is generally imperfect or pluperfect (2322): as,

Ariovistus respondit: sī ipse populō Rōmānō nōn praescrīberet, nōn oportēre sēsē ā populō Rōmānō impedīrī, 1, 36, 1, Ariovistus answered: if he did not dictate to the Roman nation, no more ought the Roman nation to interfere with him (2026). quae sī fēcisset, Pompēium in Hispāniās itūrum, Caes. C. 1, 10,3, if he did that, Pompey would go to the Spains (2061).

2328. But indeterminate protases (2023) are sometimes put in the present or perfect subjunctive in indirect discourse, even with a main secondary tense: as,

Ariovistus respondit: sī iterum experīrī velint, sē parātum esse dēcertāre, 1, 44, 1, Ariovistus auswered that if the Romans wanted to try again, he was ready to fight it out (2026). quī nisi dēcēdat, sēsē illum prō hoste habitūrum, 1, 44, 11, that unless he withdrew, he should consider him an enemy (2054).

2329. Protases of action non-occurrent (2024) remain in the imperfect or pluperfect, even with a main primary tense.

licet Varro Müsäs, Aeli Stilonis sententiä, Plautino dicat sermone locutüräs fuisse si Latine loqui vellent, Quintil. 10, 1, 99, though Varro, following Stilo's dictum, may say that the Muses would have spoken in the style of Plautus, if they had wanted to speak Latin (2095). quaeret ab accūsätoribus quid factūri essent, si in eð loco fuissent, Cornif. 2, 22, he will ask the accusers what they would have done if they had been in that predicament (2099).

(B.) Apodosis.

2330. In indeterminate conditional periods (2023), the apodosis simply follows the general rule (2312): as,

Iovem sīc āiunt philosophī, sī Graecē loquātur, loquī, Br. 121, the philosophers say that this is Jove's style of speaking, if Jove speaks Greek (2026). sīn bellō persequī persevērāret, reminiscerētur prīstinae virtūtis Helvētiōrum, I, I3, 4, if he persisted in following them up with war, let him call to mind the old time valour of the Helvetians (2056). in prōvinciīs intellegēbant sī is quī esset cum imperiō emere vellet, fore utī quod quisque vellet quantī vellet auferret, V. 4, 10, in the provinces they saw that if a man clothed in authority should wish to be a buyer, he would carry off every time whatever he wished at what he wished (2233, 2054 or 2076). futūrum esse, nisi prōvīsum esset, ut Rōma caperētur, Div. 1, 101, that unless precaution was taken, Rome would be captured (2233, 2061). sī veteris contumēliae oblīvīscī vellet, num etiam recentium inūtiārum memoriam dēpōnere posse? 1, 14, 3, if he were inclined to disregard the old affront, could he also forget their late insults? (2313). For other examples, see 2327, 2328.

2331. In conditional periods of action non-occurrent (2024), the future participle, with esse, is used to represent the imperfect subjunctive active of direct discourse, and the future participle with fuisse to represent the pluperfect subjunctive active: as,

(a.) Caesarem arbitrārī profectum in Ītaliam; neque aliter Carnūtēs interficiundī Tasgetiī consilium fuisse captūros, neque Eburonēs, sī ille adesset, ad castra ventūros esse, 3, 29, 2, that he thought Caesar was gone into Italy; otherwise, the Carnutes would not have formed theesign of killing Tasgetius, and the Eburones, if he were at hand, would not be assaulting the camp. The use of the future participle with esse is very rare. (b.) an Cn. Pompēium cēnsēs māximārum rērum gloriā laetātūrum fuisse, sī scīret sē in solitūdine Aegyptiorum trucīdātum īrī, Div. 2, 22, do you suppose that Pompey would have taken any pleasure in the fame which his peerless exploits brought him if he had known that he was going to be butchered in the wilds of Egypt?

2332. The perfect infinitive is exceptionally used; this is based upon the indicative in apodosis (2104).

memoriā teneō solitum ipsum nārrāre sē studium philosophiae ācrius hausisse, nī prūdentia mātris incēnsum animum coērcuisset, Ta. Agr. 4, I remember that he used to say that he had drunk in the study of philosophy with greater eagerness, had not his discrect mother checked his ardent soul (2105 or 2107).

2333. possum, in the apodosis of a conditional period of action non-occurrent (2101), is regularly put in the perfect infinitive in indirect discourse: as,

· Platonem existimo, si genus forense dicendi tractare voluisset, gravissime potuisse dicere, Off. 1, 4, I think that if Plato had only chosen to cultivate forensic eloquence, he might have been a most impressive speaker (2103). cum dicerent se potuisse in amplissimum locum pervenire, si sua studia ad honores petendos conferre voluissent, Clu. 153, saying they might have risen to the proudest position, if they had only chosen to apply their energies to a political career (2103).

2334. futurum fuisse ut with the imperfect subjunctive is often used in the passive instead of the future participle with fuisse (2331): as,

Theophrastus accüsässe nätüram dicitur quod hominibus tam exiguam vitam dedisset: quorum si aetäs potuisset esse longinquior, futürum fuisse ut omni doctrina hominum vita erudiretur, TD. 3, 69, it is said that Theophrastus took nature to task 'for giving man such a short life; if the period could have been longer, man's life would have been informed with knowledge of every sort' (2099).

(C.) PRONOUNS.

THE PERSONAL PRONOUN.

2335. For the use of the nominatives ego til, nos vos, see 1029. The genitive plurals nostrum and vestrum are used as partitive, nostri and vestri as objective genitives: as,

nēmō nostrūm, RA. 55, not one of us (1242). ab utrīsque vestrūm, Fum. 11, 21, 5, by each of you (1243). grāta mihī vehementer est memoria nostrī tua, Fum. 12, 17, 1, your remembrance of me is exceedingly agreeable to me (1260). nostrī nōsmet paenitet, T. Ph. 172, we're discontented with our lot (1283). For the adjective instead of the possessive or objective genitive, see 1234, 1262.

THE REFLEXIVE SE AND suus.

2336. The reflexive regularly refers to the subject of the verb: as,

fugae sēsē mandābant, 2, 24, 2, they betook themselves to flight. animō servit, nōn sibī, Pl. Tri. 308, he serves his passions, not his better self. est amāns suī virtūs, L. 98, virtue is fond of itself. dūcit sēcum ūnā virginem, T. Eu. 229, he is leading a girl along with him. Caesar cōpiās suās dīvīsit, Caes. C. 3, 97, 3, Caesar divided his forces. For sē ipse, see 2376; for sē or suus quisque, 2397.

2337. The reflexive sometimes refers to a word not the subject, when that word is specially emphasized or easily made out from the context. This holds chiefly of suus, which is used with great freedom: as,

Alexandrum uxor sua occidit, Inv. 2, 144, Alexander was murdered by his own wife. desinant insidiari domi suae consuli, C. 1, 32, let them cease to waylay the consul in his own house and home. suas res Syracusanis restituit, L. 29, 1, 17, he restored their property to the Syracuse people.

2338. In the construction of the accusative with the infinitive (2175), the reflexive is regularly used when the subject of the infinitive refers to the subject of the verb: as,

Vārus imperium sē habēre dīxit, Lig. 22, Varus said that he had authority. id sēsē effectūros spērābant, 7, 26, 2, they hoped to accomplish it (2235).

2339. The reflexive, in this construction, sometimes refers to an emphasized word not the formal subject of the verb: as,

canum custodia quid significat aliud nisi se ad hominum commoditates esse generatos? DN. 2, 158, the watchfulness of the dog—does not it show that he was created for the convenience of man?

2340. When the subject of the infinitive is different from that of the verb, the reflexive sometimes refers to the subject of the verb, sometimes to that of the infinitive: as,

Ariovistus respondit omnes Galliae civitates ad se oppugnandum venisse, 1, 44. 1, Ariovistus answered that all the states of Gaul had come to attack him, i.e. Ariovistus. neminem secum sine sua pernicie contendisse, 1, 36, 6, that no man had contended with him without his own undoing; secum refers to Ariovistus, the subject of the main verb respondit, sua to neminem.

2341. In subordinate subjunctive clauses of purpose, indirect discourse, or indirect question, the reflexive refers to the subject of the main sentence: as,

huic mandat, ut ad se quam primum revertatur, 4, 21, 2, he instructs him to come back to himself as soon as possible. excruciabit me erus, quia sibi non dixerim, Pl. MG. 859, my master'll torture me 'because I have not told him.' Paetus omnis libros, quos frater suus reliquisset, mihi donavit, Att. 2, 1, 12, Paetus made me a present of all the books 'that his brother left.'

2342. The reflexive, in such subordinate clauses, sometimes refers to an emphatic word not the main subject: as,

identidem felicem Priamum vocabat, quod superstes omnium suorum exstitisset, Suet. Tib. 62, he was for ever calling Priam 'Fortune's darling, because he outlived all his kith and kin.'

2343. The reflexive referring to the main subject is sometimes irregularly used in subordinate indicative clauses.

Epaminondas el, qui sibl successerat, exercitum non tradidit, Inv. 1, 55. Epaminondas did not deliver the army to his successor. centum boves militibus dono dedit, qui secum fuerant, L. 7, 37, 3, he gave a hundred oxen to the soldiers who had been with him.

Equivalents for a Reciprocal Pronoun.

2344. The place of a reciprocal pronoun, each other, is supplied by inter nos, inter vos, inter se, or by alter or alius followed by another case of the same word: as,

inter nos natura coniuncti sumus, Fin. 3, 66, we are united with each other by nature. Cicerones pueri amant inter se, Att. 6, 1, 12, the Cicero boys are fond of each other. cum alius alii subsidium ferret, 2, 26, 2, when they were helping each other. For uterque, see 2400. The reciprocal idea is sometimes expressed by the form of the verb: as, fulva luctantur harena, V. 6, 643, they wrestle with each other on the yellow sand (1487).

2345. From Livy on, invicem inter sē, invicem sē, or invicem alone, is often used in the expression of reciprocal relations: 25,

invicem inter se gratantes, L. 9, 43, 17, mutually congratulating each other. invicem se anteponendo, Ta. Agr. 6, mutually preferring one another. ut invicem ardentius diligamus, Plin. Ep. 7, 20, 7, that we may love each other more ardently.

THE Possessive Pronoun.

2346. The possessive of the personal and reflexive pronoun is regularly omitted, unless it is required for emphasis or contrast: as,

ora manüsque tuā lavimus, Fēronia, lymphā, H. S. I, 5, 24, our hands and faces in thy rill, Feronia, we bathe. The possessive sometimes has the meaning of proper, appropriate, favourable; as, suo loco dicam, Quintil. I, I, 36, I shall tell in the proper place. For the possessive pronoun used instead of the possessive or objective genitive, see 1234, 1262.

THE DEMONSTRATIVE PRONOUN.

hic.

2347. hic points out what is near the speaker in place, time, or thought: as,

hi domum më ad së auferent, Pl. Men. 847, these fellows will hale me off to their house. non më existimavi in hoc sermone üsque ad hanc aetatem esse ventūrum, Br. 232, I did not think that in this discourse I should get down to the present generation. reliquum omne tempus hūius annī, V. 1, 30, all the rest of this year.

2348. hIo sometimes points out the speaker with pathos, or with emphasis, particularly in comedy.

haec arma et hunc militem propitio fiumine accipias, L. 2, 10, 11, receive these arms and this soldier in thy gracious stream, the prayer of Horatius Cocles to Father Tiber. tibi erunt parata verba, huic homini verbera, T. Hau. 356, you'll get a chiding, this child a kiding. fecisset ni haec praesensisset canes, Pl. Tri. 172, and he'd have done it, unless this dog had got scent of it in time, where the speaker means himself.

2349. The neuter plural haec sometimes means the realm, our country, our state, the [Roman] world: as,

haec, quae iam pridem vastare studes, C. I, 2I, the realm which you have long sought to lay in ruins. qui haec delere conati sunt, C. 4, 7, who have tried to destroy the state. servus est nemo qui non haec stare cupiat, C. 4, 16, there lives no slave that wills not our country should abide.

2350. hic, as expressing a familiar, every-day thing, occasionally has a shade of contempt, either alone, or with volgāris, cottīdiānus or the like: as,

mittit hominī mūnera satis largē, haec ad ūsum domesticum, V. 4, 62, he sent him some presents—pretty liberal ones, commonish things for house-hold use. mittō hāsce artīs volgārīs, coquōs, pistōrēs, RA. 134, I'll skip your everyday common occupations—such as cooks, bakers, &c., &c. taedet cottīdiānārum hārum fōrmārum, T. Eu. 297, I'm sick of your everyday beauties.

2351. When his relates to the words of a sentence, it points out what has preceded or is to follow, or emphasizes a word referred to by a preceding relative.

For hic used to introduce a new sentence, see 2129.

hace habul de senectüte quae dicerem, CM.85, this was what I had to say on Old Age. sed hace hactenus; nunc ad ostenta veniamus, Div. 2, 53, so much for this; let us now go on to portents. fecit pacem his condicionibus, N.8, 3, 1, he made peace on the following terms. dicitur locutus in hanc fere sententiam esse, L. 6, 40, 2, it is said that he stoke to somewhat the following effect. quaesierat ex me Scipio quidnam sentirem de hoc quod duo soles visos esse constaret, RP. 1, 19, Scipio had asked me what I thought about this, that it was generally agreed that two suns had been seen.

2352. hio and ille are often opposed, particularly in contrasts of classes: as,

laudātur ab hīs, culpātur ab illīs, H. S. I, 2, II, one side praises him, the other condemns. illud est album, hōc dulce, canōrum illud, hōc bene olēns, hōc asperum, Ac. 2, 21, that is white, this is sweet, that sonorous, this fragrant, this rough. ōrātor, nōn ille volgāris sed hīc excellēns, O. 45, an orator, not of the common sort, but the superior one of whom we are speaking.

2353. In transitions, tile introduces a new thing, hie denotes the aforementioned: as,

sed haec vetera; illud vēro recēns, Caesarem meo consilio interfectum, Ph. 2, 25, but this is all ancient history; here, however, is something new, that Caesar was killed at my suggestion.

- 2354. When hie and ille refer to two different persons or things named in the sentence, hie commonly refers to the nearer word, ille to the remoter word; or hie sometimes refers to what is nearer the mind of the speaker, even though it be remoter in the sentence.
- (a.) Caesar beneficiis ac münificentiä mägnus habēbātur, integritāte vitae Catō. Ille mänsuētūdine et misericordiā clārus factus, huic sevēritās dīgnitātem addiderat, S. C. 54. 2, Caesar was esteemed great for his liberality and generosity, Cato for his unsullied life. The former became famous through his humanity and mercy, the latter's dignity was heightened by his austerity. (b.) cavē Catōnī antepōnās nē istum quidem ipsum quem Apollō, ut ais, sapientissimum iūdicāvit: hūius enim facta, illius dicta laudantur, L. 10, suffer not Cato to find a rival even in your man himself, whom, as you say, Apollo declared wisest of mankind; for our Cato is renowned for deeds, the other for doctrines.

2355. hic and ille are used together, chiefly in poetry, to explain something past by a present thing: as,

hunc illum poscere făta reor, V. 7, 272, this I think is he whom the fules require. hunc illum fătis externă ab sede profectum portendi generum, V. 7, 255, this was the man whom destiny foreiold should fare from foreign home to be his son-in-law.

iste.

2356. iste points out something near to, belonging to, or imputed to the person addressed: as.

cum istă sīs auctorităte, non debes adripere maledictum ex trivio, Mur. 13, carrying the influence that you do, you ought not to take to street-corner abuse. multae istărum arborum meă manu sunt satae, CM. 59, many of the trees you see there were planted by my own hand. salem istum quo caret vestra nătio, inridendis nobis nolitôte consumere, ND. 2, 74, do not waste in ridiculing us that wit which your fraternity sadly needs. Often with tuus or vester: as, isdem hic sapiens de quo loquor oculis quibus iste vester intuebitur, Ac. 2, 105, the sage of whom I speak will look with the same eyes as the sage you boast of.

Digitized by Google

2357. From its use in addressing opponents or in talking at them, iste often expresses contempt: as,

tū istīs faucibus, istīs lateribus, istā gladiātoriā totīus corporis firmitāte, Ph. 2, 63, you with that gullet of yours, those swollen flanks, that prizefighter's bulky make-up. non erit ista amīcitia, sed mercātūra quaedam, ND. 1, 122, such a thing will not be a friendship, but a sort of traffic.

ille.

2358. ille points to what is remote in place, time, or thought: as, ergo illi intellegunt quid Epicurus dicat, ego non intellego? Fin. 2, 13, do those gentlemen then understand what Epicurus means and I not? populus Romānus nihil aequē atque illam veterem indiciorum vim gravitātemque requirit, Caecil. 8, the Roman people miss nothing so much as the ancient vigour and firmness attaching to public trials. his autem dē rēbus sol mē ille admonuit ut brevior essem, DO. 3, 209, but on these topics yonder sun has warned me to be pretty brief. For other examples, see 2352-2355.

2359. ille is used to point out a celebrity, often one of the past. So, particularly without a proper name, in allusive style, referring to what is famed in story.

(a.) hic est ille Dēmosthenēs, TD. 5, 103, this is the famous Demosthenes. Athēniēnsis ille Themistoclēs, DO. 2, 299, Themistocles the great, of Athens. illud Solonis, CM. 50, Solon's memorable words. Mēdēa illa, IP. 22, Medea famed in story. (b.) Viribelle confissus periit, 1. 10, 10, the man in the story lost his life through confidence in his strength. illae rēgiae lacrimae, Plin. Ep. 3, 7, 13, the monarch's historic tears, of Xerxes.

2360. Indicating change of subject, ille is this other man. In such cases it is often best expressed in English by a proper name or a descriptive word.

ad se adulescentem iussit venire. at ille, ut ingressus est, confestim gladium destrinxit, Off. 3, 112, he gave orders to admit the young man. But this other, the moment he entered, drew his sword. Tusticus expectat dum defluat amnis: at ille läbitur et läbetur, H. E. 1, 2, 42, he is a peasunt waiting for the river to go down: but the river flows and will flow on.

2361. In concessions, ille often precedes quidem; in translation no pronoun is required.

libri scripti inconsiderate ab optimis illis quidem viris, sed non satis eruditis, TD. 1, 6, books rashly written by men respectable enough but of insufficient education. est tarda illa medicina, sed tamen magna, TD. 3, 35, it is a powerful remedy, though slow in its working. hic, is, and iste are used rarely in this way.

2362. In poetry ille may serve: (1.) To repeat a thing with emphasis: as,

arma virumque cano Troiae qui primus ab oris Italiam venit, multum ille et terris iactatus et alto, V. I, I, arms and the man I sing, from Troja's shore the first to come to Italy, much tossed that man by land and sea.

2363. (2.) To emphasize the second of two ideas: as,

nunc dextrā ingemināns ictūs, nunc ille sinistrā, V. 5, 457, now with his right redoubling blows, now mighty with his left. non tamen Euryali, non ille oblitus amorum, V. 5, 334, still not Euryalus forgetting, no, not he his love!

2364. (3.) As a provisional subject, to anticipate the real subject, and keep the attention in suspense till the real subject comes with emphasis: as,

ac velut ille canum morsu de montibus altis actus aper substitit, V. 10, 707, and e'en as he, goaded by bite of hounds from mountains high, the boar hath paused.

THE DETERMINATIVE PRONOUN.

is.

2365. is refers to something named in the context. When some feeling is to be expressed, such as admiration, or oftener contempt, homo is often put for is.

(a.) petit ä rege et eum plūribus verbīs rogat ut id ad se mittat, V. 4. 64. he solicits the king and begs him at considerable length to send it to him. nondum mātūrus imperio Ascanius erat, tamen id imperium et ad pūberem aetātem incolume mānsit, L. 1, 3, 1, Ascanius was not yet old enough for the throne, but that throne was kept safe for him till he came of age. (b.) ego hominem callidiorem vidi nēminem quam Phormionem. venio ad hominem, ut dicerem argentum opus esse, T. Ph. 591, a shrewder man than Phormio I never saw, not !! I went to him to tell him that I needed money. nēquam esse hominem et levem sciebam, Sest. 22, I knew the fellow was worthless and frivolous.

2366. (1.) is refers to something named before or after: as,

ēius omnis ōrātiō versāta est in eō, ut scrīptum plūrimum valēre oportēre dēfenderet, DO. 1, 244, his whole speech turned on the contention that the written word should be paramount. Melitēnsis Diodōrus est; is Lilybaeī multōs iam annōs habitat, V. 4, 38, Diodorus is from Melita; he has lived many years at Lilybaeum. For other examples of is used to connect sentences, see 2129.

2367. With a connective, is denotes an important addition: as,

vincula et ea sempiterna, C. 4, 7, imprisonment and that too perpetual. annum iam audientem Cratippum idque Athēnīs, Off. 1, 1, after a year's study under Cratippus, and that too in Athens. erant in eo plurimae litterae nec eae volgārēs, Br. 265, he was a man of very deep reading and that of no common sort either.

2368. (2.) is indicates something explained or restricted by a relative or indefinite, qui, quicumque, sī quis: as,

haec omnia is fēcī, quī sodālis Dolābellae eram, Fam. 12. 14, 7, all this I did, I that was Dolabella's bosom friend (1807). Unus ex eð numerð quī ad caedem parātī erant, S. I. 35, 6, one of the number that were ready to do murder (1804). neque is sum quī mortis periculð terreor, 5, 30, 2, but I am not the man to be scared by danger of death, no, not I (1818). quīcumque is est, ēī mē profiteor inimīcum, Fam. 10. 31, 3, whoever he may be, I proclaim myself his enemy (1814). cum ipse Aliēnus ex eā facultāte, sī quam habet, aliquantum dētrāctūrus sit, Caecil. 49, seeing that even Alienus is to suppress some part of that eloquence, if any he may have. See also 1795, 1708. For id quod, see 1811.

2369. For the use of is instead of a relative repeated in a different case, see 1833.

2370. is sometimes is loosely used for the reflexive $s\bar{e}$ (2341); here the point of view of the writer shows itself.

Milesids navem poposcit, quae eum Myndum prosequeretur, V. 1, 86, he asked the Milesians for a ship to escort him to Myndus. suos omness castris continuit ignesque fieri prohibuit, quo occultior esset eius adventus, Caes. C. 3, 30, 5, he confined his troops to camp and forbade the kindling of fires, in order to keep his coming a greater secret.

THE PRONOUN OF IDENTITY.

īdem.

2371. idem, the same, often connects two different predicates to the same person or thing. In this case, it may be variously rendered by likewise, also, all the same, on the other hand, at once, very, nevertheless.

ütēbātur eð cibō quī et suāvissimus esset et īdem facillimus ad concoquendum, Fin. 2, 64, he made use of such food as was both very dainty and likewise very easy to digest. ita fiet ut non omnēs quī Atticē, eidem bene dīcant, Br. 291, so it will be found that not all who speak Attic are also good speakers. multī quī ut iūs suum et libertātem tenērent volnera excēpērunt fortiter et tulērunt, īdem omissā contentione dolorem morbī ferre non possunt, TD. 2, 65, many who have met heroically and endured wounds, to preserve their rights and their freedom, are nevertheless, when no contest is involved, unable to bear the pain of a disease.

2372. idem is often used with other pronouns, hic, iste, istuc, ille: as,

haec eadem centurionibus mandabant, 7, 17, 8, they confided these same sentiments to their centurions. multae aliae idem istuc cupiunt, Pl. MG. 1040, many other ladies want just what you want.

2373. The same as is expressed by idem followed by qui, atque or ac, ut, quasi, cum, sometimes in poetry by the dative.

idem sum qui semper fui, Pl. Am. 447, I'm the same man I've always been. pomărium seminărium ad eundem modum atque oleăgineum facito, Cato, RR. 48, make your fruit-tree nursery in the same way as your nursery for olive-trees (1653). eisdem fere verbis ut disputâtum est, TD. 2, 9, in pretty much the same words as were used in the actual argument (1937). ut eodem loco res sit quasi ea pecunia legăta non esset, Leg. 2, 53, so that the position is the same as if the money had not been bequeathed (2120). tibi mēcum in eodem est pistrino vivendum, DO. 2, 144, you must live in the same nill as I. Homērus eādem aliis sopītu' quietest, Lucr. 3, 1037, Homer sleeps the same sleep as others.

THE INTENSIVE PRONOUN.

ipse.

2374. ipse, self, is used in contrasts.

2375. ipse may contrast the chief person with subordinates, or a person with any thing belonging to him.

Catilina ipse pertimuit, profügit; hī quid exspectant? C. 2, 6, Catiline, their head, has fled in abject terror; his minions here, what wait they for? Eī mūnītiōnī, quam fēcerat, T. Labiēnum lēgātum praefēcit; ipse in Ītaliam māgnīs itineribus contendit, 1, 10, 3, he put Labienus, his lieutenant, in charge of the fortification he had made: he hurried, himself, to Italy with forced marches. tēmētī nihil adlātum intellegō:: at iam adferētur, sī ā forō ipsus redierit, Pl. Aul. 355. I see there's no wine brought: but it soon will be, if the governor comes back from down town. 'ipse dīxit;' 'ipse" autem erat Pythagorās, DN. 1, 10, 'the old man said so;' now "the old man" was Pythagorās. nāvis tantum iactūrā factā, incolumēs ipsī ēvāsērunt, L. 30, 25, 8, the vessel only was lost, and the sailors escaped in sajety.

2376. ipse is often used with personals and reflexives agreeing with the emphatic word. But the nominative is usually preferred, especially when ipse stands before the other pronoun, or when it stands after per mē, per sē. After mēmet, nōbīsmet, nōsmet, &c., it agrees with these words.

(a.) neque enim potest exercitum is continere imperator, qui se ipsum non continet, IP. 38, for no commander can keep his army under control who does not keep his own self under control. miles fratremsuum, dein se ipsum interfecit, Ta. H. 3, 51, a soldier slew his own brother, then himself.

(b.) ipse se quisque diligit, L. 80, every man loves himself. bellum per se ipse, iniüssü populi ac senatüs, fecit, L. 1, 49, 7, he made war on his own responsibility, without orders from the people and senate. Iünius necem sidi ipse conscivit, DN. 2, 7, Junius killed himself. non egeo medicina, me ipse consolor, L. 10, I need no medicine, I am my own comforter. (c.) ut nobismet ipsis imperemus, TD. 2, 47, that we should govern ourselves.

2377. ipse alone sometimes stands for an emphatic se or suus: as,

pertimuerunt ne ab ipsis descisceret et cum suis in gratiam rediret, N. 7, 5, 1, they were much afraid that he would abandon them and come into favour with his compatriots again. ea molestissime ferre homines debent, quae ipsorum culpa contracta sunt, QFr. 1, 1, 2, people should be most vexed at things which are brought about through fault of their own.

2378. ipse is used in many combinations where self is an inadequate translation. It may sometimes be translated by:

2379. (1.) Actual, positive, even.

habet certõs suī studiõsõs, quõs valētūdõ modo bona sit, tenuitās ipsa dēlectat, Br. 64, he has a clique of admirers, who are charmed by positive scragginess, provided the health be good. hōc ipsum ēlegantius pōnī meliusque potuit, Fin. 2, 100, even this might have been put more logically and better.

2380 (2.) Regular, proper, real.

flagrantem invidia propter interitum C. Gracchi ipse populus Romanus periculo liberavit, Sest. 140, though greatly detested in consequence of the death of Gracchus, he was acquitted by the Roman people proper. cives Romani permulti in illo oppido conidinctissimo animo cum ipsis Agrigentinis vivunt, V. 4, 93, a great many Romans live in that town in most friendly relations with the natives of Agrigentum.

2381. (3.) As well, likewise, too, for which, from Livy on, et ipse is used.

hoc Ripheus, hoc ipse Dymas, omnisque iuventus laeta facit, V. 2, 394, this Ripheus doth, this Dymas too, and all the youth alert. cogitatio Locros urbem recipiendi, quae sub defectionem Italiae desciverat et ipsa ad Poenos, L. 29, 6, 1, a project for recovering the city of Locri, which, on the revolt of Italy, had likewise gone over to the Carthaginians.

2382. (4.) Alone, mere.

non solum adventus mali, sed etiam metus ipse adfert calamitätem, IP. 15, not only the coming of misjortune, but even the mere dread of it brings disaster.

2383. (5.) Exactly, just, with numerals and dates, or right, of place.

annis LXXXVI ipsis ante më consulem, Br. 61, exactly 86 years before my consulship. Kalendis ipsis Novembribus, C. 1, 8, on the 1st of November precisely. in ipso vado deprehensus Indutiomarus interficitur, 5, 58, 6, right at the ford Indutiomarus is caught and killed. suprā ipsum balneum habito, Sen. Ep. 56, 1, I live right over a bath.

2384. (6.) Of oneself, voluntarily, of one's own motion.

valvae subito se ipsae aperuerunt, Div. 1, 74, the temple-door suddenly opened of itself. Catilinam vel electionus vel emisimus vel ipsum egredientem verbis prosecuti sumus, C. 2, 1, we have driven Catiline out, or let him out, or, when he was going out of his own motion, wished him godspeed.

THE INTERROGATIVE PRONOUN.

uter and quis.

2385. uter, whether? which? is used in questions about two things; quis and qui, who? what? in questions about more than two, though sometimes loosely of two things.

uter est insanior horum? H. S. 2, 3, 102, which of these is the greater crank? praeclare apud eundem est Platonem, similiter facere eos qui inter se contenderent uter potius rem püblicam administraret, ut si nautae certarent quis eorum potissimum gubernaret, Off. 1, 87, in the same Plato is the excellent saying that for people to fall out with one another about which of two men should manage a state, were just as if the crew of a ship should quarret about which of them should be pilot. ut quem velis, nescias, All. 16, 14, 1, so that you don't know which to choose, as between Octavian and Antony.

2386. quis and quid ask to have a thing named; qui and quod to have it described. But see 685.

quis Dionem Syracosium doctrinis omnibus expolivit? non Plato? DO. 3, 139, who refined Syracusan Dio with learning of every sort? was it not Plato? quid rides, Il. S. 2, 5, 3, why dost thou laugh? (1144). quis fuit igitur?:: iste Chaerea.:: qui Chaerea? T. Eu. 823, who was he then?: your precious Chaerea.:: what Chaerea? quem frictum petentes scire cupimus illa quo modo moveantur? Fin. 3, 37, with what practical end in view do we seek to know how you bodies in the sky keep in motion?

THE RELATIVE PRONOUN.

2387. The relative pronoun has already been treated; see 1792-1837.

THE INDEFINITE PRONOUN.

quis or qui; quispiam.

2388. quis or qui, a, some, somebody, always stands after one or more words of the sentence. quis or qui is used after si (nisi, sive), nē, num, utrum, an, quō, or quandō, in preference to aliquis, unless emphasis is intended.

dixerit quis, Off. 3, 76, somebody may say. malum quod tibi di dabunt, Pl. Am. 563, some curse the gods will bring upon thec. hi, si quid erat durius, concurrebant; si qui equò deciderat, circumsistebant, 1, 48, 6, if there was ever any sharpish work, these men would rally; if a man fell from his horse, they would close round him. praecipit adque interdicit unum omnes peterent Indutiomarum, neu quis quem vulneret, 5, 58, 4, he charges them and forbids them; they were all to assail Indutiomarus alone; and nobody was to wound anybody (2402).

2389. quispiam, a, some, one or another.

försitan quispiam dixerit, Off. 3, 29, peradventure somebody may say. quispiam dicet, V. 3, 111, somebody will say. cum quaepiam cohors impetum fēcerat, hostēs vēlöcissimē refugiēbant, 5, 35, 1, every time one or another cohort charged, the enemy fled back quick speed (2394).

aliquis.

2390. aliquis or aliqui some one, some one or other, has always some affirmative emphasis, and is opposed to the idea of all, much, none: as,

non enim declāmātorem aliquem de lūdo, sed perfectissimum quaerimus, O. 47, for it is not some spouter from school that we aim to find, but the ideal orator. Omnēs ut aliquam perniciosam bestiam fugiebant, Clu. 41, everybody avoided him, like some dangerous wild animal or other. audē aliquid Gyaris dignum sī vis esse aliquid, J. 1, 73, venture some deed that deserves transportation, if you care to be something grand. non sine aliquā spē, D. 7, not without some hope. quaero sitne aliqua āctio an nūlla, Cacc. 33, I ask whether there is some ground for an action or none. num igitur aliquis dolor post mortem est? TD. 1, 82, is tree, then, some sense of pain after death? With emphasis after sī (2388): sī aliquid dē summā gravitāte Pompēius, multum de cupiditāte Caesar remīsisset, aliquam rem pūblicam nobīs habēre licuisset, Ph. 13, 2, if Pompey had sacrificed really something of his importance, and Caesar a good deal of his ambition, we might have had what would have been to some degree a commonwealth.

2391. aliquis is sometimes equivalent to aliquis alius: as,

cum M. Pīsone et cum Q. Pompēio aut cum aliquo, Br. 310, with Piso or Pompey or some other man. ea mihī cottīdiē aut tūre aut vino aut aliqui semper supplicat, Pl. Aul. prol. 23, she always offers me incense or wine or something else every day.

quidam.

2392. quidam, a, a certain, denotes a thing which we cannot describe or do not care to.

non inridicule quidam ex militibus decimae legionis dixit: plus quam pollicitus esset; Caesarem facere, 1, 42, 6, one of the privales of the Tenth said a very dry thing: that 'Caesar was doing more than he engaged to.' accurrit quidam notus mihi nomine tantum, H. S. 1, 9, 3, np trois a man I knew by name alone. assimilis quidam mügitui sonus, Suet. Galb. 18, a mysterious sound like the lowing of a cow. videmus natūram suo quodam itinere ad ūltimum pervenīre, D.N. 2, 35, nature reaches perfection by a kind of road of her own. Often in translations from Greek: as, aliis librīs rationem quandam per omnem natūram rērum pertinentem vidivinā esse adiectam putat, D.N. 1, 36, in other works he supposes 'a kind of Reason pervading all nature and endowed with divine power, of Zeno's doctrine.

2393. quidam is often used to soften an exaggeration or a metaphor, sometimes to denote contempt.

Eloquentissimos homines innumerabilis quosdam nominabat, DO. 1, 91, great speakers he named, absolutely without number. ad omnis enim meos impetus quasi murus quidam boni nomen imperatoris opponitur, V. 5, 2, for against all assaults of mine the name of a good commander is set up, like a regular wall. sed aliud quoddam filum drationis tuae, L. 25, but there is quite a different fibre to your speech. non est eorum urbanitate quaddam quasi coldrata dratio, Br. 170, their language lacks the tinge of an indefinable metropolitan element. Theomnastus quidam, homo ridicula insanus, V. 4, 148, a person of the name of Theomnastus, an absurd, crackbrained creature.

quisque.

2394. quisque, each, each in particular, each by himself, applies what is stated of all to each several case, out of a number more than two.

laudāti pro contione omnes sunt, donātīque pro merito quisque, L. 38, 23, 11, they were collectively commended in assembly convened, and received presents, each in proportion to his deserts. quotiens quaeque cohors procurrerat, māgnus numerus hostium cadēbat, 5, 34, 2, as the cohorts successively charged, a great number of the enemy fell every time (2389). mēns cūiusque, is est quisque, non ea figūra quae digito dēmonstrārī potest, RP. 6, 26, the mind of a man is always the man, and not that shape which can be pointed out by the finger.

2395. quisque is sometimes used in a relative and demonstrative sentence both.

quod cuique obtigit, id quisque teneat, Off. 1, 21, let every man keep what he has got. id enim est cuiusque proprium, quo quisque fruitur atque utitur, Fam. 7, 30, 2, for that is always a man's property which he has the enjoyment and use of.

2396. In a complex sentence, consisting of a main and a relative sentence, quisque is usually expressed but once, and then in the unemphatic relative sentence. In English, the equivalent of quisque goes with the main sentence.

nemo fuit qui non surrexerit, telumque quod cuique fors offerebat, adripuerit, V. 4, 95, not a man but sprang from his bed, and seized in every instance such a weapon as chance threw in his way. theatrum cum commune sit, recte tamen dici potest, eius esse eum locum, quem quisque occuparit, Fin. 3, 67, though the theatre is open to all, still it may be said with ferfect propriety, that each spectator is entitled to the seat he has taken. Messanam ut quisque nostrūm venerat, haec visere solebat, V. 4, 5, any Roman, who went to Messana, invariably went to see these statues (1939). eorum ut quisque prīmus venerat, sub mūro consistēbat, 7, 48, 2, as they successively arrived, each man of them took his stand under the wall.

2397. quisque is often used with se or suus, superlatives, and ordinals, holding an unemphatic place after these words: as,

Digitized by Google

ipse sẽ quisque dīligit, L. 80, a man always loves his own self. suos quoique mõs, T. Ph. 454, every man his own way. huic prō sẽ quisque nostrūm medērī velle dēbēmus, L. Agr. 1, 26, this evil we ought to wish to remedy, according to our several abilities. optimum quidque rārissimum est, Fin. 2, 81, ever the fairest is the rarest. nam in forō vix decumus quisquest, qui ipsus sẽsẽ nōverit, Pl. Ps. 973, for in the marketplace there's scarce one man in every ten that knows himself. quintō quōque annō Sicilia tōta cēnsētur, V. 2, 139, at the end of every four years all Sicily is assessed. quamquam prīmum quidque explicēmus, Fam. 12, 1, 1, but stay—let me explain things successively; or, one thing after another. litterās mīsit, ut is ānulus ad sẽ prīmō quōque tempore adferrētur, V. 4, 58, he sent a letter directing said ring to be sent to him without delay.

2398. In old Latin quisque is sometimes equivalent to quicumque or quisquis, whoever: as, quisque obviam huic occesserit īrātō, vāpulābit, Pl. As. 404, whoever meets him in his wrath will catch it. In cūiusque generis and cūiusque modī, it means any and every: as, tot hominēs cūiusque modī, V. 4, 7, so many people of every sort, i. e. cuicuimodī. quisquis for quisque is sometimes found in old Latin, in Cicero rarely: as, cum processit paulum et quātenus quicquid sē attingat perspicere coepit, Fin. 5, 24, when it has progressed a little and has begun to discover how far each thing affects it.

uterque.

2399. uterque, each, is used of two individuals, and utrique of two sets or parties. But sometimes utrique is used of two individuals.

(a.) ut illa nātūra caelestis et terrā vacat et ūmōre, sīc utriusque hārum rērum hūmānus animus est expers, TD. 1, 65, even as the heavenly nature is free from the earthy and the humid, so the soul of man has no part in either of these qualities (1243). nūtū tremefactus uterque est polus, O. F. 2, 489, at his nod trembled each pole (1243). Aetōliōrum utraeque manūs Hēraclēam sēsē inclūsērumt, L. 36, 16, 5, both bands of the Aetolians shut themselves up in Heraclea. (b.) sex filii nōbis, duae filiae sunt, utraeque iam nūptae, L. 42, 34, 4, we have six sons and two daughters, both already married.

2400. Reciprocal relations (2344) are sometimes expressed by uterque followed by a different case of alter; rarely by uterque and a different case of the same word.

(a.) quorum uterque contempsit alterum, Off. 1, 4, each of whom lightly esteemed the other. (b.) abduct non potest:: qui non potest?:: qui auterque utriquest cordi, T. Ph. 799, she's not to be taken from him:: why is n't she?:: because they 're heart to heart. This doubling of uterque is found only half a dozen times; not in Cicero.

quivis and quilibet; utervis and uterlibet.

2401. quivis and quilibet, any you please, are used either in affirmative or negative sentences. When two are spoken of, utervis or uterlibet is used.

(a.) ut quivis intellegere posset, V. 5, 17, so that any fool might know. faciat quidlubet, T. Hau. 464, let him do anything he likes. (b.) qui utramvis rēctē novit, ambās noverit, T. Andr. prol. 10, who knows either well, knows both. utrumlibet elige, Quinct. 81, choose either you like.

quisquam and ullus.

2402. quisquam (692), a single one, any one at all, and fillus, a bit of a, any at all, any, are used chiefly in negative, interrogative, conditional, and comparative sentences, or with sine.

vēnī Athēnās, neque mē quisquam ibī adgnōvit, TD. 5, 104, I came to Athens and not a person there knew me (1659). interdīcit omnibus, nē quemquam interficiant, 7, 40, 4, he warns them collectively against killing any man at all (2388). hunc suā quisquam sententiā ex hāc urbe expellet? Mil. 104, will anybody at all, by his vote, banish this man from Rome? quis hōc fēcit ūllā in Scythiā tyrannus? Pis. 18, what tyrant ever did this in any Scythia? sī quisquam est timidus, is ego sum, Fam. 6, 14, 1, if anybody is timid, I am the man. quī saepius cum hoste cōnflīxit quam quisquam cum inimīcō concertāvit, IP. 28, who has measured swords oftener with the enemy than anybody ever wrangled with an opponent in private life. sine ūllō metū in ipsum portum penetrāre coepērunt, V. 5, 96, without a bit of fear they began to make their way right into the harbour. nēmō quisquam and nihil quicquam are old and late: as, lepidiōrem uxōrem nēmō quisquam habet, Pl. Cas. 1008, nobody has a jolier wife. noster malī nīl quicquam prīmō, T. Ph. 80, our young master did n't make any trouble at first.

2403. nēmō is generally used for nōn quisquam, nēmō umquam for numquam quisquam, nihil for nōn quicquam, and nūllus for nōn ūllus. If only two are spoken of, neuter is used. The plural neutri is used of two parties.

nēmost miserior mē, T. Hau. 263, no man's unhappier than I. nēmo igitur vir māgnus sine aliquo adflātū dīvīno umquam fuit, DN. 2, 167, nobody who is a great man was ever without some divine inspiration. ab nūllo ille liberālius quam ā Cluentiō trāctātus est, Clu. 161, by no man has he been treated more generously than by Cluentius. neutrum eorum contrā alterum iuvāre, Caes. C. 1, 35, 5, to help neither of them against the other. neutrī alteros prīmo cernēbant, L. 21, 46, 4, neither party saw the others at first.

(D.) NUMERALS.

2404. Numerals are divided into Adjectives: Cardinal, unus, one. duo, two, &c.; Ordinal, primus, first, secundus, second, &c.; Distributive, singuli, one each, bini, two each, &c.; and Numeral Adverbs: semel, once, bis, twice, &c.

For the inflection of numerals, see 637-643.

NOTATION.

2406. Numbers are noted by combinations of the characters l=1; V=5; X=10; L=10; L=

2407. Of these signs, V seems to be the half of X, which may be Etruscan in origin. The original signs for 50 and 1000 were taken from the Chalcidian alphabet of Cumae (17), in which they represented sounds unknown to early Latin. Thus, J, in the Chalcidian alphabet representing ch (49), was used by the early Romans for 50, and became successively U, I, and L. The form J, is found very rarely, U oftener, in the Augustan period; I is common during the last century of the republic and in the early empire; L, due to assimilation with the Roman letter, appears in the elast century of the republic. The sign for 1000 was originally O (Chalcidian ph); it became OO (the common classical form), O, or W; the form M as a numeral appears in the second century A. D., although M is found much earlier as an abbreviation for millia in M P, that is millia passuum. For 100, the sign O (Chalcidian th) may have been used originally; but C (the abbreviation for centum) came into use at an early period. The sign D, = 500, is the half of O.

2408. To denote 10,000 the sign for 1000 was doubled: thus, , written also , , . Another circle was added to denote 100,000: thus, written also , . The halves of these signs were used for 5000 and 50,000: thus, and ; variations of these last two signs are found, corresponding to the variations of the signs of which they are the halves.

2409. From the last century of the republic on, thousands are sometimes indicated by a line drawn above a numeral, and hundreds of thousands by three lines enclosing a numeral: as, $\overline{V} = 5000$; $\overline{|X|} = 1,000,000$.

2470. To distinguish numerals from ordinary letters, a line is often drawn above them: as, $\nabla l = 6$. This practice is common in the Augustan period; earlier, a line is sometimes drawn across the numeral, as, H = 2; B = 500.

2411. Of the two methods of writing the symbols for 4, 9, 14, 19, &c., the method by subtraction (IV, IX, XIV, XIX, &c.) is rarer, and is characteristic of private, not public inscriptions.

Some Forms of Numerals.

2412. quinctus, the older form of quintus (135) is sometimes found in old and even in classical writers. Instead of septimus and decimus, the older septumus and decumus are not uncommon (78).

2413. In the ordinals from twentieth upwards, the older forms vicēnsumus or vicēnsimus, tricēnsumus or tricēnsimus, &c., &c., are not infrequently found instead of vicēsimus, tricēsimus, &c., &c. (131, 78).

2414. In the numeral adverbs from quinquiëns upwards, later forms in -iës (131) are often found: as, quinquiës, deciës, &c., &c.

2415. In cardinals and ordinals from thirteen to seventeen inclusive, the larger number sometimes comes first, and in cardinals et is sometimes used, though rarely in Cicero.

decem tres, L. 37, 30, 7, thirteen. fundos decem et tres reliquit, RA. 20, he lest thirteen farms. Rarely the smaller number comes first with et: as, de tribus et decem fundis, RA. 99, of the thirteen farms.

- 2416. Numbers from 18 to 99 inclusive which end in 8 or 9 are usually expressed by subtraction, as in the list (2405); less frequently (not in Cicero, rarely in classical writers) by addition: as, decem et octo, 4, 19, 4; decem novem, Ta. H. 2, 58.
- 2417. In compound numbers from twenty-one to ninety-seven inclusive, except those which end in eight or nine (2416), the smaller number with et usually comes first or the larger number without et, as in the list. But rarely the larger number comes first with et: as, viginti et septem, V. 4, 123, twenty and seven.
- 2418. In numbers from a hundred and one upwards, the larger number comes first, either with or without et; but with distributives et is not used. With cardinals and ordinals the smaller number sometimes comes first with et; as, iis regiis quadraginta annis et ducentis praeteritis, RP. 2, 52, after these two hundred and forty years of monarchy were ended.

SOME USES OF NUMERALS.

CARDINALS AND ORDINALS.

2419. Dates are expressed either by cardinals with a plural substantive or by ordinals with a singular substantive: as,

dictātor factus est annīs post Rōmam conditam CCCCXV, Fam. 9, 21, 2, he was made dictator 415 U. C. (1393). annō trecentēsimō quinquāgēsimō post Rōmam conditam, Nōnīs Iūnīs, RP. 1, 25, on the 5th of June, 350 U. C. (1350). The ordinal is also used with a substantive not used in the singular: as, mancipia vēnībant Sāturnālibus tertiīs, Att. 5, 20, 5, the slaves were sold on the third day of the Saturnalia. As the Romans, however, had no fixed official era, they had no dates in the modern sense, and marked the year by the names of the consuls.

DISTRIBUTIVES.

2420. Distributives are used to denote an equal division among several persons or things, and in expressions of multiplication: as,

bīnī senātōrēs singulis cohortibus praepositī, L. 3, 69, 8, two senators were put over every cohort: sometimes when singulī is added, the cardinal is used, thus: singulīs cēnsōribus dēnāriī trecentī imperātī sunt, V. 2, 137, every censor was assessed 300 denars. bis bīna, DN. 2, 49, twice two. Poets use multiplication freely, partly for variety, but mainly from metrical necessity.

2421. Distributives are also used with substantives which have no singular, or which have a different meaning in the singular; but in this use one is always ūnī, not singulī, and three trīnī, not ternī: as,

ut fina castra iam facta ex binis viderentur, Caes. C. 1, 74, 4, so that one camp seemed now to have been formed out of two. trinis catenis vinctus, 1, 53, 5, in triple irons. Similarly with things in pairs, as: boves bini, Pl. Fers. 317, a yoke of oxen.

2422. Poets sometimes use the singular of distributives: as, centēnāque arbore flüctum verberat, V. 10, 207, and with a hundred beams at every stroke the wave he smites. duplici nātūrā et corpore bīnō, Lucr. 5, 879, twynatured and of body twain. The plural is sometimes used in verse for the cardinal: centum bracchia... centēnāsque manūs, V. 10, 565, thundred arms... and hundred hands.

OTHER NUMERALS.

2423. Other numerical adjectives are multiplicatives, ending in -plex; they are: simplex, onefold, simple, sescuplex, one and a half fold, duplex, triplex, quadruplex, quincuplex, septemplex, decemplex, centuplex; and proportionals, used mostly in the neuter as substantives: duplus, twice as great, triplus, three times as great, quadruplus, septuplus, octuplus. Besides these there are other adjectives derived from numerals: as, primānus, soldier of the first: primārius, first rate: bīmus, twinter, two-year-old; &c., &c.

Expression of Fractions.

- **2424.** One half may be expressed by dimidium or dimidia pars; other fractions with I as a numerator by ordinals, with or without pars: as, tertia pars or tertia, $\frac{1}{3}$.
- 2425. If the numerator is greater than I it is usually expressed by the cardinal feminine, with the ordinal feminine for the denominator: as, duae septimae, 3. But besides these forms there are others, namely:
- 2426. (I.) Fractions with a numerator less by I than the denominator, except $\frac{1}{2}$, may be expressed by cardinals with partes, as, duae partes, $\frac{2}{3}$; tres partes, $\frac{3}{4}$; quattuor partes, $\frac{4}{5}$.
- 2427. (2.) Fractions with 12 or its multiples as a denominator are expressed in business language by the parts of an as: thus,

$\frac{1}{12}$, uncia	🔒, triēns	7, septunx	통, dextāns
, sextāns	½, quincunx	- ³, bēs	} deūnx
1, quadrāns	l, sēmis	‡, dōdrāns	} } , ≅s

ex asse heres, Quintil. 7, 1, 20, heir to the whole; reliquit heredes ex besse nepotem, ex tertia parte neptem, Plin. Ep. 7, 24, 2, she left her grandson heir to \(\frac{2}{3}\), her granddaughter to \(\frac{1}{3}\). heredem ex dodrante, N. 25, 5, 2, heir to \(\frac{3}{4}\).

2428. Sometimes fractions are expressed by addition: as, dimidia et quarta, ‡; pars tertia et septima, ‡; sometimes by division of the denominator: as, dimidia quinta, ½.

(E.) PROSODY.

I. RULES OF QUANTITY.

(A.) IN CLASSICAL LATIN.

2429. The length of the vowel in some classes of syllables, as used in the classical period, may be conveniently fixed in the memory by the following rules. For the usage of older writers, see 57-68 and 2464-2472. For the general principles of length of vowels and syllables, see 156-169.

Monosyllables.

2430. Monosyllables ending in a vowel or a single consonant have the vowel long: as,

dos, sol; a for ab; e for ex or ec-, pes for *peds; ablative qua, qui; quin for *quine; locative sei, commonly si; sic (708); dative and ablative plural quis (688).

Exceptions.

2431. The vowel is short in:

2432. (a.) Monosyllables ending in b, d, m, and t: as, ab, ad, dum, dat.

2433. (b.) The indefinite qua, N. and Ac.; the enclitics -que (rarely -quē), -ne, -ve, -ce; and in the words cor, fel, mel; os, bone; ac, vir, is, pol, quis (N.); fac, fer, per, ter; an, bis, in, cis; nec, vel. N. hīc is rarely short (664). For Es or es, see 747.

Polysyllables.

PENULTS.

2434. Disyllabic perfects and perfect participles have the vowel of the penult long when it stands before a single consonant: as,

vēnī, vīdī, vīcī (862); fovī (864), fotus (917).

433

Exceptions.

2435. (a.) Nine perfects have the penult short (859-861): bibī, -fidī dedī, scidī stetī, stitī tulī, -tudī, per-culī.

2436. (b.) Ten perfect participles have the penult short (918; see also 919): citus, datus itum, ratus -rutus, satus situs, status litus, quitus.

FINAL SYLLABLES.

(1.) ENDING IN A VOWEL.

2437. In words of more than one syllable, final a and e are short; final o, u, and i, are long: as,

(a.) N. aquila; Pl. N. and Ac. oppida, cetera, omnia (65, 57).

- (b.) N. ille; N. and Ac. rēte; impūne (701); V. bone; Ab. tempore (65, 57); Inf. promere (65, 57); Imperat. rege (826); Pres. Ind. and Imperat. querere; Perf. rēxēre.
- (c.) N. sermő; D. and Ab. verbő; vērő (704). iő. regő, erő, amäbő, rēxèrδ (826); estδ.

(d.) N. and Ac. cornū (587); D. and Ab. metū (590, 425, 593); diū.

(e.) G. frümenti; V. Vergili (459); G. domi (590); D. nülli, orbī; Ab. sitī (554). Imperat. vestī (845). Inf. querī, locāri; Ind. Perf. rēxī (856), rēxistī.

Exceptions in a.

- 2438. (a.) Final a is long in the ablative, in indeclinable words, and in the imperative: as,
 - (a.) Ab. mēnsā (426).
- (δ.) quadrāgintā; many indeclinable words are ablatives: as, contrā, iūxtā, (707). The indeclinable hēia, ita, and quia (701), have short a.
 - (c.) Imperat. loca (845). But puta, for instance, has short a.
- _ 2439. (b) Final a is long in some Greek nominatives and vocatives: as, N. Electra; V. Aenēa, Palla.

Exceptions in e.

- 2440. (a.) Final e is long in cases of nouns with stems in -5-(596), in adverbs from stems in -o-, and in the imperative singular active of verbs in -ere: as,
 - (a.) die (G., D., or Ab.), hodie, pridie; see also 603.
- (b.) altë (705); also ferë, fermë and ohë or ōhë; but e is always short in bene and male; inferne and superne.
 - (c.) doce (845); for cave, see 61.

2441. (b.) Final e is long in the endings of some Greek nouns: as, N. crambe, Circe; V. Alcide; Ne. Pl. N. and Ac. cete, mele, pelage, tempe.

Exceptions in o.

- 2442. (a.) Final O is short in the nominatives ego, duo, and homo. O is sometimes shortened in the nominative of stens in -n- (484, 485): as, mentio, Nãso, virgo. O is regularly short in endo, in the ablatives cito and modo, used as adverbs, and in many other words in late poetry: as, ilico, immo, ergo, quando, octo, &c.; very rarely in the ablative of the gerund.
- 2443. (b.) Before Ovid, o of the present indicative is regularly long (61). It is shortened only in the following words: in

volo, six times (Cat., 4 times; Hor., Prop.).

scio, twice (Verg.).

nescio, six times (Verg., twice; Hor., twice; Tib., Prop.);

and once each in eo and veto (Hor.), desino (Tib.), and findo (Prop.). From Ovid on, short o is not uncommon.

Short o in other forms of the verb is rare: as, dixero (Hor.); esto, ero, dabo (Ov.); but o is always short in the imperative cedo, give, tell.

Exceptions in u.

2444. Final u is short in indu and noenu.

Exceptions in i.

- 2445. (a.) Final i is short in nisi, quasi, and sīcuti; also in the endings of some Greek nouns: as N. and Ac. sinapi; V. Pari, Amarylli; D. Paridi, Minoidi: Pl. D. Troasi.
 - 2446. (b.) Final i is common in mihi, tibi, sibi; ibi, ubi (60).
 - (2.) ENDING IN A SINGLE CONSONANT NOT S.
- 2447. A final syllable ending in a single consonant not s has its vowel short: as,

donec. illud. animal (536); semel. agmen. calcar (537); soror, stultior (66, 57). moror, loquar, fatebor (68, 57); regitur, regimur, reguntur. regit (826); amat, sciat, ponebat; tinnit, possit; iacet, neget, esset (68, 57).

Exceptions.

- 2448. (a.) The last vowel is long in allec, and in compounds of par; in the contracted genitive plural of stems in -u-: as currum; in all cases of illic and istic except the nominative masculine, in the adverbs illuc and istuc, and sometimes in nihil. Also in the endings of some Greek nouns: as, N. aer, aether, sīrēn; Ac. Aenēān.
- 2449. (b.) In the short form of the genitive plural of stems in -o- and -a-, the vowel was originally long, but afterwards short: as, divom (462), caelicolum (439).
 - 2450. (c.) The last vowel is long in iit and petilt and their compounds.

(3.) Ending in s.

- 2451. Final syllables in is and us have the vowel short; those in as, es, and os, have the vowel long: as,
- (a.) N. lapis, finis; G. lapidis, finis; magis. Indic. Pres. regis (826); Fut. eris (851, 826), eritis, locabis (853, 826), locabitis.
- (b.) N. dominus; currus; N. and Ac. tempus; prius (67, 57); rēgibus (67, 57). regimus.
- (c.) aetās; Pl. Ac. mēnsās (424). Indic. Pres. locās (840); Imp. erās (848); regēbās (847); Plup. rēxerās (880); Subj. Pres. regās, vestiās, doceās (842).
- (d.) N. hērēs; sēdēs; nūbēs; Cerēs; fidēs; Pl. N. and Ac. rēgēs (424); Indic. Pres. docēs (840); Fut. regēs (852); Subj. Pres. siēs (841); locēs (843); Imp. essēs (850); regerēs (849); Plup. rēxissēs (881).
 - (e.) N. custos; arbos; Pl. Ac. ventos (424).

Exceptions in is.

2452. (a.) Final is has i in all plural cases: as,

N. and Ac. omnīs; D. and Ab. viīs (86), locīs (87). võbīs. Also in the nominatives singular Quirīs and Samnīs, usually in sanguīs (486), and twice in pulvīs.

2453. (b.) Final is has i in the second person singular of verbs in -īre, in māvis, in compounds of sīs, and in all present subjunctives singular: as, duīs, edīs, velis, mālis, nōlīs. For -rīs of the perfect subjunctive and the future perfect, see 877, 878, 883, 884.

Exceptions in us.

2454. u is long in the nominative singular of consonant stems with u before the final stem consonant: as, tellus, stem tellur-; palus, once palus (Hor.), stem palud-; in the genitive singular and nominative and accusative plural of nouns with stems in -u-: as, fructus; and in the ending of some Greek names: as, N. Panthus; G. Sapphus.

Exceptions in as.

2455. Final as has short a in anas and in the ending of some Greek nouns: as, N. Ilias; Pl. Ac. crateras.

Exceptions in es.

2456. Final es has short e in the nominative singular of stems in -d- and -t-which have the genitive in -idis, -itis, and -etis (475, 476): as, praeses, teges, comes (but \(\tilde{\tilde{e}} \) in abi\(\tilde{\tilde{e}} \), ari\(\tilde{e} \), also, in penes, in compounds of \(\tilde{e} \)s, and in the endings of some Greek nouns: as, N. Cynosarges; Pl. N. Arcades, crat\(\tilde{e} \) eractions and in the endings of some Greek nouns: as, N. Cynosarges; Pl. N.

Exceptions in os.

2457. Final os has short o in the nominative of stems in -o-: as, servos, suos, Dēlos; also in compos, impos, and exos; and in the endings of some Greek nouns: as, N. and Ac. epos; G. chlamydos, Erinyos.

Position.

2458. For the general rule of position, see 168, 169; but, except in the thesis of a foot, a final syllable ending with a short vowel generally remains short before a word beginning with two consonants or a double consonant: as, molliă strata, nemorosă Zacynthos, lücĕ smaragdī.

In Horace such a final syllable is never lengthened before a word beginning with two consonants.

HIDDEN QUANTITY.

- 2450. A vowel which stands before two consonants, or a double consonant, belonging to the same word, so that its natural quantity cannot be determined from the scansion of the word, is said to possess Hidden Quantity.
- 2460. The natural quantity of such a vowel may sometimes be ascertained: (a.) from the statements of ancient writers; (b.) from the way in which the vowel is written in Latin inscriptions (see 28-30); (c.) from the transliteration of the word into other languages, especially Greek; (d.) from the etymology of the word, or from a comparison of it with kindred words in other Indo-European languages; (e.) from comparison with derived words in the Romance languages. But all these kinds of evidence must be used with great caution.
- 2461. For the length of a vowel before ns, nf, consonantal i, and often before gn, see 167.
- 2462. In inceptive verbs (834) the ending -sco is thought to be always preceded by a long vowel: as, cresco, nascor, proficiscor.
- 2463. In the perfect indicative active, perfect participle passive and kindred formations of verbs in -go preceded by a short vowel, as ago, rego, the theme syllable shows a long vowel: as, lexi, rexi, texi; actus, lectus; rēctor; āctitō.
- (B.) Some Peculiarities of Quantity in Old Latin.
- 2464. For the preservation of a long vowel in certain specific endings in old Latin, see 64-68.
- 2465. Final -al is sometimes preserved long in the nominative singular: as, bacchānāl (Plaut.); also -ēs in the nominative singular of stems in -twhich have the genitive in -itis (477): as mīlēs (Plaut.).
- 2466. Hic, illic and istic, when adverbs, have a long final syllable; but when nominative singular masculine, have the final syllable regularly short.
- 2467. In Plautus früsträ always (six times) has the final syllable short. contra sometimes has a short final syllable in old Latin.

2468-2476.] Appendix (E.): Prosody.

- 2468. In Latin poetry down to the time of Cicero, final s often does not "make position" before a following consonant (47); as, tempus fert (Plaut.); magis stetisse (Ter.).
- 2469. The first syllable of ille, illic (the pronoun), quippe, immo, inde, unde, nempe, omnis, and perhaps iste, is sometimes shortened.

In ille, illic, quippe and immō the shortening is probably due to the fact that in common speech one of the double consonants was often pronounced faintly or not at all (48); while in inde, unde, nempe, and omnis the nasal was very faintly sounded before the following consonant. But some authorities hold that always in nempe, and sometimes in ille, quippe, inde, unde, and perhaps iste, before an initial consonant final e disappears (see 96), and the word becomes a monosyllable.

LAW OF IAMBIC SHORTENING.

- 2470. A long syllable, preceded by a short monosyllable or by a short initial syllable, and immediately preceded or followed by the verse-ictus, may be shortened: as, ét hunc, dómö mē, ad uxórem, voluntate.
- The short monosyllable may be a word which has become monosyllabic by elision: as, ég(0) hanc.
- 2471. If the syllable to be shortened is the first of a word of more than one syllable, or the second of a polysyllable, it must be one which is long by position, not by nature. There are some possible exceptions to this rule, such as verebamini (T. Ph. 902); but these are few and doubtful.
- 2472. Iambic shortening took place not only in verse, but also to a considerable extent in common speech, particularly in iambic words (see 61), in which the accent cooperated with the verse-ictus to produce the shortening.

II. FIGURES OF PROSODY.

HIATUS.

- 2473. For hiatus within a word, and the means by which it is avoided, see 97-101.
- 2474. Hiatus between two words is much more common in old Latin than in writers of the classical period. The precise extent to which it is allowed by the early dramatists is matter of dispute. The following cases may be mentioned in which the Latin poets admit hiatus:
- 2475. (1.) After interjections: as, hahahae homo, T. Ph. 411; 8 et praesidium, H. 1, 1, 2.
- 2476. (2.) After proper names, and words of Greek origin: as, ancillam ferre Veneri aut Cupidini, Pl. As. 804; Thrēiciō Aquilone, H. Epod. 13, 3.

Digitized by Google

- 2477. (3.) In the principal caesura of a verse. So especially in Plautus and Terence after the fourth foot of the iambic septenarius, and in Plautus in the principal break in the iambic octonarius, trochaic septenarius and trochaic octonarius.
- 2478. (4.) Often in the dramatists where there is a change of speakers: as, qui potuit videre?:: oculis:: quo pacto?:: hiantibus, l'l. Merc, 182.
- 2479. (5.) Probably sometimes in cases of repetition, enumeration, or sharp antithesis, and where there is an important pause in the sense: as, eam volt meretricem facere: ea me deperit, Pl. Cur. 46; sī pereo, hominum manibus periisse iuvābit, V. 3, 606.
- 2480. Vergil sometimes admits hiatus when the final syllable ending in a vowel is preceded or followed (or both) by two short syllables: as, lämentis gemituque et fēmīnēō ululātu, V. 4, 667.

Elision.

- 2481. For elision within a word, see 102.
- 2482. In verse a final vowel is generally elided before a vowel or h: as.

quidve moror, s(i) omnīs ūn(o) ordin(e) habētis Achivos, V. 2, 102. Such a vowel was probably faintly sounded, not dropped altogether.

- 2483. Elision is frequent in most of the early poets; but writers of the Augustan and succeeding ages regarded it with increasing disfavour. The elision of a long vowel before a short was in general avoided; but there are numerous exceptions.
 - 2484. Monosyllabic interjections do not suffer elision.
- 2485. Monosyllables ending in a diphthong seldom suffer elision before a short vowel.
- 2486. Diphthongs arising from Synizesis (2499) are sometimes elided in early Latin verse, but not in verse of the classical period.
- 2487. The monosyllables qui (plural), dō, stō, rē, spē, are thought never to suffer elision before a short vowel.
- 2488. The dactylic poets very rarely admit elision in an iambic (U __) or Cretic (_ U _) word before a short vowel.
- 2489. Elision seldom occurs if the syllable to be elided is immediately preceded by a vowel: as in de(um) et.
 - 2490. The final syllable of a Greek word is rarely elided.
- 2491. Elision is more common toward the beginning of a verse than toward the
- 2492. Elision rarely occurs in the first syllable or last syllable of a verse; but see under Synapheia (2510), and for the elision of the enclitic -que or -ve at the end of a dactylic hexameter, see 2568.

2493. ECTHLIPSIS (Gr. ἐκθλιψις, a squeezing out). Final m and a preceding short vowel are usually elided before a vowel or h: as,

mönstr(um) horrend(um) Inform(e) ingēns, cui lūmen adēmptum, V. 3, 658.

In such cases the ending was probably not cut off altogether, but was given a faint nasal sound.

2494. Sometimes a monosyllable ending in a short vowel and m is not elided before a vowel: as quam ego (Ter.); sunt cum odore (Lucr.).

Such unelided monosyllables are most frequent in the early dramatists, and in them usually fall under the verse-ictus.

2405. The monosyllables dem, stem, rem, spem, sim, are thought never to be elided before a short vowel.

2496. After a final vowel, final m preceded by a vowel, or final -us, the verb est often loses its e: as, bonast, bonumst, bonust, visust. So, too, es sometimes loses its vowel: as, homo's, adeptus'. This usage reflects the actual pronunciation of common speech.

2497. SEMI-HIATUS OR SEMI-ELISION. A long final vowel is sometimes shortened before a vowel. This may occur either in the arsis (2520), or in a resolved thesis: as, an qui amant (Verg.); léctulo srudituli (Cat.); nam qui aget (Ter.).

This kind of shortening is not frequent except in the early dramatists, who often shorten under the verse-ictus a monosyllable ending in a long vowel and followed by an initial vowel (as in the third example above).

2498. SYNALOEPHA (Greek συναλοιφή, a smearing together) is a general term used to denote the means of avoiding hiatus. It includes elision and synizesis, though some grammarians use it in the same sense as synizesis.

2499. Synizesis (Greek συνίζησις, a settling together). Two vowels (or a vowel and a diphthong) which belong to different syllables sometimes coalesce so as to form one syllable. This is called Synizesis, and is especially common in the early dramatists. Examples are: meo, eadem, cuius, aurei.

Some grammarians would include under Synizesis only cases in which a short vowel is subordinated to a following long; as two.

2500. The term Synaeresis (Greek ovvalues, a taking together) is sometimes used as a synonym for Synizesis. The ancient grammarians, however, used it in the sense of Contraction (99).

2501. DIALYSIS (Greek διάλυσις, a breaking up). Conversely, two vowels which usually form a diphthong are sometimes separated so as to form two syllables: as coëpī (Lucr.) for coepī.

This, however, is really the survival of the original forms (99).

- 2502. The name DIAERESIS (Greek Scaiperis, a separating) is sometimes used as a synonym for Dialysis; but it is better to restrict it to the meaning defined in 2542.
- 2503. HARDENING. A vocalic i or u is sometimes made consonantal before another vowel: as, abiete, ariete (Verg.); consilium (Hor.); omnia (Lucr.).

This usage is sometimes included under Synizesis (2499), while some grammarians term it Synaeresis (2500).

2504. Softening. Conversely, a consonantal i or u sometimes becomes vocalized before a vowel, thus giving an additional syllable: as, siluae for silvae (Hor.); evoluisse for evolvisse (Ov.). See 113.

This usage is sometimes included under the name Dialysis (2501).

2505 DIASTOLÉ (Greek διαστολή, a drawing asunder). A syllable which in verse of the classical period is generally short is sometimes used as long for metrical convenience. The syllable so employed generally falls under the verse-ictus, and in most cases is immediately followed by the principal caesura, or by a pause in the sense. Examples are:

> terga fatīgāmūs hastā, nec tarda senectus, V. 9, 610. tum sīc Mercurium adloquitūr ac tālia mandat, V. 4, 222. caeca timēt aliunde fāta, H. 2, 13, 16.

In nearly all cases this lengthening is not arbitrary, but the "lengthened" syllable is one that was originally long (see 63 ff.).

- 2506. The enclitic -que is sometimes lengthened under the ictus when another -que precedes or follows in the arsis: as, calones famulique metalliqué caculacque (Accius).
- 2507. Systole (Greek συστολή, a drawing together). Conversely a syllable which in verse is regularly long is sometimes shortened for metrical convenience: as, dederunt (Hor.), nullius (Hor.), imperat. commodă (Cat.).

In most cases this shortening is not arbitrary, but represents a pronunciation which was in actual use, especially among the common people.

2508. Syncope (Greek συγκοπή, a cutting short). A short vowel is often dropped between two consonants: as, surpite for surripite (Hor.), repostum for repositum (Verg.).

This usage doubtless reflects the common pronunciation; see 93-5.

2509. TMESIS (Greek τμησις, a cutting) is the separation of the parts of a word: as, septem subjecta trioni = septemtrioni subiecta (Verg.).

This usually occurs only in compounds; but early poets sometimes divided other words: as, saxo cere comminuit brum for saxo cerebrum comminuit (Ennius).

Digitized by Google

2510-2514.] Appendix (E.): Prosody.

2510. SYNAPHEIA (Greek συνάφεια, a joining together) is the linking together by elision or word division of two lines belonging to the same system: as,

Iove non probante uxorius amnis, H. 1, 2, 19.

Iam licet venias marīt(e),

Iam licet veniās marīt(e), uxor in thalamo tibi est, Cat. 61, 191.

III. VERSIFICATION.

By HERMAN W. HAYLEY, Ph.D.

2511. Rhythm (Gr. $\dot{\rho}\nu\theta\mu\dot{o}s$, from $\dot{\rho}\hat{\epsilon}\hat{\iota}\nu$, to flow) is the effect of regularity produced by the discrimination of a movement or sound into uniform intervals of time. It is often marked by a stress or ictus recurring at fixed intervals.

Rhythm is by no means confined to verse. Music, dancing, and even the regular beat of a trip-hammer, have rhythm. Particular kinds of movement are often called rhythms, as anapaestic rhythms, dactylic rhythms, &c.

2512. Metre (Gr. μέτρον, a measure) is the definite measurement of verse by feet, lines, strophes, systems, &c.

2513. Latin verse is quantitative, the rhythm depending upon the quantity of the syllables (but see 2548). The ictus naturally falls upon a long syllable (or its equivalent). English verse, on the other hand, is accentual, its rhythm depending upon the accent of words.

QUANTITY.

2514. Signs of Quantity. A long syllable is indicated by $_$, a short one by \smile . A syllable which varies in quantity, being sometimes long, sometimes short, is indicated by $_$ or \bigcirc .

In the following metrical schemes, \subseteq indicates that the long is more usual or more strictly in accordance with the rhythm than the short. The reverse is indicated by \bigtriangledown .

- 2515. The UNIT OF MEASURE is the duration of a short syllable and is called a *Time, Tempus*, or *Mora*. The *mora* did not have an absolute length, but varied with the nature of the rhythm. For greater convenience, however, it is assumed that its length was uniform, and equalled that of an eighth note A long syllable, being equal to two shorts, has a length of two *morae*, which is assumed to be the same as that of our quarter-note A. Hence in notation A and A and
- 2516. PROTRACTION. A long syllable may be prolonged (*Protraction*) so as to have a length of three *morae*, in which case it is called a *triseme* (marked \bigsqcup), or of four *morae*, when it is termed a *tetraseme* (marked \bigsqcup). See 2537 and 2541.
- 2517. CORREPTION. A long or short syllable may be shortened so as to occupy less than its normal time. This is called *Correption* (Lat. correptio, a shortening). See 2523 and 2524.
- 2518. RESOLUTION AND CONTRACTION. In some kinds of verse a long syllable may be, as it were, broken up (Resolution) into the equivalent two shorts; and conversely two short syllables may in some cases be united (Contraction) into the equivalent long.

FEET.

- 2519. FEET. Latin verse (like English) is measured by groups of syllables called *Feet*. Each of these groups has a definite length of so many *morae* (2515).
- It is theoretically more accurate to make the foot purely a time-division, as some authorities do; but the definition given above is sanctioned by established usage.
- 2520. ARSIS and THESIS. Every complete foot consists of two parts, an accented and an unaccented. The part on which the rhythmical accent or *ictus* falls is called the *Thesis* (Gr. $\theta \epsilon \sigma \iota s$, a setting down). The unaccented part of the foot is termed the Arsis (Gr. $\delta \iota s \sigma \iota s$).

The name Thesis originally referred to the setting down of the foot in beating time or marching, or to the movement of the leader's hand in making the downward beat; and Arsis in like manner meant the raising of the foot or hand. But the Roman grammarians misunderstood the Greek terms, supposing them to refer to the lowering and raising of the voice, and so interchanged them. Hence many modern writers prefer to use Arsis to denote the accented, and Thesis the unaccented, part of the foot.

KINDS OF FEET.

2521. The feet in common use are the following: -

	FEET OF THR	EE MORRE.	1
Name.	Sign.	Musically.	Example.
Trochee		ا ا	dücit
Iambus	¦		legunt
Tribrach		777	hominis
	FEET OF FOU	R MORAE.	
Dactyl	_00	1 22	dūcimus
Anapaest	00_		regerent
Spondee			fēcī
Proceleusmatic	0000	7777	hominibus
	FEET OF FIV	E MORAE.	
Cretic		נתנ	fēcerint
First Paeon		1111	lēgeritis
Fourth Paeon	000_		celeritās
Bacchīus	V		regēbant
	FEET OF SI	x Morae.	
Choriambus			horribilēs
Ionic ā māiōre			dēdūcimus
Ionic & minore	00		relegebant

2522. Other feet mentioned by the ancient grammarians are: -

Name.	Sign.	Name.	Sign.
Pyrrhic	33 - 13 - 13 - 13 - 13 - 13 - 13 - 13 -	Antispast Second Paeon . Third Paeon . First Epitrite . Second Epitrite Third Epitrite . Fourth Epitrite	

But these are of little practical importance, as most of them never are employed in Latin poetry, and the few which do occur are used only as substitutes for other feet.

CYCLIC FEET.

2523. A dactyl occurring in $\frac{2}{3}$ time did not have the value of 2 morae + 1 + 1, but was given instead that of $1\frac{1}{3} + \frac{3}{4} + \frac{1}{4}$; in other words both arsis and thesis suffered correption (2517), but the ratio between them remained unchanged. Such a dactyl is called cyclic, and is marked — \sim , or musically 1.3 There is also a cyclic anapaest, marked \sim — or 1.3 There is also a cyclic anapaest \sim 1.

Some scholars, however, hold that the cyclic dactyl had approximately the value $1\frac{1}{2}+\frac{1}{4}+1$, or $\frac{1}{2}$, and mark it $-\sqrt{2}$. In like manner they mark the cyclic anapacst $-\sqrt{2}$. The true nature of these cyclic feet is very uncertain.

IRRATIONAL SYLLABLES AND FEET.

2524. A long syllable sometimes stands in place of a short. A syllable thus used is called *irrational* (marked >) because it destroys the normal ratio between arsis and thesis. The foot which contains such a syllable is itself called irrational. The most common irrational foot is the *irrational spondee* (—> when it stands for a trochee; >— when it replaces an iambus), which is found in iambic, trochaic, and logaoedic rhythms.

Probably the irrational long suffered a slight correption (2517), so that its duration was between that of the ordinary long and that of a short syllable.

RHYTHMS.

- 2525. The different rhythms or metres are named trochaic, iambic, &c., according to their fundamental feet.
- 2526. Much of the Latin poetry (though not by any means all) was written to be sung. The Greeks and Romans employed in their music not only common (or $\frac{2}{4}$) time and triple ($\frac{3}{8}$, $\frac{3}{4}$) time, but also $\frac{3}{8}$ time, which last is very rarely used in modern music.
- 2528. ASCENDING AND DESCENDING RHYTHMS. Rhythms in which the thesis follows the arsis (as in iambics) are called ascending; those in which it precedes the arsis (as in trochaics) are termed descending.

Digitized by Google

Anacrusis.

2529. The ancients recognized both ascending and descending rhythms (2528), and regarded the former class as at least equal in importance to the latter; but many modern scholars since the time of Bentley have preferred to treat all rhythms as descending, regarding the first arsis of an ascending rhythm as merely answering to a preliminary upward beat in music. Such an initial arsis was named by Gottfried Hermann Anacrūsis (Gr. ἀνάκρουσις, a striking up).

Scholars have been influenced to adopt the anacrustic theory in its widest extent largely by the fact that in most modern music a measure must commence with a downward beat, a rule which did not hold in ancient music. By this theory an iambic verse becomes trochaic with anacrusis, an anapaestic verse dactylic with anacrusis, &c. But in many cases those kinds of verse which begin with an arsis were subject to different rules of construction from those which begin with a thesis. Hence it seems best to restrict anacrusis to logacedic verse, in which it undoubtedly occurs.

2530. The anacrusis may be a long syllable, a short syllable, or two shorts (but not two longs). It is often irrational (2524). In metrical schemes it is often set off from the rest of the verse by a vertical row of dots: thus, :

GROUPS OF FEET.

2531. A group of two feet is called a *dipody*, one of three a *tri-pody*, one of four a *tetrapody*, one of five a *pentapody*, and one of six a *hexapody*. The dipody is the measure of trochaic, iambic, and anapaestic verse. Other kinds of verse are measured by the single foot.

A single foot is sometimes called a monopoly. A group of three half feet, i. e. a foot and a half, is sometimes called a trithenimeris, one of two and a half feet a penthemimeris, one of three and a half a hephthemimeris, &c.

2532. A Rhythmical Series, Rhythmical Sentence, or Colon is a group of two or more feet (but not more than six) which are united into a rhythmic whole by strengthening one of the ictuses, so that it becomes the principal or dominant ictus of the whole group.

2533. THE VERSE. A rhythmical series, or group of two (or even three) series, which forms a distinct and separate whole is called a *Verse*. The final syllable of a verse must terminate a word (except in cases of synapheia, see 2510), and may be either long or short (whence it is termed syllaba anceps) without regard to the rhythm. Hiatus (2474) is freely allowed at the end of a verse (though in rare cases elision occurs before a vowel at the beginning of the following verse; see 2492 and 2568).

A verse is generally (but not always) written as one line. Hence, the words "verse" and "line" are often used as synonyms.

SYLLABA ANCEPS.

2534. In the present work, the final syllable of each verse is marked long or short as the rhythm may require, without reference to its quantity in a given example; and in the general schemes it is to be understood that the final syllable is syllaba anceps (2533) unless the contrary is expressly stated.

2535. DICOLIC AND ASYNARTETIC VERSES. A verse which consists of two rhythmical series (or cola) is called dicolic. If the series of which the verse is made up are quasi-independent of each other, so that hiatus or syllaba anceps occurs in the caesura, the verse is styled asynartetic (Gr. &overáprnos, not joined together).

2536. NAMES OF VERSES. Verses are called *trochaic*, *iambic*, *dactylic*, &c., according to their fundamental (or characteristic) feet. A verse which contains one foot (or one dipody if iambic, trochaic, or anapaestic; see 2531) is called a *monometer*, one of two a *dimeter*, one of three a *trimeter*, one of four a *tetrameter*, one of five a *pentameter*, and one of six a *hexameter*.

Trochaic, iambic, and anapaestic verses are often named by Latin adjectives in -ārius (used as nouns) denoting the number of feet. Thus, such a verse of eight feet is called an octōnārius, one of seven a septēnārius, one of six a sēnārius, &c. A short verse which is employed to close a system (2547), or to mark a metrical or musical transition between longer verses, is called a clausuia.

CATALEXIS, PAUSE, SYNCOPE.

2537. CATALEXIS. A verse, the last foot of which is incomplete, is said to suffer *Catalexis* (Gr. κατάληξις, a stopping short) or to be catalectic; one of which the last foot is complete is called acatalectic.

2538. A verse in which both the last aris and the next to the last are suppressed, so that a whole foot appears to be wanting, is called brachycatalectic.

2540. PAUSES. Theoretically all the feet (or dipodies; see 2531) into which a verse is divided must be equal in duration. Hence, when a final syllable (or two final syllables) is lost by catalexis, compensation is made for the loss by a pause at the end of the verse. Such a pause, which serves to fill out the last measure, answers to a rest in music.

A pause of one *mora* is often indicated by the sign \wedge , and one of two *morae* by $\overline{\wedge}$.

Digitized by Google

2541. SYNCOPE is the omission of one or more arses in the body of a verse. Compensation is made for the suppression of an arsis by protracting (2516) the preceding thesis.

CAESURA.

2542. CAESURA AND DIAERESIS. A Caesūra (literally a cutting, from cuedo, I cut) is the break in a verse produced by the ending of a word within a foot. When the end of a word coincides with the end of a foot, the break is called a Diaeresis (Gr. διαίρεσις, a separating). A caesura is marked ||, a diaeresis ||...

The word caesura is often loosely used to include both caesura proper and diaeresis.

- 2543. Strictly speaking, there is a caesura (or diaeresis, as the case may be) wherever a word ends within a verse; but the main incision in the verse is so much more important than the rest that it is often called the *principal caesura*, or simply the caesura.
- 2544. Caesuras are named according to their position in the verse; thus a caesura after the third half-foot (i. e. in the second foot) is called trithenmineral (from Gr. τριθημμερής, containing three halves), one after the fifth half-foot (i. e. in the third foot) penthemimeral (Gr. πενθημμερής, consisting of five halves), one after the seventh half-foot (i. e. in the fourth foot) hephthenimeral (Gr. ἐφθημμερής), &c.

The Latin names caesūra sēmiternāria (= the trithemimeral caesura), sēmiquēnāria (= the penthemimeral), sēmiseptēnāria (= the hepthemimeral), &c., are sometimes used. For the masculine and feminine caesuras, see 2557.

STROPHE. SYSTEM.

2545. THE STROPHE. A fixed number of verses recurring in a regular order is called a *Strophe*. A strophe commonly contains verses of different kinds, but some strophes are composed of verses which are all alike. The most common strophes in Latin poetry are either distichs (i. e. groups of two lines each), tristichs (of three lines each), or tetrastichs (of four).

Strophes and verses are frequently named after some poet who made use of them. So the Alcaic strophe (named after Alcaeus), the Sapphic strophe (named after Sappho), the Glyconic verse (named after Glycon), the Asclepiadean (after Asclepiades), the Phalaecean (after Phalaecus), the Pherecratean (after Pherecrates), &c.

- 2546. A Stichic Series is a series of verses of the same kind not combined into strophes.
- 2547. THE SYSTEM. A group of rhythmical series (see 2532) which is of greater extent than a verse is called a *System*. Long systems, such as are common in Greek poetry, are comparatively rare in Latin verse.

Few verses have more than two rhythmical series; none more than three.

2548. Although in all probability the Latin accent was mainly one of stress rather than of pitch, it seems to have been comparatively weak. Hence, when it conflicted with the metrical ictus, it could be the more easily disregarded. But accentual or semi-accentual poetry seems to have existed among the common people even in the Augustan age, and even in classical Latin verse in certain cases (as in the last part of the dactylic hexameter) conflict between ictus and accent was carefully avoided. After the third century A.D. the accent exerted a stronger and stronger influence upon versification, until in the Middle Ages the quantitative Latin verse was quite supplanted by the accentual.

NUMERI ITALICI.

2549. Some of the earliest remains of Latin literature are believed to show a rhythmical structure. These are chiefly prayers, imprecations, sacred songs and the like, couched in a set form of words. Of the rules according to which these carmina were composed, almost nothing is known. According to one theory, they are wholly accentual, and are composed of rhythmical series, each series containing four theses. Frequently an arsis is suppressed, and compensation for the omission is made by dwelling longer upon the thesis. As an example is given the prayer in Cato, $D\bar{e}$ $R\bar{e}$ $R\bar{u}$ stic \bar{a} , 141:

Márs páter tế précor | quaésốque útī síēs | vólēns própítiús míhí dómố | fámiliaéque nóstraé, &c.

THE SATURNIAN.

2550. THE SATURNIAN is the best known and most important of the old Italian rhythms; but its nature long has been, and still is, matter of high dispute. There are two principal theories as to its character, the quantitative and the accentual, each of which is advocated by many distinguished scholars.

2551. (1.) THE QUANTITATIVE THEORY. According to this theory, the Saturnian is a verse of six feet, with an anacrusis (2529). There is a break after the fourth arsis, or more rarely after the third thesis. Each thesis may be either a long syllable or two shorts; each arsis may be a short syllable, a long, or two shorts, but an arsis is not resolved before the principal break or at the end of the verse. Hiatus is common, especially at the principal break in the verse. A short final syllable may be lengthened by the influence of the verse-ictus. An arsis is frequently suppressed, especially the penultimate arsis. Two arses are never suppressed in the same half-verse, and rarely two in the same verse. Examples of the Saturnian, measured quantitatively,

Dabúnt malúm Metélli # Naévió poétae.

Novém Iovis concórdes # filiaé soróres.

(Naevius.)

15 449

Digitized by Google

Virúm mihí, Caména, # insecé versútum.

(Livius Andronicus.)

Eðrúm sectám sequóntur # múlti mórtálēs.

(Naevius.)

Compare in English: "The queén was in the parlour, éating bréad and hôney."

2552. Most of the Roman grammarians who discussed the nature of the Saturnian seem to have regarded it as quantitative. In modern times the quantitative theory has been advocated by Ritschl, Buecheler, Havet, Christ, Lucian Mueller, W. Meyer, Reichardt and many others.

2553. (2.) THE ACCENTUAL THEORY. According to this theory, the Saturnian is an accentual verse, constructed without regard to quantity. It is divided by the principal break into two halves, the first of which has three theses. The second half usually has three, but may have only two, in which case it is usually preceded by an anacrusis (2529). Two accented syllables are regularly separated by an unaccented syllable, but in strictly constructed Saturnians the second and third unaccented syllables are regularly separated by two unaccented ones. Hiatus was at first freely admitted, but in the Saturnians of the second century B. C. occurs only at the principal break. Examples of the Saturnian, measured according to this theory, are:

Dábunt málum Metélli # Naévió poétae.

Nóvem Ióvis concórdes # fíliaé soróres.

(Naevius.)

Vírum míhi, Caména, # insecé versütum.

(Livius Andronicus.)

Eðrum séctam sequóntur ‡ múlti mórtálēs.

(Naevius.)

2554. The accentual theory was held by the scholiast on V. G. 2, 385, and in modern times has been upheld (in one form or another) by O. Keller, Thurneysen, Westphal, Gleditsch, Lindsay and others. The brief statement given above agrees essentially with that of O. Keller. Gleditsch holds that each half-verse has four accents, as: Dábunt málum Métellí || Naévió poétae; Lindsay that the first hemistich has three accents and the second two, as: Dábunt málum Metéllí || Naévió poétae. The whole question is still far from its final settlement.

DACTYLIC RHYTHMS.

2555. These are descending rhythms belonging to the *Equal Class* (see 2527). In them the fundamental foot is the dactyl $(! \cup \cup)$, for which its metrical equivalent, the spondee $(! \cup)$, is frequently substituted.

THE DACTYLIC HEXAMETER.

2556. The DACTYLIC HEXAMETER is the verse regularly employed in epic, didactic, and bucolic poetry, and is used by the Latin writers oftener than any other measure. It consists of six feet, the last of which is a spondee (but with the privilege of syllaba anceps; see 2534). The fifth foot is usually a dactyl; but sometimes a spondee is employed, in which case the verse is called spondaic. In each of the other four feet either a dactyl or a spondee may be used. The scheme is therefore:

2557. A caesura which comes immediately after the thesis of a foot is called *masculine*; one which falls in the middle of the arsis (i. e. after the first short of a dactyl) is termed *feminine*. The Roman writers show a strong preference for masculine principal caesuras, and in general their treatment of the caesura is more strict than that of the Greek poets.

2558. The principal caesura in the Latin hexameter is most frequently the penthemimeral (2544): as in:

Arma virumque canò || Tròiae qui primus ab òris (V.1, 1).

Next in order of frequency stands the hephthemimeral, which is usually accompanied by a secondary trithemimeral, and in many cases also by a feminine caesura in the third foot: as in the verse,

Însignem || pietăte || virum || tot adire labores (V. 1, 10).

If the secondary trithemimeral caesura is lacking, the penthemimeral is usually accompanied by a feminine caesura in the second foot. Sometimes, though more rarely, the principal break in the line is the feminine caesura in the third foot (often called the "caesura after the third trochee"), as in the verse

Spargēns ūmida mella || sopōriferumque papāver (V. 4, 486).

2559. The diaeresis (see 2542) after the fourth foot (often called "bucolic diaeresis" from its use by pastoral writers) sometimes occurs, but is much less common in Latin hexameters than in Greek. An example is

Dic mihi, Dāmoetā, || cūium pecus ? # An Meliboei ? (V. E. 3, 1).

This diaeresis, though common in Juvenal, is rare in most of the Latin poets (even the bucolic), and when it does occur, it is usually accompanied by a penthemimeral caesura. Lucian Mueller and others deny that the bucolic diaeresis ever forms the principal break in a line.

2560-2563.] Appendix (E.): Prosody.

2560. When a line has several caesuras, it is often hard to determine which is the principal one. In general, masculine caesuras out-rank feminine; the penthemimeral takes precedence over the hephthemimeral, and the latter over all other caesuras. But if the hephthemimeral, or even one of the minor caesuras, coincides with an important pause in the sentence, it may out-rank the penthemimeral. Thus in the verse

Paulāt(im) adnābam || terrae; || iam tūta tenēbam (V. 6, 358),

the principal caesura is after terrae, not adnābam.

Lines without a principal caesura are rare. An instance is

Nõn quīvīs videt inmodulāta poēmata iūdex (H. AP. 263).

2561. The great flexibility of the hexameter makes it an admirable vehicle of poetic expression. Accumulated sponders give the verse a slow and ponderous movement: as in the line

Ill(I) in ter seise | mā|gnā vī | bracchia | tollunt (V. G. 4, 174).

The multiplication of dactyls imparts to the verse a comparatively rapid and impetuous motion, as in the famous verse

Quadrupe|dante pu|trem || soni|tū quatit | ungula | campum (V. 8, 596).

But even when dactyls are numerous, the Latin hexameter, "the stateliest measure ever moulded by the lips of man," should not be read with the jerky ½ movement which is characteristic of the English hexameter.

2562. The following passage may serve to illustrate the movement of the hexameter, and to show how the use of the different caesuras imparts variety to the measure:

O soci|î || — nequ(e) e|n(im) ignā|rī || sumus | ante ma|lōrum—
ð pas|sī gravi|ōra, || da|bit deus | hīs quoque | finem.

Võs et | Scyllae|am || rabi|em || peni|tusque so|nantēs
accē|stis scopu|lōs, || vōs | et Cÿ|clōpea | saxa
exper|tī; || revo|cāt(e) ani|mōs, || mae|stumque ti|mōrem
mittite: | fōrsan et | haec || ō|lim || memi|nisse iu|vābit.

(V. 1, 198).

Compare in English:

Rolls and rages amain the restless, billowy ocean, While with a roar that soundeth afar the white-maned breakers Leap up against the cliffs, like foemen madly rejoicing.

Notes on the Hexameter.

2563. (1.) In all probability, the hexameter was originally a composite verse, made up of two tripodies, or of a tetrapody and a dipody. Hence hiatus in the principal caesura is not very rare, even in the Augustan poets. The stress upon the first and fourth theses was probably stronger than that upon the other three.

2564. (2.) In the second half of the hexameter, particularly in the fifth and sixth feet, verse-ictus and word-accent show a strong tendency to coincide.

2565. (3.) A monosyllable rarely stands before the principal caesura or at the end of the verse. When the verse ends in a monosyllable, the thesis of the last foot is generally a monosyllable also, as in the line

Crispinus minimo me provocat; accipe, si vis (H. S. 1, 4, 14).

Exceptions to this rule sometimes occur when the poet wishes to produce a particular effect, as in

Parturient montes, nascētur rīdiculus mūs (H. AP. 139).

- 2566. (4.) A hexameter generally ends in a word of two or three syllables, almost never in one of four, rarely in one of five. But spondaic verses (2536) generally end with a word of four syllables, more rarely with one of three, almost never with one of two.
- 2567. (5.) Spondaic verses are comparatively rare in Ennius and Lucretius, but become more frequent in Catullus. They are not common in Vergil, Horace, Propertius and Ovid, and do not occur at all in Tibullus. Persius has one spondaic verse, Valerius Flaccus one, Claudian five, Silius Italicus six, Statius seven. Ennius has lines composed entirely of spondees, and so in one instance (116, 3) Catullus. Ennius also resolves the thesis of a dactyl in a few cases.
- 2568. (6.) A verse which is connected with the following one by elision (2492) is called hypermetrical. Such verses are rare, and usually end with the enclitics -que or -ve.
- 2569. (7.) The dactylic hexameter was introduced into Latin literature by Ennius, and was further perfected by Lucilius, Lucretius, and Cicero, who took him as their model. Catullus and the group to which he belonged followed Alexandrian models more closely, while the great poets of the Augustan age carried the technique of the hexameter to its highest perfection. Horace in his lyric poetry treats the hexameter with great strictness; but in the Satires and Epistles he handles it with much freedom, imparting to the measure a more colloquial character by the frequent use of spondees and by less rigorous treatment of the caesura.

THE DACTYLIC PENTAMETER.

2570. The DACTYLIC PENTAMETER is a verse consisting of two catalectic dactylic tripodies, separated by a fixed diaeresis. Spondees are admitted in the first tripody, but not in the second. The final thesis of the first tripody is protracted to a tetraseme (2516) to compensate for the omission of the arsis. The scheme is therefore

- 2571. (1.) The verse is not asynartetic (2535), neither syllaba anceps nor hiatus being allowed at the end of the first tripody.
- 2572. (2.) This verse is known as the pentameter because the ancient grammarians measured it

2573-2577.] Appendix (E.): Prosody.

2573. The pentameter is rarely used except in combination with the hexameter, with which it forms the so-called *Elegiac Distich*:

2574. The Elegiac Distich is used chiefly in elegiac poetry (whence the name), in amatory verse and in epigrams. The end of the pentameter generally coincides with a pause in the sense. As examples of the Elegiac Distich, the following may serve:

Quam legis | ex il | lā || tibi | vēnit e| pistola | terrā lātus u| b(1) aequore | is # additur | Hister a| quīs. Sī tibi | contige | rit || cum | dulcī | vīta sa| lūte, candida | fortū | nae # pars manet | tīna me | ae.

O. Tr. 5, 7, 1.

Compare in English (but see 2561 ad fin.):

"These lame hexameters the strong-winged music of Homer! No — but a most burlesque, barbarous experiment . . . Hexameters no worse than daring Germany gave us, Barbarous experiment, barbarous hexameters."

(TENNYSON).

2575. The Elegiac Distich was introduced into Roman poetry by Ennius, who used it in epigrams. Varro employed it in his Salwrae, and Catullus seems to have been the first of the Latins who used it in Elegiac poetry. The elegiac and amatory poets of the Augustan age, especially Ovid, perfected it, and wielded it with unequalled grace and ease.

2576. Ovid nearly always closes the pentameter with a disyllabic word; but earlier poets, especially Catullus, are less careful in this regard. Elision is less frequent in the pentameter than in the hexameter. It sometimes occurs in the main diaeresis of the pentameter, though rarely.

THE DACTYLIC TETRAMETER ACATALECTIC (or Alcmanian).

2577. This verse is chiefly used in composition with a trochaic tripody to form the Greater Archilochian verse (2677); but it occurs alone once in Terence (Andria 625), and is employed in stickic series (2546) by Seneca. The scheme is:

しの11の11の1400

An example is:

hōcine | crēdibi|l(e) aut memo|rābile (T. Andr. 625).

This verse is often called Alemanian because it was used by the Greek poet Aleman.

Digitized by Google

THE DACTYLIC TETRAMETER CATALECTIC (or Archilochian.)

2578. This verse consists of four dactylic feet, the last one being incomplete. The scheme is:

An example is:

Cármine | pérpetu|ő cele|brár(e) et

(H. 1, 7, 6).

This verse differs from the preceding in that the last foot is always a trochee or spondee, never a dactyl. It is used only in the Alcmanian strophe (2724).

THE DACTYLIC TRIMETER CATALECTIC (or Lesser Archilochian).

2579. This verse has the scheme:

An example is:

Árbori|búsque co | maé

(H. 4, 7, 2).

It is used chiefly in the First Archilochian Strophe (see 2725). In form it is the same as the second half of the pentameter (2570).

2580. These verses (2578, 2579) are often called Archilochian because they were first used by the Greek poet Archilochus.

IAMBIC RHYTHMS.

2581. These are ascending rhythms (2528)in $\frac{8}{5}$ time. The fundamental foot is the Iambus ($\bigcirc \ _$), for which its metrical equivalent the tribrach $\bigcirc \ \bigcirc \ \bigcirc$, the irrational spondee $> \ _$, the irrational dactyl $> \ \bigcirc \ \bigcirc$, the cyclic anapaest $\bigcirc \ _$, or the proceleusmatic $\bigcirc \ \bigcirc \ \bigcirc$ is sometimes substituted.

2582. The Greek poets excluded all feet except the iambus and tribrach, and in comedy the anapaest, from the even places in iambic verse. The Latin poets were not so strict: but when one of the even feet was formed by a word or a word-ending, they did not usually allow the foot to be a spondee or an anapaest, but required it to be an iambus.

THE IAMBIC TRIMETER OR SENARIUS.

2583. The IAMBIC TRIMETER is the verse most frequently used by the Roman dramatists. It consists of six iambic feet, or three iambic dipodies. The ictus on the second thesis of each dipody was probably weaker than that upon the first thesis. Some ancient authorities, however, held that the ictus on the second thesis was the stronger. The last foot is always an iambus. The normal scheme is therefore:

Some prefer (see 2529) to regard this verse as a trochaic trimeter catalectic with anacrusis. The normal scheme will then be:

2584. The Latin poets differ widely in their treatment of the Senarius, some (especially Plautus, Terence, and the other early dramatists) handling it with great freedom, while others (especially Phaedrus and Publilius Syrus) conform more closely to Greek models. We may therefore distinguish two periods:

(A.) Early Period.

2585. Any one of the substitutions enumerated in 2581 is admitted in any foot except the last. The scheme is therefore:

1 1 5	<u>۔</u> ح	<u> </u>	-5∣	<u>'</u>	l∪∸
\cup \cup \cup \cup	$\cup \circ \cup$	1000	1000	1 000	1
>としし	> 🌝 🔾	1>50	1>00	1 1> とし	1 .
~ 1	$\sim \cdot$	1 0 1	1 W :-	1 w/	1
ひじしし	\sim \circ	1200	10000	160001	1

The main caesura is usually penthemimeral (2544); but it is sometimes hephthemimeral, in which case there is generally a secondary caesura in, or diacresis after, the second foot.

The following passage may serve to show the rhythm:

Ubi vén|t(um) ad ae|dīs || ést | Dromō | pultát | forēs; anŭs quaé|dam prō|dīt; || haéc | ub(i) ape|rīt ōs|tium, continu(ō) | hic sē | conié|cīt || in|tr(ō), ego cōn|sequor; anŭs fóri|bus ob|dīt || pés|sul(um), ad | lānám | redīt. Hīc sci|rī potu|it || aút | nusqu(am) alibī, Cli nia, quō studi|ō viltam || suám | t(ē) absen|t(e) exē|gerīt, ubi d(ē) in |prōvī|sōst || in|terven|tum múli|erī, &c.

T. Hau. 275.

w1 v = 1>11 v = 1>1 v =
> 5 0 > - 1 > - 1 0 - 1 0 - 1 0 - 1
w 5 ∪ 1 ∪ ± 1 > 1 ∪ ± 1 > 2 ∪ ±
> > > _ _ _ _
> 5 0 1 > - 1 > 1 1 1 > - 1 > - 1 > - 1

- 2586. (1.) In the early dramatists, substitutions are very numerous, and lines which follow the normal scheme are rare. Substitutions are most frequent in the first foot.
- 2587. (2.) Four shorts rarely stand in succession unless they belong to the same foot. Hence a dactyl or tribrach is seldom followed by an anapaest.
- 2588. (3.) The dactyl and proceleusmatic are rare in the fifth foot. The proceleusmatic occurs chiefly in the first foot.
- 2589. (4.) The fifth foot is very often a spondee. It must not be a pure iambus except (a.) when the line ends with a polysyllable of four or more syllables; (b.) when it ends with a word which forms a Cretic (2521); (c.) when it ends with an iambic word preceded by one which forms a Fourth Paeon (2521), or by an anapaestic word which is itself preceded by a final short syllable; (d.) when there is a change of speakers before the last foot; (c.) when elision occurs in the fifth or sixth foot.
 - 2500. (5.) The main caesura is rarely preceded by a monosyllable.
- 2591. (6.) In the Senarius, and in the other iambic and trochaic verses of the early dramatists, a resolved arsis or thesis is usually placed so that its first syllable begins a word, or so that the two shorts of the resolved arisis or thesis are enclosed by other syllables belonging to the same word. Hence a dactylic word with the ictus on the penult or ultima (e. g. tempóre) rarely occurs. But there are occasional exceptions to the rule, especially in the case of words that are closely connected (e. g. a preposition with its case).

(B.) Later Period.

2592. Later writers conform more closely to Greek usage, but differ from one another in the degree of strictness with which they follow it. The general scheme is:

The main caesura is usually the penthemimeral (2544). The hephthemimeral sometimes occurs, but usually in connection with the penthemimeral, or with a diaeresis after the second foot. If the hephthemimeral is used without either of these, the second and third trochees of the line must form one word, as in

15

2593-2600.] Appendix (E.): Prosody.

2593. (1.) The anapaest is rare in nearly all classical writers; Catullus does not admit it at all, and Horace only five times in all. The proceleusmatic is admitted in the first foot by Seneca, the author of the Octavia, Phaedrus, Publilius Syrus and Terentianus Maurus; other writers exclude it altogether. Catullus keeps the fifth foot pure, and Horace does not admit the tribrach in the fifth foot.

2594. (2.) Catullus (4 and 29), Horace (*Epod.* 16), Vergil (*Cat.* 3, 4, 8), and the authors of the *Priāpēa* sometimes use the *pure* iambic trimeter, without resolutions or substitutions.

2595. (3.) Phaedrus follows in part the earlier usage, admitting the spondee, dactyl, and anapaest, in every foot except the last. The dactyl he employs chiefly in the first, third, and fifth feet, the anapaest in the first and fifth. The proceleusmatic he admits only in the first.

2596. The rhythm of the Senarius may be illustrated by the following lines:

But one amid the throng of eager listeners, A sable form with scornful eye and look averse, Out-stretched a lean fore-finger and bespake Haroun.

THE CHOLIAMBUS (or Scazon).

2597. The CHOLIAMBUS is an iambic trimeter in which a trochee has been substituted for the final iambus. The penultimate syllable is therefore long instead of short. The caesura is generally the penthemimeral (2544). If it is hephthemimeral, there is regularly a diaeresis after the second foot. The scheme is:

An example is:

Fulsé|re quon|dam || cán|didi| tibi | sốlēs.

(Cat. 8, 3.)

2598. (1). The anacrustic scheme (see 2529) of the choliambus is:

i. e. trochaic trimeter with anacrusis (2529), syncope (2541), and protraction (2516).

2599. (2.) Resolutions and substitutions are less common in the choliambus than in the ordinary trimeter. No monosyllable except est is admitted at the end of the line. The tribrach in the first foot is rare, and the fifth foot is regularly an iambus.

2600. (3). The verse is named Choliambus (i. e. "lame" or "limping lambus") or Scazon ("hobbler") from its odd, limping movement. It is sometimes called Hipponactean from its inventor Hipponax, and is chiefly used to produce a satiric or ludicrous effect. It was introduced into Roman poetry by Cn. Mattius, and was employed by Varro, Catullus, Persius, Petronius, Martial, and others.

THE IAMBIC TRIMETER CATALECTIC.

2631. The IAMBIC TRIMETER CATALECTIC occurs in Horace (1, 4 and 2, 18). The caesura is regularly penthemimeral (2544). Resolutions are not admitted, except in one doubtful case, regumque pueris (2, 18, 34), where pueris may be read (with synizesis; see 2499). The scheme is:

Examples are:

Mež | reni|det || in | domō | lacū|nar.

0 _ 1 0 - 1 0 || _ 1 0 - 1 0 - 1 0 - 1 - 1

2602. (1.) The anacrustic scheme is:

i. e. trochaic trimeter catalectic with anacrusis (2529), syncope (2541), and protraction (2516).

2603. (2.) Horace seems to have changed his practice with reference to the first foot. In 1, 4 the first foot is a spondee in nine lines out of ten; in 2, 18, it is a spondee in only two lines out of twenty.

THE IAMBIC TETRAMETER ACATALECTIC (or Octonarius).

2604. This verse consists of four iambic dipodies, or eight complete iambic feet. The substitutions enumerated in 2581 are admitted in the first seven feet; but the last foot is always an iambus. The principal break in the line is usually a diaeresis after the fourth foot (which in that case must be a pure iambus), or a caesura after the arsis of the fifth. The full scheme is:

2605. The following lines are examples of this metre:

Enīm vélrō, Dālve, nīi|locīst # sēgnīti|ae neque | sōcór|diae, quant(um) in|tellē|xī módo | senis # sentén'tiam | dē nū|ptiīs: quae si|nōn a|stū pro|viden|tur || m(ē)aut|erum | pessum | dabunt.

(T. Andr. 206.)

2606-2611.] Appendix (E.): Prosody.

2606. Compare in English:

He smote the rock, and forth a tide of crystal waters streamed amain; Up sprang the flowrets from the ground, and Nature smiled o'er all the plain.

2607. (1.) The iambic octonarius is chiefly a comic verse. Terence has about eight hundred lines in this measure, Plautus only about three hundred, Varro a few.

2608. (2.) Substitutions are much less common than in the senarius, especially in the even feet.

2609. (3.) When there is a diaeresis after the fourth foot, so that the line is divided into two equal halves, the verse is *asynartetic* (2535). There seems, however, to be no certain instance of hiatus in the diaeresis in the Terentian plays.

IAMBIC SEPTENARIUS.

(A.) Early Usage.

2610. The IAMBIC SEPTENARIUS consists of seven and a half iambic feet. In any of the complete feet the substitutes mentioned in 2581 are admitted. There is usually a diaeresis after the fourth foot, which in that case must be a pure iambus. If there is not such a diaeresis, there is generally a caesura after the arsis of the fifth foot. The scheme of substitution is:—

2611. Examples of the Septenarius are the lines:

Spērā|bit sūm|ptum sibi | senex || levā|t(um) ess(e) hā|runc ábi|tū: n(ē) iil(e) haúd | scit hōc | paulúm | lucrī || quant(um) é|ī da|mn(ī) adpór|tet.

Tũ nés|ciës | quod scis, | Dromō, || sī sápi|ēs. Mū|tum dí|cēs.
(T. Hau. 746.)

Compare in English:

"Now who be ye would cross Lochgyle, this dark and stormy water?"
(Campbell.)

- 2612. (1.) The Iambic Septenarius of the early comedy is not properly a "tetrameter catalectic" like the Greek, for the penultimate syllable is sometimes resolved, which is never the case in the Greek catalectic tetrameter. For the same reason the ordinary anacrustic (2529) scheme of the early Septenarius is erroneous; for a triseme cannot be resolved.
- 2613. (2.) When there is a diaeresis after the fourth foot, the verse is asynartetic (see 2535).
 - 2614. (3.) The Septenarius seems not to have been used in tragedy.

(B.) Later Usage.

2615. Varro and Catullus (25) employ a form of the Septenarius which conforms more closely to Greek models, keeping the arses of the even feet pure and rarely admitting resolutions. There is regularly a diaeresis after the fourth foot. The scheme is:—

$$2 \angle |0 + |2 \angle$$

2616. Catullus does not admit resolutions at all, save in one very doubtful case (25, 5). Varro seems to admit them in the first foot only.

IAMBIC DIMETER ACATALECTIC (or Quaternarius).

2617. The IAMBIC DIMETER ACATALECTIC consists of two complete iambic dipodies or four iambic feet. In the first three feet the tribrach, irrational spondee, irrational dactyl and cyclic anapaest are admitted; but the proceleusmatic is very rare, except in the first foot of the Versus Reizianus (2625), (of which a Quaternarius forms the first colon). The scheme for substitution is:

Examples are:

Rogitá re quasi diffici le sit	
₩ <u></u> 10001>6010±	(T. Eu. 209).
Ast égo vicis sim rí serō	
> 5 5 5 5 5 5 5 5 5 5 5 5 5 5 5 5 5 5 5	(H. Epod. 15, 24).
Perûn xit hōc Iá sonem	
U1 U1 U1 U1	(H. Epod. 3, 12).
461	

2618-2625.] Appendix (E.): Prosody.

2618. (1.) The verse may also be regarded as a trochaic dimeter catalectic with anacrusis (2529), with the normal scheme:

2619. (2.) Horace admits resolutions only four times, the tribrach once in the second foot and the dactyl thrice in the first.

2620. (3.) Plautus (except in a few instances), Terence, and Horace employ the dimeter only as a clausula (2536) to longer verses. Petronius, Seneca, and Prudentius use it to form systems (2547); but it is rarely so employed by earlier writers.

THE IAMBIC DIMETER CATALECTIC (or Ternarius).

2621. This is like the preceding verse, except that the last foot is incomplete. Examples are:—

Nequ(e) id | perspice|re qui|vi

$$0 \stackrel{\prime}{-} | > 0 \stackrel{\prime}{-} | 0 \stackrel{\prime}{-} \stackrel{\cdot}{-}$$
 (Pl. Cap. 784).
Date; móx | eg(o) hūc | revór|tor
 $0 \stackrel{\prime}{-} | 0 \stackrel{\cdot}{-} | 0 \stackrel{\prime}{-} \stackrel{\cdot}{-}$ (T. Andr. 485).

2622. (1.) The verse may also be regarded as a syncopated catalectic trochaic dimeter with anacrusis (2529). The normal scheme will then be:—

2623. (2.) Plautus and Terence use this verse as a clausula (2536). Petronius is the first who employs it to form systems (2547).

OTHER IAMBIC VERSES.

2624. Other short iambic verses, the acatalectic dipody (e. g. eg(o) Illúm | famē, | eg(o) Illúm | sitī. Pl. Cas. 153), and the catalectic tripody (e. g. inóps | amā|tor, Pl. Tri. 256) sometimes occur, but are rare.

THE VERSUS REIZIANUS.

2625. This is a composite verse, consisting of two cola, an iambic dimeter acatalectic and an iambic tripody catalectic. The scheme is therefore,

Examples are: -

Sed in aé|dibus | quid tíbi | meīs # n(am) erát | negő|tī m/ē) absén|te, nis(i) e|go iűs|seram? # volo scí|re. Tac(ē) érigő. Quia vé|nimŭs coc|t(um) ad nű|ptiās. # Quid tű, | malŭm, cű|rās. (Pl. Aul. 427.) 2626. The nature of the second colon of this verse has long been disputed. Reiz and Christ treat it substantially as above; Studemund regards it as a syncopated iambic dimeter catalectic (∪ _ ∪ ∪ _ _ ∪), Spengel and Gleditsch as anapaestic, Leo as logaoedic, Klotz as sometimes log.oedic and sometimes anapaestic! The view of Christ (Metrik², p. 348) seems, on the whole, the most reasonable, though the question cannot be said to be fully decided. The tribrach is rare in the second colon, but there seems to be a case in Plautus, R. 675 b.

2627. For other iambic verses and combinations of verses, see special editions of the dramatists.

TROCHAIC RHYTHMS.

2628. These are descending rhythms in § time. The fundamental foot is the trochee $\underline{\prime}$ \cup , for which its metrical equivalent the tribrach $\underline{\prime}$ \cup \cup the irrational spondee $\underline{\prime}$ >, the cyclic dactyl $\underline{\prime}$ \cup , the irrational anapaest $\underline{\prime}$ \cup >, and (rarely) the proceleusmatic $\underline{\prime}$ \cup \cup , are sometimes substituted.

THE TROCHAIC TETRAMETER CATALECTIC (or Septenarius).

2629. The TROCHAIC TETRAMETER CATALECTIC is, next to the iambic trimeter, the verse most frequently used by the early Roman dramatists. It consists of seven and a half trochaic feet, or four trochaic dipodies (the last one being incomplete). The ictus on the second thesis of each dipody was probably weaker than that on the first thesis. The normal scheme is:—

As in the case of the senarius, we may distinguish two periods in the usage: —

(A.) Early Period.

2630. The tribrach is admitted in any of the complete feet, and the irrational spondee, cyclic dactyl, and irrational anapaest in any of the first six feet. Terence does not admit the proceleusmatic in the Septenarius (nor in any other kind of trochaic verse), but Plautus admits it in the first foot. The seventh foot of the Septenarius is usually a trochee, but the tribrach sometimes occurs there. The principal break in the line is usually a diaeresis after the fourth foot (which in that case must not be a dactyl), often accompanied by a secondary diaeresis after the second foot. Sometimes, however, the principal break is a diaeresis after the fifth foot, in which case there is generally a secondary diaeresis after the third foot or a caesura in the fourth. The full scheme of substitutions is:—

The following lines are examples of the Septenarius: -

Séquere | sis, erum | qui lu|dificas # díctis | dēli|ránti|bus qui quoni(am) | erus quod | impelravit # néglē|xisti | pérse|qui, núnc ve|nis eti(am) | ultr(ō) in|risum # dóminum|: quae neque 'fie|ri póssunt | neque fan|d(ō) úmqu(am) ac|cēpit # quísquam | prōfers, | cárnu|fex. (Pl. Am. 585.)

2631. (1.) When there is a diaeresis after the fourth foot, the verse is asynartetic (2535). In Plautus hiatus in the diaeresis is not rare; but there seems to be no certain instance of it in Terence (see *Ph.* 528, *Ad.* 697).

2632. (2.) An anapaest is not allowed to follow a dactyl.

2633. (3.) The seventh foot is usually a trochee; rarely a tribrach or dactyl. The tribrach and dactyl are seldom found in the fourth foot.

(B.) Later Usage.

2634. The later and stricter form of the Septenarius keeps the arses of the odd feet pure, and regularly shows a diaeresis after the fourth foot.

Resolutions occur, but are far less common than in the earlier form of the verse. The strict form of the Septenarius is found in Varro, Seneca, and often in late poets (as Ausonius, Prudentius, &c.).

2635. The rhythm of the Septenarius may be illustrated by this line: —
"Comrades, leave me here a little, while as yet 'tis early morn."
(Tennyson.)

THE TROCHAIC TETRAMETER ACATALECTIC (or Octonarius).

a636. The Trochaic Tetrameter Acatalectic is chiefly confined to the lyrical portions of the early comedy. It consists of four complete trochaic dipodies or eight trochaic feet. The tribrach, irrational spondee, irrational anapaest and cyclic dactyl may stand in any foot save the last. The last foot is regularly a trochee or a tribrach, though (the last syllable being syllaba anceps, 2533) an apparent spondee or anapaest, but not a dactyl, may arise. The principal break in the line is regularly a diaeresis after the fourth foot (which in that case must not be a dactyl). Occasionally, however, there is instead a caesura in the fourth or fifth foot. The scheme is:—

Example: -

Cénse o. Sed|heús tū.| Quid vis ? # Cénsen | posse | m(e) offir mare? (T. Eu. 217).

Compare in English: -

Over stream and mount and valley sweeps the merry, careless rover, Toying with the fragrant blossoms, beating down the heads of clover.

2637. (1.) When there is a diaeresis after the fourth foot, the verse is asynartetic

(2535). 2638. (2.) The Octonarius is essentially a lyric metre, and is much less common than the Septenarius.

THE TROCHAIC TETRAMETER CLAUDUS (or Scazon).

2639. This verse is a trochaic tetrameter acatalectic, with syncope and protraction in the seventh foot. The normal scheme is:

An example is: -

Néc co|ruscus | imber | alto || núbi |lo ca |dens | múltus

(Varro, Sat. fr. 557 Buech.).

2640. (1.) Substitutions are much rarer in this verse than in the ordinary trochaic octonarius.

2641. (2.) The Scazon was introduced among the Greeks by Hipponax, whence it is sometimes called the Hipponactean. Varro seems to be the only Roman poet who uses it.

THE NINE-SYLLABLED ALCAIC.

2642. This verse consists of two complete trochaic dipodies, with anacrusis. The second foot is always an irrational spondee. The scheme is: -

An example is:-

Sil vaé la boran tés ge luque.

(H. 1, 9, 3.)

This verse occurs only in Horace, where it forms the third line of the Alcaic Strophe (see 2736).

THE TROCHAIC DIMETER ACATALECTIC (or Quaternarius).

2643. This verse consists of two complete trochaic dipodies. It is very rare, but there are probably a few instances of it in Plautus, e. g. Per. 31:-

THE TROCHAIC DIMETER CATALECTIC (or Ternarius).

2644. This consists of two trochaic dipodies, the second being incomplete. It occurs in the early dramatists and in Horace. The scheme for Plautus and Terence is:—

The Horatian scheme is: -

Examples are : -

Aút un d(e) auxili um pe tam

Nốn e bur ne qu(e) aure um

(T. Ph. 729). (H. 2, 18, 1).

2645. (1.) This is sometimes called the Euripidean verse, from its use by Euripides. The tribrach in the third foot is rare, and is not found in Terence. Horace keeps all the feet pure.

2646. (2.) Plautus and Terence often use this verse between trochaic tetrameters, but sometimes employ several *Ternarii* in succession, as in Plaut. E. 3-6, Cas. 953-6, Ps. 211-13.

THE TROCHAIC TRIPODY ACATALECTIC.

2647. This verse is confined to the early drama, where it is employed as a clausula (2536), especially with Cretics. It consists of three complete trochaic feet. The same substitutions are admitted in every foot that are allowed in the first two feet of the Ternarius (2644). An example is:—

Haú bonům | teneč | sérvom

(Pl. Most. 721).

This verse is sometimes called the Ithyphallic.

THE TROCHAIC TRIPODY CATALECTIC.

2648. This verse is employed by the early dramatists, usually either as a clausula (2536) or in groups of two lines each. Terence generally uses it in the former way, Plautus in the latter. The scheme of substitutions is:—

Example: -

Qu(i) impi|ger fu|f

101-01-1

(Pl. R. 925).

In one instance (R. 924 ff.) Plautus has six catalectic tripodies in succession.

OTHER TROCHAIC VERSES.

2649. The Trochalc Monometer Acatalectic is sometimes used by Plautus as a clausula (2536) to Cretic tetrameters. It consists of one complete trochaic dipody, e. g. nimis in epta's, R. 681. iūre in liūstās, Am. 247. Terence uses the catalectic monometer twice (Eu. 292, Ph. 485) at the beginning of a scene, e. g. $Dori[\bar{\delta}, Ph$. 485. Plautus has a few other trochaic verses and combinations of verses, tor which see special editions of his plays.

LOGAOEDIC RHYTHMS.

- 2650. Logacedic verse consists of dactyls and trochees combined in the same metrical series. The dactyls are "cyclic" (see 2523), occupying approximately the time of trochees, and hence the verse moves in § time. Except in the "Lesser Alcaic" verse (2663), only one dactyl may stand in a single series; and a dactyl must not occupy the last place in a line.
- 2651. (1.) The name "logaoedic" (Gr. λογαοιδικόs, from λόγοs, speech, prose, and doiδή, song) may refer to the apparent change of rhythm (due to the mixture of dactyls and trochees), in which logaoedic verse resembles prose; but this is a disputed point.
- 2652. (2.) In the logacedic verses of Horace, an irrational spondee almost always takes the place of a trochee before the first dactyl; and if an apparent choriambus ($\frac{1}{2}$ $\frac{1}{2}$); see 2521) is followed by another apparent choriambus in the same verse, the two are regularly separated by a caesura. These rules are not observed by Catullus.
- 2653. (3.) Anacrusis (2529) and syncope (2541) are very common in logacedic verse.
 - 2654. The following are the principal logacedic rhythms: -

DIPODY.

THE ADONIC.

2655. This is a logacedic dipody, with the scheme: -

10110

Examples are: -

Térruit | úrbem

(H. 1, 2, 4).

Rāra iu véntus

(H. I, 2, 24).

467

2656-2659.] Appendix (E.): Prosody.

2656. (1.) Some regard the Adonic as a syncopated catalectic tripody:

2657. (2.) A Latin Adonic should consist of a disyllable + a trisyllable, or the reverse. This rule did not hold in Greek, where such lines occur as δ τὸν "Αδωνιν. Elision is not allowed in the Latin Adonic. Late Latin poets (like Terentianus) sometimes employ the Adonic in stichic series (2546).

TRIPODIES.

THE ARISTOPHANIC.

2658. This is a logacedic tripody acatalectic, with a dactyl in the first place. The scheme is therefore:—

There is no fixed caesura. Examples are: -

Quid latet | út ma rinae

(H. 1, 8, 13).

Funera | né vi|rîlis

(H. 1, 8, 15).

Some authorities write the scheme as:

i.e. a syncopated logaoedic tetrapody catalectic.

THE PHERECRATEAN (or Pherecratic).

2659. This verse is used by Catullus (34, 61), and by Horace (as the third line of the Third Asclepiadean Strophe: see 2733). It is a logacedic tripody, with the dactyl in the second place. The scheme is:—

The trochee and iambus are admitted in the first foot by Catullus, but not by Horace. The iambus is very rare. There is no fixed caesura. Examples are:—

Gráto, | Pýrrha, sub | ántro

(H. 1, 5, 3).

With initial trochee: Lute umve pa paver

(Cat. 61, 195).

With initial iambus: Púel laéque ca namus

nus (Cat. 34, 4).

468

Some authorities prefer to regard the Pherecratean as a syncopated logacedic tetrapody catalectic, with the scheme:—

TETRAPODIES.

THE GLYCONIC.

a660. This verse is used by Catullus (34, 61), by Horace (in the First, Second, and Third Asclepiadean Strophes: see 2731, 2732, 2733), and by Seneca and other later writers. It is a logacedic tetrapody catalectic, with a dactyl in the second place. The scheme is:—

The trochee and iambus in the first foot occur in Catullus, but not in Horace (except in the doubtful case, 1, 15, 36). There is generally a trithemimeral caesura; more rarely one in the arsis of the second foot. Examples are:—

Quém mor tis || timu it gra dum

(H. 1, 3, 17).

With initial trochee: Monti um || domi n(a) ut fo res (Cat. 34, 9).

With initial iambus: Púel|1(ae) ét || pue|r(i) inte|gri (Cat. 34, 2

2661. (1.) This verse in composition with the Pherecratean forms the Priagean (2674).

2662. (2.) In admitting the trochee and iambus in the first foot, Catullus follows Greek models, while Horace adheres to the stricter Roman usage, as laid down by the grammarians of his own day. Seneca observes the same rule as Horace, but some of the later writers (e. g. Terentianus) revert to the earlier and freer usage.

THE LESSER (or DECASYLLABIC) ALCAIC.

2663. This verse is a logacedic tetrapody acatalectic, with dactyls in the first and second places. The scheme is:—

There is no fixed caesura, though there is frequently a break after the thesis, or in the arsis, of the second foot. Examples are:—

Flümina | constite | rint a | cuto

(H. 1, 9, 4).

Montibus | ét Tibe rim re vérti

(H. 1, 29, 12).

PENTAPODIES.

THE PHALAECEAN (or Hendecasyllable).

2664. This verse is a logacedic pentapody with the dactyl in the second place. The Greek poets admitted the trochee and iambus, as well as the spondee, in the first foot, and Catullus followed their example; but in Petronius, Martial, and the *Priāpēa* the first foot is always a spondee, and in later writers nearly always. Horace does not use the Phalaecean. There is no fixed caesura, though the penthemimeral is often found. The scheme is:—

Examples are: -

Cúius | vis fie|ri li|bélle | múnus

(Mart. 3, 2, 1).

With initial trochee: Dé di | é faci | tis me | i so | dáles (Cat. 47, 6).

With initial iambus: Ágit | péssimus | ómni|úm po|éta (Cat. 49, 5).

Compare in English: -

"Look, I come to the test, a tiny poem All composed in a metre of Catullus."

(Tennyson.)

2665. The Phalaecean is a favourite metre in epigrams. It was used by Sappho, Phalaecus (from whom it took its name), and other Greek poets, and was introduced into Roman poetry by Laevius and Varro. It is a favourite metre with Catullus, and is found in the fragments of Cinna, Cornificius and Bibaculus, in the Priapia, in Petronius, Statius, Martial, &c. In Catullus 55, a spondee is often employed instead of the dactyl, the two kinds of feet alternating in the latter verses of the poem; but this innovation seems not to have found favour.

THE LESSER SAPPHIC.

2666. This verse is a logaoedic pentapody acatalectic, with the dactyl in the third place. The scheme is:—

The trochee in the second foot was admitted by Alcaeus and Sappho, and occurs in Catullus, but not in Horace. In Horace the caesura regularly falls after the thesis, or (less frequently) in the arsis, of the dactyl; but in Catullus, as in Sappho and Alcaeus, it has no fixed position. Examples of this verse are:—

With masculine caesura: Iám sa tís ter tís || nivis | átque | dírae (H. I, 2, I).

With feminine caesura: Phoébe | sílvā|rúmque || po|téns Di|ána (H. C. S. 1).

With trochee in second foot: Seú Sa cás sa gittife rósve | Párthös (Cat. 11, 6).

THE GREATER (OF HENDECASYLLABIC) ALCAIC.

2667. This verse is a logacedic pentapody catalectic, with anacrusis and with the dactyl in the third foot. The scheme is:—

There is nearly always a diaeresis after the second foot. Examples are: -

O mätre | púlchrä # filia | púlchri or

(H. 1, 16, 1). Vi|dés ut | áltā # stét nive | cándi | dúm

(H. 1, 9, 1).

2668. Alcaeus admitted a trochee in the second foot, and allowed the anacrusis to be either long or short; but Horace admitted only the spondee in the second foot, and usually (in Bk. 4 always) employed a long anacrusis. Horace also differed from his predecessor in assigning a fixed place to the caesura, which in Alcaeus has no regular position.

COMPOSITE LOGAOEDIC VERSES.

THE LESSER ASCLEPIADEAN.

2669. This is a composite verse, consisting of two series, a syncopated logacedic tripody + a logacedic tripody catalectic. There is regularly a diaeresis between the two series. The scheme is:—

Examples are: -

Maécē nás ata vís # édite régi bús

(H. 1, 1, 1).

Quis de sideri | 5 # sit pudor | aut mo | dus

(H. 1, 24, 1).

THE GREATER ASCLEPIADEAN.

2670. This is a composite verse, consisting of three series. It differs from the preceding (2669) in having a syncopated logacedic dipody (!\(\sigma\) | \(\sigma\) inserted between the two tripodies. The three series are regularly separated by diaeresis. The scheme is therefore:—

Examples are: -

Núllam|, Vāre, sa crā ‡ víte pri|ús ‡ sēveris | árbo|rém Círcā | míte so|lúm ‡ Tíburis | ét ‡ moénia | Cāti|lí.) (H. 1, 18, 1-2).

THE GREATER SAPPHIC.

2671. This is a composite verse, consisting of a syncopated logacedic tetrapody + a syncopated logacedic tetrapody catalectic. There is regularly a diaeresis between the two series, and a caesura after the thesis of the first dactyl. The scheme is:—

An example is: -

Tế de jốs ö rố || Syba rín # cứr prope rếs a mán dố (H. 1, 8, 2).

2672. (1.) The second series has the same form as the Aristophanic, if the latter be written as a tetrapody (see 2658 ad fin.).

2673. (2.) Horace (1, 8) is the only Latin poet who makes use of the Greater Sapphic. It seems to be an imitation of the Greek Sapphic:—

δεῦτέ νιν άβραι Χάριτες καλλίκομοί τε Μοῖσαι

but if so, the imitation is not exact.

THE PRIAPEAN.

2674. This verse is employed by Catullus (17) and in the *Priāpēa* (86). It consists of a syncopated logacedic tetrapody + a syncopated logacedic tetrapody catalectic. There is regularly a diaeresis between the two parts, but hiatus and syllaba anceps are not allowed at the end of the first series. The scheme is:—

Examples are: -

Ó Coliónia | quaé cu|pís # pónte | lúdere | lón|gó (Cat. 17, 1). Húnc lū cúm tibi | dédi|có # cónse|crōque Pri|á|pé.

(Cat. *Fr.*).

The first series has the same form as the Glyconic (2660), and the second series has the same form as the Pherecratean, if the latter be written as a tetrapody (see 2659 ad fin.).

DACTYLO-TROCHAIC RHYTHMS.

2675. DACTYLO-TROCHAIC verse, like logacedic, is composed of dactyls and trochees; but whereas in logacedic verse the dactyls and trochees occur within the same metrical series, in dactylo-trochaic they always form separate series. Hence dactylo-trochaic verses are always composite, consisting of two or more series in combination.

2676. It is uncertain whether the dactyls in dactylo-trochaic verse were cyclic (2523) or whether there was a change of time in the middle of the verse.

THE GREATER ARCHILOCHIAN.

2677. This verse is composed of a dactylic tetrameter acatalectic + a trochaic tripody. There is regularly a diaeresis after the first colon, and a caesura after the third thesis. The fourth foot is always a pure dactyl. The third foot is very often a spondee. The scheme is:—

An example is: -

Sólvitur | ắcris hi|éms || grā'tā vice || vēris | ét Fa|vốnī (H. 4, 1).

In Archilochus the verse is said to have been asynartetic (2535); but Horace and Prudentius do not allow hiatus or syllaba anceps in the diaeresis, and Prudentius sometimes neglects the diaeresis altogether.

THE IAMBELEGUS.

2678. This verse consists of a trochaic dimeter catalectic with anacrusis + a Lesser Archilochian (2579). No resolutions are allowed in the first colon, and the dactyls in the second colon are never replaced by spondees. There is regularly a diaeresis between the two cola. The scheme is:—

$$\gtrsim : \angle \cup | \bot \gtrsim | \angle \cup | \bot \land # \angle \cup \cup | \angle \cup \cup | \angle \land X$$

An example is:—

Rū|pēre | nec mā;tér do|mum # caérula | tē reve|hét (H. Epod. 13, 16).

2679. This verse occurs only in the Second Archilochian Strophe (2726) of Horace. Some authorities treat the first colon as an iambic dimeter. The name lambelegus was given to the verse because the ancient grammarians regarded it as a dactylic pentameter for the first half of which an iambic colon had been substituted.

THE ELEGIAMBUS.

2680. This verse consists of the same cola as the Iambelegus (2678), but in reverse order. Spondees are not admitted in the first colon, and no resolutions occur in the second colon. There is regularly a diaeresis between the cola. The scheme is:—

 $\angle \cup \cup | \angle \cup \cup | \angle \wedge + \Diamond | \angle \cup | \bot \Diamond | \angle \cup | \bot \wedge$ An example is:—

> Scribere | vérsicu|lős || a|mőre | percus|súm gra|ví (H. Epod. 11, 2).

2681. This verse occurs only in the Third Archilochian Strophe (2727) of Horace. The name Elegiambus is given to it as being the reverse of the lambelegus (see 2679).

ANAPAESTIC RHYTHMS.

2682. In these the fundamental foot is the anapaest 0 0 1, for which its metrical equivalents the spondee 1 1, dactyl 1 1 and proceleusmatic 0 1 are sometimes substituted.

2683. The anapaestic verse of the early Latin comedy is extremely irregular, and its limits are often hard to define. Spondees and apparent bacchii (reduced to anapaests by the law of iambic shortening; see 2470) are extremely common, and metrical irregularities of various kinds abound. The Latin language has so few anapaestic words that it does not lend itself readily to this rhythm. Terence wisely abstained altogether from anapaestic verse. Varro, Seneca, and Prudentius and other late writers wrote anapaests conforming more closely to Greek models.

THE ANAPAESTIC TETRAMETER ACATALECTIC (or Octonarius).

2684. This consists of four anapaestic dipodies or eight complete anapaestic feet. There is regularly a diaeresis after the fourth foot, and the last thesis of the line is never resolved. Hiatus and syllaba anceps sometimes occur in the diaeresis, the verse being asynartetic (2535). The scheme is:—

Examples are: -

Neque quód | dubitem | neque quód | timeam # me(ō) In péc |
tore con | ditumst cón | silium

(Pl. Ps. 575).

Quid mihi | meliust | quid magis | in remst # qu(am) a cor|pore vi|tam se|clūdam

(Pl. R. 220).

2685. The proceleusmatic is very rare in the fourth foot, but the spondee is very common there. Some editors divide the anapaestic octonarii into dimeters (or quaternarii) and write them as such.

THE ANAPAESTIC TETRAMETER CATALECTIC (or Septenarius).

2686. This is like the preceding, except that the last foot is incomplete. The seventh thesis may be resolved. There is regularly a diaeresis after the fourth foot, and hiatus and syllaba anceps sometimes occur in the diaeresis. The scheme is:—

- ししと1ししエ ししと ししと ししエ ししエ して
#
_ 501_001_501_00#_501_001_501
0000 0000 0000 0000 0000 0000

Examples are: -

Em né|m(5) habet hō|r(um)? occi|disti. # dic igi|tur quis ha|bet né|scis (Pl. Aul. 720).

Hunc hómi|nem decet | aur(ō) éx|pend(i): huic # decet státu|am statu(i) | ex aú|rō (Pl. B. 640).

THE ANAPAESTIC DIMETER ACATALECTIC (or Quaternarius).

2687. This verse consists of two anapaestic dipodies, or four complete anapaestic feet. There is generally a diaeresis after the second foot, and the fourth thesis is not resolved. The scheme is:—

Examples are: -

Quod lúbet | non lubet # iam cón|tinuo.

Ita m(ē) Ámor| lass(um) ani|mī lú|dificat,
fugat, ágit | appetīt # raptát | retinet
(Pl. Cist. 214).

This verse is often used to form systems, which frequently end in a paroemiac (see 2688).

THE ANAPAESTIC DIMETER CATALECTIC (or Paroemiac).

2688. This verse consists of two anapaestic dipodies or four anapaestic feet, the last foot being incomplete. The third thesis is sometimes resolved. There is no fixed caesura. The scheme is:—

Examples are: -

Volucér | pede cor | pore púl | cher (Ausonius).

Nimīs tán| d(em) eg(o) žbs tē | conté|mnor. Quipp(e) égo | tē nī| conté|mnam, stratió|ticus homo| qui clúe|ar? (Pl. Ps. 916).

2689. (1.) The Paroemiac is generally used to close a system of acatalectic anapaestic dimeters; but sometimes several paroemiacs in succession form a system (as in the second example above), especially in Ausonius, Prudentius, and other late poets.

 ${\bf 26go}$ (2.) Other anapaestic verses sometimes occur, especially in the early comedy, but they are rare.

475

CRETIC RHYTHMS.

2691. These are rhythms of the Hemiolic class (2527), in $\frac{5}{8}$ time. The fundamental foot is the Cretic $(\bot \cup \bot)$.

Either (but not both) of the two longs of a Cretic is sometimes resolved (giving the First Paeon $\underline{J} \cup \underline{\cup} \cup$ or the Fourth Paeon $\underline{J} \cup \underline{\cup} \cup$); but there is rarely more than one resolution in a single verse. The middle short is sometimes replaced by an irrational long (giving $\underline{J} > \underline{\cdot}$, or if there is resolution, $\underline{J} \cup \underline{\cup} \cup \cup$); but this never occurs in the last foot of a verse, and but rarely when the middle syllable is the penult of a spondaic word (e. g. nos nostrās).

2692. (1.) The ictus on the first long of the Cretic was probably (at least in most cases) stronger than that on the second. The first long and the short form the thesis, the second long the arsis, $\underline{I} \cup \underline{I}$.

2593. (2.) The impetuous, swinging movement of the Cretic rhythm fits it for the expression of passionate emotion.

THE CRETIC TETRAMETER ACATALECTIC.

2694. This verse consists of four complete Cretic feet. There is usually a diaeresis after the second foot, but sometimes there is instead a caesura after the first long of the third foot. Resolution is not admitted before the diaeresis or the end of the line. The irrational long middle syllable is admitted in the first and third feet. The scheme is:—

Examples are: -

Út malis | gaúdeant # átqu(e) ex in|cómmodis (T. Andr. 627).

Déind(e) uter|qu(e) impera|tor || in medi|(um) éxeunt (Pl. Am. 223).

2695. This verse is common in the cantica of the early drama, and is often repeated to form systems. Hiatus and syllaba anceps sometimes occur in the diaeresis.

THE CRETIC TETRAMETER CATALECTIC.

2696. This is similar to the preceding, except that the last foot is incomplete. The scheme is:—

Examples are: -

Sí cadēs,! non cadēs # quín cadam | técum (Pl. Most. 329).

Nov(i) eg(o) hoc; saéculum # moribus quíbus sit (Pl. Tri. 283).

OTHER CRETIC VERSES.

2697. The Cretic trimeter acatalectic sometimes occurs, though rarely: e. g.

Iám revor;tár. diūst| i(am) id mihī (Pl. Most. 338).

More frequent is the dimeter acatalectic, which has the scheme: -

This is often compounded with a trochaic tripody catalectic: e. g.

Hốc ub(1) Am|phítru(8) erus # cổnspi|cátus|ést (Pl. Am. 212)

and sometimes with a trochaic tripody acatalectic (e. g. Pl. Ps. 1248), a trochaic dipody acatalectic (e. g. Pl. Cap. 214), or a Thymelicus _ _ _ _ _ _ _ _ _ _ _ (e. g. Pl. Am. 245). For other kinds of Cretic verses, see special editions of the early dramatists.

BACCHIAC RHYTHMS.

2698. These are rhythms of the Hemiolic class (2527), in § time. The fundamental foot is the Bacchīus ($(-\frac{1}{2})$). Either (or both) of the two longs of a bacchīus is sometimes resolved. For the initial short syllable an irrational long is sometimes substituted. Occasionally two shorts are so substituted, especially in the first foot of a verse.

2699. (1.) The ictus on the first long of the bacchius was probably stronger than that on the second long.

2700. (2.) The bacchiac rhythm, like the Cretic, has an impetuous and passionate character.

THE BACCHIAC TETRAMETER ACATALECTIC.

2701. This verse consists of four complete bacchiac feet. There is generally a caesura after the first long of the second or third foot, or (more rarely) a diacresis after the second foot. An irrational long (or two shorts) may be substituted for the initial short only in the first and third feet. Resolution is not allowed before the caesura or the end of the verse. The scheme is:—

Examples are: -

Habénd(um) et | ferúnd(um) hōc # onúst cum | labốre (Pl. Am. 175).

At tamen ubi | fides? | sī | roges nīl | pudent hic (T. Andr. 637).

Vetulaé sunt | min(ae) ámb(ae). At # bonás fuis|se crédo (Pl. B. 1129).

2702. (1.) There are seldom more than two resolutions in the same verse, and never more than three. Bacchiac tetrameters are often repeated to form systems. 2703. (2.) According to some authorities, bacchiac tetrameters catalectic sometimes occur, e. g. Pl. Cas. 656, 867, Men. 969, 971, Most. 313, Posn. 244.

OTHER BACCHIAC VERSES.

2704. (1.) Bacchiac dimeters are occasionally found, especially as *clausulae* to bacchiac systems. An example is:—

Ad aétā|t(em) agúndam

(Pl. Tri. 232).

(Pl. B. 1127).

An acatalectic dimeter is not seldom compounded with a catalectic iambic tripody: e. g.

Rerin tēr in ánno # t(0) hās tón sitá ri?

2705. (2.) Bacchiac hexameters occur in a few instances, as: -

Satin par|va rés est | volúptā|t(um) in vít(ā) at|qu(e) in aétā|t(e) agúndā (Pl. Am. 633).

2706. (3.) Hypermetrical combination of bacchii into a system appears to occur in Varro, Sat. Men. ir. 405 Buech.

CHORIAMBIC RHYTHMS.

2707. In these, the fundamental foot is the choriambus $(\underline{l} \cup \cup \underline{\cdot})$. True choriambic verse is very rare in Latin poetry, though apparent choriambi of the form $\underline{l} \cup |\underline{\cdot}|$ or $\underline{l} \cup |\underline{\cdot}|$ are common in logaoedic verse (2652).

Apparently, however, in Terence, Ad. 611-13,

Út neque quid | mê faciam| néc quid agam ‡ certúm|sit. mémbra metű | débilia | súnt, animus ‡ timó:re óbstipuit, | péctore cōn;sistere nil ‡ cōnsi|lí quit,

there are three choriambic trimeters, the first two with iambic close, the third with trochaic. In the second line there is syllaba anceps at the end of the second choriambus. In Plautus, Casina 629, Menaechmi 110, and perhaps Asinaria 133, we have a choriambic dimeter + an acatalectic trochaic dipody.

Owing to the frequent occurrence of the apparent choriambus in certain kinds of logacedic verse, the metricians of Horace's day regarded them as really choriambic. Hence the rule mentioned in 2652, a rule unknown to Greek writers of logacedic verse.

IONIC RHYTHMS.

2708. In these, the fundamental foot is the Ionic, of which there are two forms, the Ionic d maiore l v v, so called because it begins with the greater part (i. e. the thesis) of the foot, and the Ionic d minore v v v v which receives its name from the fact that it begins with the less important part of the foot (i. e. the arsis).

2709. (1.) Ionics ā minore are often treated as Ionics ā māiore with anacrusis, $\bigcirc \bigcirc \bigcirc \stackrel{1}{} \stackrel{1}{} \stackrel{.}{} \stackrel{.}{} \bigcirc \bigcirc$, &c. See 2529 ad fin.

Digitized by Google

2710. (2.) Ionic verse shows numerous resolutions and irrational longs, especially in early Latin. The accumulation of short syllables imparts to the verse a wild and passionate character.

THE IONIC **ā māiōre** Tetrameter Catalectic (or Sotadean).

2712. This verse consists of four Ionic ā māiōre feet, the last foot being incomplete. In the early Latin poets, beginning with Ennius, the Sotadean is treated with much freedom: resolution, contraction (2518), anaclasis (2711), and irrational longs are freely admitted. Examples are:—

Nám quam varia | sínt genera po | ématörum, | Baébi, quámque longē | dístinct(a) ali | (a) áb aliis sīs, | nósce (Accius, *Didasc*. p. 305 M.).

Compare in Greek: -

σείων μελί ην Πηλίαδα | δεξιών κατ' | ώμων (Sotades).

Examples are: -

Móllēs, vete | rés Dēlia|cí manū re|císī péde tendite, | cúrs(um) addite, | cónvolāte | plántā (Petron. 23).

Laevius and Varro employ Ionic a maiore systems of considerable length.

THE IONIC **ā minōre** TETRAMETER CATALECTIC (or Galliambic.)

2714. This consists of four Ionic ā minōre feet, the last one incomplete. Anaclasis, resolution, and contraction are extremely common, and the multiplication of short syllables gives the verse a peculiarly wild and frenzied movement. Catullus very rarely admits Ionics that are not anaclastic (never in the first half of the verse, except the doubtful cases 63, 18; 54; 75); but Varro is less strict in this regard. The penultimate long is nearly always resolved. There is rarely more than one resolution in the same half-verse. A diaeresis regularly occurs after the second foot. The scheme is:—

Examples are: -Ades, înquit, | Ō Cybébē, || fera mônti|um deá Super álta | vēctus Áttis || celerí ra te mariá (Catullus 62, 1). ししとし1-04-#ししとし1000至天 Quo nos de cet citatis # celerare | tripudiis (Id. 63, 26). Ego iúvenis, | eg(o) adulėscēns # eg(o) ephėbus, | ego puér (/d. 63, 63). Tibi typana | non inani || sonitů ma tri' deúm (Varro, Sat. Men. 132 Buech.). しし としし1二した二井しした二100至天 2715. It has been suggested that Catullus probably felt the rhythm not as Ionic, but as trochaic or logaoedic: -'>'| 。゚、 。| 。゚、 。| ヒ| : # '>' | ゚_。 ゚ | "_゚ ゚ | 1 ^, or the like. This view has much in its favour; but the true nature of the rhythm is still matter of dispute. 2716. Compare the Greek: -Γαλλαί μη τρός δρείης | φιλόθυρσοι | δρομάδες, and in English: -"Perished many a maid and matron, many a valorous legionary,

Fell the colony, city and citadel, London, Verulam, Camuloduné." (Tennyson).

2717. Horace (3, 12) employs a system of ten pure Ionics ā minore, e. g.: -

Miserárum (e)st | nequ(e) amórī | dare lūdum | neque dúlcī mala vinō | laver(e) aút ex animárī metuéntis | patruaé ver bera línguae.

There is generally a diagresis after each foot.

Lyric Metres of Horace.

2718. The following is a list of the Horatian lyric metres: 2719. (I.) The IAMBIC TRIMETER (see 2592 ff.). Epode 17. 480

2730. (II.) The IAMBIC STROPHE, an iambic trimeter (2592) followed by an iambic dimeter acatalectic (2617):—

So in Archilochus, e.g.: -

⁷Ω Ζεῦ πάτερ, Ζεῦ, σὸν μὲν οὐρανοῦ κράτος, σὺ δ' ἔργ' ἐπ' ἀνθράπων όρας. (Fr. 88, Bergk).

2721. (III.) The HIPPONACTEAN or TROCHAIC STROPHE, a trochaic dimeter catalectic (2644) followed by an iambic trimeter catalectic (2601):—

2722. (IV.) The FIRST PYTHIAMBIC STROPHE, a dactylic hexameter (2556) followed by an iambic dimeter acatalectic (2617):—

So in Archilochus, e.g.: -

άψυχος, χαλεπήσι θεών όδυνήσιν έκητι πεπαρμένος δι' όστέων.

(Fr. 84, Bergk).

2723. (V.) The SECOND PYTHIAMBIC STROPHE, a dactylic hexameter (2556) followed by a pure iambic trimeter (2594):—

So the Greek epigrammatists, e.g.: -

Οἶνός τοι χαρίεντι πέλει ταχὸς ἵππος ἀοιδῷ ·
δδωρ δὲ πίνων οὐδὲν ἄν τέκοι σοφόν. (Nicaenetus).

2724. (VI.) The ALCMANIAN STROPHE, a dactylic hexameter (2556) followed by a dactylic tetrameter catalectic (2578):—

2725. (VII.) The First Archilochian Strophe, a dactylic hexameter (2556) followed by a Lesser Archilochian (2579):—

2726. (VIII.) The SECOND ARCHILOCHIAN STROPHE, a dactylic hexameter (2556) followed by an iambelegus (2678):—

48 t

16

2727-2731.] Appendix (E.): Prosody.

2727. (IX.) The THIRD ARCHILOCHIAN STROPHE, an iambic trimeter (2592) followed by an elegiambus (2680):—

Compare Archilochus fr. 85, Bergk (elegiambus; the trimeter is lost):—

ἀλλά μ' δ λυσιμελής, δ 'ταῖρε, δάμναται πόθος.

2728. (X.) The FOURTH ARCHILOCHIAN STROPHE, 2 Greater Archilochian (2677) followed by an iambic trimeter catalectic (2601):—

So Archilochus, e.g.: -

τοῖος γὰρ φιλέτητος έρως ὑπὸ καρδίην ἐλυσθεὶς πολλὴν κατ' ἀχλὺν ὀμμάτων ἔχευεν (Fr. 103, Bergk).

See, however, 2677 ad fin.

2729. (XI.) The LESSER ASCLEPIADEAN METRE, a series of Lesser Asclepiadeans (2669) employed stichically (2546):—

So Alcaeus, e.g.: -

ήλθες έκ περάτων γᾶς έλεφαντίναν λάβαν τῶ ξίφεος χρυσοδέταν ἔχων

(Fr. 33, Bergk).

2730. (XII.) The Greater Asclepiadean Metre, a series of Greater Asclepiadeans (2670) employed stichically (2546):—

So Alcaeus, e.g.: -

μηδέν άλλο φυτεύσης πρότερον δένδριον άμπέλω (Fr. 44, Bergk).

Many editors hold (with Meineke) that the Horatian odes were written in tetrastichs (2545), and hence that this metre and the preceding were employed by Horace in strophes of four lines each. Catullus (30) seems to use the Greater Asclepiadean by distichs, and so apparently Sappho (fr. 69, Bergk). But as to these points there is still much dispute.

2731. (XIII.) The First Asclepiadean Strophe, a Glyconic (2660) followed by a Lesser Asclepiadean (2669):—

$$\frac{1}{2} > |\frac{1}{2} \leftrightarrow |\frac{1}{2} \lor |\frac{1}{2} \land$$

 $\frac{1}{2} > |\frac{1}{2} \leftrightarrow |\frac{1}{2} \lor |\frac{1}{2} \lor |\frac{1}{2} \land$
 $C. 1, 3, 13, 19, 36; 3, 9, 15, 19, 24, 25, 28; 4, 1, 3.$
 482

Cf. Alcaeus: -

νῦν δ' [αὖτ] οὖτος ἐπικρέτει κινήσαις τὸν ἀπ' ἵρας πύματον λίθον.

(Fr. 82, Bergk).

In one instance, C. 4, 1, 35, elision occurs at the end of the Glyconic.

2732. (XIV.) The SECOND ASCLEPIADEAN STROPHE, three Lesser Asclepiadeans (2669) followed by a Glyconic (2660):—

C. 1, 6, 15, 24, 33; 2, 12; 3, 10, 16; 4, 5, 12.

2733. (XV.) The THIRD ASCLEPIADEAN STROPHE, two Lesser Asclepiadeans (2669), a Pherecratean (2659) and a Glyconic (2660):—

C. 1, 5, 14, 21, 23; 3, 7, 13; 4, 13.

Compare Alcaeus (Pherecratean followed by Glyconic; apparently two Lesser Asclepiadeans preceded, but they are lost):—

λάταγες ποτέονται κυλιχνᾶν ἄπο Τηταν.

(Fr. 43, Bergk).

2734. (XVI.) The Greater Sapphic Strophe, an Aristophanic (2658) followed by a Greater Sapphic (2671):—

2735. (XVII). The SAPPHIC STROPHE, three Lesser Sapphics (2666) and an Adonic (2655):—

C. 1, 2, 10, 12, 20, 22, 25, 30, 32, 38; 2, 2, 4, 6, 8, 10, 16; 3, 8, 11, 14, 18, 20, 22, 27; 4, 2, 6, 11; Carmen Saeculare. Also in Catullus 11 and 51.

So Sappho: -

φαίνεταί μοι κήνος Ίσος θέοισιν ξμμεν ώνερ δστις έναντίος τοι ίζάνει καὶ πλασίον άδυ φωνεύσας δπακούει.

(Fr. 2, Bergk).

Sappho apparently treated the third Sapphic and the Adonic as continuous; but Horace and Catullus allow syllaba anceps (and Horace in four cases, 1, 2, 47; 1, 12, 7, and 31; 1, 22, 15, hiatus) at the end of the third line. On the other hand, both Catullus and Horace sometimes join the third line to the fourth (by dividing a word, Hor. 1, 2, 19; 25, 11; 2, 16, 7; Cat. 11, 11; by elision Hor. 4, 2, 23; Car. Saec. 47; Cat. 11, 19), and in a few instances the second to the third (Hor. 2, 2, 18; 16, 34; 4, 2, 22; Cat. 11, 22, all by elision) by synapheia (see 2510). In Horace, the last foot of the third line is nearly always an irrational spondee.

2736. (XVIII.) The ALCAIC STROPHE, two Greater Alcaics (2667), a nine-syllabled Alcaic (2642) and a Lesser Alcaic (2663):—

C. 1, 9, 16, 17, 26, 27, 29, 31, 34, 35, 37; 2, 1, 3, 5, 7, 9, 11, 13, 14, 15, 17, 19, 20; 3, 1, 2, 3, 4, 5, 6, 17, 21, 23, 26, 29; 4, 4, 9, 14, 15.

So Alcaeus: -

'Ασυνέτημι των ανέμων στάσιν'
τὸ μὲν γὰρ ἔνθεν κῦμα κυλίνδεται,
τὸ δ' ἔνθεν' ἄμμες δ' ἀν τὸ μέσσον
νᾶῖ φορήμεθα σὺν μελαίνα.

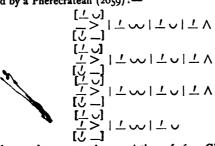

(Fr. 18, Bergk).

In the Greek poets the last two lines are sometimes joined by synapheia (2510), and Horace has elision at the end of the third verse in 2, 3, 27; 3, 29, 35. But he frequently admits hiatus in that place.

2737. (XIX.) The IONIC SYSTEM, a system of ten pure Ionics ā minōre (see 2717):—

Lyric Strophes of Catullus.

2738. Catullus in 34 uses a strophe consisting of three Glyconics (2660) followed by a Pherecratean (2659):—

In 61 he employs a strophe consisting of four Glyconics followed by a Pherecratean.

484

2739. Index of Horatian Odes and their Metres.

The Roman numerals in the table refer to the numbers assigned to the various strophes in 2719-2737.

ABBREVIATIONS USED IN CITING THE AUTHORS.

2740. In Part First, in which authors are occasionally cited, but without direct reference to their works, the usual abbreviations are employed: as, Plaut., Ter., Cic., Verg., Hor., &c., &c.

2741. In Part Second, the principles adopted are as follows:

2742. (1.) A reference consisting of figures alone (as, 2, 2, 3), denotes book, chapter, and section of Caesar de Bello Gallico.

2743. (2.) A reference to a work (in italics), without a preceding abbreviation for the author's name (as, TD. 1, 2; Mil. 3), denotes the book and section, or the section only, of a work by Cicero. The abbreviations used to denote his works are given in the list below (2745).

2744. (3.) A reference made to Vergil (V.), followed by figures alone, is a reference to the *Acneid*: as, V. 1, 20. Similarly, H. stands alone for the *Odes* of Horace; O. alone for the *Metamorphoses* of Ovid; and Ta. alone for the *Annals* of Tacitus.

2745. (4.) Roman letters are used in the abbreviations of the names of authors, *italics* in the abbreviations of the names of their works, as in the following List:—

INDEX OF SUBJECTS.

THE REFERENCES ARE TO SECTIONS.

Abbreviations,

C. for Gāius, 18; Cn. for Gnaeus, 18; O. for Gāia, 18; K. for Kalendae, 18.

Ability,

verbal expressions of, in indic. with . infin., 1495, 1496; in impf. indic., 1497; in conditional periods, 2074, 2101; words of, with gerundive construction, 2254.

Ablative case,

defined, 419; sing., how formed, 425, 426; plur., how formed, 428; lacking, see Defective; forms in -bus for older -būs, 59; -būs retained, 67; of words in -tu- (-su-), 235, 430.

-ā- stems, in -ād, 426, 443; in -eis, 440, 443; in -āis and -ēis, 441; in -īs for iis, 440; in -ābus, 442; inscriptional forms, 443; Greek nouns, 444,

445.
-o- stems, in -ōd, 426, 465; in -āis, -ēis, -ōis, 458; in -ōbus, 464; inscriptional forms, 465; Greek nouns,

Consonant stems, -e for older -E, 59 425; -E retained, 65; substs., in -I and -ei, 502, 507; adjs., in -ī, 503, 622, 626; in -īd, 426, 507; inscriptional

forms, 507; Greek nouns, 508-512.
-i- stems, substs., in -i, -e, 552-558, 561, 517-527, 531; adjs., in -i, -e, 558-561, 525-537, 634-636; adjs., in -i alone, 559, 629; pres. part., in -i, -e, 560, 633; inscriptional forms, 564; Greek

nouns, 565.

-u- stems, in -uo (-ūd), 593; in -ubus, 592; inscriptional forms, 593.
Pronouns, peculiar and inscriptional forms, of ego, tū, suī, 648, 650, 651; of meus, tuus, suus, 653-655; of hic, 663-665; of ille, iste, 667, 668; of illic, istic, 670; of is, 673, 674; of idem, 677, 678; of ipse, 680; of qui, quis, 688-690; of aliquis, &c., 692.

Ablative case - continued.

Uses of, 1296-1400; general, 1296-1301; meaning of, 1297, 1299, 1300; as adv., 703-707, 1376; combined with

1199, 1303.

Ablative proper, 1297, 1302-1330, attached to subst., 1301, 1313, 1314; of separation, want, departure, 1302-1306, 1293, 1294; denoting place from which, with town and island names, 1307-1310; denoting origin and place from which, with country names, 1309, 1310; in dates, 1307; domō, rure, humō, 1311; of source, stuff, or material, 1312-1315; of the doer of an action, 1318, 1319, 1476, 1477, 2243; of cause, influence, or motive, 1316-1319; with facio and sum, denoting that with which or to which something is done, 1315; causa, gratia, &c., 1257, 1317; denoting person, equivalent to abstract, 1319; of comparison, 1320-1330; with alter, alius, 1323; with compar, advs., 1327; in expressions of age, 1329; opinione, exspectāti-one, spē, 1330; amplius, longius, plus, minus, 1328, 1329; with judicial verbs, 1280-1282.

Locative ablative, 1299, 1331-1355; attached to subst., 1301, 1331; in dates, 1307, 1331; domi, rūrī, humī, orbī, 1337; bellī, mīlitiae, 1338; joined with loc. adv., 1340; of place where with town and island names, 1331-1335, 1342, 1343; of place where, with forum, urbs, oppidum, &c., 1332, 1333; of place where, with other appellatives, 1344, 1347; of place where, with country names, 1336, 1347; with tene6, recipió. &c., 1348; with fidő, cönfidő, glőrior, laetor, nītor, stő, frētus, 1349; of time at which, 1341, 1350, 1351; of time within which, 1352-1354; of time during which, 1355.

Instrumental ablative, 1300, 1356-

16*

Ablative case - continued.

1399; of accompaniment, 1356, 1357; with idinctus, conidinctus, 1357; of manner, 1358-1361; absolute, 1362-1374, see also 1533, 1900, 2110, 2121; of quality, 1375; of the route taken, 1376; of instrument or means, 1377-1384, 1476, 1477; with fruor, fungor, potior, ütor, vēscor, üsus est, Opus est, 1379-1384; of specification, 1385; with verbs of fulness, 1386; with adjs. of fulness, 1387; of measure, exchange, price, 1388-1392; with dignus, indignus, &c., 1392; of amount of difference, 1393-1399, 1153, 1154, 1459; of time before or after which, 1394, 1154; with absum and disto, 1153; of intervallum and spatium in designations of distance, 1399; of persons, instead of abl. with

ab, 1477.
Combined with other abls. in same sentence, 1400; with in and sub after verbs of rest, 1423; with in after verbs of motion, 1424; of gerundive construction and gerund, 2265-2268; supine in -U

as, 235, 2269, 2277. Abounding,

verbs of, with gen., 1293; with abl., 1386; adjs. of, with gen., 1263, 1264;

with abl., 1387.
Abridgement,

of sentences, 1057, 2111.

Abstaining,

verbs of, with gen., 1294; with abl., 1302-1306, 1294; with quin, 1986.

Abstract,

substs., defined, 7; plur. of, 416, 1109; subst. suffixes denoting quality, 246-264; adj. suffixes denoting action, 212-237, 249, 25; abstract in rel. sentence instead of in main sentence, 1800.

Acatalectic verse,

defin**e**d, 2537.

Accent,

general rules of, 170, 171: In gen. and voc. of -o- decl., 172; on final syllable, 173; marks of, 174-177; of proclitics and enclitics, 178, 179; of preps., 178; of rel. and indef. prons., 178; of compounds of facio, 394; in verse, 2548.

Accentual,

verse, 2548; verse, in carmina, 2549; theory of the Saturnian, 2553.

Accompaniment,

abl. of, 1356, 1357.

Accomplishing,

verbs of, with subjv., 1579, 1712; with purpose clause, 1951; with result clause, 1955, 1965; with acc. and infin., 2196. Accusative case,

defined, 419; sing., of neut. nouns, how formed, 423; plur., of neut. nouns, how formed, 423; sing. and plur., of gender nouns, how formed, 424; lacking, see Defective; ending in d, 143.

-E- stems, in -Em, 436; inscrip-

-a- stems, in -am, 436; inscriptional forms, 443; Greek nouns, 444, 445.

-o- stems, in -om and -um, 452; in -ā, 65, 461; inscriptional forms, 465; Greek nouns, 466.
